[para26] Section 11 sets out the powers of an inspector carrying out an inspection under s.8. These powers include requiring the production of the drawings and specifications of a building, as well as information from any person regarding any matter related to a building or a part of a building: s. 11(1)(a); making examinations, tests, or inquiries or take such samples or photographs as are necessary for the purposes of the inspection: s. 11(1)(c); and ordering any person responsible for the construction to take and supply at that person's own expense such tests and samples as are specified in the order: s. 11(1)(d).

[para27] The Regulations under the Act consist of the provincial Building Code. This Code sets out the standards which must be met for building permits to be approved prior to construction and for occupancy certificates to be issued after the completion of construction.

[para28] The duty and purpose of building inspection is clear from these statutory provisions. Municipalities have a duty to appoint inspectors as are necessary to enforce this Act. Inspections before the permit is issued are intended to ensure that building permits are issued only for plans that will conform with the building code. Inspections after the issuing of the permit are to see that the construction is carried out in conformity with the plans on the basis of which the building permit was approved. The inspectors are given the powers necessary to enter lands or premises, to carry out a range of inspections, and to issue various orders. These powers enable them to determine whether construction has been carried out according to the permits and to halt it, if it has not been. The Act does not state that inspections are mandatory, but this is to allow inspectors the discretion to determine when and how often inspections are necessary. Obviously, in cases of minor renovations, an inspection may not be necessary. Although the Act nowhere mentions safety, it is clear that the standards set in the building code are not exercises in governmental arbitrariness, but are intended to ensure the safety of buildings constructed in the province.

[para29] Therefore, the province has made a policy decision that cities inspect building plans and construction; and, as a result, the cities owe a duty of care to all who it is reasonable to conclude might be injured by the negligent exercise of those powers.

B. STANDARD OF CARE -- WHAT CONSTITUTES A REASONABLE INSPECTION?

[para30] The appropriate standard of care for municipal building inspectors has been set out by LaForest J. in Manolakos, supra:

> [A] municipality, once it has made the policy decision to inspect construction, is not bound to discover every latent defect in a given project, nor every derogation

> from applicable standards. This would be to hold the municipality to an impossible standard. Rather a municipality is only called upon to show reasonable care in the exercise of its powers of inspection. Accordingly, a municipality ... will only incur liability for such defects as it could reasonably be expected to have detected and to have ordered remedied. This is implicit in the decision of this Court in Kamloops v. Nielsen. (at 224-5)

[para31] What constitutes a reasonable inspection is a factual determination that will differ from case to case.

[para32] In Nielsen, the builder carried on construction on a house for his father, a city alderman, despite stop work orders issued by the municipal building inspectors. The evidence in the case gave rise to a strong inference that the city, with full knowledge that the construction had been done in violation of a municipal by-law, did not pursue the matter because one of its aldermen was involved. After the house was sold and the subsequent owner learned that the foundations had subsided, he successfully sued the city for negligence.

[para33] In Manolakos, supra, a contractor, in applying for a building permit, submitted a rough sketch of the backyard retaining wall being constructed, rather than detailed plans. The chief building inspector exercised his discretion and granted a permit, despite the absence of plans, because the adequacy of the wall could be evaluated by on-site inspections. However, appropriate inspections were not carried out, even after cracks began to appear in the wall. The Court held that the city was liable for negligence,

but that the owners of the house were contributorily negligent for not giving the city notice of the need for inspection until after the concrete had been poured and a visual inspection could no longer be carried out.

[para34] In each of these cases, the city's breach of its duty of care was blatant. In Kamloops, supra, despite the knowledge that the house was probably unsafe, the municipality allowed it to be occupied, because of political considerations. In Manolakos, supra, there were no plans for the project and the city explicitly stated that it would rely on inspections. In such a situation, allowing the project to continue despite the impossibility of a visual inspection and even after there was a sign that the wall might not be stable constituted clear negligence.

[para35] There was a similar situation in a recent decision of the Court of Appeal, Mortimer v. Cameron (1994), 17 O.R. (3d) 1. In that case, the court upheld a finding of negligence against the City of London. On the facts of the case, the application for a building permit for an apartment building was not accompanied by drawings or specification, as required by the by-law. The permit was issued with insufficient evidence as to Building Code compliance. Moreover, the deficiencies in the construction of an enclosed exterior stairway were obvious and could readily have been detected had there been a proper inspection of either the plans or the work done pursuant to the plans.

[para36] The situation in the case at bar is very different. The building permit was issued on the basis of a plan which, if followed by the contractor, would have met safety standards. Both Tecson and Grimaldi carried out a number of inspections which indicated that the work had been done according to the plan. Furthermore, I accept Tecson's explanation that he could not have dug down to determine the depth of the underpinning because it was raining the day he inspected and, in the absence of drains in the basement, water would have immediately collected in any hole he dug.

[para37] Nevertheless, I find that the inspection fell short of meeting a reasonable standard, given the facts of the situation.

[para38] I have two grounds for so finding. First of all,

I accept the Plaintiff's submissions that the behaviour of the contractor should have made the inspector wary. In fact, as LaForest J. observed in Manolakos, supra, building inspections are carried out precisely because it is clear that contractors do not always do their jobs properly:

> It is to be expected that contractors, in the normal course of events, will fail to observe certain aspects of the building by-laws. That is why municipalities employ building inspectors. Their role is to detect such negligent omissions before they translate into dangers to health and safety. (at 226)

In this case, there were special reasons to suspect that the contractor might have acted negligently. He did not apply for the building permit until after the underpinning had been put in. Despite the fact that the permit stated that the building inspector was to be notified before proceeding with the underpinning, not only was no notice given as to the status of the underpinning, but the building permit was not even posted outside the Plaintiff's home. Furthermore, Tecson stated that he did not know Tutkaluk and his work and, thus, had no basis for relying on him. Given these circumstances, it would have been reasonable to inspect further.

[para39] A second reason why a more thorough inspection was reasonable is the nature of the work being carried out. The work consisted of the installation of a major structural element, a serious defect in which might lead to a collapse of the entire house. Tort law has long held that the greater the risk of harm, the higher is the requisite standard of care demanded. Although the various inspections and test carried out by Tecson were reasonable as far as they went, a reasonable standard for inspection of construction on which the safety of the entire building depends demands verification that the work has been done properly according to the plan.

[para40] This finding is in no way altered by the City's argument, which I accept, that it is not obligated to supply guarantee of work done by contractors. The purpose of building permit and inspection provisions in the Act is not to allow home owners to make the City an insurer for renovation work which they have done. If the municipal inspectors had an obligation to discover every defect, even those which had been covered up before the building permit was applied for, then house owners could, at their will, make the City an unpaid insurer of renovation work. Under those circumstances, an owner could contract to have work done cheaply and not apply for a building permit until after the point at which the work could be inspected. If the work was subsequently found to be defective, the owner could gain the cost of repairs by suing the City for negligent inspection. This is clearly not the purpose of the Act.

[para41] But one must distinguish between a guarantee of work done and a reasonable inspection of an important structural element. Because the City was not obligated to provide an absolute guarantee that the work was done properly in every respect did not absolve it of the responsibility of determining whether the full extent of the underpinning specified by the plan had been installed.

[para42] I also reject the argument of the City, based on expert testimony by James Cowie, a structural engineer, that the exterior foundation walls could have been considered safely supported by the underpinning installed by Tutkaluk. Even if this is the case, and I make no finding one way or the other, it does not affect the reasonableness or unreasonableness of the inspection at the time it was made.

[para43] Tecson was not in possession of Cowie's report or a report by any other engineer on how much underpinning was necessary to support the exterior foundation walls. What he had in front of him was the building permit and the plan on the basis of which the permit had been approved. I must assume that the plan was approved because it conformed to good construction practice and to the Building Code. It was on the basis of this plan that a court must determine whether or not Tecson's inspection was reasonable. And, on this basis, as I have already stated, the inspection was

insufficient.

[para44] I also reject the argument that there should be no finding of negligence because there was no cracking in the walls of the house or other damage that might have resulted from the underpinnings. The City is negligent if there is a foreseeable risk of damage. Since the purpose of the Building Code Act and the regulations under that Act are to ensure the safety of buildings in the province, a court must hold that construction work that is carried out in clear non-conformity with the legal requirements poses a foreseeable risk of damage, whether or not any actual damage has taken place.

C. POWERS OF INSPECTOR

[para45] The City argues that, even if the inspection was negligent, the inspector lacked the power to do anything further. It bases this argument on s. 9(2) of the Act, the provision dealing with an order to uncover. The subsection reads as follows:

> (2) Where a chief official has reason to believe that any part of a building has not been constructed in compliance with this Act and such part has been covered or enclosed, contrary to an order made by an inspector or chief official under subsection (1), the chief official may order any person responsible for the construction to uncover the part at the person's own expense for the purpose of an inspection.

The City submitted that the inspector had no reason to believe any part of the building has not been constructed in compliance with this Act. In addition, there had been no order made by an inspector or chief official not to cover or enclose the underpinning. Since these conditions were not present, the inspector had no power to issue an order to uncover the underpinning.

[para46] In response, the Plaintiff pointed to the provisions in the Act setting out the powers of the inspector. Specifically, it noted that s. 11(1)(d) gives the inspector the power to

> order any person responsible for the construction to take and supply at the person's own expense such tests and samples as specified in the order.

He submitted that Tecson could have ordered him to call in an engineer to saw through the underpinning in order to determine its width.

[para47] I reject the argument of the City that the building inspector lacked the power to act in the situation and accept the argument of the Plaintiff. The City is correct that the preconditions for issuing an order to uncover were absent. But this did not exhaust the possibilities available to the inspector. The general powers of the inspectors are set out in s.11, the section relied on by the Plaintiff. These powers include the power to order any person responsible for the construction to take and supply at that person's own expense such tests and samples as are specified in the inspector's order. The Act does not specify any preconditions for, or limitations on, the power of the inspector to issue such an order.

[para48] There were also other possibilities available to the inspector. Section 9(1) allows an inspector to issue an order prohibiting the covering or enclosing of any part of a building pending inspection. The inspector could have ordered that the concrete floor of the basement not be laid. He could then have returned after the drains had been installed on a day when there was no rain falling and dug down to determine the depth of the underpinning.

[para49] The City's argument that the inspector lacked the power to do anything further therefore fails.

D. THE PLAINTIFF'S NEGLIGENCE

[para50] The City argued that, even if the building inspector was negligent, the Plaintiff was contributorily negligent in not applying for, or seeing that the contractor applied for, a building permit before the work was started. It is the statutory duty of the owner to obtain a building permit, as prescribed by s. 5(1) of the Act:

> No person shall construct or demolish or cause to be constructed or demolished a building in a municipality unless a permit has been issued therefor by the chief official.

[para51] On the facts, the City noted the concurrence of Drs. Ingles and Watt to the delaying of the application for the building permit. If the Plaintiff was relying on the building inspector, it argued, then he would have made sure that the underpinning was inspected at the time it was being laid.

[para52] The City further pointed to one clause of the contract with Tutkaluk, dated June 7, 1990 and signed by both the Plaintiff and his spouse, which stated that completion of an "illegal" deck would be postponed until after the visit of the building inspector. The City submitted that this clause was clear evidence the Plaintiff did not place reliance on municipal building inspection.

[para53] In Manolakos, supra, the Supreme Court of Canada held that the owners' failure to give timely notice for the on-site building inspection did not disentitle them from recovering against the city which failed to discharge its responsibilities:

> Of course, the cause of the problem would have been evident if the inspector had been asked to come at the proper time. But this does not absolve the inspector of his duties. (at 229)

[para54] Nevertheless, the Court held that the owners should bear a degree of responsibility for the loss they incurred because of their failure to summon the inspector in good time.

> The damage could have been avoided if notice had been given at the proper time. The by-law, I repeat, places responsibility for giving notice squarely on the owner. It could not really function without this requirement ... These are not technical matters for which the average person must rely on an experienced contractor. People generally should know that a building permit is required and that inspections cannot be done when the work is covered up. Of course, owners generally rely on a contractor to give notice at the appropriate time, but the responsibility is ultimate the owner's, not the city's. (per LaForest J. at 230-231)

[para55] Counsel for the Plaintiff stated that neither the Plaintiff nor his spouse understood that a building permit must be applied for before construction began. I find this a totally incredible claim. The Plaintiff and his spouse both have Ph.D.'s. It strains credibility to think that these two highly educated individuals would have thought that a "permit" to build did not have to be obtained before the building work began. It is equally difficult to accept that the Plaintiff could have believed that the building inspector, on whom he claims he relied, could have carried out an inspection of the renovations after they had been covered up and were no longer visible or accessible. The Plaintiff knew or should have known what he was doing in agreeing to a delay in obtaining a building permit and must, therefore, bear partial responsibility for the late

inspection. As LaForest J. stated, the damage could have been avoided if notice had been given at the proper time.

[para56] I find the City's argument based on the "illegal" deck clause in the contract totally unconvincing. The fact that the Plaintiff and his spouse seemed willing to construct an illegal deck after the municipal inspection proves nothing about their reliance on the inspector to certify that the underpinnings conformed to the requirements and the plan. People are more likely to be cavalier about the requirements for a backyard deck than they are about underpinnings which, if inadequate, can lead to the collapse of their house. In her testimony, Dr. Watt was clearly highly upset at the thought that the house in which she and her husband lived and in which they planned to reside during their retirement might collapse because it was inadequately underpinned. Furthermore, she had spent much time and effort in researching and drawing up precise plans which contained provisions for proper underpinnings. Despite their foolishness in signing a contract that called for not only a contravention of a by-law, but a deliberate concealing of the contravention from the building inspector, I find it impossible to conclude from this action that they participated in a conscious effort to prevent the building inspector from examining the underpinnings of their home.

DAMAGES

[para57] Although the hearing of this claim was devoted essentially to the question of the City's liability, the principal fault was that of the Defendant Tutkaluk. There was uncontested evidence that it was Glen Tutkaluk, the owner of Tutkaluk Construction Ltd., who persuaded the Plaintiff that it was not necessary to apply for a building permit until after the underpinning had been poured and set. It was Tutkaluk who gave misinformation to the building inspectors, and it was Tutkaluk who negligently and in breach of his contract with the Plaintiff and his spouse put in underpinnings which fell short of what was called for by the building permit and good construction practice. I, therefore, find that the Defendant Tutkaluk is 80 per cent liable for the damage suffered by the Plaintiff. The City is 20 per cent liable for its negligent inspection. As I have explained above, the Plaintiff must bear part of the responsibility for the negligent inspection. I, therefore, reduce the City's liability by 30 per cent because of the contributory negligence of the Plaintiff.

[para58] On the basis of the documents submitted in the Joint Document Brief, I accept the figure of $57,520.00 as the amount paid by the Plaintiff for repair work. However, this figure must be reduced because $5,000.00 of it went for water protection and waterproofing. I accept the evidence of Mr. Cowie that the need for the waterproofing was not the result of the inadequate underpinning. Therefore, I reduce the amount of damages to $52,520 to be apportioned as I have indicated above. Tutkaluk is liable for $42,016.00, and judgment shall so issue. The City is liable for $10,504.00, but this sum is reduced by $3,151.20 because of the Plaintiff's contributory negligence, resulting in a liability on the part of the City for $7,352.80; and judgment shall issue for same.

COSTS

[para59] I may be spoken to as to costs and interest.

CONANT J.

Ingles v. Tutkaluk Construction Ltd.

ADDENDUM

Between
James Ingles, plaintiff, and
Tutkaluk Construction Limited and the Corporation of the City of Toronto, defendants

[1995] O.J. No. 231
DRS 95-10450
Court File No. 61453/90Q

Ontario Court of Justice - General Division

Toronto, Ontario
Conant J.
Heard: May 9, 10, 11, 12, 1994.
Judgment: February 7, 1995.

Barbara J. Murchie, for the plaintiff.
Dianna Dimmer, for the defendant Tutkaluk Construction Ltd.

CONANT J.:--

ADDENDUM

[para1] Subsequent to issuing reasons, counsel appeared by for me on an issue that was pleaded but not argued at trial.

[para2] The issue centres on the interpretation of the Ontario Negligence Act, R.S.O. 1990, c. N.1, ss. 1 and 3, in cases where several defendants are liable to the plaintiff who is himself contributorily negligent. The sections read as follows [emphasis added]:

> Extent of liability, remedy over
>
> 1. Where damages have been caused or contributed to by the fault or neglect of two or more persons, the court shall determine the degree in which each of such persons is at fault or negligent, and, where two or more persons are found at fault or negligent, they are jointly and severally liable to the person suffering loss or damage for such fault or negligence, but as between themselves, in the absence of any contract express or implied, each is liable to make contribution and indemnify each other in the degree in which they are respectively found to be at fault or negligent.
>
> Plaintiff guilty of contributory negligence
>
> 3. In any action for damages that is founded upon the fault or negligence of the defendant if fault or negligence is found on the part of the plaintiff that contributed to the damages, the court shall apportion the damages in proportion to the degree of fault or negligence found against the parties respectively.

[para3] The defendant submits that since I have found that the plaintiff was contributorily negligent, the City is no longer jointly liable for the whole of the remaining damages.

[para4] The defendant relies on two Court of Appeal cases from British Columbia: Cominco Ltd. v. Canadian General Electric Co. Ltd. et al. (No. 2) (1983), 4 D.L.R. (4th) 186 and Leischner v. West Kootenay Power & Light (1986), 24 D.L.R. (4th) 641.

[para5] In my view, those cases are inapplicable in Ontario as I read the B.C. Negligence Act, R.S.B.C. 1979, c. 298, ss. 1, 2(c). The latter reads [emphasis added]:

> (c) as between each person who has sustained damage or loss and each other person who is liable to make good the damage or loss, the person sustaining the damage or loss shall be entitled to recover from that other person the percentage of the damage or loss sustained as corresponds to the degree of fault of that other person.

[para6] The Ontario statute does not, however, distinguish between situations where the plaintiff is completely faultless and where the plaintiff is part of a group of tortfeasors. Instead, s. 1 of the Ontario Act clearly states that those at fault are "jointly and severally liable" to the person suffering the loss.

[para7] In the alternative, the defendant City suggested that above and beyond apportioning fault I should also itemize the specific damages incurred and decide for each head of damages whether the defendants are jointly or severally liable for it. But, having decided that the Negligence Act makes the defendants jointly liable, this last submission amounts to an attempt to revisit my apportionment of fault.

INGLES V TORONTO AND TUTKALUK

James Ingles *Appellant*

v.

The Corporation of the City of Toronto *Respondent*

ON APPEAL FROM THE COURT OF APPEAL FOR ONTARIO

APPEAL from a judgment of the Ontario Court of Appeal (1998), 38 O.R. (3d) 384, 158 D.L.R. (4th) 147, 107 O.A.C. 310, 37 C.L.R. (2d) 192, 46 M.P.L.R. (2d) 1, [1998] O.J. No. 1126 (QL), setting aside a judgment of the Ontario Court, General Division (1994), 18 C.L.R. (2d) 67 and 82, 24 M.P.L.R. (2d) 293 and 308, [1994] O.J. No. 1714 (QL) and [1995] O.J. No. 231 (QL), allowing in part the plaintiff's claim for damages for negligence. Appeal allowed.

Philip Anisman and *Barbara J. Murchie*, for the appellant.

Diana W. Dimmer and *Naomi Brown*, for the respondent.

The judgment of the Court was delivered by

BASTARACHE J. --

I. Introduction

1 The issue to be resolved in this appeal is the liability of a public authority for breach of its duty of care in the exercise of a function that it has undertaken pursuant to a policy decision to that effect.

II. Factual Background

2 The appellant Mr. Ingles and his wife own an 80-year-old home in Toronto. In 1990, they decided to renovate the basement of the home, lowering it by18 inches, and to build a patio at the rear of the house. Lowering the basement would necessitate installing underpinnings under the existing foundations of the house to keep the walls from cracking and the house from falling down. They hired a contractor, Tutkaluk Construction Limited ("Tutkaluk") to do the work. The contract specified that the contractor would apply for and obtain a building permit and offered him an extra $500 for doing so. Mr. Ingles knew that a building permit was required to ensure that an inspection of the renovations would take place. He wanted such an inspection to ensure that the construction was being done properly.

3 Tutkaluk informed Mr. Ingles and his wife that the work would be delayed if it had to obtain a building permit before starting the renovations. Mr. Ingles reluctantly agreed that the work should begin as soon as possible, without the permit. Both Mr. Ingles and his wife asked the contractor several times in the following weeks to apply for the permit. The respondent, City of Toronto, received and approved the application for the permit two weeks after construction had begun. At this point, the underpinning work had already been completed, but the concrete for the new basement floor had not yet been poured.

4 The respondent added the following conditions to the permit before approving the application: first, that the underpinning be carried out to the satisfaction of the building inspector; second, that the building inspector be notified before proceeding with the underpinning and pouring of the concrete; and third, that the underpinning be at least as wide as the existing footings.

5 The morning after the permit was issued, Mr. Tecson, a building inspector with the city, noticed that there was construction under way at the Ingles' residence, and that the permit was not posted. After asking to see the permit, Mr. Tecson began to inspect the construction. He conducted a 30-minute inspection of the visible portions of the work. Because the

underpinning had already been installed, it was not possible to determine visually whether the underpinning continued for the full width of the footing as required by the building permit. It was also not possible to determine visually the depth of the underpinning. Therefore, the inspector looked at the colour of the concrete and struck it with a hammer to see if it had set. It was raining the day of the inspection, and hence it was not possible to dig a hole next to the underpinning to determine its depth. With respect to the width of the underpinning, Mr. Tecson relied on Tutkaluk's assurances that everything was done in accordance with the drawings attached to the building plan. Mr. Tecson noted on his building card that the underpinning had been done prior to his inspection. This was contrary to the specifications on the permit, which required that an inspector be notified before starting the underpinning work.

6 Approximately two weeks later, Mr. Grimaldi, the regular building inspector for the area, also visited the site. By this time, the basement floor had been laid and visual inspection of the underpinning as a whole was even less possible than it had been at the time of Mr. Tecson's inspection. Mr. Grimaldi carried out the same inspection as had Mr. Tecson. In addition he noticed that the concrete was smooth and without voids, an indication that it had been packed down adequately. On the job card he wrote that the underpinning appeared to be complete.

7 Within weeks of the completion of the project, the appellant began to experience flooding in his basement. He hired another contracting company to remedy the drainage problems. In the course of their work, the contractors discovered that the initial underpinning construction was completely inadequate. The underpinning was only 6 inches wide, instead of the 24 inches specified in the permit. In several places, the underpinning had not been installed to the depth stated in the plans. In fact, neither the width, nor the depth of the underpinning was in accordance with the specifications, and neither met the requirements of the *Building Code Act*, R.S.O. 1980, c. 51.

III. Judicial History

8 Conant J. of the Ontario Court (General Division) examined the basic duties and responsibilities for the regulation and inspection of construction in Ontario as set out in the *Building Code Act* ((1994), 24 M.P.L.R. (2d) 293). He found that it was clear from the statutory provisions that municipalities have a duty to appoint inspectors as are necessary to enforce the Act. The purpose of conducting inspections before issuing building permits was to ensure that permits were issued only for those plans that would conform with the building code. The purpose of conducting inspections after the permits were issued was to ensure that all construction was carried out in conformity with the plans. Conant J. concluded that the province had made a policy decision that cities inspect building plans and construction, and, as a result, that cities owe a duty of care to all who it is reasonable to conclude might be injured by the negligent exercise of those powers.

9 Having found that the city owed a duty of care to Mr. Ingles, Conant J. proceeded to determine the appropriate standard of care for a municipal inspector. Following the decision of La Forest J. in >*Rothfield v. Manolakos*, [1989] 2 S.C.R. 1259, he found that the city must show reasonable care in the exercise of its powers of inspection. The standard would not hold the city to the standard of an insurer, bound to discover every latent defect in the project and every derogation from the building code requirements. Instead, the city would be liable for those defects which it could reasonably be expected to have detected and to have ordered remedied.

10 Conant J. found that the city failed to meet the standard of care in its inspection of the construction at Mr. Ingles' home for two reasons. First, he found that it was not reasonable for Mr. Tecson to rely on Tutkaluk's assurance that the construction met the specifications. Mr. Tecson should have been wary of the contractor's assurances for the following reasons: the contractor did not apply for the permit until after the underpinning had been put in; the contractor did not give notice as to the status of the project, despite the requirements on the building permit; the permit was not posted outside the home; and Mr. Tecson did not know the contractor or his work. Second, he found that a more thorough inspection was reasonable because the underpinning was a major structural element. A defect in that element could lead to a collapse of the entire house. Conant J. concluded that the inspector could have used his investigatory powers to determine the width and depth of the underpinnings and was negligent in failing to do so.

11 As for the appellant's negligence, Conant J. found that he knew, or should have known, what he was doing in agreeing to a delay in obtaining a building permit. As such, he was required to bear some of the responsibility for the damage. However, Conant J. also found that the appellant and his wife did not participate in a conscious effort to prevent the building inspector from examining the underpinnings. They were not disentitled from recovering against the city, which failed to discharge its obligations.

Tutkaluk was found 80 percent liable for the damage and the city was found to be 20 percent liable. The city's liability was reduced by a further 30 percent to account for the appellant's contributory negligence.

12 In a subsequent addendum to the original judgment ((1995), 24 M.P.L.R. (2d) 308), Conant J. clarified the apportionment of liability as between the co-defendants, and the effect of the reduction on the award against the respondent city. He found that the respondent and the contractor were jointly and severally liable for the damages. The net effect of this finding was that the $52,520 in damages was apportioned 6 percent to the appellant, 14 percent to the city and 80 percent to Tutkaluk, with a judgment against both the city and Tutkaluk for $49,368.80 representing 94 percent of the damages. In a second addendum, he also awarded prejudgment interest fixed at the statutory rate of 12.9 percent.

13 Sharpe J. (*ad hoc*), writing for the Ontario Court of Appeal, allowed the appeal, solely on the ground that the trial judge erred in failing to address whether the appellant had removed himself from the scope of the city's duty of care: (1998), 38 O.R. (3d) 384.

14 Sharpe J. applied the test set out in *Kamloops (City of) v. Nielsen*, [1984] 2 S.C.R. 2, and agreed with the trial judge that the city had made a policy decision to inspect building plans and construction, and thus that it owed a duty of care to any person reasonably within its contemplation as someone to be injured by a breach of its duty. Sharpe J. then proceeded to apply the two-step analysis of the duty of care as set out in *Kamloops v. Nielsen*. Namely, he asked whether the city was in a relationship of proximity with the appellant such that it could contemplate that carelessness in its inspection would harm the appellant. Second, he asked whether there were any policy considerations which would negate the duty in these circumstances.

15 Sharpe J. answered both questions in the affirmative. Although there was a relationship of proximity between the city and the appellant, the Court of Appeal also found that there were considerations that removed the appellant from the class of persons to whom the city owed a duty of care. Sharpe J. based this finding on the remarks of La Forest J. in *Rothfield v. Manolakos*, *supra*, followed in *Hospitality Investments Ltd. v. Lord (Everett) Building* Construction Ltd. (1993), 143 N.B.R. (2d) 258 (Q.B.), to the effect that an owner-builder could exclude himself from the municipality's duty of care when he knowingly flouted the applicable building regulations. In his view, the appellant "[went] along with Tutkaluk's scheme" to proceed with the underpinning work without a permit. The appellant knew that this would preclude inspections while the underpinning work was being done and that it would make the inspection much more difficult afterwards. In the opinion of the Court of Appeal, this course of action was simply incompatible with the appellant attempting to recover from the city.

IV. Analysis

A. *Duty of Care*

16 This Court recently affirmed in >*Ryan v. Victoria (City)*, [1999] 1 S.C.R. 201, that the test set in *Anns v. Merton London Borough Council*, [1977] 2 All E.R. 492 (H.L.), adopted by this Court in *Kamloops v. Nielsen* (the "*Anns/Kamloops*" test) is the appropriate test for determining whether a private or public actor owes a duty of care. These cases provide the basis for determining whether the law can impose on a public authority a private law duty towards individuals, enabling individuals to sue the authority in a civil suit, and for determining whether a duty of care is owed by a public authority in particular circumstances. To determine whether a private law duty of care exists, two questions must be asked. These questions are set out by Wilson J. at pp. 10-11 of the decision in *Kamloops v. Nielsen* as follows:

(1)is there a sufficiently close relationship between the parties (the local authority and the person who has suffered the damage) so that, in the reasonable contemplation of the authority, carelessness on its part might cause damage to that person? If so,

(2)are there any considerations which ought to negative or limit (a) the scope of the duty and (b) the class of persons to whom it is owed or (c) the damages to which a breach of it may give rise?

17 The first step of the *Anns/Kamloops* test presents a relatively low threshold. A *prima facie* duty of care will be established if it can be shown that a relationship of proximity existed between the parties such that it was reasonably foreseeable that carelessness on the part of the public actor would result in injury to the other party; see, for example, *Ryan v. Victoria*, *supra*, at para. 22. However, as Lord Wilberforce recognized in *Anns*, only in certain circumstances will a public authority owe a private law duty of care towards individuals. Thus, under the second step of the test, the court must examine the legislation which governs the public authority to

determine whether a private law duty should be imposed in the circumstances. Wilson J. summarized the types of legislation identified by Lord Wilberforce, at p. 11 of *Kamloops v. Nielsen*, *supra*, as follows:
(1) statutes conferring powers to interfere with the rights of individuals in which case an action in respect of damage caused by the exercise of such powers will generally not lie except in the case where the local authority has done what the legislature authorized but has done it negligently;

(2) statutes conferring powers but leaving the scale on which they are to be exercised to the discretion of the local authority. Here there will be an option to the local authority whether or not to do the thing authorized but, if it elects to do it and does it negligently, then the policy decision having been made, there is a duty at the operational level to use due care in giving effect to it.

18 Inspection schemes fall within the second type of legislation identified by Lord Wilberforce. To determine whether an inspection scheme by a local authority will be subject to a private law duty of care, the court must determine whether the scheme represents a policy decision on the part of the authority, or whether it represents the implementation of a policy decision, at the operational level. True policy decisions are exempt from civil liability to ensure that governments are not restricted in making decisions based upon political or economic factors. It is clear, however, that once a government agency makes a policy decision to inspect, in certain circumstances, it owes a duty of care to all who may be injured by the negligent implementation of that policy; see, for example, >*Just v. British Columbia*, [1989] 2 S.C.R. 1228, at p. 1243, *per* Cory J.; *Rothfield v. Manolakos*, *supra*, at p. 1266, *per* La Forest J.

19 While I have stated above that a government agency will not be liable for those decisions made at the policy level, I must emphasize that, where inspection is provided for by statute, a government agency cannot immunize itself from liability by simply making a policy decision never to inspect. The decisions in *Anns v. Merton London Borough Council*, *supra*, and *Kamloops v. Nielsen*, *supra*, establish that in reaching a policy decision pertaining to inspection, the government agency must act in a reasonable manner which constitutes a *bona fide* exercise of discretion. In the context of a municipal inspection scheme, we must bear in mind that municipalities are creatures of statute which have clear responsibilities for health and safety in their area. A policy decision as to whether or not to inspect must accord with this statutory purpose; see, for example, *Kamloops v. Nielsen*, at p. 10.

20 Once it is determined that an inspection has occurred at the operational level, and thus that the public actor owes a duty of care to all who might be injured by a negligent inspection, a traditional negligence analysis will be applied. To avoid liability, the government agency must exercise the standard of care in its inspection that would be expected of an ordinary, reasonable and prudent person in the same circumstances. Recently, in *Ryan v. Victoria*, *supra*, at para. 28, Major J. reaffirmed that the measure of what is reasonable in the circumstances will depend on a variety of factors, including the likelihood of a known or foreseeable harm, the gravity of that harm and the burden or cost which would be incurred to prevent the injury. The same standard of care applies to a municipality which conducts an inspection of a construction project. While the municipal inspector will not be expected to discover every latent defect in a project, or every derogation from the building code standards, it will be liable for those defects that it could reasonably be expected to have detected and to have ordered remedied; see, for example, *Rothfield v. Manolakos*, *supra*, at pp. 1268-69.

(1) Did the City Owe the Appellant a Duty of Care?

21 Both the trial judge and the Court of Appeal found that the city owed the appellant a *prima facie* duty of care in these circumstances. I agree with their finding in this respect. It is certainly foreseeable that a deficient inspection of the underpinnings of a home could result in damage to the property of the homeowners, or injury to the homeowners or others. As a result, I agree that there was a sufficient relationship of proximity between the appellant and the city such that the city owed the appellant a *prima facie* duty to conduct an inspection of the renovations of the appellant's home and to do so with reasonable care. The first stage of the *Anns/Kamloops* test has been met.

22 Having found that the city owed the appellant a *prima facie* duty of care, I now turn to the legislative scheme which governs municipal inspections in Ontario to determine whether there is any policy reason to limit the *prima facie* duty of care. The relevant provisions of the *Building Code Act*, R.S.O. 1990, c. B.13, are as follows:

3.--(1) The council of each municipality is responsible for the enforcement of this Act in the municipality.

(2) The council of each municipality shall appoint a chief building official and such inspectors as are necessary for the purposes of the enforcement of this Act in the areas in which the municipality has jurisdiction.

5.--(1) No person shall construct or demolish or cause to be constructed or demolished a building in a municipality unless a permit has been issued therefor by the chief official.

6.--(1) The chief official shall issue a permit except where,

(a) the proposed building or the proposed construction or demolition will not comply with this Act or the building code or will contravene any other applicable law;

. . .

(3) No person shall make a material change or cause a material change to be made to a plan, specification, document or other information on the basis of which a permit was issued without notifying the chief official and filing details of such change with him or her for the purpose of obtaining his or her authorization.

. . .

(5) No person shall construct or cause to be constructed a building in a municipality except in accordance with the plans, specifications, documents and any other information on the basis of which a permit was issued or any changes thereto authorized by the chief official.

8.--(1) Subject to section 11, an inspector may, for the purpose of inspecting a building or site in respect of which a permit is issued or an application for a permit is made, enter in or upon any land or premises at any time without a warrant.

(2) Where an inspector finds that any provision of this Act or the building code is being contravened, the inspector may give to the person whom he or she believes to be the contravener an order in writing directing compliance with such provision and may require the order to be carried out forthwith or within such time as he or she specifies.

(3) Where an inspector gives an order under this section, the order shall contain sufficient information to specify the nature of the contravention and its location.

. . .

(5) Where an order of an inspector made under this section is not complied with within the time specified therein, or where no time is specified, within a reasonable time in the circumstances, the chief official may order that all or any part of the construction or demolition respecting the building cease and such order shall be served on such persons affected thereby as the chief official specifies and a copy thereof shall be posted on the site of the construction or demolition and no person except an inspector or the chief official shall remove such copy unless authorized by an inspector or the chief official.

(6) Where an order to cease construction or demolition is made under subsection (5), no person shall perform any act in the construction or demolition of the building in respect of which the order is made other than such work as is necessary to carry out the order of the inspector made under subsection (2).

9.--(1) An inspector or chief official may issue an order prohibiting the covering or enclosing of any part of a building pending inspection and where such an order is issued, an inspection shall be made within a reasonable time after notice is given by the person to whom the order is issued that the person is ready for the inspection.

(2) Where a chief official has reason to believe that any part of a building has not been constructed in compliance with this Act and such part has been covered or enclosed, contrary to an order made by an inspector or chief official under subsection (1), the chief official may order any person responsible for the construction to uncover the part at the person's own expense for the purpose of an inspection.

10.--(1) Subject to section 11, an inspector may enter in or upon any land or premises at any time without a warrant for the purpose of inspecting any building to determine whether such building is unsafe.
(2) Where an inspector finds that a building is unsafe, he or she may serve upon the assessed owner and each person apparently in possession of the building an order in writing setting out the reasons why the building is

unsafe and the remedial steps that the inspector requires to be taken to render the building safe and may require the order to be carried out within such time as the inspector specifies in the order.

(3) Where an order of an inspector under subsection (2) is not complied with within the time specified therein, or where no time is specified, within a reasonable time in the circumstances, the chief official may by order prohibit the use or occupancy of the building and such order shall be served on the assessed owner and each person apparently in possession and such other persons affected thereby as the chief official specifies and a copy thereof shall be posted on the building, and no person except an inspector or the chief official shall remove such copy unless authorized by an inspector or the chief official.

(4) Where the chief official has made an order under subsection (2) and considers it necessary for the safety of the public, the chief official may cause the building to be renovated, repaired or demolished for the purpose of removing the unsafe condition or take such other action as he or she considers necessary for the protection of the public and, where the building is in a municipality, the cost of the renovation, repair, demolition or other action may be added by the clerk to the collector's roll and collected in like manner as municipal taxes.

11.--(1) For the purposes of an inspection under section 8 or 10, the inspector may,

(a) require the production of the drawings and specifications of a building or any part thereof, including any drawings prescribed by the regulations, for his or her inspection and may require information from any person concerning any matter related to a building or part thereof;

(b) be accompanied by any person who has special or expert knowledge of any matter in relation to a building or part thereof;

(c) alone or in conjunction with such other person or persons possessing special or expert knowledge, make such examinations, tests, inquiries, or, subject to subsections (2) and (3), take such samples or photographs as are necessary for the purposes of the inspection;

(d) order any person responsible for the construction to take and supply at the person's own expense such tests and samples as are specified in the order.

23 The legislative scheme is designed to ensure that uniform standards of construction safety are imposed and enforced by the municipalities. Sections 5 and 6 of the Act require that building plans and specifications be inspected before a permit is issued to ensure that they conform with the building code. Sections 8 to 11 set out the powers of the inspector to ensure that all work that is being completed conforms with the permit and, as a result, with the building code. Inspectors are given a broad range of powers to enforce the safety standards set out in the code, from ordering tests at the owners' expense, to ordering that all work cease in general. Section 9 grants inspectors the power to order builders not to cover work pending inspection, or to uncover work when there is reason to believe that any part of the building has not been constructed in compliance with the Act. The purpose of the building inspection scheme is clear from these provisions: to protect the health and safety of the public by enforcing safety standards for all construction projects. The province has made the policy decision that the municipalities appoint inspectors who will inspect construction projects and enforce the provisions of the Act. Therefore, municipalities owe a duty of care to all who it is reasonable to conclude might be injured by the negligent exercise of their inspection powers.

24 It would appear from the use of the word "may" in ss. 8 to 11 that municipalities have the discretion under the Act to decide whether to inspect and enforce the safety standards after construction has begun. Therefore, it may be open to the municipalities to make policy decisions as to whether to inspect in certain circumstances. Of course, all such policy decisions must be made in good faith and in a way that is consistent with the overall purpose of ensuring the health and safety of the public. Such decisions can only be immune from civil action when they accord with the overall purpose of the statutory scheme. Here, the evidence is that the city had made a policy decision to inspect construction, even if the permit was issued after the construction had begun. At trial, Fred Breeze, the city's Director of Inspections, testified as follows:

Q. Well, if the inspector is not in the position to do proper inspection because of the lateness of the building permit, can you tell me why the city doesn't simply refuse to do such inspections and insist that the owner get an inspection from an independent engineer, for instance?

A. Well, that's not our policy. Our policy is to inspect once a permit has been issued, and we will inspect to the best the inspector can do at the time on what they can see while they are there. [Emphasis added.]

This policy has since been codified in the *Building Code Act, 1992*, S.O. 1992, c. 23, s. 13(6), which grants powers to the chief building official to order work to be uncovered when notice to inspect is not given in a timely fashion. While the Act gave the city the discretion to decide when to inspect, the city made a policy decision to inspect even when a permit was received late. Once the city chose to implement this decision, and exercised its power to enter upon the premises to inspect the renovations at Mr. Ingles' home, it owed a duty of care to all who it is reasonable to conclude might be injured by the negligent exercise of that power.

25 Following the *Anns/Kamloops* test, the city owed Mr. Ingles a duty of care to conduct an inspection of the renovations on their home and to exercise reasonable care in doing so, despite the fact that the building permit was obtained late. Therefore, the city could be found negligent if it ignored its own scheme and chose not to inspect the renovations. It could also be found negligent for conducting an inspection of the renovations without adequate care.

(2) The Negligent Owner-Builder

26 The Ontario Court of Appeal found that, despite the fact that the inspection scheme was operational, there were considerations that removed the appellant from the class of persons to whom the city owed a duty of care. Relying on the decision of La Forest J. in *Rothfield v. Manolakos*, *supra*, the court found that owner-builders could be excluded from the ambit of a municipality's duty of care regarding building inspections if they are seen as the sole source of their loss. After reviewing the appellant's negligence, the Ontario Court of Appeal concluded that the appellant had knowingly flouted the building code by agreeing with Tutkaluk's scheme to apply for the permit late. In doing so, the court found, the appellant removed himself from the ordinary inspection scheme and from the scope of the city's duty of care.

27 With respect, the Ontario Court of Appeal erred in its interpretation of the meaning of the decision in *Rothfield v. Manolakos*. While there may be some ambiguity in the language of that decision, *Rothfield v. Manolakos* stands for the proposition that an owner's negligence may, in very rare circumstances, be considered as a complete defence to a finding of negligence on the part of municipal inspectors. The decision does not stand for the proposition that an owner's negligence can remove him or her from the scope of a municipality's duty of care.

28 The facts of the case of *Rothfield v. Manolakos* were quite similar to the facts of the case at bar. The plaintiffs were owners of a home who hired contractors to build a retaining wall in their backyard. The contractors applied for a building permit and presented the building inspector with a rough sketch of the project. The inspector exercised his discretion and granted a permit despite the fact that the plans had not been certified by an engineer. Neither the owners, nor the contractors, advised the city, as required by the by-law, that the project had come to a stage where inspection was required. When the inspector did come to inspect the construction, most of the wall had been put in place and it was not possible to conduct a standard inspection.

29 La Forest J., for the majority of the Court, began his analysis of facts by applying the *Anns/Kamloops* test. After examining the legislative scheme, he found that once the city had made a policy decision to inspect building plans and construction, it owed a duty of care to all who it is reasonable to conclude might be injured by the negligent exercise of those powers. He then proceeded to consider whether owner-builders, as a class, should be excluded from the scope of a municipality's duty of care under the second portion of the *Anns/Kamloops* test. He could see no reason why an owner-builder would not fall within the scope of the duty of care owed by a municipality. Owner-builders are no better versed in the technical aspects of building construction than other members of the public, and cannot see to it that their contractors comply with the building codes. Owner-builders thus rely on the disinterested expertise of building inspectors to ensure that construction work is safe. In addition, La Forest J. found that owner-builders are also ratepayers in the municipality, members of the public for whose benefit the by-law was passed. Therefore, it is clear that La Forest J. decided that owner-builders are a class of persons to whom a duty is owed by municipal inspectors.

30 Having decided that municipal inspectors owe a duty of care to owner-builders, La Forest J. proceeded to discuss the implications of the owner-builder's negligence. He considered the *dictum* of Lord Wilberforce in *Anns v. Merton London Borough Council*, *supra*, that no duty is owed "to a negligent building owner, the source of his own loss"; see *Rothfield v.*

Manolakos, *supra*, at p. 1271. La Forest J. found that this principle was applicable only in the narrowest of circumstances. At p. 1271, he states:

It is to be expected that contractors, in the normal course of events, will fail to observe certain aspects of the building by-laws. That is why municipalities employ building inspectors. Their role is to detect such negligent omissions before they translate into dangers to health and safety. If, as I believe, owner builders are within the ambit of the duty of care owed by the building inspector, it would simply make no sense to proceed on the assumption that every negligent act of an owner builder relieved the municipality of its duty to show reasonable care in approving building plans and inspecting construction.

Negligent owners would be viewed as the sole source of their own loss where they, for example, knowingly flouted the applicable building regulations or the directives of the municipality, or totally failed to acquit themselves of the responsibilities that properly rested on them, none of which apply in this appeal. La Forest J. concluded that the conduct of the plaintiffs in *Rothfield v. Manolakos*, *supra*, was not such as to make them the sole source of their own loss.

31 There is some ambiguity in the decision in *Rothfield v. Manolakos* as to where in the traditional tort law analysis the consideration of an owner-builder's negligence should take place, namely whether the analysis should take place in the determination of whether a municipality owes a duty of care to the negligent owner-builder, or whether the negligence of an owner-builder can serve as a defence to a finding of negligence on the part of a municipal inspector. This ambiguity stems from the fact that La Forest J. began his analysis of the consequences of the negligence of an owner-builder by quoting the *dictum* of Lord Wilberforce in *Anns v. Merton London Borough Council*, *supra*. At p. 504, Lord Wilberforce states:

To whom the duty is owed. There is, in my opinion, no difficulty about this. A reasonable man in the position of the inspector must realise that if the foundations are covered in without adequate depth or strength as required by the byelaws, injury to safety or health may be suffered by owners or occupiers of the house. The duty is owed to them, not of course to a negligent building owner, the source of his own loss.

Lord Wilberforce's *dictum* does imply that an examination of the negligence of an owner-builder will take place within the two-step analysis of whether a duty of care is owed by a municipality in conducting an inspection. As a result, the analysis of the consequences of the negligence of an owner-builder in *Rothfield v. Manolakos*, *supra*, also uses language which implies that the inquiry into whether a municipality is liable for its negligent inspection will end at the duty stage of the analysis if the plaintiff's conduct is found to be such as to make him or her the sole source of his or her own loss. Upon further examination, however, it is my view that the true intention of the decision in *Rothfield v. Manolakos* was to create a defence available to municipalities in a very limited set of circumstances.

32 There are several passages in the reasons of La Forest J. in *Rothfield v. Manolakos* which make it clear that the negligent conduct of an owner-builder should not absolve a municipality of its duty to take reasonable care in its inspection. For example, at p. 1273, he states:

It cannot be disputed that the owners were negligent in failing to give timely notice for the pre-pour inspection. The by-law places this obligation squarely on every property owner. But the fact remains that when the inspector did attend at the site he was confronted with a situation in which it must have been at once clear to him that the retaining wall was potentially substandard. As I have just pointed out, there is no mystery to the fact that uninspected foundations may give rise to hidden defects.

Again, at p. 1274, he states:

. . . when he attended at the site, [the inspector] was confronted with a situation which, if left unremedied, manifestly stood to pose a threat to the health and safety of the public, including the neighbours and the owner builder. Of course, the cause of the problem would have been evident if the inspector had been asked to come at the proper time. But this does not absolve the inspector of his duties. It must be remembered that the inspector was, at the time, armed with all the powers necessary to remedy the situation. As I see the matter, it was incumbent on the building inspector, in view of the responsibility that rested on him, to order the cessation of the work, and the taking of whatever corrective measures were necessary to enable him to ensure that the structure was up to standard.

In light of these two passages, it is apparent that an inspector who attends at a site owes a duty of care to the public, to third-party neighbours, and to owner-builders to ensure that all renovation and construction projects meet the standards set out in the by-laws. This duty arises regardless of the conduct or negligence of the owner-builder.

33 Having found that a municipality whose inspector conducts a site inspection owes a duty to conduct a reasonable inspection, despite the negligence of the owner-builder, La Forest J. proceeds to set out a defence that may be available to municipalities in limited circumstances. He underlines that it may be open to a municipality to argue in its defence that an owner-builder's conduct was such that it was impossible to fulfill the duty to take reasonable care in its inspection. He sets out the test as follows, at pp. 1273-74:

The key question, it seems to me, is whether it is reasonable to conclude that despite the negligence of the owners, the inspector was still in a position to acquit himself of the responsibility that the by-law placed on him, i.e., to take reasonable care to ensure that all building was done in accordance with the applicable standards of the by-law. In other words, is it reasonable, in the circumstances, to conclude that a due exercise by the inspector of his powers, even though he was summoned late, could have avoided the danger?

The test assumes that inspectors owe a duty to take reasonable care to ensure that all construction is done in accordance with the standards. A municipality will only be absolved completely of the liability which flows from an inspection which does not meet the standard of reasonable care when the conduct of the owner-builder is such as to make it impossible for the inspector to do anything to avoid the danger. In such circumstances, for example when an owner-builder determines to flout the building by-law, or is completely indifferent to the responsibilities that the by-law places on him or her, that owner-builder cannot reasonably allege that any damage suffered is the result of the failure of the building inspector to take reasonable care in conducting an inspection.

34 La Forest J.'s interpretation of Lord Wilberforce's *dictum* in *Anns v. Merton London Borough Council, supra*, is consistent with the interpretation provided by the English Court of Appeal. In *Acrecrest Ltd. v. Hattrell & Partners*, [1983] 1 All E.R. 17, Donaldson L.J. found that the principle does not exclude negligent builder-owners from the ambit of a municipality's duty of care, but rather that it serves as a defence. He interprets the Lord Wilberforce's *dictum* as follows, at p. 31:

. . . the local authority's duty of care extends to the building owner and the builder-owner to the same extent as to future owners and present and future occupiers. The difference in the position of the building owner or builder-owner is not in the ambit of the duty, but in the fact that they may have more difficulty in proving a causal connection between the damage and the building inspector's negligence and may also be faced with allegations of contributory negligence which may partially or even wholly defeat their claim. This, I think, is what Lord Wilberforce meant when in the *Anns* case . . . he said:

"The duty is owed to them [the owners or occupiers of the house], not of course to the negligent building owner, the source of his own loss."

If the building owner's negligence was the effective source of his loss, he would fail on the ground that there was a break in the chain of causation or on the ground that it was just and equitable that the damages recoverable should be reduced to nothing, having regard to the building owner's share in the responsibility for the damage. . . .

Clearly, the English Court of Appeal interpreted Lord Wilberforce's *dictum* as a defence to a claim of negligence on the part of an owner-builder who was the sole source of his or her own loss. Such a defence could be invoked, either to show that the negligence of an inspector could not in any way be the cause of the owner-builder's loss, or as a complete bar to recovery for the owner-builder's contributory negligence.

35 La Forest J.'s interpretation of Lord Wilberforce's *dictum* as a defence to a finding of negligence against a municipality, rather than as a principle which excludes a class of negligent builder-owners from the scope of a municipality's duty of care, is also consistent with this Court's approach to other defences in tort law which focus on the plaintiff's conduct. In the context of the defence of *ex turpi causa non oritur actio*, this Court has ruled that it is inappropriate to consider the effect of the conduct of a plaintiff within the duty of care analysis. In >*Hall v. Hebert*, [1993] 2 S.C.R. 159, McLachlin J., for the majority of the Court, found that it is inconsistent with the conceptual role of the duty of care within the traditional tort law analysis to consider the plaintiff's conduct as a consideration which can remove him or her from the scope of a duty which would otherwise be owed to him or her. She found that a duty of care should be grounded in considerations of proximity and foreseeability. The legality or morality of the plaintiff's conduct is an extrinsic consideration. As such, she found, in those cases where the conduct of the plaintiff does become an issue to be considered, it should be done by way of a defence, rather than by distorting the notion of the duty of care owed by the defendant to the plaintiff; see *Hall v. Hebert*, *supra*, at p. 182. It would be inconsistent with this Court's jurisprudence to develop an area of negligence

law where the conduct of the plaintiff is determinative of whether he or she is owed a duty of care when this Court has specifically pronounced that a plaintiff's conduct may not be considered in determining whether a duty of care is owed to him or her in other areas of negligence law.

36 The respondent city argues that to interpret the decision of La Forest J. in *Rothfield v. Manolakos*, *supra*, as setting out the parameters for a defence to a claim of negligence by a negligent owner-builder against a municipality would necessitate overruling this Court's decision in >*Hospitality Investments Ltd. v. Everett Lord Building Construction Ltd.*, [1996] 3 S.C.R. 605. This decision consists of one paragraph which restores the judgment of the New Brunswick Court of Queen's Bench at (1993), 143 N.B.R. (2d) 258, and is set out, at p. 606, as follows:

> We agree with the trial judge that no duty of care was owed to the respondent in the circumstances of this case. Accordingly, the appeal is allowed, the judgment of the Court of Appeal (1995), 166 N.B.R. (2d) 241, is reversed, and the trial judgment (1993), 143 N.B.R. (2d) 258, is restored, the whole with costs throughout.

This decision does appear to contradict the decision in *Rothfield v. Manolakos*, *supra*, as it seems to exempt the municipality from liability at the first stage of the negligence analysis. However, the Court did not adopt the reasons of the trial judge in the case and wrote only one sentence in disposing of the appeal. To the extent that the decision can be read as departing from the analysis of *Rothfield v. Manolakos*, it should not be followed.

37 The respondent city also relies on the decision of the British Columbia Court of Appeal in *McCrea v. White Rock*, [1975] 2 W.W.R. 593, to support its contention that a duty of care is not owed to the appellant in the case at bar. That case is also distinguishable from the case at bar. In that case, the plaintiffs had hired a contractor to renovate their grocery store. The contractor applied for and received a building permit on the basis of a plan which he submitted to the inspector. He did not, however, follow the plan when installing a beam into the renovations and eventually the building collapsed. The by-law which governed inspections in the City of White Rock provided for a scheme of inspections to occur at various stages of the construction. A duty was placed on the owners of the building to notify the inspector at various stages of the construction to receive inspections. The city had made a policy decision not to inspect until notified of the need for an inspection. The contractor called the inspector on behalf of the owners, and received three inspections pursuant to the by-law. There was evidence that the practice in White Rock was for the contractor to call for inspections on behalf of the owner. No further calls for inspection were made and as a result the inspector did not inspect the beam and did not conduct any further inspections of the site.

38 While three separate and concurring sets of reasons were delivered in that case, all three of the judges of the British Columbia Court of Appeal agreed that the by-law imposed a duty to inspect the construction only when the inspector was notified by the owners that the construction had reached one of the stages where inspection was required by by-law. A municipal inspector could not be expected to attend at a site continuously to ensure that the construction met the specifications in the permit. Since the owners had failed to notify the inspector of the need to inspect the work, the inspector owed no duty to them. Two of the sets of reasons were careful to distinguish the case from those cases where inspectors had attended at construction cites and been negligent in conducting their inspections. This case is distinguishable from the case at bar, where the owners did notify the inspector of a need to inspect, and the inspector did attend at the site to conduct the inspection.

39 To summarize, despite some ambiguity in the language used in his decision, it is clear that La Forest J. created a complete defence for municipalities that could be used to militate against a finding of negligence only in the rarest of circumstances, namely, when the owner-builder's conduct was such that a court could only conclude that he or she was the sole source of his or her own loss. This complete defence may encompass those situations where an owner-builder never applies for a building permit, or never notifies the inspector of the need for an inspection, or those situations where the inspector receives notification so late that it would be impossible, upon full exercise of the powers granted under the governing legislation, to discover any hidden defects. In other cases, such as *Rothfield v. Manolakos*, *supra*, itself, it will still be open to municipalities to show that a plaintiff was contributorily negligent, and to seek an apportionment of the damages accordingly. It is also clear that once a municipality chooses to implement a policy decision to inspect, it owes a duty to all who might be injured by the negligent exercise of those powers, including builder-owners, to take reasonable care in conducting that inspection. As a result, I must disagree with the findings of the Ontario Court of Appeal in this case. The city owed a duty to the appellant to conduct a reasonable inspection of the renovations to his home.

B. *Standard of Care*

40 As I have stated above, to avoid liability the city must show that its inspectors exercised the standard of care that would be expected of an ordinary, reasonable and prudent inspector in the same circumstances. The measure of what constitutes a reasonable inspection will vary depending on the facts of each case, including the likelihood of a known or foreseeable harm, the gravity of that harm, and the burden or cost which would be incurred to prevent the injury; see, for example, *Ryan v. Victoria*, *supra*, at para. 28. For example, a more thorough inspection may be required once an inspector is put on notice of the possibility that a construction project may be defective. In addition, a municipal inspector may be required to exercise greater care when the work being inspected is integral to the structure of the house and could result in serious harm if it is defective. While in some circumstances a more thorough inspection will be required to meet the standard of care, municipalities will not be held to a standard where they are required to act as insurers for the renovation work. The city was not required to discover every latent defect in the renovations at the appellant's home. It was, however, required to conduct a reasonable inspection in light of all of the circumstances; see, for example, *Rothfield v. Manolakos*, *supra*, at pp. 1268-69.

41 The inspection scheme set out in the 1990 *Building Code Act* delineates the powers that are available to municipal inspectors to discover defects in a construction project. The city can only be held liable for those defects which the municipal inspector could reasonably be expected to have detected and had the power to have remedied.

42 I turn now to the inspection that took place at the appellant's home. In examining whether the inspection was reasonable in the circumstances, we must bear in mind that the determination of whether a defendant has met the standard of care required in the circumstances is a question of fact. While it is open to an appeal court to find that a trial judge applied the wrong standard of care, once it is determined that he or she applied the correct standard, an appeal court can reverse a trial judge's findings with respect to whether that standard was met by the defendant only if it can be established that he or she made some palpable and overriding error which affected the assessment of the facts; see, for example, *Ryan v. Victoria*, *supra*, at para. 57; *Stein v. The Ship "Kathy K"*, [1976] 2 S.C.R. 802, at p. 808.

43 After conducting a thorough examination of the facts in this case, Conant J. concluded that the city's inspection fell short of meeting a reasonable standard in the circumstances. He accepted the appellant's submission that the behaviour of the contractor should have made the inspector wary. The contractor did not apply for the building permit until after the underpinning had been put in. The contractor had ignored the instructions in the permit, which specified that the inspector was to be notified before proceeding with the underpinning. The contractor had also failed to post the permit outside the appellant's home. Mr. Tecson testified that he did not know the contractor and had no basis for relying on him. The trial judge concluded that, given these circumstances, it would have been reasonable to inspect further. It was simply insufficient for the inspector to rely on the contractor's assurances that the work, which was not readily visible, had been completed according to the specifications. Indeed, it has been recognized by this Court that it is to be expected that contractors, in the normal course of events, will fail to observe certain aspects of the building by-laws. It is for this reason that municipalities employ building inspectors; see, for example, *Rothfield v. Manolakos*, *supra*, at p. 1271. It is, therefore, unreasonable for an inspector to conclude that a project has met the standards in the building code simply because the contractor has said so. Such a conclusion is especially unreasonable when the inspector has been put on notice of the contractor's willingness to contravene the instructions in the building permit.

44 Conant J. also found that a more thorough inspection was reasonable in this case because of the nature of the work that was being carried out. He found that the risk of harm was great, requiring a higher standard of care. The construction work consisted of the installation of underpinning, which was to bear the weight of the entire house. It was a major structural element, and a serious defect in its construction could have led to the collapse of the entire house. While the tests conducted by the inspector could help to ascertain the quality of the materials used, they could not help to ascertain whether the dimensions of the underpinning were in accordance with the plan. Given the importance of the underpinning to the safety of the entire house, verification that its construction met the specifications of the plan was necessary.

45 The city argued that the inspector lacked the power to do anything further than the inspection that he conducted. The underpinning had been laid before his arrival and it was impossible to determine visually whether it continued for the full width of the footing. The basement was dug up for the laying of the drains, and only a few inches of the depth of the underpinning were visible because of the piles of dirt from the excavation. The city argued that the powers of the building inspector to uncover work were

limited. Section 9(2) restricted those powers to situations where there was a reason to believe that a part of the building had not been constructed in compliance with the Act and there was a pre-existing order not to cover. At trial, Conant J. accepted that the preconditions to satisfy granting an order pursuant to s. 9(2) of the Act were absent in this case. However, he rejected the argument that this was the only power available to the municipality to remedy the defect.

46 The trial judge found that, pursuant to s. 11(1)(d) of the 1990 Act, the inspector had the power to order the appellant to call in an engineer to saw through the underpinning to determine its width. Furthermore, pursuant to s. 9(1) of the Act, the inspector could have ordered that the basement floor not be laid. He could then have returned after the drains had been installed, when it was not raining, and dug down to determine the depth of the underpinning. The city argues that this places too high a standard on the inspector. He had no reason to believe that the underpinning did not meet the specifications in the plan. His inspection indicated that the work had been done properly. I find no error in the findings of the trial judge in this respect. The inspector reached his conclusion that the depth and the width of the underpinning met the specifications in the plan on the assurance of a contractor who had already shown disregard for the requirements of the building permit, and tests which concluded that the other aspects of the underpinning had met the standard. Given the nature of the work, it was unreasonable to conclude that the width and the depth of the underpinning met the requirements of the building code without actually inspecting that aspect of the work.

47 The trial judge applied the correct principles in determining that the inspector failed to conduct a reasonable inspection in the circumstances. He recognized that in the circumstances, especially in light of the importance of the underpinning to the structural safety of the home, a more vigilant inspection was required. The Act granted the power to the inspector to conduct such an inspection. By failing to exercise those powers to ensure that the underpinning met the specifications in the plan, the inspector failed to meet the standard of care that would have been expected of an ordinary, reasonable and prudent inspector in the circumstances. I therefore agree with Conant J. that the municipality was negligent in conducting the inspection of the renovations on the appellant's home.

C. *The Negligent Owner-Builder*

48 Having found that the city owed a duty to the appellant to conduct a reasonable inspection, and that its inspector failed to conduct a reasonable inspection in the circumstances, I must now examine whether the conduct of the appellant in this case was negligent, absolving the city of some of its liability for its insufficient inspection. The appellant's conduct may even have been such as to justify absolving the city of all liability for its negligence.

49 Mr. Ingles had specified in his contract that Tutkaluk was to apply for a building permit. Tutkaluk told him that the work would be delayed if it had to obtain a building permit before it began. The trial judge found that the appellant knew or should have known what he was doing in agreeing to a delay in obtaining a building permit, and found that he was negligent in allowing the construction to begin without a permit. On the other hand, the trial judge also found that it was impossible to conclude that the appellant and his wife participated in a conscious effort to prevent the building inspector from examining the underpinnings of their home. The Court of Appeal found that the appellant and his wife were "sadly mistaken" in relying on Tutkaluk's advice that it was appropriate to proceed with the underpinning without a permit. It is clear that the appellant was negligent. That negligence may reduce, in part, the city's liability. However, for the city to avail itself of the complete defence described in *Rothfield v. Manolakos*, *supra*, it must show that the appellant's conduct was such as to make him the sole source of his own loss.

50 As I have discussed above, the defence described in *Rothfield v. Manolakos* applies only in the narrowest circumstances. To avail itself of the defence, the municipality must show that the owner-builders knowingly flouted the applicable building regulations or the directives of the building inspector, or that the owner-builders totally failed to acquit themselves of the responsibilities that rested on them, such that the inspector was no longer in a position to take reasonable measures to ensure that the construction was done in accordance with the applicable standards. In delineating the type of conduct which might be considered "flouting" of the building regulations, or a total failure to meet the requirements of the legislative scheme on the part of the owner, it is important to consider the fact that the defence absolves municipalities of all liability. As a result it serves as a complete bar to recovery for certain plaintiffs. The scope of the defence must be consistent with the purposes of a system of tort law, and with tort law principles themselves.

51 The contributory negligence bar, where a plaintiff was denied any means of recovery once he or she was seen to have contributed to his or her own loss, is no longer a part of our system of tort law. It has been replaced by statutory schemes which apportion liability between negligent defendants and contributorily negligent plaintiffs. This Court recently reaffirmed its disapproval of the bar in >*Bow Valley Husky (Bermuda) Ltd. v. Saint John Shipbuilding Ltd.*, [1997] 3 S.C.R. 1210. In the course of determining whether the contributory negligence bar could still apply in maritime law, McLachlin J. states (at para. 94):

The considerations on which the contributory negligence bar was based no longer comport with the modern view of fairness and justice. Tort law no longer accepts the traditional theory underpinning the contributory negligence bar -- that the injured party cannot prove that the tortfeasor "caused" the damage. The contributory negligence bar results in manifest unfairness, particularly where the negligence of the injured party is slight in comparison with the negligence of others. Nor does the contributory negligence bar further the goal of modern tort law of encouraging care and vigilance. So long as an injured party can be shown to be marginally at fault, a tortfeasor's conduct, no matter how egregious, goes unpunished.

In light of this Court's approach to the contributory negligence bar, a municipality cannot avail itself of the defence set out in *Rothfield v. Manolakos*, *supra*, simply because a plaintiff acted negligently. To allow the municipality to do so would amount to a reintroduction of the contributory negligence bar into the sphere of municipal inspection. It would be inconsistent with the modern goal of tort law of encouraging care and vigilance to absolve a municipality of all liability for a negligent inspection simply because its inspectors were contacted late. Municipalities, having made a policy decision to inspect even when a permit is obtained late, would be able to conduct unreasonable inspections, while being assured that there would be no financial sanction for doing so. As I have stated above, the contributory negligence of a plaintiff may still be relevant to the apportionment of liability. In *Bow Valley v. Saint John Shipbuilding*, *supra*, McLachlin J. reduced the plaintiff's recovery by 60 percent due to its negligence. In the case at bar, the liability will also be apportioned in accordance with the appellant's negligence. In the rarest of circumstances, such as those described in *Rothfield v. Manolakos*, a defendant may be absolved of all liability because it is shown that the owner-builder is entirely responsible for the damage and did not rely on the inspection.

52 The concept of "flouting", therefore, must denote conduct which extends far beyond mere negligence on the part of an owner-builder. The word suggests that the owner-builder in fact mocks the inspection scheme. Certainly, an owner-builder who submitted false plans and documents to receive a permit would be mocking the scheme. Similarly, an owner-builder who never contacted an inspector to conduct an inspection would show a lack of respect for the inspection scheme and certainly no reliance on it. However, in this case the appellant did not act in these ways. He certainly acted negligently. The trial judge, however, found that he did not participate in a conscious effort to undermine the building code regime. In my view, such conduct does not amount to a "flouting" of the building code. As a result, I find that the Court of Appeal erred in absolving the city of all liability.

D. *Damages*

53 The appellant contends that this Court does not have the jurisdiction to review the trial judge's award of damages in this case because the respondent city did not apply for leave to cross-appeal pursuant to Rule 29 of the *Rules of the Supreme Court of Canada*, SOR/83-74. The relevant provisions of Rule 29 provide as follows:

29. (1) A respondent who seeks to set aside or vary the whole or any part of the disposition of the judgment appealed from shall apply for leave to cross-appeal within 30 clear days after the service of the application for leave.

. . .

(3) A respondent who seeks to uphold the judgment on a ground or grounds not raised in the reasons for the judgment appealed from may do so in the respondent's factum without applying for leave to cross-appeal, and the appellant may serve and file a factum in reply in accordance with Rule 41.

The appellant argues that since the city's arguments with respect to apportionment, damages, and joint and several liability do not seek to uphold the Court of Appeal judgment on a ground not raised in the reasons for judgment, the city must apply for leave to cross-appeal pursuant to Rule 29(1).

54 The Court of Appeal did not find that the city was negligent in this case, and as such, did not comment upon the apportionment of the damages by the trial judge. In asking this Court to review the trial judge's apportionment of fault in this case, the city is not seeking to set aside or vary any part of the Court of Appeal judgment. In addition, the city is not seeking to uphold the judgment on a ground or grounds not raised in the reasons for judgment. The city is merely responding to the appellant's position that the appellant's negligence is properly considered in the apportionment of fault, and not in the determination of whether a duty of care was owed by the municipality. Therefore, I find that the city's arguments do not fall within Rule 29 and that this Court has the jurisdiction to review the apportionment of fault by the trial judge.

55 The trial judge found that Tutkaluk was 80 percent liable for the damage suffered by the appellant. The city was 20 percent liable for its negligent inspection. He then turned to the appellant's negligence. Having found that the appellant should bear some of the responsibility for his loss, the trial judge reduced the city's liability by 30 percent to account for the appellant's negligence. It appears that the trial judge took this approach to ensure that Tutkaluk would not benefit from the finding of negligence against the appellant, by having his damages reduced in proportion to the appellant's fault. With respect, this initial apportionment is not consistent with the *Negligence Act*, R.S.O. 1990, c. N.1. Sections 1 and 3 of that Act read as follows:

1. Where damages have been caused or contributed to by the fault or neglect of two or more persons, the court shall determine the degree in which each of such persons is at fault or negligent, and, where two or more persons are found at fault or negligent, they are jointly and severally liable to the person suffering loss or damage for such fault or negligence, but as between themselves, in the absence of any contract express or implied, each is liable to make contribution and indemnify each other in the degree in which they are respectively found to be at fault or negligent.

3. In any action for damages that is founded upon the fault or negligence of the defendant if fault or negligence is found on the part of the plaintiff that contributed to the damages, the court shall apportion the damages in proportion to the degree of fault or negligence found against the parties respectively.

When there are two or more tortfeasors, and a plaintiff has also been found negligent, the proper approach to apportionment is to first reduce the extent of the recoverable damages in proportion with the plaintiff's negligence, and then to apportion the remaining damages between the defendants, in accordance with their fault; see, for example, *Fitzgerald v. Lane*, [1988] 2 All E.R. 961 (H.L.); *Bow Valley v. Saint John Shipbuilding*, *supra*; *Colonial Coach Lines Ltd. v. Bennett*, [1968] 1 O.R. 333.

56 In his subsequent addendum, however, the trial judge clarified that his intention was to apportion fault so that the appellant would be 6 percent liable, the city would be 14 percent liable and Tutkaluk would be 80 percent liable. In assessing the damages, he corrected his previous error, and subtracted the portion of the damages that could be attributed to the plaintiff in accordance with his findings of fault.

57 The city has asked this Court to overturn the trial judge's apportionment of fault in this case. It argues that his apportionment is inconsistent with other apportionments in similar situations; see, for example, *Rothfield v. Manolakos*, *supra*, at p. 1278. The apportionment of liability is primarily a matter within the province of the trial judge. Appellate courts should not interfere with the trial judge's apportionment unless there is demonstrable error in the trial judge's appreciation of the facts or applicable legal principles; see *Bow Valley v. Saint John Shipbuilding*, *supra*, at para. 78. While the trial judge applied an unorthodox method of apportionment in his original judgment, his subsequent addendum clearly shows his intention to apportion fault between the plaintiff and the defendants as follows: 6 percent to the appellant; 14 percent to the city; and 80 percent to the contractor. The trial judge was well apprised of all of the facts in the case, and based his final apportionment on these facts. In my view, there is no demonstrable error in the trial judge's appreciation of the facts in this case to justify interfering with his apportionment.

58 The city also argues that it should not be held to be jointly and severally liable with the contractor and that it should be liable only for its portion of the fault. To support this contention, the city relies on authorities from British Columbia that have held that where the plaintiff is contributorily negligent, multiple tortfeasors will only be liable to the extent of their fault; see, for example, *Leischner v. West Kootenay Power & Light Co.* (1986), 24 D.L.R. (4th) 641 (B.C.C.A.). I do not find these authorities to be applicable in this case. The legislation in British Columbia differs significantly from the legislation in Ontario. Section 2(c) of the *Negligence Act*, R.S.B.C. 1979, c. 298, reads as follows:

. . . as between each person who has sustained damage or loss and each other person who is liable to make good the damage or loss, the person sustaining the damage or loss shall be entitled to recover from that other person the percentage of the damage or loss sustained as corresponds to the degree of fault of that other person. [Emphasis added.]

Therefore, it is possible to read the British Columbia legislation as allowing contributorily negligent plaintiffs to recover only the percentage of the damage sustained that corresponds to the degree of fault of each of the individual tortfeasors.

59 The Ontario legislation has been interpreted differently, and joint and several judgments have been awarded to contributorily negligent plaintiffs; see *Menow v. Honsberger Ltd.*, [1970] 1 O.R. 54 (H.C.), aff'd [1971] 1 O.R. 129 (C.A.), aff'd on other grounds, [1974] S.C.R. 239 (*sub nom. Jordan House Ltd. v. Menow*). Similarly, in *Bow Valley v. Saint John Shipbuilding, supra*, this Court ruled that defendants would be jointly and severally liable for a negligent plaintiff's damages in the context of the *Canada Shipping Act*, R.S.C., 1985, c. S-9. The purpose of a regime which imposes joint and several liability on multiple defendants is to ensure that plaintiffs receive actual compensation for their loss. Given the wording of the Ontario *Negligence Act*, I can see no reason to deny this benefit to a plaintiff who contributes to his or her loss. His or her responsibility for the loss is accounted for in the apportionment of fault. There is no reason to account for it again by denying him or her the benefit of a scheme of joint and several liability when the wording of the legislation does not intend it to be so.

60 In light of the foregoing analysis, I would allow the appeal and restore the apportionment of fault by the trial judge. As a result, the damages of $52,520 will be reduced by $3,151.20, representing 6 percent of the damages, to account for the appellant's negligence. I would thus restore the judgment of $49,368.80 against both the city and the contractor. The city is entitled to have judgment for indemnity against the contractor for $42,016.

61 I turn now to the prejudgment interest that was awarded by the trial judge. The trial judge awarded prejudgment interest at the rate of 12.9 percent. The city has asked this Court to review that award to account for the fluctuations in the market interest rates that occurred between the date that the action was commenced and the date of judgment. The *Courts of Justice Act*, R.S.O. 1990, c. C.43, s. 130, grants trial judges the discretion to award prejudgment interest at a different rate than the prescribed interest rate to account for changes in market interest rates. The trial judge did not find that this was an appropriate case to lower the prejudgment interest rate from the one prescribed. He did not find that he was prevented from adjusting the interest rate, but simply chose not to do so. I find no reason to interfere with the trial judge's exercise of his discretion on this matter.

62 I would accordingly allow the appeal, set aside the judgment of the Court of Appeal and restore the decision of the trial judge, with costs throughout.

Appeal allowed with costs.

Solicitor for the appellant: Philip Anisman, Toronto.

Solicitor for the respondent: City Solicitor, Toronto.

Innisfil (Township) v. Shakell

Between
The Corporation of the Township of Innisfil, plaintiff, respondent and appellant by cross-appeal, and
Alexander Shakell, Kenneth Russell Shakell and Glenn Alexander Shakell, defendants, appellants and respondents by cross-appeal

[1982] O.J. No. 100

Ontario Supreme Court - Court of Appeal
Toronto, Ontario
Howland C.J.O., Blair and Goodman JJ.A.
Heard: April 22 & 23, 1982.
Judgment: June 24, 1982.
(19 pp.)

Counsel:
Michael M. Miller, for the appellants, respondents by cross-appeal.

E. Marshall Green, for the respondent, appellant by cross-appeal.

The judgment of the Court was delivered by

[para1] GOODMAN J.A.:-- The appellants appeal from a judgment of Carruthers J., dated February 2, 1981, whereby a mandatory injunction was granted ordering each of the appellants to remove the mobile home which each of them occupied and which were situated on lands in the Township of Innisfil owned by the appellant Alexander Shakell. It further ordered that Alexander Shakell have removed from the lands all other mobile homes which had been moved onto them on or after August 14, 1978. It then provided that the removal of the mobile homes was to be effective "on or before the 15th day of May, 1981, unless on or before the 15th day of April, 1981, a permit as provided for by the provisions of the Building Code Act has been issued with respect to any such mobile home".

[para2] The appellants seek an order setting aside the mandatory injunction.

[para3] The respondent (herein referred to as the Township) cross-appealed requesting that the judgment be varied to order that the appellants be required to remove or cause to be removed all mobile homes now in place on the subject lands regardless of the date on which they have been placed thereon.

[para4] The admitted facts which gave rise to the action are as follows. In 1946, Alexander Shakell became the registered owner of 49 acres of land in the Township of Innisfil. From 1946 to 1960 gravel was removed from the property at various locations. From 1960 to 1971 the lands were used as a source of gravel, a wrecking yard, a repair garage, and a motor vehicle race track. No dispute arises from these uses of the land.

[para5] In 1972, Alexander Shakell began to use the lands as a "travel trailer park" for seasonal temporary use. This use was carried on in 1973. In 1972, Alexander Shakell, herein referred to as Shakell Sr., had moved onto the property a mobile home which was used by him as a year around permanent residence and for purposes accessory to the operation of the "seasonal trailer park".

[para6] Approximately one year later, his two sons, the appellants Kenneth Russell Shakell and Glenn Alexander Shakell, each moved onto the lands a mobile home used for his personal residence and purposes accessory to the operation of the trailer park. In 1974, Shakell Sr. permitted to be placed on the lands mobile homes for use as year around premises by the owners thereof who placed the homes there pursuant to land rental leases entered into by them with him.

[para7] In 1975, the Township, as a result of a letter received by it from the Ministry of Industry and Tourism requesting from it a "letter of compliance", first became aware of the fact that Shakell Sr. was operating a trailer park on his lands. Counsel for the Township at trial and on this appeal conceded that the appellants made use of their

individual mobile homes for purposes which were "accessory" to the operation of the trailer park. By letter dated October 24, 1975, the Township had advised Shakell Sr. that "their present use may continue as long as the trailer camp is in operation in accordance with existing By-laws".

[para8] In the year 1975, Shakell Sr. applied to the Township Planning Board and to Council to re-zone his lands to permit the placing of permanent mobile homes thereon. The applications were refused. It was as a result of these applications that the Township first became aware that Alexander Shakell had permitted the placement of permanent mobile homes on his lands. By the end of 1974, five such permanent mobile homes had been placed on the property in addition to the three permanent mobile homes placed there by the appellants for their personal use.

[para9] An agreement was reached in 1975 between the Township Planning Director and Shakell Sr. whereby a "letter of compliance" would be given to the Ministry of Industry and Tourism on condition that Shakell Sr. would phase out all of the permanent mobile homes except those being used by him and his two sons. The "letter of compliance" was forwarded to the Ministry and Shakell Sr. received from the Ministry of Industry and Tourism a licence to operate "the tourist establishment known as Lonesome Pine Trailer Court" in the year 1975. He received further licences in the years 1976, 1977 and 1978. No licence was required thereafter. Shakell Sr. continued to lease lands, generally on a month to month basis, to persons who brought on to his property mobile homes used by them as year around residences. At the date of trial of the action in December, 1980 there were 21 such mobile homes on the property. These homes are connected to water, hydro-electric and sewage services provided by Shakell Sr.

[para10] On September 13, 1977, the Township commenced this action against the appellants and twenty other named defendants who allegedly had brought on to the property mobile homes which they used as year around residences. At the outset of the trial and on the consent of all parties, the action was discontinued as against all defendants other than the appellants. The relief claimed by the Township was an order requiring the defendants to remove all mobile homes situated on the lands belonging to Shakell Sr.

[para11] As stated by the learned trial judge the Township's position was that use of mobile homes situated on the lands as permanent residences constituted an unlawful use of the lands.

[para12] Counsel for the appellant advised the Court that it had discontinued the action against the lessees-owners because of the numerous and continuing changes in occupancy and ownership of the various permanent mobile homes which were brought on to the lands prior to the commencement of the action and the removal of some and placement of others between the date of institution of the action and the trial thereof.

[para13] In order to determine the outcome of the appeal and cross-appeal, it is necessary to consider the provincial legislation and municipal by-laws relied upon by the Township in its pleadings and at trial.

[para14] The Township had adopted an Official Plan dated 1968 and approved, with modifications by the Minister of Municipal Affairs, in 1969. The Official Plan designated the subject lands as "rural".

[para15] Section V of the Official Plan entitled Detailed Development Policies contained a definition of "rural" as it pertained to use of lands so designated on the map schedule and the definition included use of such land for "recreational uses".

[para16] Counsel for the Township conceded that an automobile trailer camp constituted a recreational use and fell within the permissible uses contemplated under the definition of "rural" in the Official Plan.

[para17] At the time that the Official Plan was approved, there was in existence Township of Innisfil By-law A-30 which was passed on May 10, 1956 and approved by the Ontario Municipal Board in the month of August, 1956. The by-law was amended by By-law A-35 of the same year. That by-law was

entitled "A By-law to regulate the use of land and the Character, Location and Use of Buildings and Structures".

[para18] The approval of this by-law preceded the adoption of the Official Plan by approximately 12 years.

[para19] Although the Township of Innisfil relied upon this by-law as a zoning by-law, in my opinion it cannot be deemed to be such. Section 3 of the bylaw which is headed "Scope and Effect" reads as follows:

> The provisions of this by-law for purposes of interpretation and application shall be held to be the minimum requirements adopted for the protection of the health, convenience, safety and general welfare of the public. No land shall be used and no building shall be erected or used except in conformity with the provisions of this by-law.

[para20] Section 4 of the by-law purported to classify the use of lands and provide for erection and use of buildings within the area under use classifications as follows: (a) residential, (b) business, (c) industrial, (d) agricultural and (e) forestry and mining. Other sections defined the various uses and set forth numerous provisions governing the various uses such as lot frontages, side yard and set-back requirements, lot area coverage and sanitary accommodation. No provision, however, was made in the by-law setting forth, by metes and bounds or by reference to a map or otherwise, those particular areas which were to be restricted in use to any one or more of the classifications referred to above.

[para21] This Court had occasion to deal with this by-law in the case of The Corporation of the Township of Innisfil v. Pennell (unreported reasons, released June 2, 1980). At p. 3 of those reasons Blair J.A. said, "Essentially, by-law A-30, as amended, is a building by-law prescribing standards for construction and location on lots of different types of buildings". I agree with that statement with the addition that it may also be considered a land use by-law. It is not, however, a zoning by-law as it did not purport in any way to divide the Township into zones restricting the uses of the lands within such zones.

[para22] In the present case, I agree with the finding of the learned trial judge that a "mobile home" falls within the definition of an "automobile trailer" as defined in the by-law and accordingly that the occupation of a mobile home as a permanent residence constitutes a residential use as defined in section 6 of the by-law.

[para23] Section 8 of the by-law sets forth "Provisions governing tourist accommodation". It makes certain provisions for lot areas, side-yards, and distances from the highway of lands used in connection with automobile trailers inter alia, falling within the classification of tourist accommodation. Paragraph (iv) of sub-section (d) of Section 8 provides:

> No automobile trailer shall be used for human habitation in this municipality for a period of more than sixty days in any year; unless by special permit from Bldg. Inspector for a special purpose. (Emphasis is mine)

[para24] As of the date of the passing of By-law A-30 as amended by By-law A-35, the authority of a municipality to pass by-laws governing prohibition of the use of automobile trailers as living accommodation within a municipality are to be found in the Municipal Act, R.S.O. 1950, c. 243 s. 388(1) as amended by S.O. 1952, c. 63 s. 16(3) which amended s. 388(1) by adding thereto ss. 91a and further amended by 1955, c. 48 s. 39 by adding clause (d) so that the relevant parts of s. 388(1) 91a then read:

> 388(1) By-laws may be passed by the councils of local municipalities:
>
> ...
>
> 91a For prohibiting the use, and for prohibiting the owner or lessee of any trailer from permitting the use, of any trailer for the living, sleeping or eating accommodation of persons, within the municipality or one or more defined areas thereof, for more than such number of days, not less than sixty, as the by-law provides, in

any period of ten consecutive months.

(a) In this paragraph, "trailer" means any vehicle so constructed that it is suitable for being attached to a motor vehicle for the purpose of being drawn or propelled by the motor vehicle, and capable of being used for the living, sleeping or eating accommodation of persons, notwithstanding that such vehicle is jacked-up or that its running-gear is removed.

(b) A by-law passed under this paragraph may be made to apply to any trailer whether or not such trailer was used for the living, sleeping or eating accommodation of persons before the by-law was passed.

(d) For the purposes of this paragraph, a trailer shall be deemed to be in use on every day, it is located in the municipality or in the defined area or areas, as the case may be, but this clause does not apply where the trailer is located in the municipality or the defined area or areas only for the purpose of sale or storage. (Emphasis is mine)

[para25] It can readily be seen that By-law A-30 as amended by By-law A-35, in prohibiting the use of automobile trailers for use for human habitation for a period of more than 60 days in one year imposed a more severe limitation on such use than the prohibition of use for such purpose for a period of more than 60 days in any period of 10 consecutive months as provided in ss. 91a. It is clear that the Township did not have the power to enact s. 8(d)(iv). and that particular clause is clearly invalid. Taking the position of the Township at its highest, namely, that the remainder of the by-law has not been invalidated thereby, there is nothing in the remainder of the by-law, standing alone, to prevent the use of the automobile trailers or mobile homes for permanent residences. It should be noted that the above statutory provisions were carried forward in the Municipal Act, R.S.O. 1970, c. 284 as s. 354(1)86 and later repealed by S.O. 1976, c. 69 s. 10(6).

[para26] The Township argued, however, that the by-law should be read in conjunction with the Official Plan of the Township approved by the Minister of Municipal Affairs in 1969. It was the Township's position that By-law A-30, taken alone or when read in conjunction with the Official Plan had the effect of "freezing" the uses then in existence for the lands unless used in conformity with the development policies set forth in the Official Plan. In particular, the Township relied on Section 17 of By-law A-30 which contained certain provisions with respect to change in the purpose for which lots or buildings are used, severance of portions of lots and construction of new buildings or additions to existing buildings on lots.

[para27] For the reasons given by him, I agree with the learned trial judge that, "Try as I might, I cannot conclude from the wording of the by-law that it can be looked at as a zoning by-law of general application so as to freeze or hold the use being made of the lands in question at the time of the enactment of the by-law." He then concluded that since a mobile home fell within the definition of an "automobile trailer", the appellants' "occupation of the mobile homes as permanent residences is a residential use permitted by By-law A-30."

[para28] Nor can I find any ground upon which to hold that the Official Plan was intended to implement By-law A-30 or that By-law A-30 can be interpreted as implementing the development policies contained in the Official Plan. Section V of the Official Plan, under the heading Detailed Development Policies, reads as follows:

This Section should be read in conjunction with Map Schedule I which shows the land use proposals, in a semi-diagrammatic form. This method of presentation of Map Schedule I is used to illustrate the overall land use policy of the Township without defining the specific boundaries of the various land use classifications. A more detailed definition of boundaries will be

established by the implementing Zoning By-law.

1) Rural

Definition: "Rural" shall mean that the predominant use of the land so designated on Map Schedule I shall be for activities connected with agriculture, such as: forestry; reforestation; conservation of soil, water or wildlife; market or nursery gardening; apiaries; the raising of fur-bearing animals; kennels; stables or veterinary establishments. Churches, schools, hospitals, institutions, cemeteries, country clubs, parks, recreational uses or uses connected with government departments, airports, railways or public utilities shall be permitted. A dwelling as an accessory use to any of the above uses shall be permitted.

Establishments for the repair or sale of agricultural implements, including the sale of fuel and lubricants for agricultural equipment, shall be permitted. (Emphasis is mine)

[para29] It is clear that it was intended that the development policies were to be implemented by a by-law to be passed in the future not by one passed 12 years before. Indeed, the evidence indicates that the Official Plan contemplated a "Rural Zone" whereas By-law A-30 does not refer to a rural zone or a rural use.

[para30] The Planning Act, R.S.O. 1970, c. 349 provides by section 20 thereof:

A by-law that conforms with an official plan shall be deemed to implement the official plan whether the by-law is passed before or after the official plan is approved.

This section was in force at the time of the approval by the Minister of the 1969 official plan. In my view, By-law A-30 cannot be said to conform to the Official Plan and accordingly the provisions of s. 20 of the Act are of no assistance to the Township's position.

[para31] It is common ground that the Township did in fact pass a restricted area zoning By-law 74-5, at some time in the year 1975 and gave third reading to a new restricted area zoning By-law 13-78 on February 22, 1978. A new Official Plan was adopted by the Township in 1976. At the time of trial it had not received the approval of the Minister. Neither one of these by-laws have received the approval of the Ontario Municipal Board. It is clear that under these by-laws the lands of Shakell Sr. would be included in an agricultural zone and that a dwelling could only be erected thereon for purposes accessory to any permitted use. I accept, for the purpose of these reasons, that the provisions of these by-laws would not have permitted the erection of mobile homes on his lands for the purpose of permanent residences except as a use accessory to carrying on a tourist trailer park business. It was conceded by the Township that these by-laws were not in force at the time any of the permanent mobile homes were brought on to the lands of Shakell Sr. The Township submitted, however, that they expressed a clear intention of the municipality to re-zone and accordingly upon application of a person for a permit to erect a building which would contravene the provisions of the by-law, the municipality would have been justified in refusing such a permit. See Ottawa v. Boyd Builders Ltd. (1965), S.C.R. 408; Campeau Corporation v. Township of Gloucester et al. (1979), 22 O.R. (2d) 652.

[para32] It was the contention of the Township that a building permit was in fact required for the placing of the mobile homes on his property for use as permanent residences, and that if he had applied for such permits, the Township would have refused to grant them. In fact no such applications were made by any of the appellants or other persons who brought such homes onto the lands.

[para33] It should be noted that the Township, in its statement of claim, made no reference to the fact that the appellants had not applied for or received building permits for the mobile homes used as permanent residences. It was only at the trial that the Township made reference to the Building Code Act, 1974 S.O. c. 74. This Act was proclaimed in force on December 31, 1975. It provided by s. 5(1) thereof as follows:

> 5.-(1) No person shall construct or demolish a building in a municipality unless a permit therefor has been issued by the chief official.

[para34] It was held in Re Chief Building Official for the City of Toronto and Manolan Enterprises Ltd. et al. (1978), 22 O.R. (2d) 60 that the wording of the section was not sufficiently broad to make it an offence for an owner to permit the construction or alteration of a building by his tenant without a permit. Subsection (1) was repealed and the following substituted 1978, c. 40, s. 2(1) proclaimed in force August 14, 1978:

> (1) No person shall construct or demolish or cause to be constructed or demolished a building in a municipality unless a permit has been issued therefor by the chief official.

[para35] The Township, at trial and in its respondent's statement and statement as appellant by cross-appeal, relied solely on the Building Code Act, 1974 and amendments thereto for its position that the mobile homes in question had been unlawfully erected on the lands by reason of the failure of Shakell Sr. to obtain the necessary building permits.

[para36] Argument was addressed to the Court on the questions whether a "mobile home" is a building within the meaning of s. 5(1) of the Building Code Act, 1974 and whether the placing of the mobile homes on the lands in the manner described in the evidence and shown in the photographs filed as exhibits fall within the meaning of the word "construct" as used in that subsection. The trial judge found for the Township on both grounds, namely that the mobile homes were buildings constructed within the meaning of the subsection and accordingly building permits were required. He found, accordingly, that those persons who brought mobile homes onto the lands on or after December 31, 1975 were in breach of the Act and that with respect to those mobile homes brought onto the lands after August 14, 1978, Shakell Sr. was in breach of the Act for having caused the buildings to be constructed without having obtained building permits before allowing the homes to be placed on his property.

[para37] Taking the findings of the learned trial judge at their best in so far as the Township is concerned and thus assuming, without deciding, that he was correct in his interpretation of the words "building" and "construct", the Township is nevertheless in an untenable position. The Township concedes that the three mobile homes owned by the appellants and placed on the lands of Shakell Sr. in the years 1972 and 1973 were being used for purposes accessory to a lawful use and accordingly did not infringe any by-law of the Township. In my view, even without such concession, the use of such mobile homes for permanent residences was not prohibited by the valid provisions of any by-law of the Township and there was no evidence indicating that any building permit was required in those years to place them on the lands.

[para38] In granting a mandatory injunction ordering the removal of these three mobile homes by the appellant, the learned trial judge appeared to apply the provisions of s. 25(1) of the Building Code Act, 1974 (now R.S.O. 1980, c. 51

s. 26(1)) which reads as follows:

> 25.-(1) Where it appears to a chief official that any person does not comply with any provision of this Act, the regulations or an order made under this Act, notwithstanding the imposition of any penalty in respect of such non-compliance and in addition to any other rights he may have, the chief official may apply to a judge of the High Court for an order directing such person to comply with such provision, and upon the application, the judge may make such order or such other order as the judge thinks fit.

This Act was not in force at the time these three mobile homes were placed on the property. The appellants could not have been guilty of noncompliance with the provisions of the Act. Accordingly, no order could be made pursuant to s. 25(1) and, in my view, there were no other grounds upon which a mandatory injunction could be granted with respect to these mobile

homes.

[para39] In so far as permanent mobile homes placed on the lands in the years 1974 and 1975 are concerned, there is no evidence that any such homes were placed on the lands by the appellants. In any event, there is no evidence that a building permit was required for such homes. As previously noted, the Act was not proclaimed in force until December 31, 1975. No order was made with respect to these homes nor was there any grounds upon which an order for their removal could be made.

[para40] In so far as permanent mobile homes placed on the lands during the period December 31, 1975 to August 14, 1978, are concerned, once again there is no evidence that any such homes were placed there or were owned by Shakell Sr. Under the provisions of the Act as it read during this time period there was no obligation upon him as landlord to obtain a building permit and he could not therefore be found to have not complied with the provisions of the Act. No order was made therefore against him for the removal of these homes nor was there any grounds for the making of such an order. Although the Township Council had given third readings to by-laws which would have prevented the use of the lands in question for permanent mobile homes, if Municipal Board approval had been obtained of such by-laws, in the circumstances of the lack of such approval, they were ineffective for such purpose. The only persons who might be said to be in breach of the Building Code Act, 1974 during this time period were the tenant-owners who by the time of trial were no longer parties to the action. In my opinion, the Court should not and could not make an order directly affecting the rights of persons not parties to the action, based on alleged violations of the law on their part.

[para41] In so far as those mobile homes placed on the lands after August 14, 1978 are concerned, it need only be noted that the writ of summons in this action was issued on September 13, 1977. It is a well-established principle of law that a plaintiff cannot claim beyond what were his rights at the teste of the writ. The cause of action must be in existence at the date of the institution of the action. Subsequent events may be evidence of the state of affairs at the teste of the writ, but can themselves give no cause of action: Cornish v. Boles (1914), 19 D.L.R. 447; United Cigar Stores Ltd. v. Buller and Hughes, [1930-31] 66 O.L.R. 593; Blasco v. Blasco (1971), 2 R.F.L. 79. The Township, in its amended statement of claim, claimed "an order that the Defendants forthwith remove the mobile homes situated upon the subject lands". This claim can only relate to such homes as were on the lands on the date of the issue of the writ and not to homes placed thereon after that date. It might have been otherwise if the Township had claimed injunctive relief by way of a restraining order. The judgment below cannot be permitted to stand with respect to these mobile homes.

[para42] Accordingly, for the above reasons, the appeal is allowed with costs and the cross-appeal is dismissed with costs. The judgment below is set aside and the action is dismissed with costs.

HOWLAND C.J.O.
BLAIR J.A.
GOODMAN J.A.

Re **J. & R. Rite Holdings (Oshawa)**, Inc. and City of Oshawa

(Ont. H.C.J.)

64 O.R. (2d) 471

ONTARIO
Supreme Court of Ontario
Lovekin D.C.J. (L.J.S.C.).
May 18, 1988.

APPLICATION for an order directing the issuance of a building permit.

David Sims, for applicant.

Robert M. Holland, for respondent.

LOVEKIN D.C.J.:-- This is an application by J. & R. Rite Holdings (Oshawa), Inc. for a building permit to erect a rental storage unit. These units are small but separate units rented by persons living in apartments or such accommodation to store various items.

The chief building officer refused to issue the permit. Admittedly, if the City of Oshawa zoning by-law governed, the permit should issue.

The building official in refusing the permit cited s. 27(1) of the Planning Act, 1983, S.O. 1983, c. 1. That section reads as follows:

> 27(1) When the Minister has approved an official plan adopted by a county or by a regional, metropolitan or district municipality,
>
> (a) every official plan; and
>
> (b) every zoning by-law passed under section 34 of this Act or a predecessor thereof,
>
> that is then in effect in the area affected by the county, regional, metropolitan or district plan shall be amended to conform therewith.

If that section is read as the defendant chief building officer and the City of Oshawa read it, traditional planning nomenclature has been reversed. Historically an official plan was an over-all general guideline and the operative legislation was the applicable and specific zoning by-law. To older lawyers who remember the official plan as an idealistic over-all concept, this appears nonsensical and completely topsy-turvy. Historically the official plan was not cast in stone. Two documents were in existence in one municipality and the operative legislation was the zoning by-law. Regional government and the two-tier system of municipal government has apparently changed all that. The regional official plan is the definitive and directing document. To ensure uniformity the local zoning by-law that spells out particulars must conform to the superior document, the regional official plan. The scope of the local zoning by-law has been seriously limited. In this connection we refer to Campeau Corp. v. Town of Gloucester (1978), 21 O.R. (2d) 4, 89 D.L.R. (3d) 135, 2 M.P.L.R. 290 (H.C.J.); affirmed on this point, 22 O.R. (2d) 652, 96 D.L.R. (3d) 320, 8 M.P.L.R. 147 (C.A.). In this case, Mr. Justice R.E. Holland stated at p. 9 O.R., p. 140 D.L.R.:

> In my view, the distinguishing feature of this case is that the official plan in question is the official plan of the regional municipality, and the provisions of s. 68(7) of the Regional Municipality of Ottawa-Carlton Act, which requires the amendment forthwith of By-law 26 of 1960 of the township to conform with the official plan ... There is a statutory obligation imposed upon the municipality to amend its by-laws and in the interim the municipality should refuse any application for a building permit, even though such application complies with its by-law if the by-law does not conform to the official plan of the regional municipality.

A similar piece of legislation governs the Regional Municipality of Durham: refer Official Plan -- Region of Durham (effective March 17, 1978).

16.6.1 Where this Plan or any part thereof takes effect, every zoning by-law then in effect in the planning area affected thereby shall be amended forthwith by the area municipalities to conform with this Plan pursuant to The Regional Municipality of Durham Act.

There is no real theoretical or practical problem in the concept that there must be a harmonious and compatible relationship between the regional official plan and any and all local zoning by-laws. Many of the problems that have arisen and the specific problem raised here are problems arising from interim situations. It may well be that the ideal working situation would involve closer team-work between regional and local authorities so that all amendments to the regional official plan would be announced and come into force simultaneously with suitable amendments being made to the local zoning by-laws. The longer a conflict is allowed to remain between the local zoning by-laws and the regional official plan the more difficult it is for solicitors to properly advise their clients and for the public to enjoy that sense of finality and a known position that is so necessary in the conduct of municipal affairs generally and planning matters in particular. Unfortunately we do not live in a perfect world and practical problems intervene to frustrate such an idyllic situation.

The real question at issue then may be phrased as follows:

Where there is a conflict between the official plan and a local zoning by-law in the two-stage form of local government as set up in Ontario as regional government, does the alteration of the regional official plan totally invalidate a local zoning by-law automatically or does the change in the official plan simply put the public on notice that the local land uses set out in the local zoning by-law will soon be changed? During such an interim period is the chief building officer empowered by law to decline to issue building permits based on the existing land use as set out in the local zoning by-law and justify his position by relying on the regional official plan? Our answer is: he may.

Is there any reasonable or measurable time-limit set for the resolution of the problem or could a situation where the regional official plan and the local zoning by-law were totally incompatible continue unresolved indefinitely?

The following authorities are of some interest: (1) Campeau Corp. v. Township of Gloucester, supra; (2) Re Woodglen & Co. Ltd. and City of North York (1983), 43 O.R. (2d) 289, 23 M.P.L.R. 18; affirmed 47 O.R. (2d) 614, 12 D.L.R. (4th) 146, 26 M.P.L.R. 40 (Div. Ct.); (3) Csele v. Town of Pelham (1985), 29 M.P.L.R. 188 -- with respect we decline to follow this case.

We find the time element here is not critical. In consequence, the actions of the respondent herein, based on this aspect of the case, appear to be proper.

There is another aspect of this case that we regard as critical which has not been extensively argued before us. While we have found that vis-a-vis the official plan and the local zoning by-law conflict the official plan governs, does that mean the applicant is not entitled to a building permit? We think not.

The city and the chief building officer apparently take the position that this is a form of warehousing and it should be located in an industrial zone and not in a special commercial uses area where the applicant proposes to construct it.

We cannot agree.

Is the proposed building property described in "warehousing" terms? While we do not have all the specifics of the planned structure, the particular building proposed apparently supplies a small cinder block storage space with its own door permitting persons living in apartments and other limited housing units to store seasonal clothing, extra pictures and all such domestic articles in an area where they are readily accessible for limited use on various occasions. It is the kind of storage area that would have been found in the basement of every private home a few years ago. It is not in our mind properly described as a warehousing facility but rather as a storage facility. The locker that one has for one's own use at a health

club is not a "warehouse" facility. The locker space one has in a high school is not a "warehouse". The basement "locker" made available in a large apartment building to a tenant separate from his living quarters is a storage locker, not a "warehouse" and could quite easily be of the same total cubic content.

It is common to have various sized "lockers" available to the public at bus stations and airports. Would anyone seriously contend that the bus company or the airlines were operating a "warehouse"?

There are certain characteristics that we believe separate warehousing facilities and storage facilities:

(A) Warehousing facilities:

(1) are governed by statutory conditions;

(2) cater to large volume storage;

(3) are open in business hours only and goods must be "requisitioned" and picked up at certain times at a certain place and in a certain manner.

(B) Locker facilities:

(1) small storage areas for small amounts of currently used articles.

(2) access is gained through a single locked door by the renter himself at any hour;

(3) the articles stored are used with high frequency rate and their being available at all hours is perhaps the most singular characteristic.

There may well be other factors. It may well be the real issue is a matter of scale and design. The issue as to whether a permit should issue to the applicant on the basis that what he proposes to erect is a proper land use, bearing in mind the precise zoning requirements in the proposed location, was not the real issue before the court. The wider question as to whether the applicant should have a permit for such a building was.

While we are of the opinion that the applicant fails vis-a-vis his official plan zoning argument, it would appear there are other grounds the applicant might pursue.

We have answered the specific question; we have commented on the general question. Our remarks on the general question are of course obiter but in dealing with the general question, "may the applicant erect the proposed structure?" we hope we may have cast a light on the problem which may assist the parties in settling their problem without further protracted and costly litigation.

The application as cast is dismissed.

There will be no order as to costs.

Application dismissed.

Jessie's Centre Non-Profit Home Corp. v. Bottan

Between
Jessie's Centre Non-Profit Home Corporation, Plaintiff, and
John Bottan and Sandra May Bottan, Defendants

Ontario Judgments: [1991] O.J. No. 1699
Action No. 91-CQ-5134

Ontario Court of Justice - General Division
Toronto, Ontario
O'Driscoll J.
Heard: October 2, 1991
Judgment: October 4, 1991

Ronald D. Manes and Michael Silver, for the Plaintiff.
Douglas Johnson, for the Defendants.

O'DRISCOLL J.:--

I. Type of Proceedings

The plaintiff seeks:

"1. An order requiring the defendants to dismantle the scaffolding and all materials erected on the defendants' property which are preventing access to the unfinished wall of the plaintiff's building.

2. An order requiring the defendants to keep the access clear to the unfinished wall of the plaintiff's building during the period of its completion.

3. An order restraining the defendants from any contact, interaction or interference with the plaintiff or its representatives, or with workmen completing the building at the plaintiff's premises.

4. Costs of this motion."

The grounds set out in the Notice of Motion are:

"1. The plaintiff has relocated its Centre to 205 Parliament Street, Toronto, Ontario and has erected a new building on the premises. The southern wall of the new building requires approximately 10 working days (weather permitting) to complete the insulation and stucco. Only approximately two hours of time must actually be spent on the defendants' property to complete the wall. No occupancy permit can be issued for the building and the plaintiff is unable to move in its operations until this exterior wall is completed.

2. In order for the workman to have access to the wall, a swing stage (like a window washing platform) is lowered which overhangs the airspace above the defendants' property. The defendants have erected a scaffold from their premises which rises to a level below the swing stage thereby impeding the descent of the swing stage and making it impossible for the south wall to be completed.

3. The defendants, and in particular John Bottan, have exhibited potentially dangerous behaviour and have done everything in their power to thwart the completion of the plaintiff's new building.

4. The defendants are in violation of City of Toronto by-laws and the plaintiff has undertaken to take all protective measures towards the defendants' premises and to pay any damages arising from the completion of the south wall.

5. The plaintiff performs a valuable public service and is suffering mounting damages daily due its inability to move into its new building. The building in its unfinished state is a target for vandalism and a safety hazard to the community."

II. The Parties

1. Jessie's is a drop-in, multi purpose daytime resource centre for pregnant or parenting teenagers. Jessie's is a nonprofit without share capital corporation. 60% of Jessie's funding is provided by the Ministry of Community and Social Services, 10% comes from the United Way and 30% is raised from the private sector.

2. Because of expansion and its lease situation, Jessie's outgrew its original location at 154 Bathurst Street, Toronto. In 1986, property was purchased at 205 Parliament St., Toronto for a new residence.

3. Sandra May Bottan owns the property (191 Parliament St) immediately to the south of 205 Parliament St. John Bottan, her husband, operates the Rear View Mirror Restaurant and an auto body shop on the land at 191 Parliament St.

4. Ellis-Don Design Build Inc. (Ellis-Don) is the plaintiff's contractor; Ellis-Don is building on a non-profit basis; so too, the architect, A.J. Diamond, Donald Schmitt and Company.

5. It appears that John Bottan has been hostile to the plaintiff since "day one". That attitude was displayed by Mr. Bottan in the following ways:

(a) dumping garbage onto the plaintiff's vacant lot and necessitating the plaintiff hiring people to clean up the garbage left by Mr. Bottan.

(b) refusing to allow a pre-construction survey on his property so that the contractor and the plaintiff would have a "before and after record".

(c) aggressive behaviour towards Ellis-Don's employee, Vic Croutch.

(d) his letter of February 12, 1991 to Ellis-Don.

(e) his refusal to reply to Ellis-Don's offer of indemnification in a letter dated February 15, 1991.

(f) his threat in the spring of 1991 to erect a ham radio antenna on his rooftop to obstruct the swing of Ellis-Don's crane boom. In fact, sections of the antenna were assembled and later removed.

(g) On June 25, 1991, he turned two hoses onto 2 workmen on site who were employed by a sub-contractor; those employees were on a swing stage attempting to complete the external wall of the premises. The police were called and charges were laid against John Bottan by one of the sub-contractor's employees. The motion record has photographs that record the event with the hoses.

(h) On July 8, 1991, John Bottan pushed an Ellis-Don employee off a 14 foot ladder. The police were called and a charge was laid against John Bottan. Fortunately, there were no injuries.

The on site representative of Ellis-Don, James Stinson describes the events this way in his affidavit:

> Mr. Bottan first erected his scaffolding from his rooftop patio on June 18, 1991. This scaffolding was erected on the westerly half of the south wall of the building requiring completion. He also stuck metal poles vertically from the erected scaffolding in order to prevent any movement of the swing stage.
>
> On June 25, 1991 Ellis-Don brought another swing stage to complete the easterly half of the south wall of the building and dropped the swing stage down the south wall. Mr. Bottan turned on a water hose and sprayed workman completing the easterly half of the wall for over two hours. Mr. Bottan's son also participated by hosing the workers. Notwithstanding the hosing, the workmen remained at the site completing their task until the police arrived and stopped Mr. Bottan from hosing them. However, as the swing stage ascended the easterly side of the wall, Mr. Bottan built up scaffolding to prevent any further movement downward of the swing stage. I am advised by Lawrence Noocho, a worker on

> the swing stage during the hosing, and verily believe that he has charged Mr. Bottan with assault in respect of the hosing. I am advised by Lawrence Noocho and verily believe that on June 13, 1991 Mr. Bottan had threatened him with violence. I took pictures of Mr. Bottan and his son hosing the workers and have attached them as an exhibit hereto.

(i) On the weekend of August 17, 1991, John Bottan again turned a water hose on the south wall of the plaintiff's building.

(j) On August 22, 1991, John Bottan once again hosed the south wall of the plaintiff's building.

(k) On December 17, 1990, John Bottan threatened to use his shotgun on Ellis-Don personnel "if any more debris fell onto his patio".

III. The Problem Faced by the Plaintiff and its contractors and sub-contractors.

Nancy Elaine Dodington, an employee of the plaintiff since 1982, in her affidavit, sworn September 24, 1991, sums it up this way:

> 20. The construction of the building's exterior walls are very close to the lot lines. As a result, it has been necessary on occasion to have the contractor's swing stage hang over the side of the building to install the exterior insulation and stucco. The neighbours to the north, the Cammisa's, have agreed to allow the contractor to utilize their air space. Mr. Bottan has not. On the south side of Jessie's building the Defendants have a two story building. Mr. Bottan refuses to allow Jessie's to use the air space above his premises to complete the exterior of its building, and accordingly, on June 25, 1991 erected the scaffolding from his rooftop patio blocking access to this unfinished south wall.
>
> The scaffolding impedes the descending of the swing stage upon which the workmen place themselves in order to complete the insulation and siding of the building's south wall. The scaffolding erected is several sections high with lengthy bars attached at the top and directed upwards towards Jessie's building.
>
> 21. I verily believe that this scaffolding serves no other purpose than to obstruct access to Jessie's south wall and thereby to prevent the lowering of the swing stage and the wall's completion. Several pictures have been taken and illustrate the problem.

IV. Negotiations, requests and demands

1. On July 3, 1991, a formal demand was sent by the plaintiff's solicitor to the then solicitor for John Bottan requiring that the scaffolding be taken down. A copy of s. 13(1) of the City of Toronto by-law 300-68 was enclosed; that by-law allows entry upon adjoining land to the extent necessary for the purpose of improvements or repairs.

John Bottan's then solicitor replied on July 3, 1991 and denied that the scaffold was erected as an obstruction to workers and also alleged that the by-law was ultra vires/inoperative as it breached the Building Code Act, R.S.O. 1980, c. 51 and also alleged that the by-law did not apply to the construction of new buildings.

2. On July 8, 1991, the sub-contractor wrote to Ellis-Don and advised that they would not do the work on the south wall of 265 Parliament St. because of Bottan's scaffolding; it prevented access to the area requiring the work and it endangered the lives and safety of the workers. The sub-contractor refused to attempt to proceed in the absence of a court order.

3. Paragraph 27 of Ms. Dodington's affidavit states:

> Jessie's has engaged in a lengthy but unfruitful process and negotiation with Mr. Bottan. In the spring of 1991, Ellis-Don representatives, Paul

> Richer and Vic Croutch, met with Mr. Bottan and his lawyer to discuss the situation. I am advised by Mr. Richer and Mr. Croutch and verily believe that Mr. Bottan identified a settlement figure of $80,000.00. This amount was felt to be exorbitant by Jessie's. On September 10, 1991 I attended a meeting with Mr. Beaman, one of Mr. Bottan's solicitors, in which Mr. Beaman indicated that Mr. Bottan might be prepared to accept payment of $100,000.00 in exchange for removing the scaffolding.

4. James Stinson in his affidavit, sworn September 24, 1991, swears that:

> 6. On or about January 24, 1991 I am advised by Vic Croutch and verily believe that once again the possibility of an Air Rights Agreement was discussed in the context of dealing with Mr. Bottan's problem with the construction of Jessie's new site. I am advised by Mr. Croutch and verily believe that Mr. Bottan informed him that if Ellis-Don gave him approximately $500.00 per day (leading to a total of $50,000.00 to $60,000.00) that he would stop making a fuss. I am advised by Mr. Croutch and verily believe that Mr. Bottan was not interested in the specific Air Rights Agreement. I am further advised by Mr. Croutch and by Paul Richer of Ellis-Don that they had other meetings with Mr. Bottan with respect to an Air Rights Agreement, all to no avail.

V. Damages to the Plaintiff

1. Water Damage

Because the south side of the building is unfinished, water has infiltrated doing damage to hardwood floor and linoleum. Some of the water was from a heavy August 1991 rain; some was from the hosing incidents of John Bottan. The damages have been estimated at $60,000.

2. Costs to the Plaintiff of Alternate Accommodation

September 1, 1991 was the scheduled "move in date"; the plaintiff has had to rent other units and pay to store furniture.

3. Occupancy Permit

Because of the unfinished state of the south exterior of the building, the building cannot be occupied and an occupancy permit cannot be issued. Moreover, the architect cannot certify that the contract has been "substantially performed", under s. 2(1)(a) of the Construction Lien Act. The contractor and the sub-contractor are, therefore, prejudiced because the hold-back money cannot be released.

VI. The Premises Of John Bottan

On August 27, 1991, Eric Jones, a City of Toronto inspector for the Department of Buildings and Inspection, served John Bottan with a "repair order" under by-law 366-73. The inspector's order stated in part:

> You are ordered to repair or otherwise take the necessary action to correct the violations noted below in order to place the premises in conformity with the requirements of the said By-law within the time limit shown.
>
> The following items must be remedied within 48 hours.
>
> The roof is not kept free from objects and materials, which create accident hazards, namely:
>
> A. Scaffolding on the flat roof on the north side.

As of October 2, 1991, the scaffold on the roof of 191 Parliament St. had not been taken down.

VII. The Applicable Law

1. City of Toronto By-law 300-68:

> s. 3. This By-law applies to the excavation for, construction, erection, alteration, repair, removal, wrecking, and change of occupancy of any building or structure or part thereof.
>
> 13.(1) The owner or occupant of any building or the agent or employee of such owner or occupant may enter upon any adjoining land for the purpose of making repairs, alterations or improvements to such building but only to the extent necessary to effect such repairs, alterations or improvements.
>
> (2) Every person who enters upon any land under the authority of Section (1), of this Article and every owner or occupant of any building who causes the entry upon any land under the authority of Section (1) of this Article shall leave such land in the same condition that it was prior to such entry.

2. Section 327 of the Municipal Act, R.S.O. 1980, c. 302:

> Where any by-law of a municipality or of a local board thereof, passed under the authority of this or any other general or special Act, is contravened, in addition to any other remedy and to any penalty imposed by the by-law, such contravention may be restrained by action at the instance of a ratepayer or the corporation or local board.

3. Building Code Act, R.S.O. 1980, c. 51:

> s. 27. ...and the building code made under section 19 of this Act supersedes all municipal by-laws respecting the construction or demolition of buildings as defined in section 1.

VIII. Conclusions

1. On August 27, 1991, John Bottan was served with "an order of inspector" that the premises at 191 Parliament St., Toronto were contravening by-law 376-73 of the City of Toronto because of the "scaffolding on the flat roof on the south side"; the scaffolding was still there on September 26, 1991, although the order of inspector required the removal of the scaffolding within 48 hours of August 27, 1991.

In my view, the erection of the scaffolding was a demonstration of sheer "cussedness" (borrowing a phrase from Dean McLaren) on the part of John Bottan; the sole purpose of erecting the scaffold was to cause trouble for the plaintiff, its contractor and sub-contractor with the hope of "raising the stakes" and "upping the ante".

2. Section 3 and s. 13(1) and (2) of the City of Toronto By-law 300-68 apply to the situation in this case. In my view, the Toronto's City Solicitor has summed it up succinctly in his letter of August 26, 1991:

> In my opinion, this By-Law applies to the construction of new buildings as well as to repairs done to existing buildings.
>
> Section 13(1) of the By-Law, in my view, permits a neighbour to utilize a neighbour's property to complete work on a building. This of course is subject to the obligation to leave the neighbouring property in a similar state to that in which it was found.
>
> If a neighbour is preventing the construction of a building by preventing the owner or occupant of any building or the agent or employee of such owner or occupant from entering upon the adjoining lands, in my view that neighbour would be in breach of the bylaw.

3. In my view, s. 27 of the Building Code Act has nothing to do with the facts of this case.

4. It seems to me that s. 3 and s. 13 of the City of

Toronto By-law 300-68 were designed to prevent the "ransom" situation that the defendants seek to impose upon the plaintiff.

In his article "Case Comment: Attorney General of Manitoba v. Campbell et al. 26 C.C.L.T. 326, 321, Dean J.P.S. McLaren wrote:

> Indeed, what the defendant, Mr. Campbell, wanted to do was to impose his land use regime on the plaintiff. He endeavoured to achieve this, not by negotiation, not by pursuing his rights in court, but by conduct which had no utility to the operation of his land at all, which was merely done to force concessions from the plaintiff and which constituted a danger...

5. If the defendants remove the scaffolding, as they are required to do under the Inspector's order pursuant to by-law 376-73, then the cause of the plaintiff's present difficulty vanishes and Ellis-Don is able to have the contractor's swing stage hang over the side of the building; the workers will set foot on the defendant's property for a few hours in order to complete the bottom portion of the south wall.

XI. Result

An order will go that:

1. The defendants shall dismantle the scaffolding and any material(s) on the defendant's property which prevent access to the unfinished wall of the plaintiff's building and do so within 24 hours of the date of this order.

2. If the defendants fall to carry out paragraph 1 of this order, the plaintiff or its agents are entitled to do so after the 24 hour period has elapsed.

3. The defendants are to keep the access clear to the unfinished wall of the plaintiff's building during the period of its completion.

4. The defendants and anyone having knowledge of this order shall refrain from any contact, interaction or interference with the plaintiff or with its representatives or with any workmen completing the building at the plaintiff's premises.

5. The Sheriff of the Municipality of Metropolitan Toronto and, if required, the Metropolitan Toronto Police Force are hereby directed to assist the plaintiff in ensuring that the terms of this order are carried out.

X. Costs

Before reserving judgment, I asked counsel for their submissions as to costs.

Counsel for the defendants asked $500 for costs, if his clients were successful on the merits.

Counsel for the plaintiff asked for costs in the amount of $7,582.00, if successful on the merits; that figure is comprised of $782.00 disbursements and $6,800.00 for fees.

The defendants have deliberately given everyone associated with the plaintiff a difficult time - they denied service and, generally, were not amenable to common sense. One ounce of reasonableness on the part of the defendants would have rendered unnecessary all these proceedings.

In view of the circumstances, the defendants will pay to the plaintiff, forthwith, its costs of these proceedings set at $782.00 for disbursements and $4,000.00 for fees - a total of $4,782.00.

O'DRISCOLL J.

Just v. British Columbia

John Just, appellant;
v.
Her Majesty The Queen in right of the Province of British Columbia, respondent.

[1989] 2 S.C.R. 1228
[1989] S.C.J. No. 121
File No.: 20246.

Supreme Court of Canada
1989: February 24 / 1989: December 7.
Present: Dickson C.J. and Wilson, La Forest, L'Heureux-Dubé, Sopinka, Gonthier and Cory JJ.

ON APPEAL FROM THE COURT OF APPEAL FOR BRITISH COLUMBIA

APPEAL from a judgment of the British Columbia Court of Appeal (1986), 10 B.C.L.R. (2d) 223, [1987] 2 W.W.R. 231, 40 C.C.L.T. 160, 1 M.V.R. (2d) 357, dismissing an appeal from a judgment of McLachlin J. (1985), 64 B.C.L.R. 349, [1985] 5 W.W.R. 570, 33 C.C.L.T. 49, 34 M.V.R. 124. Appeal allowed, Sopinka J. dissenting.

T.R. Berger and J.N. Laxton, Q.C., for the appellant.
William A. Pearce and Harvey M. Groberman, for the respondent.

Solicitors for the appellant: Laxton, Pidgeon & Co., Vancouver.
Solicitor for the respondent: The Attorney General of British Columbia, Victoria.

The judgment of Dickson C.J. and Wilson, La Forest, L'Heureux-Dubé, Gonthier and Cory JJ. was delivered by

[para1] CORY J.:-- This appeal puts in issue the approach that should be taken by courts when considering the liability of government agencies in tort actions.

Factual Background

[para2] On the morning of January 16, 1982, the appellant and his daughter set out, undoubtedly with high hopes and great expectations, for a day of skiing at Whistler Mountain. As a result of a heavy snow fall they were forced to stop in the northbound line of traffic on Highway 99. While they were waiting for the traffic to move forward a great boulder weighing more than a ton somehow worked loose from the wooded slopes above the highway and came crashing down upon the appellant's car. The impact killed the appellant's daughter and caused him very serious injuries. He then brought this action against the respondent contending that it had negligently failed to maintain the highway properly.

[para3] Highway 99 is a major commuter road between Vancouver and the major ski resorts located at Whistler Mountain. The appellant alleged that there had been earlier rock falls near the scene of the tragedy. As well it was said that the climatic conditions of freezing and thawing, coupled with a heavy build-up of snow in the trees and resulting tree damage created a great risk of rock falls. Trees were said to be a well-known factor in levering rocks loose. It was contended that inadequate attention had been given to all these factors by the respondent and that a reasonable inspection would have demonstrated that the rock constituted a danger to users of the highway.

[para4] At the time of the accident the Department of Highways had set up a system for inspection and remedial work upon rock slopes particularly along Highway 99. At the apex of the organization was a Mr. Eastman, the regional geotechnical material engineer. He is a specialist in rock slope maintenance and together with another engineer was responsible for inspecting rock slopes and making recommendations regarding their stability.

[para5] The Department contained a rock work section which included Mr. Oliver, the rock work engineer responsible for rock stabilization and inspections on Highway 99. The section also included a rock [page1233] scaling crew which was formed in 1971 to perform remedial work on the slopes. This crew

serviced the entire province. The crew's function was to remove potentially dangerous rocks by prying them loose using a crowbar. As well, they removed trees that were considered a hazard to the safety of those using the highways. Mr. Oliver was required to inspect rock cut areas to assess the stability of the slope and to determine whether there was a risk that a rock might fall on the highway. His inspection duties extended to the entire slope from which such a danger might arise.

[para6] When the rock work engineer inspected the rock slopes on Highway 99 he would report his findings and recommendations to the district highways manager responsible for the area. The district manager in turn through the regional geotechnical material engineer submitted requests for the services of the rock scaling crew. The rock scaling crew itself had no discretion as to where and when it worked; its schedule was determined by the requests for remedial work made to the rock work section.

[para7] Prior to the accident the practice had been for the Department of Highways to make visual inspections of the rock cuts on Highway 99. These were carried out from the highway unless there was evidence or history of instability in an area in which case the rock engineer would climb the slope. In addition there were numerous informal inspections carried out by highway personnel as they drove along the road when they would look for signs of change in the rock cut and for rocks in the ditch.

Decisions at Trial and on Appeal

[para8] In the reasons of the trial judge (1985), 64 B.C.L.R. 354, the term "rock scaling crew" is used to refer to the rock work section. In any event it was found at p. 354 that:

> ... the rock scaling crew had virtually an absolute discretion as to when and where it would work. It created the standards and it determined their enforcement. Its discretion went far beyond the limited operational [page1234] discretion of how to go about enforcing policies set by others. In effect, the Department of Highways had conferred upon the rock scaling crew the responsibility of formulating policy with respect to the prevention of rock falls on highways.

The reasons continued with the finding that there were no standards to which the rock scaling crew was required to work or against which its conduct could be evaluated as that determined its own standards. It was found that the decision as to what inspection was to be undertaken on a particular site was a "policy" decision. The conclusion was set out at p. 355 in these words:

> The number and quality of inspections as well as the frequency of scaling and other remedial measures were matters of planning and policy involving the utilization of scarce resources and the balancing of needs and priorities throughout the province. Decisions of that nature are for the governmental authorities, not the courts.

[para9] No finding was made as to whether or not the system of inspection set forth by the Department of Highways was a reasonable one or whether the inspections themselves were properly carried out. Rather, as indicated, it was found that the entire system of inspection as well as the way in which it was carried out was a matter of planning and policy for which there was no liability.

[para10] The Court of Appeal (1986), 10 B.C.L.R. (2d) 223, determined that the trial judge had considered the proper indicia in determining that the number and quality of decisions as to the inspections and the decisions as to the work to be done on a particular site were matters of policy, as opposed to an operational decision. That court upheld the finding of the trial judge that the decisions involved in this case constituted a policy decision for which there was no liability rather than the implementation of policy. The appeal was dismissed without calling upon the respondent.

Test to be Applied

[para11] In cases such as this where allegations of negligence are brought against a government agency, it is appropriate for courts to consider and apply the test laid down by Lord Wilberforce in Anns v. Merton London Borough Council, [1978] A.C. 728. At pages 751-52 he set out his position in these words:

> Through the trilogy of cases in this House -- Donoghue v. Stevenson [1932] A.C. 562, Hedley Byrne & Co. Ltd. v. Heller & Partners Ltd. [1964] A.C. 465, and Dorset Yacht Co. Ltd. v. Home Office [1970] A.C. 1004, the position has now been reached that in order to establish that a duty of care arises in a particular situation, it is not necessary to bring the facts of that situation within those of previous situations in which a duty of care has been held to exist. Rather the question has to be approached in two stages. First one has to ask whether, as between the alleged wrongdoer and the person who has suffered damage there is a sufficient relationship of proximity or neighbourhood such that, in the reasonable contemplation of the former, carelessness on his part may be likely to cause damage to the latter -- in which case a prima facie duty of care arises. Secondly, if the first question is answered affirmatively, it is necessary to consider whether there are any considerations which ought to negative, or to reduce or limit the scope of the duty or the class of person to whom it is owed or the damages to which a breach of it may give rise: see Dorset Yacht case [1970] A.C. 1004, per Lord Reid at p.
>
> 1027. [Emphasis added.]

That test received the approval of the majority of this Court in City of Kamloops v. Nielsen, [1984] 2 S.C.R. 2. As well it was specifically referred to by both Beetz and L'Heureux-Dubé JJ. in Laurentide Motels Ltd. v. Beauport (City), [1989] 1 S.C.R. 705. It may be that the two-step approach as suggested by Lord Wilberforce should not always be slavishly followed. See Yuen Kun Yeu v. Attorney-General of Hong Kong, [1988] A.C. 175 (P.C.), at pp. 190, 191, 194. Nevertheless it is a sound approach to first determine if there is a duty of care owed by a defendant to the plaintiff in any case where negligent misconduct has been alleged against a government agency.

[para12] In the case at bar the accident occurred on a well used major highway in the Province of British Columbia. All the provinces across Canada extol their attributes and attractions in the fierce competition for tourist business. The skiing facilities at Whistler are undoubtedly just such a magnificent attraction. It would be hard to imagine a more open and welcoming invitation to use those facilities than that extended by the provincial highway leading to them. In light of that invitation to use both the facilities and the highway leading to them, it would appear that apart from some specific exemption, arising from a statutory provision or established common law principle, a duty of care was owed by the province to those that use its highways. That duty of care would extend ordinarily to reasonable maintenance of those roads. The appellant as a user of the highway was certainly in sufficient proximity to the respondent to come within the purview of that duty of care. In this case it can be said that it would be eminently reasonable for the appellant as a user of the highway to expect that it would be reasonably maintained. For the Department of Highways it would be a readily foreseeable risk that harm might befall users of a highway if it were not reasonably maintained. That maintenance could, on the basis of the evidence put forward by the appellant, be found to extend to the prevention of injury from falling rock.

[para13] Even with the duty of care established, it is necessary to explore two aspects in order to determine whether liability may be imposed upon the respondent. First, the applicable legislation must be reviewed to see if it imposes any obligation upon the respondent to maintain its highways or, alternatively, if it provides an exemption from liability for failure to so maintain them. Secondly, it must be determined whether the province is exempted from liability on the grounds that the system of inspections, including their quantity and quality, constituted a "policy" decision of a government agency and was thus exempt from liability.

The Applicable Legislation

[para14] The Highway Act, R.S.B.C. 1979, c. 167, s. 8, provides for construction and maintenance of highways in these words:

> 8. The minister may ... maintain a highway across any land taken under the powers conferred by this Act ....

and the Ministry of Transportation and Highways Act, R.S.B.C. 1979, c. 280, s. 14, as follows:

> 14. The minister has the management, charge and direction of all matters relating to the acquisition, construction, repair, maintenance, alteration, improvement and operation of ... highways ....

The liability of the respondent in respect of the exercise of these powers is limited by ss. 2 and 3 of the Crown Proceeding Act, R.S.B.C. 1979, c. 86, in this manner:

> 2. Subject to this Act,
>
> . . .
>
> (c) the Crown is subject to all those liabilities to which it would be liable if it were a person, ...
>
> 3. ...
>
> (2) Nothing in section 2
>
> . . .
>
> (f) subjects the Crown, in its capacity as a highway authority, to any greater liability than that to which a municipal corporation is subject in that capacity.

On their face these statutory provisions do not appear to absolve the respondent from its duty of care to maintain the highways reasonably. Rather, by inference they appear to place an obligation on the province to maintain its highways at least to the same extent that a municipality is obligated to repair its roads.

Was the Decision of the Rock Section as to the Quantity and Quality of Inspections a "Policy" Decision Exempting the Respondent from Liability?

[para15] The respondent placed great reliance on the decision of this Court in Barratt v. District of North Vancouver, [1980] 2 S.C.R. 418. In the Barratt case injury occurred as a result of a [page1238] pothole on the road. It was established that the City of North Vancouver had a policy of inspecting its roads for potholes every two weeks. Indeed it had inspected the road where the accident occurred one week earlier and found no pothole. It was found that the inspection policy established by the municipality was a reasonable and proper one. However, Justice Martland in giving the reasons for this Court went on to express an opinion that the municipality could not be held negligent for formulating one inspection policy rather than another. He put it this way at pp. 427-28:

> In essence, he [the trial judge] is finding that the Municipality should have instituted a system of continuous inspection to ensure that no possible damage could occur and holds that, in the absence of such a system, if damage occurs, the Municipality must be held liable.
>
> In my opinion, no such duty existed. The Municipality, a public authority, exercised its power to maintain Marine Drive. It was under no statutory duty to do so. Its method of exercising its power was a matter of policy to be determined by the Municipality itself. If, in the implementation of its policy its servants acted negligently, causing damage, liability could arise, but the Municipality cannot be held to be negligent because it formulated one policy of operation rather than another.

This statement was not necessary to the decision as it had

already been determined that the system of inspection established by the municipality was eminently reasonable. Neither was there any serious question raised that there had been any negligence in carrying out the system of inspection. The finding that a reasonable system of inspection had been established and carried out without negligence constituted the basis for the conclusion reached by the Court in that case. With the greatest respect, I am of the view that the portion of the reasons relied on by the respondent went farther than was necessary to the decision or appropriate as a statement of principle. For example, the Court would not have approved as "policy" a system that called for the inspection of the roads in a large urban municipality once every five years. Once a policy to inspect is established then it must be open to a litigant to attack the system as not having been adopted in a bona fide exercise of discretion [page1239] and to demonstrate that in all the circumstances, including budgetary restraints, it is appropriate for a court to make a finding on the issue.

[para16] The functions of government and government agencies have multiplied enormously in this century. Often government agencies were and continue to be the best suited entities and indeed the only organizations which could protect the public in the diverse and difficult situations arising in so many fields. They may encompass such matters as the manufacture and distribution of food and drug products, energy production, environmental protection, transportation and tourism, fire prevention and building developments. The increasing complexities of life involve agencies of government in almost every aspect of daily living. Over the passage of time the increased government activities gave rise to incidents that would have led to tortious liability if they had occurred between private citizens. The early governmental immunity from tortious liability became intolerable. This led to the enactment of legislation which in general imposed liability on the Crown for its acts as though it were a person. However, the Crown is not a person and must be free to govern and make true policy decisions without becoming subject to tort liability as a result of those decisions. On the other hand, complete Crown immunity should not be restored by having every government decision designated as one of "policy". Thus the dilemma giving rise to the continuing judicial struggle to differentiate between "policy" and "operation". Particularly difficult decisions will arise in situations where governmental inspections may be expected.

[para17] The dividing line between "policy" and "operation" is difficult to fix, yet it is essential that it be done. The need for drawing the line was expressed with great clarity by Becker J. of the United States District Court, in Blessing v. United States, 447 F.S. 1160. The case required him to deal with a claim under the Federal Tort Claims Act, 28 U.S.C. s. 2680 which provides:

[page1240]

> The provisions of this chapter and section 1346(b) of this title shall not apply to --
>
> (a) Any claim based upon an act or omission of an employee of the Government, exercising due care, in the execution of a statute or regulation, whether or not such statute or regulation be valid, or based upon the exercise or performance or the failure to exercise or perform a discretionary function or duty on the part of a federal agency or an employee of the Government, whether or not the discretion involved be abused.

He wrote at p. 1170:

> Read as a whole and with an eye to discerning a policy behind this provision, it seems to us only to articulate a policy of preventing tort actions from becoming a vehicle for judicial interference with decision-making that is properly exercised by other branches of the government and of protecting "the Government from liability that would seriously handicap efficient government operations," United States v. Muniz, 374 U.S. 150, 163, 83 S.Ct. 1850, 1858, 10 L.Ed.2d 805 (1963). Statutes, regulations, and discretionary functions, the subject matter of s. 2680(a), are, as a rule, manifestations of policy judgments made by the political branches. In our tripartite governmental

> structure, the courts generally have no substantive part to play in such decisions. Rather, the judiciary confines itself -- or, under laws such as the FTCA's discretionary function exception, is confined -- to adjudication of facts based on discernible objective standards of law. In the context of tort actions, with which we are here concerned, these objective standards are notably lacking when the question is not negligence but social wisdom, not due care but political practicability, not reasonableness but economic expediency. Tort law simply furnishes an inadequate crucible for testing the merits of social, political or economic decisions.

[para18] The need for distinguishing between a governmental policy decision and its operational implementation is thus clear. True policy decisions should be exempt from tortious claims so that governments are not restricted in making decisions based upon social, political or economic factors. However, the implementation of those decisions [page1241] may well be subject to claims in tort. What guidelines are there to assist courts in differentiating between policy and operation?

[para19] Mason J., speaking for himself and one other member of the Australian High Court in Sutherland Shire Council v. Heyman (1985), 60 A.L.R. 1, set out what I find to be most helpful guidelines. He wrote:

> Anns decided that a duty of care cannot arise in relation to acts and omissions which reflect the policy-making and discretionary elements involved in the exercise of statutory discretions. It has been said that it is for the authority to strike that balance between the claims of efficiency and thrift to which du Parcq LJ referred in Kent v. East Suffolk Rivers Catchment Board [1940] 1 KP 319 at 338 and that it is not for the court to substitute its decision for the authority's decision on those matters when they were committed by the legislature to the authority for decision (Dorset Yacht Co. v. Home Office, [1970] AC 1004 at 1031, 1067-8; Anns, at p. 754; Barratt v. District of North Vancouver (1980) 114 D.L.R. (3d) 577). Although these injunctions have compelling force in their application to policy-making decisions, their cogency is less obvious when applied to other discretionary matters. The standard of negligence applied by the courts in determining whether a duty of care has been breached cannot be applied to a policy decision, but it can be applied to operational decisions.
>
> Accordingly, it is possible that a duty of care may exist in relation to discretionary considerations which stand outside the policy category in the division between policy factors on the one hand and operational factors on the other. This classification has evolved in the judicial interpretation of the "discretionary function" exception in the United States Federal Tort Claims Act -- see Dalehite v. United States (1953) 346 US 15; ... United States v. Varig Airlines, supra. The object of the Federal Tort Claims Act in displacing government immunity and subjecting the United States Government to liability in tort in the same manner and to the same extent as a private individual under like circumstances, subject to the "discretionary function" exception, is similar to that of s. 64 of the Judiciary Act, 1903 (Cth).
>
> The distinction between policy and operational factors is not easy to formulate, but the dividing line between them will be observed if we recognize that a public authority is under no duty of care in relation to decisions which involve or are dictated by financial, economic, social or political factors or constraints. Thus budgetary allocations and the constraints which they entail in terms of allocation of resources cannot be made the subject of a duty of care. But it may be otherwise when the courts are called upon to apply a standard of care to action or inaction that is merely the product of administrative direction, expert or professional opinion, technical standards or general standards of reasonableness. [Emphasis added.]

[para20] The duty of care should apply to a public authority unless there is a valid basis for its exclusion. A

true policy decision undertaken by a government agency constitutes such a valid basis for exclusion. What constitutes a policy decision may vary infinitely and may be made at different levels although usually at a high level.

[para21] The decisions in Anns v. Merton London Borough Council and City of Kamloops v. Nielsen, supra, indicate that a government agency in reaching a decision pertaining to inspection must act in a reasonable manner which constitutes a bona fide exercise of discretion. To do so they must specifically consider whether to inspect and if so, the system of inspection must be a reasonable one in all the circumstances.

[para22] For example, at a high level there may be a policy decision made concerning the inspection of lighthouses. If the policy decision is made that there is such a pressing need to maintain air safety by the construction of additional airport facilities with the result that no funds can be made available for lighthouse inspection, then this would constitute a bona fide exercise of discretion that would be unassailable. Should then a lighthouse beacon be extinguished as a result of the lack of inspection and a shipwreck ensue no liability can be placed upon the government agency. The result would be the same if a policy decision were made to increase the funds for job retraining and reduce the funds for lighthouse inspection so that a [page1243] beacon could only be inspected every second year and as a result the light was extinguished. Once again this would constitute the bona fide exercise of discretion. Thus a decision either not to inspect at all or to reduce the number of inspections may be an unassailable policy decision. This is so provided it constitutes a reasonable exercise of bona fide discretion based, for example, upon the availability of funds.

[para23] On the other hand, if a decision is made to inspect lighthouse facilities the system of inspections must be reasonable and they must be made properly. See Indian Towing Co., 350 U.S. 61 (1955). Thus once the policy decision to inspect has been made, the Court may review the scheme of inspection to ensure it is reasonable and has been reasonably carried out in light of all the circumstances, including the availability of funds, to determine whether the government agency has met the requisite standard of care.

[para24] At a lower level, government aircraft inspectors checking on the quality of manufactured aircraft parts at a factory may make a policy decision to make a spot check of manufactured items throughout the day as opposed to checking every item manufactured in the course of one hour of the day. Such a choice as to how the inspection was to be undertaken could well be necessitated by the lack of both trained personnel and funds to provide such inspection personnel. In those circumstances the policy decision that a spot check inspection would be made could not be attacked. (See United States v. S.A. Empresa De Viacao Aerea Rio Grandense (Varig Airlines), 467 U.S. 797 (1984).)

[para25] Thus a true policy decision may be made at a lower level provided that the government agency establishes that it was a reasonable decision in light of the surrounding circumstances.

[para26] The consideration of the duty of care that may be owed must be kept separate and distinct from [page1244] the consideration of the standard of care that should be maintained by the government agency involved.

[para27] Let us assume a case where a duty of care is clearly owed by a governmental agency to an individual that is not exempted either by a statutory provision or because it was a true policy decision. In those circumstances the duty of care owed by the government agency would be the same as that owed by one person to another. Nevertheless the standard of care imposed upon the Crown may not be the same as that owed by an individual. An individual is expected to maintain his or her sidewalk or driveway reasonably, while a government agency such as the respondent may be responsible for the maintenance of hundreds of miles of highway. The frequency and the nature of inspection required of the individual may well be different from that required of the Crown. In each case the frequency and method must be reasonable in light of all the surrounding circumstances. The governmental agency should be entitled to demonstrate that balanced against the

nature and quantity of the risk involved, its system of inspection was reasonable in light of all the circumstances including budgetary limits, the personnel and equipment available to it and that it had met the standard duty of care imposed upon it.

[para28] It may be convenient at this stage to summarize what I consider to be the principles applicable and the manner of proceeding in cases of this kind. As a general rule, the traditional tort law duty of care will apply to a government agency in the same way that it will apply to an individual. In determining whether a duty of care exists the first question to be resolved is whether the parties are in a relationship of sufficient proximity to warrant the imposition of such a duty. In the case of a government agency, exemption from this imposition of duty may occur as a result of an explicit statutory exemption. Alternatively, the exemption may arise as a result of the nature of the decision made by the government agency. That is, a government agency will be exempt from the imposition of a [page1245] duty of care in situations which arise from its pure policy decisions.

[para29] In determining what constitutes such a policy decision, it should be borne in mind that such decisions are generally made by persons of a high level of authority in the agency, but may also properly be made by persons of a lower level of authority. The characterization of such a decision rests on the nature of the decision and not on the identity of the actors. As a general rule, decisions concerning budgetary allotments for departments or government agencies will be classified as policy decisions. Further, it must be recalled that a policy decision is open to challenge on the basis that it is not made in the bona fide exercise of discretion. If after due consideration it is found that a duty of care is owed by the government agency and no exemption by way of statute or policy decision-making is found to exist, a traditional torts analysis ensues and the issue of standard of care required of the government agency must next be considered.

[para30] The manner and quality of an inspection system is clearly part of the operational aspect of a governmental activity and falls to be assessed in the consideration of the standard of care issue. At this stage, the requisite standard of care to be applied to the particular operation must be assessed in light of all the surrounding circumstances including, for example, budgetary restraints and the availability of qualified personnel and equipment.

[para31] Turning to the case at bar it is now appropriate to apply the principles set forth by Mason J. in Sutherland Shire Council v. Heyman, supra, to determine whether the decision or decisions of the government agency were policy decisions exempting the province from liability. Here what was challenged was the manner in which the inspections were carried out, their frequency or infrequency and how and when trees above the rock cut should have been inspected, and the manner in which the cutting and scaling operations should have been carried out. In short, the public authority had settled on a plan which called upon it to [page1246] inspect all slopes visually and then conduct further inspections of those slopes where the taking of additional safety measures was warranted. Those matters are all part and parcel of what Mason J. described as "the product of administrative direction, expert or professional opinion, technical standards or general standards of care". They were not decisions that could be designated as policy decisions. Rather they were manifestations of the implementation of the policy decision to inspect and were operational in nature. As such, they were subject to review by the Court to determine whether the respondent had been negligent or had satisfied the appropriate standard of care.

[para32] At trial the conclusion was reached that the number and frequency of inspections, of scaling and other remedial measures were matters of policy; as a result no findings of fact were made on the issues bearing on the standard of care. Since the matter was one of operation the respondent was not immune from suit and the negligence issue had to be canvassed in its entirety. The appellant was therefore entitled to a finding of fact on these questions and a new trial should be directed to accomplish this.

[para33] It may well be that the respondent at the new

trial will satisfy the Court that it has met the requisite standard of care. It is apparent that although the Crown Proceeding Act imposes the liability of a person upon the Crown, it is not in the same position as an individual. To repeat, the respondent is responsible not for the maintenance of a single private road or driveway but for the maintenance of many hundreds of miles of highway running through difficult mountainous terrain, all of it to be undertaken within budgetary restraints. As noted earlier, decisions reached as to budgetary allotment for departments or government agencies will in the usual course of events be policy decisions that cannot be the basis for imposing liability in tort even though these political policy decisions will have an effect upon the frequency [page1247] of inspections and the manner in which they may be carried out. All of these factors should be taken into account in determining whether the system was adopted in bona fide exercise of discretion and whether within that system the frequency, quality and manner of inspection were reasonable.

[para34] To proceed in this way is fair to both the government agency and the litigant. Once a duty of care that is not exempted has been established the trial will determine whether the government agency has met the requisite standard of care. At that stage the system and manner of inspection may be reviewed. However, the review will be undertaken bearing in mind the budgetary restraints imposed and the availability of personnel and equipment to carry out such an inspection.

Disposition

[para35] In the result, a new trial must be held to determine whether the respondent had in all the circumstances met the standard of care that should reasonably be imposed upon it with regard to the frequency and manner of inspection of the rock cut and to the cutting and sealing operations carried out upon it.

[para36] The appellant is entitled to costs of the appeal to this Court and in the Court of Appeal of British Columbia. The issue of costs of the first trial is reserved to the judge presiding at the new trial.

The following are the reasons delivered by

[para37] SOPINKA J. (dissenting):-- This appeal raises the issue of the liability for negligence of a public body in the absence of the breach of a statutory duty of care. The facts are set out in the reasons of Justice Cory, which I have had the advantage of reading. Regrettably, I find that I cannot agree with his conclusion. In my opinion, the conclusion of the trial judge (1985), 64 B.C.L.R. 349, and a unanimous Court of Appeal (1986), 10 B.C.L.R. (2d) 223, was the correct one. This conclusion is expressed by Hinkson J.A., speaking for the court, [page1248] affirming the following passage from the reasons of McLachlin J. (as she then was):

> ... I conclude that the decisions here complained of fall within the area of policy and cannot be reviewed by this court. The number and quality of inspections as well as the frequency of scaling and other remedial measures were matters of planning and policy involving the utilization of scarce resources and the balancing of needs and priorities throughout the province. Decisions of that nature are for the governmental authorities, not the courts.

[para38] In comparatively recent years the law of torts has evolved by imposing on public authorities a common law duty of care based on the neighbourhood or proximity principle, frequently called the Anns principle. This has resulted in substantially increasing their liability in negligence for activity which they are authorized to carry on by statute but in respect of which the statute imposes no duty of care. This change in the law was not brought about by legislation but through the evolution of the common law which has traditionally taken account of the changing views and needs of society. The expansion of liability by reason of this and other developments in the law of torts has created a crisis in this area of the law leading to demands for the fundamental reappraisal of the tort system itself. The basic premise of adjusting losses on the basis of fault is being

subjected to intense criticism. In the United States there is a growing consensus that the tort system is responsible for the crisis in liability insurance. There is now substantial support for wholesale legislative reform of the tort system. These developments are discussed in the Final Report of the Ontario Task Force on Insurance (May 1986) to the Ministry of Financial Institutions, at p. 52. Reference is made to the study made by Professor Michael J. Trebilcock and entitled "The Insurance -- Deterrence Dilemma of Modern Tort Law: Trends in North American Tort Law and Their Implications for the Current Liability Crisis" (April 21, 1986). At pages [page1249] 53-54 of the Final Report of the Ontario Task Force on Insurance, it is stated that:

> A crucial finding in the Trebilcock study was that the current "explosion" in American tort law was not the result of judicial extensions of already-advanced American strict liability doctrines but rather the judicial extension of traditional negligence liability and its application to an ever-widening range of activities and injuries.

The Report goes on to state at p. 54:

> There is every indication that similar tendencies exist in Canadian negligence law and that similar developments will occur in the future in Canada as well. The reason for this inevitable expansion of liability, even within the bounds of traditional negligence doctrine, is a matter that is intractably and unavoidably rooted in what we will later describe as the "insurance-deterrence dilemma" in modern tort law.

[para39] The insurance-deterrence dilemma is described in a study paper prepared by Philip Osborne for the Task Force and cited at pp. 61-62 as follows:

> The massive transformation of the fault system ... is a change which is explicable only on the basis of liability insurance and judicial compassion for the victims of social progress. Judges who in their written judgments give no indication of the prevalence of liability insurance are in fact keenly aware that in almost all cases the defendant is not paying, and that they are in the last analysis deciding whether or not the plaintiff should be compensated from insurance monies .... The prevalence of liability insurance fundamentally altered the moralistic nature of the loss-shifting function of fault. The loss-shifting mechanism was converted into a loss-spreading mechanism and it became more realistic to speak of the fault system as a fault-insurance system. The punitive and deterrent aspects of fault were diminished and compensation became the predominant function of tort law.

[para40] Other commentators are generally in support of the above criticisms of the tort system: Holding, "The Relationship Between Recent Trends in Tort Litigation and the Current Insurance Crisis in [page1250] Canada" (1986), 54 Assurances 435; Stradiotto, "Canadian Perspectives on Tort Law: Personal Injury Damages" (1988), 46 The Advocate 737; Rea, "Economic Perspectives on the Liability Insurance Crisis," in Insurance Law, Special Lectures of the Law Society of Upper Canada, 1987; Klar, "Negligence -- Reactions Against Alleged Excessive Imposition of Liability -- A Turning Point?" (1987), 66 Can. Bar Rev. 159.

[para41] I draw attention to these developments in order to emphasize that while the law of torts must move with the times, this is not a time to move. Yet, I am of the opinion that the reasons of my colleague would considerably expand the liability for negligence of public authorities by subjecting to judicial review their policy decisions which were hitherto not reviewable.

[para42] The starting point for the application of the Anns principle is that there is no statutory duty in favour of the plaintiff to do the thing the lack of which is alleged to have caused the injury to the plaintiff. Many public bodies have the power to carry out a function but no duty to do so. In these circumstances, they have a discretion whether to do the thing or not. Conduct within the limits of that

discretion gives rise to no duty of care. Conduct outside of

these limits may attract a private law duty of care. In City of Kamloops v. Nielsen, [1984] 2 S.C.R. 2, Wilson J. speaking for the majority, summed up the Anns principle as follows, at p. 11:

> Lord Wilberforce found that the defendant in Anns was under a private law duty to the plaintiff. It had to exercise a bona fide discretion as to whether to inspect the foundations or not and, if it decided to inspect them, to exercise reasonable skill and care in doing so. He concluded that the allegations of negligence were consistent with the Council or its inspector having acted outside any delegated discretion either as to the making of an inspection or as to the manner in which the inspection was made.

[para43] If a statutory duty to the plaintiff is breached, the private duty based on the neighbourhood principle is unnecessary. In London Passenger Transport Board v. Upson, [1949] A.C. 155, at p. 168, Lord Wright stated:

> The statutory right has its origin in the statute, but the particular remedy of an action for damages is given by the common law in order to make effective, for the benefit of the injured plaintiff, his right to the performance by the defendant of the defendant's statutory duty.

My colleague, Cory J., states (at p. 1237) that the statutory provisions "place an obligation on the province to maintain its highways at least to the same extent that a municipality is obligated to repair its roads." Sections 2 and 3(2) of the Crown Proceeding Act, R.S.B.C. 1979, c. 86, referred to by him, make it clear that the respondent's liability cannot be greater than that of a municipality. The extent of the liability of a municipality in British Columbia was settled by Barratt v. District of North Vancouver, [1980] 2 S.C.R. 418. While a municipality has the authority to maintain highways, it has no duty to do so. What it does in this respect is within its statutory discretion. At page 426, Martland J. said:

> The Municipality, under the provisions of subs. 513(2), had authority to lay out, construct, maintain and improve highways. Unlike the provisions of some other similar statutes, no duty was imposed upon the Municipality to maintain its highways.

[para44] My colleague's reasons are based essentially on an attack on the policy of the respondent with respect to the extent and manner of the inspection program. In my opinion, absent evidence that a policy was adopted for some ulterior motive and not for a municipal purpose, it is not open to a litigant to attack it, nor is it appropriate for a court to pass upon it. As stated by Lord du Parcq in Kent v. East Suffolk Rivers Catchment Board, [1940] 1 K.B. 319, at p. 338:

> ... it must be remembered that when Parliament has left it to a public authority to decide which of its powers it shall exercise, and when and to what extent it shall exercise them, there would be some inconvenience in [page1252] submitting to the subsequent decision of a jury, or judge of fact, the question whether the authority had acted reasonably, a question involving the consideration of matters of policy and sometimes the striking of a just balance between the rival claims of efficiency and thrift.

This statement was approved by Lord Wilberforce in Anns v. Merton London Borough Council, [1978] A.C. 728, at p. 754.

[para45] If a court assumes the power to review a policy decision which is made in accordance with the statute, this amounts to a usurpation by the court of a power committed by statute to the designated body. As pointed out by Wilson J. in City of Kamloops v. Nielsen, supra, at pp. 9-10:

> It is for the local authority to decide what resources it should make available to carry out its role in supervising and controlling the activities of builders. For example, budgetary considerations may dictate how many inspectors should be hired for this purpose, what their qualifications should be, and how often inspections should be made. He approved the statement of du Parcq

> L.J. in Kent v. East Suffolk Rivers Catchment Board ... that public authorities have to strike a balance between the claims of efficiency and thrift and whether they get the right balance can only be decided through the ballot box and not in the courts.

[para46] In Anns v. Merton London Borough Council, supra, Lord Wilberforce was of the opinion that although the exercise by a public authority of discretionary power was not entirely immune from attack, it was open to challenge only if no consideration was given to whether to exercise the power which, there as here, was whether to inspect and the manner of the inspection, supra, at p. 755. He did not elaborate as to whether such a challenge could be by way of a claim for damages by a person injured by the failure to inspect. Lord Salmon, however, was of the view that an improper exercise of discretion could only be corrected by certiorari or mandamus, and did not give rise to an action for damages, supra, at p. 762.

[para47] In the following passage, at p. 755, Lord Wilberforce makes it clear that a decision to inspect, [page1253] and the time, manner and techniques of inspection, may all be within the discretionary power:

> There may be a discretionary element in its exercise -- discretionary as to the time and manner of inspection, and the techniques to be used. A plaintiff complaining of negligence must prove, the burden being on him, that action taken was not within the limits of a discretion bona fide exercised, before he can begin to rely upon a common law duty of care. But if he can do this, he should, in principle, be able to sue.

[para48] If, as here, the statute creates no duty to inspect at all, but simply confers a power to do so, it follows logically that a decision to inspect and the extent and manner thereof are all discretionary powers of the authority.

[para49] It is not suggested here that the respondent failed to consider whether to inspect or the manner of inspections. The trial judge and the Court of Appeal found that a policy decision [page1254] was made that inspections would be carried out by a crew of men called the Rockwork Section. In view of the fact that the crew had responsibility for the inspection of the slopes of all highways, the extent and manner of the inspection was delegated to the Rockwork Section. While it might be suggested that guidelines for inspection should have been laid down for the guidance of the crew, this would be second guessing the policy decision and not a matter for the Court. The appellant's attack on the conduct of the respondent and its employees is an attack on the manner in which they carried out the inspection and scaling of the mountain. The Rockwork Section had decided it could not closely monitor all slopes at all times. Some slopes would only be visually inspected from the highway. The appellant contended that the slopes above man-made cuts should have been closely inspected and that the trees should have been removed within ten feet of a cut slope. The trial judge made the following important findings concerning the decision of the respondent as to the extent and manner of the inspection program:

> The question in the case at bar is thus whether the failure of the Crown to take the steps which the plaintiff says it should have taken to prevent the rock fall was a matter of policy or operational. In order to answer it, it is necessary to consider the nature of the decisions here in question. The Crown had never established as a matter of policy that all slopes above highways must be inspected for potential rock fall. Nor had it laid out specific guidelines for dealing with problems if danger was perceived. What it had done was to establish a small crew of men (the rock scaling crew) to deal with problems arising on cliff faces throughout the Province. This crew responded to specific requests from various highway districts for inspection and scaling. For the most part, however, it developed and followed its own program. Given that it was responsible for inspection of slopes and appropriate remedial measures for all the highways in the Province, it could not closely monitor all slopes at all times. The slope

here in question was visually inspected from the highway on a number of occasions. However, there had never been scaling or close inspection of the area above the cut because the rock scaling crew did not deem that work to be a priority.

[para50] In stating that the authority "must specifically consider whether to inspect and if so the system must be a reasonable one in all the circumstances", my colleague is extending liability beyond what was decided in Anns v. Merton London Borough Council, Barratt v. District of North Vancouver, and City of Kamloops v. Nielsen, supra. The system would include the time, manner and technique of inspection. On this analysis it is difficult to determine what aspect of a policy decision would be immune from review. All that is left is the decision to inspect. It can hardly be suggested that all the learning that has been expended on the difference between policy and operational was expended to immunize the decision of a public body that something will be done but not the content of what will be done. It seems to me that a decision to inspect rather than not inspect hardly needs protection from review. The concern that has resulted in extending immunity from review in respect of policy decisions is that [page1255] those entrusted with the exercise of the statutory powers make the decision to expend public resources. It is not engaged by a decision simply to do something. It is the decision as to what is to be done that will entail the taxation of the public purse. Lord Wilberforce underscores this concern when he states, at p. 754:

> Let us examine the Public Health Act 1936 in the light of this. Undoubtedly it lays out a wide area of policy. It is for the local authority, a public and elected body, to decide upon the scale of resources which it can make available in order to carry out its functions under Part II of the Act -- how many inspectors, with what expert qualifications, it should recruit, how often inspections are to be made, what tests are to be carried out, must be for its decision. It is no accident that the Act is drafted in terms of functions and powers rather than in terms of positive duty. As was well said, public authorities have to strike a balance between the claims of efficiency and thrift (du Parcq L.J. in Kent v. East Suffolk Rivers Catchment Board [1940] 1 K.B. 319, 338): whether they get the balance right can only be decided through the ballot box, not in the courts.

[para51] In this case, the extent of the inspection program was delegated to the Rockwork Section. The respondent acted within its statutory discretion in making that decision. It was a decision that inspections should be done and the manner in which they should be done. In order for a private duty to arise, it would have to be shown that the Rockwork Section acted outside its delegated discretion to determine whether to inspect and the manner in which the inspection is to be made.

[para52] The principal authorities in this Court do not support my colleague's view that the manner and extent of inspections are operational. Indeed, they confirm that these are the very substance of policy. In Barratt v. District of North Vancouver, supra, the respondent municipality had authority under s. 513(2) of the Municipal Act, R.S.B.C. 1960, c. 255, to lay out, maintain and improve highways. It [page1256] was, however, under no statutory duty to maintain highways. The respondent adopted a system of road inspections which required an inspector to travel all roads once in each two-week period. An accident occurred when the plaintiff rode his bicycle into a pot-hole on Marine Drive which had been inspected a week before. There was no allegation that the inspection was made improperly or negligently. I do not agree with my colleague that the basis for this decision was a determination that the policy was reasonable. That finding does not appear in the reasons of Martland J. although he referred to the evidence that the system of road inspection was well organized. The basis for the decision was that the program of inspection was a matter of policy or planning which could not be the basis for an allegation of negligence. At page 428 Martland J. states:

> In my opinion, no such duty existed. The Municipality, a public authority, exercised its power to maintain Marine Drive. It was under no statutory duty to

> do so. Its method of exercising its power was a matter of policy to be determined by the Municipality itself. If, in the implementation of its policy its servants acted negligently, causing damage, liability could arise, but the Municipality cannot be held to be negligent because it formulated one policy of operation rather than another.

Then, after citing du Parcq L.J. in Kent v. East Suffolk Rivers Catchment Board, supra, he continued, at p. 428:

> My conclusion is that the trial judge sought to impose upon the Municipality too heavy a duty, that the determination of the method by which the Municipality decided to exercise its power to maintain the highway, including its inspection system, was a matter of policy or planning, and that, absent negligence in the actual operational performance of that plan, the appellant's claim fails.

[para53] In City of Kamloops v. Nielsen, supra, the City of Kamloops had a statutory power to regulate construction by by-law. It did not have to do so. It exercised this power in favour of regulating construction [page1257] in accordance with a by-law which, inter alia, provided for the depth of footings. The by-law also imposed a duty in the City's building inspector to enforce the by-law by inspection. The inspector failed to inspect as required in order to determine whether work was progressing in accordance with the by-law. Wilson J., speaking for the majority, held that the provisions of the by-law were policy whereas in carrying out the inspection required by the by-law, the inspector was bound to act with reasonable care. It is clear that the provisions of the by-law which "provided for a scheme of inspections at various stages of construction" (at p. 12) was considered policy. The failure to enforce a stop work order and to inspect in order to determine whether the by-laws were being complied with was conduct outside of the area of delegated discretion. It was a departure from the duty created by the by-law and therefore a common law duty of care based on the proximity principle arose. It is significant that in the course of her reasons Wilson J. dealt with the judgment in Barratt v. District of North Vancouver, supra. She makes clear in the following passage, at p. 20 of her reasons, that Barratt v. District of North Vancouver decided that a decision by the municipality as to the extent of inspections is a policy matter which cannot be the foundation for an action in negligence:

> The second is that it seems to be central to his judgment that no duty was imposed upon the municipality. It was in the discretion of the municipality whether or to what extent it exercised its maintenance power. The courts could not therefore interfere in the absence of negligence in the implementation of the policy it adopted with respect to inspection. This, it appears to me, is the ratio of the decision in Barratt. [Emphasis added.]

[para54] In order for a private duty to arise in this case, the plaintiff would have to establish that the Rockwork Section, having exercised its discretion as to the manner or frequency of inspection, carried out the inspection without reasonable care or at all. [page1258] There is no evidence or indeed allegation in this regard. In this respect, the decision in Barratt v. District of North Vancouver, supra, is on all fours and ought to be applied here. I would therefore dismiss the appeal.

Kally's Restaurant Inc. v. Scarborough, (City)

Ontario Court (General Division), Divisional Court; O'Driscoll, Hartt and Adams JJ.
February 23, 1993

APPEAL with leave from a decision of the Ontario Municipal Board refusing approval of a site plan under s. 40(12) of the *Planning Act 1983*

Irving Marks, for appellant.
Louis C. Mangoff, for respondent.

The judgment of the court was delivered by

ADAMS J.:—The issue in this case is whether the Ontario Municipal Board ("O.M.B.") erred in applying to a site plan application, a parking by-law in effect at the date of O.M.B. hearing and not the by-law in effect at the earlier date of the original application to the municipality.

Pursuant to leave granted by A. Campbell J. on February 10, 1992 under the provisions of s. 96 of the *Ontario Municipal Board Act*, R.S.O. 1990, c. 0.28, Kally's Restaurant Inc. ("Kally's") appeals from a decision of the Ontario Municipal Board dated November 8, 1991 dismissing an application for approval of a site plan referred to the O.M.B. pursuant to s. 40(12) of the *Planning Act 1983*, S.O. 1983, c. 1, as amended ("the Act"). The referral arose from a decision of the Corporation of the City of Scarborough ("the City") on May 16, 1988 refusing to approve Kally's site plan application on the basis of a planning committee report dated April 27, 1988 recommending that more parking spaces were needed than provided for on the west side of the site. This recommendation was made notwithstanding that the requirements of the City's parking by-law had been met by the site plan application. However, on August 22, 1988 the City passed a new zoning by-law creating a higher parking standard which, if applicable to Kally's application, increased the parking requirement for its restaurant from 144 spaces to 238 spaces, *i.e.* more than the 179 spaces provided for in Kally's site plan application. The O.M.B. held that the applicable parking standard was determined by the zoning by-law in force at the date of the O.M.B. hearing which was March 27, 1991. At this time, the August 22, 1988 parking by-law requiring 238 spaces for Kally's was in effect.

In issue is whether the O.M.B. erred in law in holding that the applicable parking by-law was the by-law in force at the date of the O.M.B. hearing instead of the by-law in force when the site plan application ought to have been approved by the City, i.e., on May 16, 1988 or on May 24, 1988 when Kally's referred the site plan application to the O.M.B. pursuant to s. 40(12) of the Act. We have come to the conclusion the appeal ought to be allowed. Kally's cannot be required to provide more than 144 parking spaces required by the by-law in effect at the time the application should have been approved.

On April 12, 1984, Kally's entered into a site plan agreement with the City. The site plan agreement provided for a restaurant with 259 parking spaces on the entire site. At that time the applicable zoning by-law required the provision of a total of 117 parking spaces for the restaurant use as then proposed. The parking spaces provided on the east side of the site were provided voluntarily by Kally's, pending future development. A site plan agreement was registered on title on June 5, 1984. In November 1986, Kally's made application to revise the site plan to provide for an addition to the restaurant, including a banquet hall, a mezzanine and basement storage. These revisions were approved by the City. In June of 1987 Kally's was issued a building permit based on the revised plan and construction of the restaurant was completed in accordance with the permit in April 1988. Kally's has operated a restaurant from this location on the west side of the site since that time. On July 29, 1987, in order to proceed with the severance and future development of the east side of the site, Kally's made a site plan application to the City to delete the parking from the east side of the site and to provide 179 parking spaces on the west side of the site. At that time, the applicable parking by-law required 144 parking spaces for the restaurant use as set out in the plans approved by the building permit. It is common ground that the City refused to approve the site plan application because it wanted more parking spaces than were either proposed or required by the existing by-law. However, by the time the matter came before the O.M.B. the new zoning by-law was in place which required 238 spaces.

We are of the view that *Dominion Stores Ltd. v. Etobicoke (Borough)* (1982), 37 O.R. (2d) 661, 135 D.L.R. (3d) 301 (Div. Ct.), at p. 662 O.R, p. 302 D.L.R., applies by analogy. In that case, a development control approval had been refused because the City did not want to permit access to the land from either of two local streets. While the City had no right to prevent such access, it also refused a building permit because of the absence of development control approval. In requiring the issuance of a building permit, Galligan J. (as he then was) dealt directly with the

propriety of refusing the development approval for a reason that was not authorized by law:

The respondent has refused to issue the building permit because it has not given development control approval under s. 40 of the *Planning Act*, R.S.O. 1980, c. 379. It is clear beyond peradventure that the only reason that the respondent has not given its approval is that it does not want to permit access on to the applicant's lands from either of the local streets. It has refused to approve any development plans or drawings or enter into any development agreement which in any way provide access to or from the proposed supermarket on to those local streets. The issue before this Court is whether the Municipality is legally entitled to refuse to give development approval on that ground. While a certain amount of discussion took place before us as to whether development approval under s. 40 of the *Planning Act* is or is not a condition precedent to the issue of a building permit, I do not think it is necessary for the purposes of this application to decide that issue. I am of the opinion assuming without deciding that development approval is a condition precedent to the issuance of the building permit, that a Municipality may not withhold such approval for a reason that is not authorized by law. If it were otherwise an applicant's legal right to a building permit could easily be frustrated.

As the O.M.B. itself found, the City was obligated to apply to Kally's application the parking requirements set out in its by-laws and was not entitled to demand a higher parking standard simply because of the existence of a site plan agreement. We also note that s. 34(9) of the Act prevents the application of a by-law to a building or structure for which a building permit has been issued prior to the day of passage of the by-law. This indicates a legislative purpose aimed at minimizing the impact of by-law changes on existing development. In this case, Kally's is being adversely affected by a by-law which was not in force at the time it built its restaurant and at the time it applied for site plan approval.

We also note the legislation provides for interim by-laws which can be passed expeditiously and without notice by municipalities pending a permanent revision of existing by-laws. Thus, it was open to the City, in the facts at hand, to pass an interim parking by-law pending the August 22, 1988 permanent revision. However, the City chose not to utilize its interim by-law making powers and, instead, simply refused the proposed amendment to Kally's site agreement because it wished more parking spaces than required by the existing parking by-law. In so doing, the City was acting in an unlawful manner and the situation falls squarely within the exception contemplated in *Quay West v. Toronto (City)* (1989), 47 M.RL.R. 109 (Ont. Div. Ct.), at p. 112.

Therefore, the appeal is allowed and a declaration will go that the appellant cannot be required to provide more than 144 parking spaces in respect of the subject site plan application insofar as it pertains to the western portion on which the restaurant is located. The site plan application is returned to the O.M.B. to be approved, settled and determined in accordance with this declaration.

Counsel agreed that costs should follow the event. Costs in the sum of $2,500. The respondent shall pay that amount to the appellant.

Appeal allowed.

Kamloops (City) v. Nielsen

City of Kamloops, Appellant; and
Jan Clemmensen Nielsen, Respondent; and
Wesley Joseph Hughes, and Gladys Annetta Hughes, Respondents.

[1984] 2 S.C.R. 2

Supreme Court of Canada
File No.: 16896.
1982: November 22 / 1984: July 26.
Present: Ritchie, Dickson, Estey, McIntyre and Wilson JJ.
ON APPEAL FROM THE COURT OF APPEAL FOR BRITISH COLUMBIA

APPEAL from a judgment of the British Columbia Court of Appeal (1981), 31 B.C.L.R. 311, dismissing an appeal from a judgment of Andrews J. Appeal dismissed, Estey and McIntyre JJ. dissenting.

Harry J. Grey, Q.C., for the appellant.
R.J. Gibbs, Q.C., and J.A. Horne, for the respondent Jan Clemmensen Nielsen.

Solicitors for the appellant: Harper, Grey, Easton & Company, Vancouver.
Solicitors for the respondent Jan Clemmensen Nielsen: Berna, Horne, Marr & Coates, Kamloops.
Solicitor for the respondents Wesley Joseph Hughes and Gladys Annetta Hughes: John Gnitt, Kamloops.

The judgment of Ritchie, Dickson and Wilson JJ. was delivered by

WILSON J.:-- This case raises the rather difficult question whether a municipality can be held liable for negligence in failing to prevent the construction of a house with defective foundations. It also raises a number of ancillary questions, such as whether such a liability, assuming it exists, extends to third party purchasers, what sort of damages are recoverable, and when the limitation period starts to run.

1. The Facts

Since the facts are of vital importance I set them out in some detail. Mr. Hughes, Jr. set out to build a house on a hillside for his father who was an Alderman in the City of Kamloops. To this end he submitted plans to the City's building inspector. The plans were approved, subject to the requirement that the footings were to be taken down to solid bearing, and a building permit was issued. Mr. Hughes did not take the footings down to solid bearing; instead he set the foundations on piles which were set into loose fill. He then requested an inspection of the foundations. When one of the City's building inspectors arrived to make his inspection on December 18, 1973 he realized that the foundations were not in accordance with the plans but he was unable to check whether they were adequate to support the building because the concrete had been poured. Accordingly, on his own initiative the building inspector followed up with two further inspections on December 23, 1973 and January 2, 1974 and sent a letter to Mr. Hughes on the latter date indicating that a stop work order had been placed on the site and would not be lifted until new plans had been submitted showing how the structural defects were going to be remedied. Mr. Hughes retained a firm of professional engineers to prepare the new plans and on receipt of their proposal the building inspector lifted the stop work order. Mr. Hughes, however, did not cooperate with the engineers on the required changes but continued with the construction of the house on the original plans. The engineers, disavowing all liability, notified the building inspector.

On February 27, 1974 two building inspectors attended at the site. This was followed next day by a registered letter from the building inspector to Mr. Hughes telling him that the stop work order would remain in effect until he submitted a report from a structural engineer. Mr. Hughes ignored this communication and carried on with the building. Various further inspections were made by building inspectors who

reported to their superior, the building inspector, that construction was continuing despite the stop work order.

On April 9, 1974 Mr. Hughes, Sr. and his wife purchased the property from their son. The City Solicitor wrote to them on April 22, 1974 advising them of the City's concern over the structural integrity of the building and that the stop work order which was currently in force would not be lifted until the City was provided with complete structural drawings from an engineer verifying the adequacy of the proposed construction. Mr. Backmeyer, Director of Planning for the City, became involved at this stage but no resolution to the problem was effected. The dialogue moved into the Council Chamber and Mr. Backmeyer testified that Mr. Hughes, Sr.'s plea to his fellow council members was that this was his retirement home and, since he was going to live in it, any problems that arose would be his and his alone. It was therefore no one's business but his and why was he being subjected to this kind of harassment?

At this point a strike of city employees broke out and the Director of Planning and the Building Division Administrator were left to run the Building Division by themselves until the strike ended sometime in July. No further inspections were made after the strike and no occupancy permit was ever issued. A plumbing permit was, however, issued in August 1974. The house was completed and the Hughes moved in February 1975. In December 1977 they sold the property to the present plaintiff who was told nothing of its chequered history. Before purchasing the house the plaintiff had taken a contractor with him to advise him on the cost of some renovations and also to make a general inspection of the house. The contractor did not see anything to alert him to a potential problem with the foundations but he did not crawl under the house to examine them. Accordingly, the first the plaintiff knew of the defective foundations was when they were drawn to his attention in November 1978 by a plumber called to attend to a burst pipe. The plumber discovered the situation when he went into the four-foot crawl space under part of the house and saw that the foundations had subsided.

The plaintiff issued his writ in January 1979 alleging against his vendor: (1) fraudulent misrepresentation; (2) breach of contract; and (3) negligence in the construction of the house. He alleged negligence also against the City of Kamloops for failing to enforce the stop work order or alternatively for failing to condemn the building as unfit for habitation.

Andrews J. found both defendants liable and apportioned fault between them, 75 per cent against the Hughes and 25 per cent against the City. No appeal was taken by the Hughes. The City's appeal to the Court of Appeal of British Columbia was dismissed.

But for the issue of limitations which I will deal with later, the City's grounds of appeal to this Court were substantially the same as those presented to the Court of Appeal and rejected by it. The first was that no duty of care was owed by the City to the plaintiff and, absent such a duty, no liability in negligence could be incurred.

2. The Duty of Care

The leading English authority favouring the existence of a duty of care owed by the City to the plaintiff is the decision of the House of Lords in Anns v. Merton London Borough Council, [1978] A.C. 728. The facts, in brief, were that the Borough Council in February 1962 approved plans for the creation of a two-storey block of flats. The plans called for the foundations to be "3'0" or deeper to the approval of local authority". In fact the foundations were only two feet six inches deep. By February 1970 cracks had appeared in the walls of the flats and the floors had begun to slope. Two of the plaintiffs were original lessees; the others were assignees from original lessees. All claimed against the Borough for the negligence of the council surveyor in approving foundations that were inadequate.

The relevant English legislation was the Public Health Act 1936, s. 61 of which empowered Council to make by-laws to regulate the construction of buildings. By-law 18(1)(b)

provided that the foundations of every building should be taken down to such depth or be so designed as to safeguard the building against damage caused by swelling and shrinking of the subsoil. The builder was under a statutory duty to notify the local authority before covering up the foundations and the local authority had at that stage the right to inspect and to insist on any correction necessary to bring the work into conformity with the by-laws.

Lord Wilberforce pointed out that the local authority is a public body whose powers and duties are definable in terms of public rather than private law. However, in some circumstances the law could impose over and above, or perhaps alongside, these public law powers and duties a private law duty towards individuals enabling them to sue the authority for damages in a civil suit. The difficulty was to determine when such a private law duty could be imposed. The first step, Lord Wilberforce said, is to analyse the powers and duties of the authority to determine whether they require the authority to make "policy" decisions or "operational" decisions. He said at p. 754:

> Most, indeed probably all, statutes relating to public authorities or public bodies, contain in them a large area of policy. The courts call this "discretion" meaning that the decision is one for the authority or body to make, and not for the courts. Many statutes also prescribe or at least presuppose the practical execution of policy decisions: a convenient description of this is to say that in addition to the area of policy or discretion, there is an operational area. Although this distinction between the policy area and the operational area is convenient, and illuminating, it is probably a distinction of degree; many "operational" powers or duties have in them some element of "discretion." It can safely be said that the more "operational" a power or duty may be, the easier it is to superimpose upon it a common law duty of care.

His Lordship then adverted to the fact that frequently policy decisions are affected by budgetary considerations. It is for the local authority to decide what resources it should make available to carry out its role in supervising and controlling the activities of builders. For example, budgetary considerations may dictate how many inspectors should be hired for this purpose, what their qualifications should be, and how often inspections should be made. He approved the statement of du Parcq L.J. in Kent v. East Suffolk Rivers Catchment Board, [1940] 1 K.B. 319, at p. 338, that public authorities have to strike a balance between the claims of efficiency and thrift and whether they get the right balance can only be decided through the ballot box and not in the courts. He then dealt with the argument that where the local authority is under no duty to inspect but merely has a power to inspect, it can avoid liability for negligent inspection by simply deciding not to inspect at all. He pointed out that this overlooks the fact that local authorities are public bodies operating under statute with a clear responsibility for public health in their area. They must, therefore, make their discretionary decisions responsibly and for reasons that accord with the statutory purpose. They must at the very least give due consideration to the question whether they should inspect or not and, having decided to inspect, they must then be under a duty to exercise reasonable care in conducting that inspection.

Lord Wilberforce rejected the notion that a distinction was to be made in this context between statutory duties and statutory powers, the former giving rise to possible liability and the latter not. Such a distinction, he says, overlooks the fact that parallel with public law duties owed by local authorities there may co-exist private law duties to avoid causing damage to other persons in proximity to them. The trilogy of House of Lords cases -- Donoghue v. Stevenson, [1932] A.C. 562, Hedley Byrne & Co. v. Heller & Partners Ltd., [1964] A.C. 465, and Home Office v. Dorset Yacht Co., [1970] A.C. 1004 -- clearly established that in order to decide whether or not a private law duty of care existed, two questions must be asked:

> (1) is there a sufficiently close relationship between the parties (the local authority and the person who has suffered the damage) so that, in the reasonable contemplation of the authority, carelessness on its

part might cause damage to that person? If so,

(2) are there any considerations which ought to negative or limit (a) the scope of the duty and (b) the class of persons to whom it is owed or (c) the damages to which a breach of it may give rise?

These questions, Lord Wilberforce said, must be answered by an examination of the governing legislation.

Lord Wilberforce categorized the various types of legislation as follows:

(1) statutes conferring powers to interfere with the rights of individuals in which case an action in respect of damage caused by the exercise of such powers will generally not lie except in the case where the local authority has done what the legislature authorized but has done it negligently;

(2) statutes conferring powers but leaving the scale on which they are to be exercised to the discretion of the local authority. Here there will be an option to the local authority whether or not to do the thing authorized but, if it elects to do it and does it negligently, then the policy decision having been made, there is a duty at the operational level to use due care in giving effect to it.

Lord Wilberforce found that the defendant in Anns was under a private law duty to the plaintiff. It had to exercise a bona fide discretion as to whether to inspect the foundations or not and, if it decided to inspect them, to exercise reasonable skill and care in doing so. He concluded that the allegations of negligence were consistent with the Council or its inspector having acted outside any delegated discretion either as to the making of an inspection or as to the manner in which the inspection was made.

Following the path charted by Lord Wilberforce and directing myself to the governing legislation, s. 714 of the Municipal Act of British Columbia, R.S.B.C. 1960, c. 255, as amended, now R.S.B.C. 1979, c. 290, provides in part as follows:

714. The Council may, for the health, safety, and protection of persons and property, and subject to the Health Act and the Fire Marshal Act and the regulations made thereunder, by by-law

(a) regulate the construction, alteration, repair, or demolition of buildings and structures;

. . .

(k) require that, prior to any occupancy of a building or part thereof after construction, wrecking, or alteration of that building or part thereof, or any change in class of occupancy of any building or part thereof, an occupancy permit be obtained from the Council or the proper authorized official, which permit may be withheld until the building or part thereof complies with the health and safety requirements of the by-laws of the municipality or of any Statute.

It would appear from the use of the word "may" in s. 714 that the Council has a discretion under the statute whether to regulate the construction of buildings by by-laws or not. However, in fact Council decided to exercise its regulatory power and passed By-law No. 11-1. The By-law prohibited construction without a building permit, provided for a scheme of inspections at various stages of construction, prohibited occupancy without an occupancy permit and, perhaps most important, imposed on the building inspector the duty to enforce its provisions. It should be noted, however, that the By-law also imposed a duty on the owner of the building or his agent to give notice to the building inspector when the building reached the various stages at which inspection was called for under the By-law.

It seems to me that, applying the principle in Anns, it is fair to say that the City of Kamloops had a statutory power

to regulate construction by by-law. It did not have to do so. It was in its discretion whether to do so or not. It was, in other words, a "policy" decision. However, not only did it make the policy decision in favour of regulating construction by by-law, it also imposed on the city's building inspector a duty to enforce the provisions of the By-law. This would be Lord Wilberforce's "operational" duty. Is the City not then in the position where in discharging its operational duty it must take care not to injure persons such as the plaintiff whose relationship to the City was sufficiently close that the City ought reasonably to have had him in contemplation?

3. The Argument on Causation

Counsel for the City puts forward two main propositions which it says should insulate it against liability to the plaintiff. The first is that even if this Court were to adopt the principle in Anns and find that the City owed the plaintiff a private law duty of care, the plaintiff's damage was not caused by any fault of the City. The plaintiff's damage, it submits, was caused solely by the wilful disregard by the Hughes of the building by-law and the structural safety requirements imposed on them by the building inspector and their deceit in concealing their knowledge of the structural defects from the plaintiff when he bought the house. Reliance was placed on the House of Lords' decision in East Suffolk Rivers Catchment Board v. Kent, [1941] A.C. 74. Alternatively, the City argued, the plaintiff's damage was caused or contributed to by the plaintiff's own negligence in failing to make a proper inspection at the time of purchase. Counsel for the City submits that surely a careful examination of the foundations of a house built on a hillside would be a primary consideration in the mind of any competent contractor retained by a prospective purchaser to opine on the structural integrity of the house.

It seems to me that the learned trial judge was right in the way he dealt with the liability of the Hughes. He agreed that they played a major role in causing the plaintiff's damage and imposed a 75 per cent liability on them. He did not deal in his brief reasons for judgment with the defence of contributory negligence on the part of the plaintiff put forward by the City but it is implicit in the result he reached that he found none. The Court of Appeal in dealing with this issue said there was no evidence to show that, at the time the plaintiff had his contractor check out the house, the subsidence of the foundations had taken place or would have been apparent even if his contractor had entered the four-foot crawl space. It seems to me that this may not be completely accurate. There was some evidence that efforts had been made to shore up the foundations prior to the plaintiff's acquisition of the house. I prefer therefore to adopt the inference to be drawn from the trial judge's finding of no contributory negligence that the plaintiff had no obligation in the circumstances to crawl under the house to inspect the foundations.

I do not think the House of Lords' decision in East Suffolk helps the City on the causation issue. In that case the Catchment Board exercised its statutory power to repair a breach in a retaining wall when the river broke through it as a result of a flood. But the Board carried out its work so inefficiently that the flooding continued over an extensive period of time and did serious damage to the plaintiff's pasture land. The evidence disclosed that the breach could with reasonable skill have been repaired in fourteen days. The trial judge found for the plaintiff. If the defendant Board had done nothing, he concluded, it would have been free of liability. But having injected itself into the action it owed a duty to the plaintiff to use reasonable care. The

Court of Appeal agreed with the trial judge that the defendant, having elected to exercise its powers, came under a duty to exercise them with a reasonable degree of skill and care. The House of Lords, however, (Lord Atkin dissenting) reversed the Court of Appeal, holding that the defendant Board was under no obligation to repair the wall or to complete the work after having started it. Viscount Simon and Lord Thankerton both found that the plaintiff's damage was caused by the flooding and not by the abortive efforts of the defendant to repair the gap in the wall. There was no evidence that any additional damage was caused as a result of its intervention.

Lord Wilberforce was not content to characterize East Suffolk simply as a case on causation. He thought rather that it revealed that in 1940 the concept of a general duty of care resting on public officials was not yet fully recognised and, indeed, that that recognition did not come until 1970 with the decision in Home Office v. Dorset Yacht Co., supra.

In my view, the East Suffolk case is clearly distinguishable from the present case. This is not the case of a power which the City decided to exercise but exercised in a negligent manner. This is the case of a duty owed by the City to the plaintiff, a person who met Lord Wilberforce's test of proximity in Anns. The City's responsibility as set out in the By-law was to vet the work of the builder and protect the plaintiff against the consequences of any negligence in the performance of it. In those circumstances it cannot, in my view, be argued that the City's breach of duty was not causative. The builder's negligence, it is true, was primary. He laid the defective foundations. But the City, whose duty it was to see that they were remedied, permitted the building to be constructed on top of them. The City's negligence in this case was its breach of duty in failing to protect the plaintiff against the builder's negligence.

In Anns Lord Wilberforce suggests that if East Suffolk were being decided today the Catchment Board, although free of liability if it decided to take no steps to stem the flood, might attract a liability if it decided to exercise its power and take steps but exercised its power negligently. It seems to me that this would follow from a finding that the Board had made a policy decision to exercise its power and acted negligently in carrying its policy decision into operation. A liability might then be incurred not only with respect to any fresh damage caused by its negligent interventions but also with respect to damage the flood would have caused regardless of its intervention provided that damage could and ought to have been mitigated by a non-negligent intervention.

I believe that if the courts below had found in this case that the City owed no private law duty of care to the plaintiff, they would have held the Hughes one hundred per cent liable. Their apportionment of liability therefore must stand or fall on the existence of such a duty.

4. Non-feasance and Misfeasance

The second proposition put forward on behalf of the City goes directly to the central issue in the case, namely what, if any, duty was owned by the City to the plaintiff. Counsel submits that even if this Court were to adopt the principle in Anns, it should not be applied in this case because at most the City was guilty of non-feasance rather than misfeasance. He submits that this distinction between non-feasance and misfeasance is well established in Canadian law and that non-feasance does not give rise to a liability in negligence. Accordingly, he submits, the principle in Anns, if adopted, should be confined in Canada to misfeasance cases. It is necessary to consider this submission in some detail.

A good starting point is the case most strongly relied upon by counsel, namely McCrea v. White Rock (City of) (1974), 56 D.L.R. (3d) 525. The circumstances giving rise to that litigation are not dissimilar to those arising here. An owner of a building sued the municipality for negligent inspection of the structure after it collapsed. Alterations had been made to the building to substitute a beam supported by two columns for a bearing wall. Three inspections were made at the call of the contractor, one at the time of the pouring of the cement floor, another in relation to a laminated fire wall and the third in connection with the floor repair. Maclean J.A. summarizes the crucial facts, at pp. 528-29, as follows:

> There was evidence that the practice in White Rock was for the contractor to call for inspections on behalf of the owner. No further calls for inspections were made and the inspector did not inspect the beam. In fact, the contractor did not follow the plan which he had submitted in support of the application for the building permit. However, the inspector had no reason to believe that an

inspection other than one called for by the owner or his agent was required.

Mr. Justice Berger found that the City had been negligent, applying the reasoning in Dutton v. Bognor Regis United Building Co., [1972] 1 All E.R. 462, [1972] 1 Q.B. 373, sub nom. Dutton v. Bognor Regis Urban District Council. The Court of Appeal of British Columbia reversed the decision of the trial judge. Maclean J.A. distinguished the Dutton case on the basis of the distinction between non-feasance and misfeasance. Quoting from his judgment at pp. 529-30:

> In my view, if it could be said that the building inspector was at fault at all, his fault was one of non-feasance at the worst, rather than misfeasance. The respondents relied on the case of Dutton v. Bognor Regis United Building Co. Ltd. et al., [1972] 1 All E.R. 462, [1972] 1 Q.B. 373 sub nom. Dutton v. Bognor Regis Urban District Council. In that case the builder erected the building on a rubbish tip, and upon discovering the nature of the ground, he enlarged the foundations and
>
> made other provisions in an attempt to ensure the safety of the building. These attempts were futile, however, and the building became an almost total loss because of settling of the foundations. The building inspector had passed the foundations following an inadequate inspection. There is no doubt that his inspection was inadequate and careless in the extreme. The negligent inspection by the building inspector was clearly an act of misfeasance as Lord Denning, M.R., said at p. 475 of the report of the Dutton case:
>
> > It was his job to examine the foundations to see if they would take the load of the house. He failed to do it properly. In the third place, the council should answer for his failure. They were entrusted by Parliament with the task of seeing that houses were properly built. They received public funds for the purpose. Yet, they failed to protect them. Their shoulders are broad enough to bear the loss.
> >
> > (Emphasis added.)
>
> It should be noted that the building inspector was also held liable for the loss, but, as previously noted, the Dutton case was clearly a case of misfeasance on the part of the servant, the building inspector. Liability was imposed upon him by the law of England, but in my view, the same result does not necessarily follow here. In any event, the Dutton case is distinguishable because that was a case of misfeasance whereas in my view this is a case of non-feasance if it is anything. [My emphasis.]

Robertson J.A. agreed with Maclean J.A. that the Dutton case was distinguishable on this basis. In the course of his reasons for judgment he made reference to the judgment of Schroeder J.A. in Schacht v. The Queen in right of the Province of Ontario, [1973] 1 O.R. 221, in which certain police officers failed to warn the plaintiff of an excavation on the highway and as a result he suffered personal injuries. Action was brought against the Crown. After reviewing a number of cases and statutory provisions Mr. Justice Schroeder, delivering the judgment of the Court, said at p. 231:

> Looked upon superficially the passivity of these two officers in the face of the manifest dangers inherent in the inadequately guarded depression across the highway may appear to be nothing more than non-feasance, but in the case of public servants subject not to a mere social obligation, but to what I feel bound to regard as a legal obligation, it was non-feasance amounting to misfeasance. [My emphasis.]

Seaton J.A. commented on Schacht at pp. 548-49 as follows:

> In Schacht there is reference to non-feasance amounting to misfeasance. I do not understand that statement. In Dutton Sachs, L.J., dealt with the borderline between non-feasance and misfeasance so as to much reduce the area termed non-feasance. The judgment under appeal adopts that reasoning and carries it

> further. I think that the result is not consistent with the decisions in England (for example, East Suffolk, supra), this jurisdiction (for example, Stevens & Willson v. Chatham, supra, Mainwaring v. Nanaimo, [1951] 4 D.L.R. 519, 3 W.W.R. (N.S.) 258, and Miller & Brown Ltd. v. City of Vancouver (1966), 59 D.L.R. (2d) 640, 58 W.W.R. 191), or elsewhere (for example, Gorringe v. Transport Com'n (Tas.) (1950), 80 C.L.R. 357, and Oamaru Borough v. McLeod, [1967] N.Z.L.R. 940). I think that this case must turn upon the presence or absence of a duty to inspect. If a duty is discovered the non-feasance/misfeasance dichotomy is not necessary. [My emphasis.]

Mr. Justice Seaton concluded that there was no duty on the appellant in the McCrea case to inspect and that was sufficient to dispose of the appeal. He was able to reach this conclusion because there was no obligation on the inspector to inspect until the owner had given notice and no notice had been given in respect of the beam.

The McCrea case, of course, predates Anns. Counsel relies also therefore on a number of Canadian decisions since Anns including a decision of this Court. In Barratt v. North Vancouver (Corporation of), [1980] 2 S.C.R. 418, a plaintiff was thrown from his bicycle and injured when he rode into a deep pothole in the road surface. The evidence indicated that the municipality had a once every two weeks inspection system, that the road was properly inspected one week before the accident and that the pothole developed between the time of that inspection and the date of the accident. It was held that the plaintiff could not recover in negligence from the municipality on the ground that it should have provided for more frequent inspections. It should be noted that s. 513(2) of the British Columbia Municipal Act gave the municipality authority to lay out, construct, maintain and improve highways but it imposed no duty on the municipality to maintain its highways. Mr. Justice Martland said at p. 428:

> In my opinion, no such duty existed. The Municipality, a public authority, exercised its power to maintain Marine Drive. It was under no statutory duty to do so. Its method of exercising its power was a matter of policy to be determined by the Municipality itself. If, in the implementation of its policy its servants acted negligently, causing damage, liability could arise, but the Municipality cannot be held to be negligent because it formulated one policy of operation rather than another.

The position of the Municipality is well stated in the judgment of du Parcq L.J. in the Court of Appeal in Kent v. East Suffolk Rivers Catchment Board, [1940] 1 K.B. 319, at p. 338:

> The law would perhaps be more satisfactory, or at any rate seem more satisfactory in some hard cases, if a body which chose to exercise its powers were regarded as being in exactly the same position as one upon which an Act of Parliament imposed a duty. On the other hand, it must be remembered that when Parliament has left it to a public authority to decide which of its powers it shall exercise, and when and to what extent it shall exercise them, there would be some inconvenience in submitting to the subsequent decision of a jury, or judge of fact, the question whether the authority had acted reasonably, a question involving the consideration of matters of policy and sometimes the striking of a just balance between the rival claims of efficiency and thrift.

Mr. Justice Martland then stated his conclusion as follows, at p. 428:

> My conclusion is that the trial judge sought to impose upon the Municipality too heavy a duty, that the determination of the method by which the Municipality decided to exercise its power to maintain the highway, including its inspection system, was a matter of policy or planning, and that, absent negligence in the actual operational performance of that plan, the appellant's claim fails.

Two things are of interest about Mr. Justice Martland's reasons for judgment in Barratt. The first is that he makes no reference to any distinction between non-feasance and misfeasance although presumably, if the distinction was significant, this would be categorized as a non-feasance case. The second is that it seems to be central to his judgment that no duty was imposed upon the municipality. It was in the discretion of the municipality whether or to what extent it exercised its maintenance power. The courts could not therefore interfere in the absence of negligence in the implementation of the policy it adopted with respect to inspection. This, it appears to me, is the ratio of the decision in Barratt.

This Court did, however, indicate some support for the non-feasance/misfeasance distinction in its earlier decision in Stevens and Willson v. Chatham (City of), [1934] S.C.R. 353. Indeed, that case may be viewed as the primary source of the distinction. The facts in brief were that the plaintiff's building burned while firemen stood by helplessly because they did not know how to turn off the electricity which was the source of the fire. The firemen telephoned the Public Utilities Commission to get them to turn off the electricity but by the time this was done the fire was out of control and the building could not be saved. Duff C.J. and Smith J. agreed with the trial judge and the majority of the Ontario Court of Appeal that the firemen were not in these circumstances negligent. Rinfret J. concurred but added at p. 363:

> The City is not legally responsible in damages, in this case, for mere inactivity on the part of its firemen.

Crocket J. dissented, expressing no opinion on whether the firemen were negligent in their "nonfeasance or misfeasance" in waiting for the Commission to shut off the power. He found that the Commission had been negligent in being slow to shut off the power. Only Lamont J. based his judgment primarily on the ground that the City was not liable "for mere inactivity on the part of its servants" (p. 364). The "mere inactivity" approach would appear to have formed the basis of the non-feasance/misfeasance distinction adopted and applied in cases such as Wing v. Moncton, [1940] 2 D.L.R. 740, Neabel v. Ingersol (Town of) (1967), 63 D.L.R. (2d) 484, and McCrea v. White Rock (City of), supra.

5. The Nature of the Alleged Breach

Two important questions that must be answered in the present case are: (1) What was it that the building inspector failed to do in this case that is alleged to have contributed to the plaintiff's damage? and (2) Was he under a duty to do that thing? If the building inspector was under a duty to do the thing he failed to do, then it seems to me that Seaton J.A. was right in McCrea when he stated that the non-feasance/misfeasance dichotomy becomes irrelevant. He is in breach of a duty and, if his breach caused the plaintiff's damage, liability must ensue. If, however, he is under no duty to do the thing he failed to do, there can be no liability. Again, the non-feasance/misfeasance dichotomy is irrelevant.

Lambert J.A., speaking for the Court of Appeal, [(1981), 31 B.C.L.R. 311], found that the building inspector was under a public law duty to prevent the continuation of the construction of the building on structurally unsound foundations once he became aware that the foundations were structurally unsound. He was also under a public law duty to prevent the occupancy of the building by the Hughes or the plaintiff. He failed to discharge either of those public law duties. Lambert J.A. then went on to discuss the nature of the private law duty he was under. He said at p. 319:

> I turn now to the private law duty. The conduct of the building inspector in response to the public law duties involved decisions on alternative courses of conduct which were, in my opinion, operational in character. The building was a danger to the occupant of the house and to adjoining property owners. It may have been a danger to anyone in the house. Policy decisions could have confronted the city as to whether to prosecute

> or to seek an injunction. There may have been other policy choices. But a decision not to act at all, or a failure to decide to act, cannot be supported by any reasonable policy choice. That decision or failure was not "within the limits of a discretion bona fide exercised", using again the words of Lord Wilberforce. It was certainly open to the trial judge to reach that conclusion. Indeed, having regard to the evidence of Mr. Backmeyer, it was open to the trial judge to conclude that the decision not to act or the failure to decide to act, was influenced by the pressure exerted by Mr. Hughes Sr. in his capacity as alderman.
>
> I would follow the reasons of Lord Wilberforce in Anns in concluding that a private law duty was owed to Mr. Nielsen as the owner and occupier of the house at the time when the defective foundations first became apparent by causing actual subsidence and damage. [My emphasis.]

It seems to me that Lambert J.A. was correct in concluding that the courses of conduct open to the a building inspector called for "operational" decisions. The essential question was what steps to take to enforce the provisions of the by-law in the circumstances that had arisen. He had a duty to enforce its provisions. He did not have a discretion whether to enforce them or not. He did, however, have a discretion as to how to go about it. This may, therefore, be the kind of situation envisaged by Lord Wilberforce when, after discussing the distinction between policy decisions and operational decisions, he added the rider [[1978] A.C. 728, at p. 754]:

> Although this distinction between the policy area and the operational area is convenient, and illuminating, it is probably a distinction of degree; many "operational" powers or duties have in them some element of "discretion". It can safely be said that the more "operational" a power or duty may be, the easier it is to superimpose upon it a common law duty of care.

It may be, for example, that although the building inspector had a duty to enforce the by-law, the lengths to which he should go in doing so involved policy considerations. The making of inspections, the issuance of stop orders and the withholding of occupancy permits may be one thing; resort to litigation, if this became necessary, may be quite another. Must the City enforce infractions by legal proceedings or does there come a point at which economic considerations, for example, enter in? And if so, how do you measure the "operational" against the "policy" content of the decision in order to decide whether it is more "operational" than "policy" or vice versa? Clearly this is a matter of very fine distinctions.

Mr. Justice Lambert resolves this problem, as I apprehend the passage already quoted from his reasons, by concluding that the City could have made a policy decision either to prosecute or to seek an injunction. If it had taken either of those steps, it could not be faulted. Moreover, if it had considered taking either of those steps and decided against them, it could likewise not be faulted. But not to consider taking them at all was not open to it. In other words, as I read his reasons, his view was that the City at the very least had to give serious consideration to taking the steps toward enforcement that were open to it. If it decided against taking them, say on economic grounds then that would be a legitimate policy decision within the operational context and the court should not interfere with it. It would be a decision made, as Lord Wilberforce put it, within the limits of a discretion bona fide exercised.

There is no evidence to support the proposition that the City gave serious consideration to legal proceedings and decided against them on policy grounds. Rather the evidence gives rise to a strong inference that the City, with full knowledge that the work was progressing in violation of the by-law and that the house was being occupied without a permit, dropped the matter because one of its aldermen was involved. Having regard to the fact that we are here concerned with a statutory duty and that the plaintiff was clearly a person who should have been in the contemplation of the City as someone who might be injured by any breach of that duty, I think this is an appropriate case for the application of the principle in Anns. I do not think the appellant can take any comfort from

the distinction between non-feasance and misfeasance where there is a duty to act or, at the very least, to make a conscious decision not to act on policy grounds. In my view, inaction for no reason or inaction for an improper reason cannot be a policy decision taken in the bona fide exercise of discretion. Where the question whether the requisite action should be taken has not even been considered by the public authority, or at least has not been considered in good faith, it seems clear that for that very reason the authority has not acted with reasonable care. I conclude therefore that the conditions for liability of the City to the plaintiff have been met.

It is of interest to note in this connection that other courses were open to the City. It could have posted warning notices on the building and it could have condemned it. In fact, it did neither even although it knew that work was continuing despite the stop work order and that the house was being occupied without an occupancy permit. Indeed, it issued a plumbing permit in August 1974 before the Hughes moved in.

6. The "Floodgates" Argument

Before leaving the issue of the liability of public officials and moving on to the equally vexatious issue of recovery for pure economic loss, I should like to say a word or two about what has come to be known as the "floodgates" argument. The floodgates argument would discourage a finding of private law duties owed by public officials on the ground that such a finding would open the floodgates and create an open season" on municipalities. No doubt a similar type of concern was expressed about the vulnerability of manufacturers following the decision in Donoghue v. Stevenson, supra. While I think this is an argument which cannot be dismissed lightly, I believe that the decision in Anns contains its own built-in barriers against the flood. For example, the applicable legislation or the subordinate legislation enacted pursuant to it must impose a private law duty on the municipality or public official before the principle in Anns applies. Further, the principle will not apply to purely policy decisions made in the bona fide exercise of discretion. This is, in my view, an extremely important feature of the Anns principle because it prevents the courts from usurping the proper authority of elected representatives and their officials. At the same time, however, the principle ensures that in the operational area, i.e. in implementing their policy decisions, public officials will be exposed to the same liability as other people if they fail in discharging their duty to take reasonable care to avoid injury to their neighbours. The only area, in my view, which leaves scope for honest concern is that difficult area identified by Lord Wilberforce where the operational subsumes what might be called secondary policy considerations, i.e. policy considerations at the secondary level. This, I believe, is the area into which this case falls. This case, however, is more easily disposed of by virtue of the complete failure of the municipality to deal with the policy considerations. On the assumption that by and large municipalities and their officials discharge their responsibilities in a conscientious fashion, I believe that such a failure will be the exception rather than the rule and that the scope for application of the principle in Anns will be relatively narrow. I do not see it, as do some commentators, as potentially ruinous financially to municipalities. I do see it as a useful protection to the citizen whose ever-increasing reliance on public officials seems to be a feature of our age: see Linden, "Tort Law's Role in the Regulation and Control of the Abuse of Power", Special Lectures of the Law Society of Upper Canada, 1979, p. 67.

7. Recovery for Pure Economic Loss

It was forcefully argued by the appellant that even if the Court were to find a breach by the City of a private law duty owed to the plaintiff, the plaintiff's action should be dismissed because his loss was purely economic. Reliance was placed on the decision of this Court in Rivtow Marine Ltd. v. Washington Iron Works, [1974] S.C.R. 1189.

It will be recalled that in Rivtow the plaintiff had purchased a crane manufactured by the defendant from a distributor. The crane had a latent defect which made it

dangerous to operate a fact which the defendant discovered when one of its cranes broke, killing the operator. The defendant knew that the plaintiff had purchased one of its cranes, but it took no steps to warn the plaintiff. The plaintiff discovered the defect when cracks appeared during the busy season and had to withdraw the crane from operation in order to have it repaired. The Supreme Court characterized the cost of the repairs as economic loss. The majority held that that cost was not recoverable but, since the defendant was in breach of its duty to warn the plaintiff of the defect in the crane, it was liable to the plaintiff for the difference between the loss of earnings it sustained during the busy season and the loss of earnings it would have sustained if its attention had been directed to the defect and it had had the crane repaired during the slack season. The minority would have allowed the cost of repair to the crane itself.

The learned trial judge identified the damages in the instant case as being the cost to the plaintiff of having his home restored to the condition it should have been in if properly constructed plus certain expenses he could incur while this was being done. He awarded general damages in the amount of $45,004.27 and attributed 25 per cent of that sum to the City.

The City submits that this is pure economic loss analogous to the cost of repairs to the crane which was expressly disallowed by the majority in Rivtow. Lambert J.A., after pointing out that recovery for economic loss was allowed in Anns, Lord Wilberforce expressing a preference for the dissenting judgment of Laskin J. (as he then was) in Rivtow over that of the majority, proceeded to distinguish Rivtow. The majority, he said, analyzed the breach in that case as a failure in the duty of the manufacturer and sales agent to warn the plaintiff of the defects in the crane. However, and this he thought was the key to Rivtow, even if that duty had been complied with the crane would still have been damaged and the plaintiff would have had to bear the cost of repair in the absence of any contractual warranty. Accordingly, the plaintiff could recover only for the economic loss occasioned by the breach of the duty to warn. The minority, on the other hand, would have allowed the cost of the repair to the crane, not as damage flowing from breach of a duty to warn but as the cost of avoiding damage to persons or property.

There is no doubt that the preclusion of recovery for economic loss in the absence of physical injury to person or property has a venerable history. The decision of Blackburn J. in Cattle v. Stockton Waterworks Co. (1875), L.R. 10 Q.B. 453, was still held to be good law by Widgery J. in Weller & Co. v. Foot and Mouth Disease Research Institute, [1966] 1 Q.B. 569, [1965] 3 All E.R. 560. The rationale for the economic loss rule was probably most articulately stated by Cardozo C.J. in Ultramares Corp. v. Touche, 255 N.Y. 170 (1931) who said at p. 179 that to allow such recovery would "expose [defendants] to a liability in an indeterminate amount for an indeterminate time to an indeterminate class".

It took the decision of the House of Lords in Hedley Byrne & Co. Ltd. v. Heller & Partners Ltd., supra, to spark a review and reassessment of the economic loss rule by legal scholars and judges, and this review has been going on now for almost two decades. How, it is asked, can one justify to injured plaintiffs the difference in treatment the law accords to physical and to economic loss caused by a defendant's negligent acts? In one you are compensated by the wrongdoer: in the other you have to bear the loss yourself. Does it make sense to permit the recovery of economic loss for negligent words but not for negligent acts? What is the significant difference between them? Why, if economic loss is reasonably foreseeable as a consequence of negligent acts, should it not be as recoverable as reasonably foreseeable physical injury to persons or to property? And should Chief Judge Cardozo's fear of indeterminate liability to an indeterminate class preclude recovery by a very specific plaintiff in a very specific amount? Can a policy consideration which leads to a manifest injustice in certain types of cases be a good policy consideration? Is there some rationale whereby injustice in specific cases can be avoided and Chief Judge Cardozo's fear guarded against at the same time?

In an edifying article Negligent Misstatements, Negligent Acts and Economic Loss, 92 L.Q.R. 213, Mr. Craig points out

that it is the reasonable foreseeability test of recovery in Donoghue v. Stevenson which could open up an exposure for economic loss of indeterminate scope. It is arguable that no such exposure arises under the Hedley Byrne principle because of the restricted class entitled to recovery under that principle. Quoting from Mr. Craig's article at p. 218:

> The very nature of the duty framed by the House of Lords in 1964 has within it certain limiting factors mentioned above which mean that these problems of indeterminate liability are far less likely to arise: the need for some form of relationship between the participants, reasonable reliance leading to loss, knowledge by the representor of some particular transaction for which the information is to be required. The nexus envisaged was far closer than reasonable foresight per se.

Mr. Craig is clearly not completely satisfied with this distinction since the full scope of the duty in Hedley Byrne has not yet been determined. There has been a tendency to expand it in subsequent cases (see, for example, Dutton v. Bognor Regis United Building Co., supra, and Ministry of Housing and Local Government v. Sharp, [1970] 2 Q.B. 223) and this is a trend which might well continue as the jurisprudence around Hedley Byrne develops.

The High Court of Australia has tried to find a solution to the economic loss problem by narrowing the test of reasonable foreseeability. In Caltex Oil (Australia) Pty. Ltd. v. The Dredge "Willemstad" (1976), 136 C.L.R. 529, the Willemstad, while conducting dredging operations in Botany Bay, damaged an oil pipeline belonging to a refinery which ran across the bed of the Bay to a terminal operated by Caltex. Caltex supplied crude oil to the refinery for processing and received the refined product back by way of the pipeline. By reason of the damage to the pipeline Caltex had to find other means of transportation either by road or ship, and this cost it $95,000. This amount was characterized as pure economic loss.

Gibbs J. affirmed that the general rule was that economic loss was not recoverable. The fact that it was reasonably foreseeable did not make it recoverable. However, he held (at p. 555) that an exception to this rule of non-recovery arises when the defendant "has knowledge or means of knowledge that the plaintiff individually, and not merely as a member of an unascertained class, will be likely to suffer economic loss as a consequence of his negligence". He found that the defendant had knowledge in this case and permitted recovery. The decision was unanimous. Stephen and Mason JJ. adopted Gibb J.'s exception to the general rule. Jacobs J. distinguished between physical injury to property and physical effect on property and said that physical effect on property was recoverable even if it took the form of economic loss resulting from the immobilization of the property. Murphy J. stated that there was no satisfactory general principle governing the recovery of economic loss and that the issue was really a policy one. Just as Donoghue v. Stevenson had brought the law into conformity with the then notions of social justice, so must the court do the same in permitting recovery for economic loss unless there are acceptable policy reasons for not doing so. He saw none in this case.

It is quite apparent that Gibbs and Jacobs JJ., and possibly Stephen J. also, were seeking some means of permitting recovery for pure economic loss while avoiding the undesirable consequences of applying the reasonable foreseeability rule, namely indeterminate liability to an indeterminate class. They saw the solution in limiting foreseeability to specific individuals rather than members of a class. I am not sure, however, that their exception solves the problem. It may make the class determinate but it gives no guarantee that it will be small.

The House of Lords took a fresh look at the issue in Junior Books Ltd. v. Veitchi Co., [1983] A.C. 520. In that case the defendants were hired to lay a floor in a factory which was being erected for the plaintiffs by a building company. The defendants were sub-contractors and had no contractual relationship with the plaintiffs. The plaintiffs claimed that the floor was defective owing to the defendants' negligence and that the defendants knew what products were required and were alone responsible for the composition and construction of the floor. They also knew that the plaintiffs

were relying on their skill and judgment. The plaintiffs brought an action for the estimated cost of relaying the floor and for various items of economic loss consequential on its replacement, such as the cost of removal of machinery and the loss of profits while the floor was being relaid.

It was held by the House of Lords (Lord Brandon of Oakbrook dissenting) that where the relationship between parties is sufficiently close the scope of the duty of care owed by a person doing work is not limited to a duty to avoid causing foreseeable harm to persons or property by negligent acts or omissions but extends also to a duty to avoid defects in the work itself which will involve the plaintiffs in the cost of having them remedied. There was a sufficient degree of proximity between the plaintiffs and the defendants in this case and the plaintiffs were entitled to recover the cost of repairing the floor.

Lord Roskill, who delivered the main judgment in the case, said the case must be approached as one in which there was no physical damage. He referred with approval to Lord Wilberforce's two propositions in Anns: (1) his test of proximity and (2) whether there were any considerations which would call for a limitation on recovery. He found the proximity test was met and that the only reason for negating recovery was the traditional attitude of the law to economic loss. He held that this was not good enough. He saw no reason why "damage to the pocket" simpliciter should be disallowed when "damage to the pocket" coupled with physical damage has always been allowed. It was time for the law to take the next step forward in its development and he saw no untoward consequences from doing so. He expressed the view that the fears raised by the floodgates argument had proved unfounded.

Lord Brandon, dissenting, agreed that Lord Wilberforce's two propositions in Anns were sound. He agreed also that the proximity test was met in Junior Books. However, he found that Donoghue v. Stevenson itself and all the cases in which it had been followed had one thing in common, namely the existence of danger or the threat of danger of physical damage to persons or their property excluding the property from the defective condition of which the danger or threat of danger arose. In the absence of a contractual relationship Lord Brandon thought it inappropriate to extend the duty in tort so as, in effect, to create a warranty. He was, I believe, expressing a concern not dissimilar to that troubling the majority of this Court in Rivtow.

It is noted that in the instant case there is present the danger or threat of danger referred to by Lord Brandon. However, that was so in Rivtow also. The majority in Junior Books do seem to have carried the law a significant step forward.

As I mentioned earlier, recovery for economic loss was permitted in Anns with an expression of preference for the minority rather than the majority judgment in Rivtow. It seems to me, however, that the minority judgment results from the application of the reasonable foreseeability test which, it would appear, gives rise to the concern over indeterminate liability. In any event, the majority judgment of this Court in Rivtow stands until such time as it may be reconsidered by a full panel of the Court.

It seems to me, however, that Rivtow is distinguishable from this case in several significant respects. Rivtow was a lawsuit between private litigants. The plaintiff's claim here is against a public authority for breach of a private law duty of care arising under a statute. (This should not be confused with breach of statutory duty per se: see The Queen in right of Canada v. Saskatchewan Wheat Pool, [1983] 1 S.C.R. 205. It is noted that in the Dutton case Sachs L.J. put great emphasis on the fact that the defendant was a public authority and stated that the type of loss recoverable was the type of loss the private law duty arising under the statute was designed to prevent. If economic loss was within the purview of the statute, then it should be recoverable for breach of the private law duty arising under the statute whether or not it is recoverable for breach of a duty at common law. In my view, the private law duty in this case was designed to prevent the expense incurred by the plaintiff in putting proper foundations under his house. It was imposed to ensure that proper foundations would be under his house from the

outset. I suppose it is arguable that the damage the duty was designed to prevent was injury to the occupants from the collapse of the house or damage caused by the house sliding down the hill. But it seems to me that this is too narrow an approach to the protection the statute was designed to provide. The purpose of the By-law in this case was to prevent the construction of houses on defective foundations. The duty of enforcement which the By-law imposed on the building inspector required him at the very least to determine the scope of the measures which were necessary to achieve that end and, if required, to attempt to obtain the approval of the City for them. If he failed in that duty and a house on defective foundations resulted, it was obviously going to have to be repaired since it represented a threat to the health and safety of the occupants. This is not a case, like Rivtow, of failure to warn of the defective foundations: this is a case of failure to give consideration to a course of action which would have prevented the defective foundations. What else was the plaintiff to do to rectify the situation resulting from the City's breach?

It is noted also that there are no contractual overtones to this case as there were in Rivtow. It seems to have been important to the majority in Rivtow that no contractual warranty had been given with respect to the crane. Accordingly, there was some concern that the tort door should not be opened so far as to permit a recovery in tort which would not have been available in contract. No such problem arises in this case.

I said earlier in commenting upon the floodgates argument in relation to the imposition of a private law duty of care that I was not troubled by the thought that public officials in discharging their duties should incur the same liability as ordinary citizens. It may be that in exposing public authorities to liability for economic loss when under our law as it presently stands a private litigant may not be so exposed, the Court would be extending the liability of public authority beyond that of private litigants. I am not, however, persuaded that this is so. Like Lambert J.A. I tend to think that the problem of concurrent liability in contract and tort played a major role in the restrictive approach taken by the majority in Rivtow and that, as in the case of Hedley Byrne, we will have to await the outcome of a developing jurisprudence around that decision also: see Gypsum Carrier Inc. v. The Queen, [1978] 1 F.C. 147; Agnew-Surpass Shoe Stores Ltd. v. Cummer-Yonge Investments Ltd., [1976] 2 S.C.R. 221; but cf. Bethlehem Steel Corp. v. St. Lawrence Seaway Authority (1977), 79 D.L.R. (3d) 522 (F.C.); Ital-Canadian Investments Ltd. v. North Shore Plumbing and Heating Co., [1978] 4 W.W.R. 289 (B.C.S.C.)

I do not believe that to permit recovery in this case is to expose public authorities to the indeterminate liability referred to in Ultramares. In order to obtain recovery for economic loss the statute has to create a private law duty to the plaintiff alongside the public law duty. The plaintiff has to belong to the limited class of owners or occupiers of the property at the time the damage manifests itself. Loss caused as a result of policy decisions made by the public authority in the bona fide exercise of discretion will not be compensable. Loss caused in the implementation of policy decisions will not be compensable if the operational decision includes a policy element. Loss caused in the implementation of policy decisions, i.e. operational negligence will be compensable. Loss will also be compensable if the implementation involves policy considerations and the discretion exercised by the public authority is not exercised in good faith. Finally, and perhaps this merits some emphasis, economic loss will only be recoverable if as a matter of statutory interpretation it is a type of loss the statute intended to guard against.

It seems to me that recovery for economic loss on the foregoing basis accomplishes a number of worthy objectives. It avoids undue interference by the courts in the affairs of public authorities. It gives a remedy where the legislature has impliedly sanctioned it and justice clearly requires it. It imposes enough of a burden on public authorities to act as a check on the arbitrary and negligent discharge of statutory duties. For these reasons I would permit recovery of the economic loss in this case.

8. Limitation of Actions

The City alleged in its pleadings that the plaintiff's action in this case was statute-barred by the Municipal Act, R.S.B.C. 1960, c. 255, ss. 738 and 739 or, alternatively, by the Limitations Act, 1975 (B.C.), 1975, c. 37, s. 3, as amended. The limitations issue was not raised on appeal to this Court but for reasons which I will refer to in a moment the Court subsequently invited counsel to address it on this subject.

Limitations was an issue before the Court of Appeal and, according to Mr. Justice Lambert, the City accepted the proposition that the limitation period starts to run from the date on which the plaintiff actually discovers the damage or should with reasonable diligence have discovered it. It accepted, in other words, that the law in Canada was as stated in Sparham-Souter v. Town and Country Developments (Essex) Ltd., [1976] Q.B. 858. It did not put forward any other date. Rather, it confined its case before the Court of Appeal to the proposition that the plaintiff ought reasonably to have discovered the damage before he purchased the house in December 1977.

Since the hearing of the appeal in this Court the law in England has been changed by the decision of the House of Lords in Pirelli General Cable Works Ltd. v. Oscar Faber & Partners (a firm), [1983] 1 All E.R. 65, and the Court now has the written submissions of counsel on the implications of the change for this appeal.

The limitation problem stems from the apparent conflict between the decision of the English Court of Appeal in Sparham-Souter and the earlier decision of the House of Lords in Cartledge v. E. Jopling & Sons Ltd., [1963] A.C. 758. In Sparham-Souter the date of discoverability of the damage was held to be the date from which the limitation period started to run. In Cartledge, however, the effective date was held as a matter of statutory interpretation to be the date on which the damage occurred. The statutory language in Cartledge precluded the bringing of an action after the expiration of six years "from the date on which the cause of action accrued...." The statute contained a separate provision that where fraud or mistake was involved time did not begin to run until the fraud had been or could with reasonable diligence have been discovered. The House of Lords held unanimously, although regretfully, that these provisions left no room for an argument that in the absence of fraud the limitation period started to run from the date of discovery. Accordingly, since the plaintiff had contracted an industrial disease several years prior to his becoming aware of it, and also it appears, prior to the ability of medical science to detect it, his cause of action was barred by the statute before he even knew he had one.

The members of the English Court of Appeal discussed Cartledge in Sparham-Souter. They distinguished it on a variety of different bases and I think it is fair to say that no clear basis of distinction emerges from the several sets of reasons. The House of Lords nevertheless in Anns approved the views of the Court of Appeal in Sparham-Souter. Lord Wilberforce stated at p. 760 that the cause of action can only arise when "the state of the building is such that there is present or imminent danger to the health or safety of persons occupying it". Lord Salmon expressed the view at p. 770 that the cause of action arose "when the building began to sink and the cracks appeared". He said also that the period started to run when "the building suffered damage ... which endangered the safety of its occupants or visitors".

In Pirelli the House of Lords overruled Sparham-Souter and applied Cartledge. The defendants in Pirelli were consulting engineers who in March 1969 were negligent in the design of a boiler flue chimney at the plaintiff's works. As a result cracks appeared in the chimney. The plaintiffs did not discover the cracks until November 1977 and issued the writ in October 1978. The trial judge found that the cracks could not have occurred later than April 1970. He also found that the plaintiffs could not with reasonable diligence have discovered the damage before October 1972. He concluded, applying Sparham-Souter, that the plaintiffs only suffered damage when they discovered or ought reasonably to have

discovered the damage. Accordingly, the cause of action accrued within the six year limitation period and the plaintiffs were entitled to judgment. The defendants appealed to the Court of Appeal on the basis that the action was statute-barred. The Court of Appeal dismissed the appeal but the defendants succeeded in the House of Lords.

Their Lordships held that the cause of action accrued when physical damage occurred to the building, i.e. when the cracks formed in the chimney, whether or not the plaintiffs were or should have been aware of the damage at that time. The cause of action therefore accrued in April 1970 and the action was statute-barred. Their Lordships repudiated any distinction between personal injury damage and property damage for purposes of the application of the principle in Cartledge

In addition to overruling Sparham-Souter on the date of discovery as the effective date, their Lordships also seized the opportunity to put to rest the problem of the limitation period applicable to successive owners. They rejected the idea that the period starts to run afresh with each new owner and instead found that the duty was owed to owners as a class so that if time ran against one owner it ran also against all his successors in title.

It seems to me that it is now settled, at least in England, that the defendant's negligence has to have manifested itself in the shape of physical damage to the property, e.g. cracks or subsidence, before time starts to run for limitation purposes. It is vital, therefore, that the trial judge make a finding as to when this occurred. Once the damage has manifested itself it is, according to Pirelli, immaterial when the plaintiff discovered or ought reasonably to have discovered it.

It seems to me that Pirelli casts a bit of a cloud on that part of Lord Wilberforce's judgement in Anns in which he adopts the reasoning of the Court of Appeal in Sparham-Souter. Lord Fraser of Tullybelton was clearly sensitive to this and attempted, in my view not too successfully, to analyze the extent to which Lord Wilberforce intended to approve Sparham-Souter.

Be that as it may, the question for this Court now is whether or not it should adopt the law in Pirelli. If it were to adopt it, it would face a problem in this particular case in that the trial judge made no findings as to when the defective construction caused cracks or subsidence to the building. Counsel for the City now submits that physical damage appeared as early as the spring of 1974 prior to the Hughes' purchase of the property from their son. Lambert J.A., however, stated in his reasons for judgment, (1981), 31 B.C.L.R. 311, at p. 322:

> There was no evidence that would show or would tend to show that anyone who entered the crawl space in December 1977 would have seen the same sight as that which greeted the plumber, Mr. Nielsen and Mr. Hank in November 1978. There was no evidence that the defect which was apparent in November 1978 must have been apparent in December 1977, or that the structural deterioration had been gradual rather than sudden. The trial judge made no relevant finding of fact.

There is no doubt that in the spring of 1974 and even earlier the building inspector was expressing concern about the inadequacy of the foundations. The defect which had the potential for damage was there, but was the damage? In Bagot v. Stevens Scanlan & Co., [1966] 1 Q.B. 197, Lord Justice Diplock (as he then was) expressed the view that latent defects in a structure give rise to damage for limitation purposes at the time construction is completed but this approach, although consistent with Cartledge, was rejected by Lord Salmon in Anns and by Lord Fraser in Pirelli. Damage accrued only when the latent defect manifested itself in the form of physical damage such as cracks.

There are obvious problems in applying Pirelli. To what extent does physical damage have to have manifested itself? Is a hair-line crack enough or does there have to be a more substantial manifestation? And what of an owner who discovers that his building is constructed of materials which will cause it to collapse in five years time? According to Pirelli he has no cause of action until it starts to crumble. But

perhaps the most serious concern is the injustice of a law which statute-bars a claim before the plaintiff is even aware of its existence. Lord Fraser and Lord Scarman were clearly concerned over this but considered themselves bound by Cartledge. The only solution in their eyes was the intervention of the legislature.

This Court is in the happy position of being free to adopt or reject Pirelli. I would reject it. This is not to say that Sparham-Souter presents no problem. As Lord Fraser pointed out in Pirelli the postponement of the accrual of the cause of action until the date of discoverability may involve the courts in the investigation of facts many years after their occurrence. Dennis v. Charnwood Borough Council, [1982] 3 All E.R. 486, is a classic illustration of this. It seems to me, however, to be much the lesser of two evils.

Applying Sparham-Souter then to s. 738(2) of the Municipal Act which bars an action on the expiration of one year from the date on which the cause of action arose, the plaintiff's cause of action would not have arisen until November 1978 when his plumber, called to fix a burst pipe, drew the damage to his attention. By this time, however, s. 738(2) had been repealed by the Limitations Act, 1975 (B.C.), c. 37, which came into force on July l, 1975.

As already mentioned, the City relied in the alternative on s. 3 of the Limitations Act as barring the plaintiff's action. Section 3, however, must be read in conjunction with s. 6. The relevant parts I of these sections read as follows:

> 3. (1) The following actions shall not be brought after the expiration of 2 years after the date on which the right to do so arose:
>
> (a) an action for damages in respect of injury to person or property, including economic loss arising therefrom, whether based on contract, tort, or statutory duty ....
>
> 6. ...
>
> (3) The running of time with respect to the limitation periods fixed by this Act for an action
>
> . . .
>
> (b) for damage to property, or
>
> . . .
>
> (e) in which material facts relating to the cause of action have been wilfully concealed
>
> . . .
>
> is postponed and time does not commence to run against a plaintiff until the identity of the defendant is known to him and those facts within his means of knowledge are such that a reasonable man, knowing those facts and having taken the appropriate advice a reasonable man would seek on those facts, would regard those facts as showing
>
> (j) that an action on the cause of action would, apart from the effect of the expiration of a limitation period, have a reasonable prospect
>
> of success, and
>
> (k) that the person whose means of knowledge is in question ought, in his own interests and taking his circumstances into account, to be able to bring an action.
>
> (4) For the purpose of subsection (3),
>
> . . .
>
> (b) "facts" include
>
> (i) the existence of a duty owed to the plaintiff by the defendant, and
>
> (ii) that a breach of a duty caused injury,

damage, or loss to the plaintiff;

(c) where any person claims through a predecessor in right, title, or interest, the knowledge or means of knowledge of the predecessor before the right, title, or interest passed is that of the first mentioned person;...

. . .

(5) The burden of proving that the running of time has been postponed under subsection (3) is on the person claiming the benefit of the postponement.

It seems to me that the purpose of ss. 3(1)(a) and 6(3) was to give legislative effect to the reasoning in Sparham-Souter by postponing the running of time until the acquisition of knowledge or means of knowledge of the facts giving rise to the cause of action. The Act has also resolved the problem of stale claims which was the major criticism of the principle. Section 8(1) reads in relevant part:

8. (1) Subject to section 3(3), but notwithstanding a confirmation made under section 5 or a postponement or suspension of the running of time under section 6, 7, or 12, no action to which this Act applies shall be brought after the expiration of 30 years from the date on which the right to do so arose....

However, the 1975 legislation seems also in s. 6(4)(c) to have given statutory effect to the reasoning in Pirelli concerning successive purchasers by attributing the knowledge or means of knowledge of a predecessor in title to a subsequent owner. It may be said therefore that the Hughes' knowledge for purposes of the application of s. 6(4)(c) is the plaintiff's knowledge and he is accordingly statute-barred under the section by the Hughes' failure to litigate.

With respect, I do not think it is open to the City to make that argument. I think it would be doing violence to the facts in this case to say that the plaintiff was a person "claiming through" the Hughes. The Hughes were well aware of the structural defects. They were advised of them and of the stop work order by the city's solicitor in April, 1974 and their response was to encourage the City to drop the matter. I cannot see how the Hughes in these circumstances could allege a cause of action against the City so as to start time running against the plaintiff. This being so, the Limitations Act, even if applicable to the plaintiff's cause of action, does not assist the City. I find that the plaintiff, when he issued his writ in January 1979, had a valid and subsisting cause of action against the City which was not foreclosed by either s. 738(2) of the Municipal Act or s. 3 of the Limitations Act.

I would dismiss the appeal with costs.

The reasons of Estey and McIntyre JJ. were delivered by

McINTYRE J. (dissenting):-- This case involves consideration of whether or not a municipal government is under a duty to enforce its building by-law by proceedings in court after inspection has revealed breaches of the by-law in the construction of a building. I have read the reasons for judgment prepared in this matter by my colleague, Wilson J. I am content to accept, generally, her statement of the facts of the case, but because of their importance I wish to stress certain elements.

The son of the respondents Hughes (herein after Hughes, Jr.) set about the construction, or the completion of the construction, of a house for his parents, the respondents Hughes. He procured a building permit from the appellant municipality (the City) and deposited construction plans which, according to the building by-law, he was required to follow. Hughes, Jr., as he was required to do under the by-law, called for the inspection of the foundations after some construction work had been done. Being the only inspection called for, it was, according to the by-law, the only one the City was required to make. Not satisfied with the foundations, the inspectors directed corrective steps to be taken, and recommended that professional engineering advice be sought. The inspectors were prepared to cooperate with the builder in the necessary corrective program which was prepared

by a qualified engineer, but Hughes, Jr. did not implement the scheme and, as a result, the engineers withdrew from the matter. The City made several further inspections wherein deficiencies in the foundations were noted and, on February 28, 1974, the administrative officer of the city inspection department wrote to Hughes, Jr., informing him that the design he was using for the foundations was unsafe and reimposing an earlier 'stop work' order. Hughes, Jr. continued to build in defiance of the order and, on April 22, 1974, the city solicitor wrote to him and affirmed that the 'stop work' order would remain in effect. The 'stop work' order was posted on the premises during the month of February, 1974. Further inspections revealed continuing violations of the 'stop work' order. A plumbing permit was issued on August 23, 1974. According to the evidence of one Duncan, one of the building inspectors, the permit was issued to enable the sub-contractor who had completed the plumbing work to be paid, and because it did not interfere with the structural integrity of the building. No occupancy permit for the premises, as required by the building by-law, was ever issued despite many requests by the respondents Hughes.

It was not said, nor could it be said, that there was any negligence on the part of the city inspectors in the inspections they carried out or in the actions they took thereafter. The only fault alleged against the City is a failure to enforce the 'stop work' order. Consideration of the City's duty to the respondent Nielsen must be upon that basis.

The trial judge in very short reasons found both defendants, that is, the City and the respondents Hughes, negligent and, applying the provisions of the Negligence Act, R.S.B.C., 1979, c. 298, he apportioned 75 per cent to the respondents Hughes and 25 per cent to the City. He awarded damages in the amount of $45,004.27, which included the costs of the necessary repairs to the building and certain additional expenses which would be borne by the plaintiffs, together with the pre-judgment interest at 10 per cent per annum from December, 1978. An appeal by the City was dismissed.

Lambert J.A. wrote the judgment of the court (Taggart, Lambert and Macdonald JJ.A.) After reciting the facts, he pointed out that the claim made by the plaintiff Nielsen against the City:

> ...was for negligence in failing to take steps to enforce the stop work order or to condemn the building as unfit for habitation.

He posed the question which confronted the court in these terms:

> Was there, in this case, a private law duty owed by the city to an as yet unrevealed Mr. Nielsen, "over and above, or perhaps alongside" the public law duty of inspection and the related public law duties under the Municipal Act, R.S.B.C. 1960, c. 255, and the Kamloops building by-law?

He adopted the terminology and reasoning of Lord Wilberforce in Anns v. Merton London Borough Council, [1978] A.C. 728, in deciding on the existence of a private law duty of care and then said:

> A private law duty of care may exist whether the corresponding public law imposes a duty or merely grants a power. Decisions as to the manner of performing the duty or as to whether to exercise the power, or, if it is exercised, as to the manner of performance, may raise alternative courses of action. If the decision as to the choice of alternatives should be classified as a policy or planning decision, that is, a decision involving allocation of scarce resources or balancing such factors as efficiency and thrift, then there is no liability in the realm of private law for making a choice which causes harm. If the decision as to the choice of alternatives should be classified as an operational decision then the particular choice, the particular decision, and the particular omission or commission must be examined to see whether the ordinary principles of the law of negligence operate to impose a private law liability. The relationship of proximity or lack of proximity between

the parties that determines whether a private law liability should be imposed arises, of course, from the behaviour of the public authorities in response to the public law duty or power.

Then, after referring to parts of the building by-law, he continued:

> In my opinion those provisions established a public law duty on the building inspector to prevent the continuation of the construction of the building on structurally unsound foundations after it came to his notice that the foundations were unsound and a public law duty on the building inspector to prevent the occupancy of the building by Mr. and Mrs. Hughes Sr. or by Mr. Nielsen. Those public law duties should, in the last resort, have been exercised by seeking an injunction under the powers given by ss. 734 and 735 (now ss. 750 and 751) of the Municipal Act, R.S.B.C. 1960, c. 255.
>
> I turn now to the private law duty. The conduct of the building inspector in response to the public law duties involved decisions on alternative courses of conduct which were, in my opinion, operational in character. The building was a danger to the occupant of the house and to adjoining property owners. It may have been a danger to anyone in the house. Policy decisions could have confronted the city as to whether to prosecute or to seek an injunction. There may have been other policy choices. But a decision not to act at all, or a failure to decide to act, cannot be supported by any reasonable policy choice. That decision or failure was not "within the limits of a discretion bona fide exercised", using again the words of Lord Wilberforce. It was certainly open to the trial judge to reach that conclusion. Indeed, having regard to the evidence of Mr. Backmeyer, it was open to the trial judge to conclude that the decision not to act or the failure to decide to act, was influenced by the pressure exerted by Mr. Hughes Sr. in his capacity as alderman.

I would interject here to say that, having read the entire record, I have been unable to find any evidence which would support any such inference of impropriety on the part of the Council. Later he said:

> The duty of the building inspector was not a duty to warn. It was a duty to prevent the construction of the house and a duty to prevent its occupation.

It will be seen that Lambert J.A. has applied the principles expressed by Lord Wilberforce in the Anns case to find a private duty upon the building inspector to prevent construction and occupation once the defective construction has been discovered by seeking an injunction under the powers conferred in ss. 734 and 735 of the Municipal Act, R.S.B.C. 1960, c. 255. I have difficulty with the application of the trilogy of cases much discussed in this and other recent cases: Dutton v. Bognor Regis United Building Co., [1972] 1 All E.R. 462; Home Office v. Dorset Yacht Co., [1970] A.C. 1004; and Anns, supra, to the facts of the case at bar. In each of those cases the courts considered the position of a public authority whose liability depended upon the negligent conduct of their employees. Dutton was a case of faulty inspection of building construction. The Dorset Yacht Co. case was one of negligent supervision of prisoners, and Anns dealt with faulty building inspection. In each case the liability of the public authority was vicarious and depended upon the underlying negligence of its employees. In Anns,

Lord Wilberforce held that a private law duty of care could arise in these circumstances, the breach of which would give to a person injured a cause of action for damages against the public authority. There is nothing novel in this proposition as far as Canadian law is concerned. Robertson J.A. pointed this out in McCrea v. White Rock (City of) (1974), 56 D.L.R. (3d) 525, [1975] 2 W.W.R. 593, at p. 541 and p. 610, respectively, where he said:

> I am of the opinion that, where there is a duty to inspect and the person on whom the duty rests enters on its performance and carries it out in a negligent way, a person who thereby suffers damage has a cause of action against him.

He cited in support Ostash v. Sonnenberg (1968), 63 W.W.R. 257, in the Appellate Division of the Supreme Court of Alberta, where liability was found against a gas inspector for negligent inspection of a gas appliance, as well as against his employer, the Crown.

This is not, however, the case before us. The building inspector had a duty to enforce the by-law. In pursuance of that duty the inspector and his associates by adequate inspection found the defects, directed correction and when correction was not made issued a 'stop work' order. They posted a notice of the 'stop work' order on the premises and declined to issue an occupancy permit, despite repeated requests by the Hughes. No complaint has been made of the manner of inspection and no allegation of negligence in that respect has been made. The building inspectors have fully and adequately performed their duties in the case at bar and no vicarious liability can be visited upon the City because of any failure on their part. The only complaint seriously advanced in this Court has been non-enforcement by proceedings in court.

This is a situation fundamentally different from that arising in Anns or in the other cases it referred to. If liability is to be found against the City in this case, it can have nothing to do with the conduct of the building inspectors. It can only be on the basis of its own conduct in not seeking to enforce the 'stop work' order and to prevent the occupation of the unsafe house by legal proceedings. Since the case sounds in negligence, it must be shown that the City was under a duty to enforce its by-law by proceeding in the courts and that that duty was one the non-performance of which could give a cause of action in damages to persons injured.

The City argued in this Court that it was under no duty to the Hughes or Nielsen to exercise its power to prosecute or sue the Hughes in order to procure compliance with the by-law. The power is permissive, lying within the discretion of the City and one in which, on the authorities, the Court would not interfere. To recognize a duty upon the City to enforce its by-law by legal proceedings would impose an impossible burden upon it, one exceeding any burden imposed by the governing statute, the Municipal Act.

The Municipal Act, supra, in force at the relevant time, deals with enforcement of municipal by-laws in ss. 734 and 735 in these terms:

> 734. (1) Any by-law adopted under this Act may be enforced, and the breach of any by-law, resolution, or regulation of the Council or any provision of this Act restrained by action, suit, or proceeding in the Supreme Court or a County Court whether or not any penalty has been imposed for such breach.
>
> (2) Any civil action, suit, or proceeding to enforce, or to prevent or restrain the breach of, any by-law, resolution, or regulation of the Council or any provision of this Act, or relating to any damage to or interference with any highway or any property of the municipality, may be brought or taken by and in the name of the municipality; and neither the Crown nor the Attorney-General, nor any officer of the Crown, is a necessary party plaintiff to any such action, suit, or proceeding; provided, however, that in all cases a municipality shall, before the expiration of the time limited by the writ for appearance by the defendant, or within such further time as may be added by the Court in which such action is brought, serve a copy of such writ on the Attorney-General.
>
> 735. Where a building is erected or used, or land is used, in contravention of a by-law adopted under the authority of this Act, in addition to any other remedy provided in this Act, and to any penalty imposed by the by-law, such contravention may be restricted by action at the instance of the municipality alone.

and see s. 715:

> 715. (1) The Council may by by-law authorize

(a) the demolition, removal, or the bringing up to a standard specified in the by-law of a building, structure, or thing, in whole or in part, that is

(i) in contravention of any by-law; or,

(ii) in the opinion of Council, in an unsafe condition; or

(b) the filling-in, covering-over, or alteration in whole or in part of an excavation that is

(i) in contravention of any by-law; or

(ii) in the opinion of Council, in an unsafe condition.

(2) A by-law adopted under subsection (1) shall provide for thirty days' notice of the contemplated action to be given the owner, tenant, or occupier of the real property affected.

(3) An appeal lies to a Judge of the County Court having jurisdiction against the contemplated action under any by-law aforesaid.

(4) Notice of an appeal under subsection (3) shall be given the municipality within ten days from the date of the notice given under the by-law to the owner, tenant, or occupier of the affected premises.

(5) The Judge shall hear and finally determine the matter, making such order as seems meet to him.

(6) At the expiration of the thirty-day period mentioned in subsection (2), it shall be competent for the proper authorized official to proceed in accordance with the by-law or the decision of the Judge, as the case may be. [Emphasis added.]

The provisions of the building by-law passed by the City, pursuant to the discretionary powers given in s. 714 of the Municipal Act, provide in s. 900:

900. The building inspector shall enforce the provisions of this by-law and administer the by-law.

This section imposes a duty on the building inspector with respect to enforcement matters within his competence, but in my view does not include authority to commence proceedings in court. The duty is satisfied when the building inspector, having made an adequate inspection and issued the 'stop work' order, reports fully to the Council. This duty was fully performed in the case at bar. Further steps towards enforcement are beyond the competence of the inspectors and solely within the powers of the Council to be exercised by by-law or resolution of the Council (see s. 165 of the Municipal Act). It will be observed that the sections give a statutory power to enforce its by-law by court proceedings or demolition without imposing a statutory duty to do so.

It has been held that a municipality has no duty to enforce by-laws passed under statutory powers which leave a discretion as to whether such powers may be exercised or not. The provisions of the Municipal Act of British Columbia which empower the passage of a building by-law are found in s. 714 of the Act and are clearly permissive. The provisions of ss. 734, 735 and 715, cited above, give a power to take legal steps towards enforcement but impose no duty.

In Brown v. Hamilton (City of) (1902), 4 O.L.R. 249, the City of Hamilton had passed a by-law which prohibited the setting off of fireworks in the city streets. The by-law had for many years been ignored by the public and, presumably, by the City. The plaintiff was injured by a Roman candle during a display of fireworks in the streets. He sued the City for damages arising from its failure to enforce its by-law. In the High Court, Chancellor Boyd said, at p. 251:

Having enacted such a by-law, there is no duty cast on the municipality to see to its enforcement,

and at p. 252 he added:

> The argument of the plaintiff was that a cause of action arose because the city had passed a by-law, and that the by-law was systematically disregarded to the knowledge of the officers of the city, and that no steps were ever taken to enforce it by the city.
>
> This is a novel proposition, which has its sole sanction in the decisions of the Maryland courts, but is opposed to all other American, English and Canadian authorities.

In another trial judgment in Bertrand v. Neilson and City of Vancouver, [1934] 3 W.W.R. 433, a case where the plaintiff sought damages against the City for injuries alleged to have been caused or contributed to by the non-enforcement of a traffic and parking by-law, passed under powers given in the Vancouver Incorporation Act, Robertson J. of the British Columbia Supreme Court considered a breach of a permissive by-law would not render a city liable to a third party injured by the breach. In so doing, he referred to Sheppard v. Glossop (Borough of), [1921] 3 K.B. 132; Stevens and Willson v. Chatham (City of), [1934] S.C.R. 353; and Sanitary Commissioners of Gibraltar v. Orfila (1890), 15 A.C. 400.

In Toronto (City of) v. Polai (1969), 8 D.L.R (3d) 689 (Ont. C.A.), the City brought proceedings for an injunction to restrain the use by the defendant of her house as a multiple family dwelling house in an area zoned against such use. For a number of years, the City had maintained a "deferred list" of known offenders of the zoning by-law against whom no prosecutions were to be brought during the current year. The list was subject to annual review. By this device, the City was exercising a discretion to prosecute some offenders and not others. The defendant, not being on the list, became the target of the City's action and resisted it on the ground that the action of the City was inequitable and discriminatory. The defendant succeeded at trial but an appeal was allowed (Schroeder, Jessup and Brooke JJ.A.) Three separate opinions were written. Schroeder J.A. said, at pp. 696-97:

> As members of the city corporation the inhabitants are entitled to look to the duly elected representatives who comprise the municipal council for enforcement of the provision of by-laws passed for their protection, and in enforcing those by-laws the corporation, whether by means of a prosecution or in a suit for injunctive relief, acts on behalf of all the inhabitants. The municipality, acting through its council and duly appointed officials, occupies in a more restricted sense the same position as does the Attorney-General who represents the Crown in its capacity as parens patriae charged with the responsibility of enforcing the rights of the public when they are violated. The decision whether or not the Attorney-General should prosecute or sue is a matter for him, and the Courts have no power to question his right to do so or to refrain from doing so as distinct from his right to relief.
>
> The Attorney-General is in a different position from the ordinary litigant, for he represents the public interest in the community at large; when he intervenes to ask for relief the Courts should pay great heed to his intervention and only refuse relief in the most exceptional circumstances: Atty-Gen'l v. Harris, [1961] 1 Q.B. 75.
>
> In my opinion the city, acting in a more restricted sphere in the enforcement of its own by-laws, is likewise in a different position from the ordinary litigant. The inhabitants and the municipality are sufficiently interested in the dispute to warrant intervention by the corporation for the purpose of asserting public rights, and the dispute is not one between individuals. Rather it is one between the public and a small section of the public refusing to comply with the by-law. In suits in which the Court's equitable jurisdiction is invoked and the clean hands doctrine is pleaded regard must be had to the nature of the relief sought and the character in which the plaintiff is suing. It would be a most extraordinary result if in a suit brought by an individual taxpayer, a course sanctioned by s. 486 of the Municipal Act, the relief were to be granted, but in a suit brought by the city, representing the general body

of ratepayers, the suit should fail. The result appears even more incongruous when it is considered that the mere passing of a by-law by a municipal corporation does not cast any legal duty on the municipality to see to its enforcement: Brown v. City of Hamilton (1902), 4 O.L.R. 249 (per Chancellor Boyd).

And later he said, at pp. 698-99, in reference to the deferred list:

> No doubt, to persons who are obliged to comply with the by-law this practice may present the appearance of political favouritism or it may smack of discrimination. It is one of the difficult problems of administration to decide what acts are harmless in themselves in particular circumstances or, in isolated instances, must be forbidden in the public interest, or what acts may be tolerated without doing injury to the public interest. Without embarking on a wide-ranging inquiry into all these other cases which are, in reality, res inter alios acta, the Court cannot determine whether the decision of the Committee was right or wrong, fair or unfair, in the particular circumstances. Be that as it may, that course is not open to us in these proceedings and the Court has neither the right nor the power to control the exercise of Council's discretion by either direct or indirect means, except, possibly, in a case where Council lays down a general policy not to enforce its restrictive zoning by-laws: Vide R. v. Commissioner of Police, Ex p. Blackburn, [1968] 2 W.L.R. 893.

Jessup J.A., while expressing a different view as to the findings of fact by the trial judge than that suggested by Schroeder J.A., supported the view that the Council's discretion in enforcing zoning by-laws was not, as a rule, reviewable by a court. He said, at p. 703:

> In his statement of law and fact, filed, counsel for the appellant concedes, "The 'deferred list' practice is admittedly open to abuse". However, it is to be emphasized that the learned trial Judge made no finding of corruption in the "deferred list" practice. There was absolutely no evidence of impropriety of that or like nature. In the absence of such evidence it is to be assumed that in placing properties on the "deferred list" the members of the Committee on Buildings and Development exercised bona fides the discretion they undoubtedly have in the enforcement of the city's zoning enactments: Brown v. City of Hamilton (1902), 4 O.L.R. 429.

Brooke J.A. reached his conclusion for different reasons, but recognized as well as the other judges the discretionary nature of municipal prosecution to enforce its by-laws. He said, at pp. 707-08:

> Municipal council has a discretion as to when it will prosecute for a breach of or sue to enforce the provisions of the zoning by-law. To deny the discretion in municipal council would be to place the most technical breach of the by-law beside the most blatant and to remove from consideration the harm done to the offender and the value to the community of the proposed proceedings when considering when they ought to be taken. The discretion when to prosecute or when to sue which rests with the municipal corporation or the comparable discretion which rests with public authorities charged with the responsibility of enforcing the rights of the public when they are violated, is one of the great strengths of our system of justice. It is true that the Court cannot interfere with that discretion and the remedy by way of injunction provided by s. 486 of the Municipal Act should not be used for this purpose. On the other hand, and equally important, the Court must see to it that its processes are never used to accomplish a wrong against any person and, of course, this is so irrespective of who applies for the remedy. There may well be circumstances where it would be in the public interest to refuse relief by way of injunction to a plaintiff whether a municipal corporation or otherwise in this type of action and some actions where wrongful discrimination could be shown would fall within the class of cases to which I refer.

An appeal of this decision to the Supreme Court of Canada was dismissed, [1973] S.C.R. 38, without any comment on the quoted passages.

Authority for this view may also be found in English cases, notably East Suffolk Rivers Catchment Board v. Kent, [1941] A.C. 74 (H.L.). It seems to me that in Canada and in England, at least up until 1941, a public authority which had a mere power to act, as distinct from a duty to do so, could not be made liable in damages only by reason of a failure to exercise that power. It has been suggested that the three well-known cases in England, Dutton v. Bognor Regis United Building Co.; Home Office v. Dorset Yacht Co. and Anns v. Merton London Borough Council, have had the effect of changing the law in that respect in England and that Canadian courts should follow the lead. Indeed, the Anns case has been followed in Canadian courts and its principles concerning the law of negligence at least viewed with approval in this Court in Barratt v. North Vancouver (Corporation of), [1980] 2 S.C.R. 418. My colleague, Wilson J., has dealt with the Anns case and it is not necessary for me to go into it at any great length. Lord Wilberforce, who wrote the principal judgment, suggests that the duty of care issue be approached in two steps. First, one should ask whether a relationship of proximity exists so as to give rise to a prima facie duty of care and then, if such a duty is found, it becomes necessary to consider whether there are considerations which ought to limit the scope of that duty. In respect of public authorities exercising statutory powers and duties, a distinction is drawn between policy and operational matters. There can be no liability in negligence, in respect of acts or omissions based on a bona fide policy consideration. In summary, it appears that the Anns case set aside the distinction between statutory powers and statutory duties as a source of a private law duty on a public authority. Anns placed the public authority on the same footing as the ordinary litigant with respect to liability for negligence, but recognizing the special nature of a public authority provided that it could be excused its want of care in respect of acts or omissions based on a bona fide policy choice which, but for the policy choice, would have led to liability. In my view, Anns, and the principles lays down, have no application in the case at bar.

Liability for negligence of a public authority, dealt with in Anns and the other cases considered with it, would arise out of the activities of the public authority in the conduct of its business. Public authorities, in addition to their administrative and regulatory functions, must perform many tasks. They enter into a wide variety of contracts covering business, commercial and industrial enterprises, and public works. They enter the market place and operate as do private corporations and private individuals. In these circumstances there would seem to be no reason why public authority should not be liable for its own acts of negligence and vicariously liable for the negligence of its servants in the performance of their duties of employment. The public authority, as has been noted in Anns, differs from the private citizen in that, while it must undertake much in accordance with its mandate, it has as a rule limited resources and frequently limited credit and relatively fixed revenues. The employment of those resources, frequently not sufficient to cover completely all responsibilities, will involve policy choices as to their application. The policy choice protective provision developed in Anns meets this problem. It will be observed, however, that in Anns and in the various other cases which preceded it (Dutton v. Bognor Regis United Building Co. and Home Office v. Dorset Yacht Co.) and in many later cases which have applied it, the policy choice required of the public authority was one which would protect it against negligence in carrying out the corporate functions and such negligence is ordinarily found in the conduct of its employees for which the authority may be vicariously liable.

No such negligence occurred in the case at bar. The building inspectors, as has been pointed out, fully and adequately carried out their duties and I am unable to agree with Lambert J.A. when he said:

> The conduct of the building inspector in response to the public law duties involved decisions on alternative courses of conduct which were, in my opinion, operational in character.

The building inspector in his response to the problems he discovered faced no alternative courses of action. His duty was to report, and he did so, and any alternative courses of conduct in response to public duties were for the Council, the City itself, and I am wholly unable to characterize them as operational in character.

The exercise of the discretion by the City regarding enforcement proceedings in court differs fundamentally from the 'policy choice' contemplated by Anns. In my opinion, it does not involve considerations of negligence because it is not properly subject to restriction by a private law duty of care. It involves, in my view, such considerations as those discussed by Laskin J. (as he then was) in Wellbridge Holdings Ltd. v. Greater Winnipeg (Metropolitan Corporation of), [1971] S.C.R. 957. In that case action was brought against the City of Winnipeg by an apartment company to recover damages suffered in acting in reliance on a city by-law declared ultra vires because of the procedural failure by the Council in its enactment. Laskin J. said, at pp. 965-66:

> The liability in negligence sought to be imposed upon the defendant is not a vicarious one, resting upon the fault of a servant or agent of the defendant, but rather an original, independent liability. As I took the argument, it was said to proceed from a duty of the defendant, in enacting a rezoning by-law enlarging the development possibilities of designated land, to exercise reasonable care to see that the procedures upon which valid enactment depended were followed; and this duty was owed specially to those persons having or obtaining an interest in the affected land which enabled them to exploit those possibilities. There was, in the circumstances, more than merely a duty at large to the residents of the municipality or to the smaller number residing in the affected area. If a duty such as is urged exists, I would not exclude the appellant from the class of those to whom it was owing, merely because the appellant did not come into existence until after the invalid by-law was passed and did not acquire an interest in the affected land until about sixteen months after its passage.

and later, at pp. 968-69:

> The defendant is a municipal corporation with a variety of functions, some legislative, some with also a quasi-judicial component (as the Wiswell case determined) and some administrative or ministerial, or perhaps better categorized as business powers. In exercising the latter, the defendant may undoubtedly (subject to statutory qualification) incur liabilities in contract and in tort, including liability in negligence. There may, therefore, be an individualization of responsibility for negligence in the exercise of business powers which does not exist when the defendant acts in a legislative capacity or performs a quasi-judicial duty.
>
> Its public character, involving its political and social; responsibility to all those who live and work within its territorial limits, distinguishes it, even as respects its exercise of any quasi-judicial function, from the position of a voluntary or statutory body such as a trade union or trade association which may have quasi-judicial and contractual obligations in dealing with its members: cf. Abbott v. Sullivan; Orchard v. Tunney. A municipality at what may be called the operating level is different in kind from the same municipality at the legislative or quasi-judicial level where it is exercising discretionary statutory authority. In exercising such authority, a municipality (no less than a provincial Legislature or the Parliament of Canada) may act beyond its powers in the ultimate view of a Court, albeit it acted on the advice of counsel. It would be incredible to say in such circumstances that it owed a duty of care giving rise to liability in damages for its breach. "Invalidity is not the test of fault and it should not be the test of liability": see Davis, 3 Administrative Law Treatise, 1958, at p. 487.

The facts in Wellbridge differ widely from the facts at bar, but the case emphasizes the different consequences that may flow from the exercise or non-exercise of quasi-judicial powers by a public authority. Laskin J. also pointed out the

difference between a public body vicariously liable in negligence for the conduct of its employees and a public body charged with "an original independent liability". This factor is of fundamental importance and goes far to distinguish the case at bar from the trilogy of cases culminating in Anns. Here we have a public body against whom it is said, you are negligent in that you failed to exercise what is essentially a quasi-judicial function, that is, you failed to enforce your by-law by proceeding in court. It is my view that a public body, vested with the discretion of by-law enforcement, may not be required by a court to exercise that power in a certain way and is not under a private law duty to do so. I draw support in reaching this conclusion from Wellbridge.

Finding that the City is not under a private law duty to enforce its building by-law by court proceedings or demolition does not mean that its discretion is completely unfettered. This becomes clear from a reference to Roncarelli v. Duplessis, [1959] S.C.R. 121, where Rand J., at p. 140, said:

> In public regulation of this sort there is no such thing as absolute and untrammelled "discretion", that is that action can be taken on any ground or for any reason that can be suggested to the mind of the administrator; no legislative Act can, without express language, be taken to contemplate an unlimited arbitrary power exercisable for any purpose, however capricious or irrelevant, regardless of the nature of purpose of the statute. Fraud and corruption in the Commission may not be mentioned in such statutes but they are always implied as exceptions. "Discretion" necessarily implies good faith in discharging public duty; there is always a perspective within which a statute is intended to operate; and any clear departure from its lines or objects is just as objectionable as fraud or corruption.

These words have the support of Martland J. in his reasons in the same Case, at p. 155-57, which was concurred in by Kerwin C.J. and Locke J. The plaintiff might have succeeded in this case on showing of corruption upon the part of the City officials and Council, or upon showing that the failure to prosecute resulted from consideration of extraneous or improper matters or from bad faith. But the scanty evidence in the perhaps inadequate record before this Court would allow no such conclusion to be drawn.

In the case at bar the record discloses little as to what, if any, steps were taken by the Council towards the enforcement of its by-law. It is clear that the defective foundations rendered the house unsafe. It is equally clear that the building inspectors, having found the defective work, reported the matter to the Council and took such steps as were open to them to correct matters including the refusal to lift the 'stop work' order or give an occupancy permit. It is also evident that the Council was aware of the infraction of the by-law and that the respondents Hughes were living in the house. There is no evidence of any positive step taken in the matter by the Council, save that at one time it consulted its City solicitor who shortly after returned the file with a covering letter which is not before us. From all this, the only conclusion that can be reached is that the Council took no further step toward enforcement and there is no evidence which would justify any inference of bad faith or impropriety.

I would conclude as follows:

1. This is not a case of underlying negligence by employees of a public authority which could visit liability upon the appellant City.

2. At common law, a municipality has no duty to enforce its by-laws by court proceedings. The matter is discretionary. Failure to exercise enforcement powers in court does not give rise to a private cause of action in negligence to those suffering harm from non-enforcement.

3. The concept of negligence as developed in Anns and its predecessors may apply to render a public authority liable for its own negligent acts or omissions or vicariously liable for the negligence of its employees, but municipal prosecutorial or enforcement powers by court proceedings, like municipal legislative functions, are different in kind and are not amenable to judicial constraint by the imposition of a private law duty of care.

4. The discretion regarding enforcement proceedings in court is not, however, unfettered and may be subject to judicial constraint in cases of corruption, bad faith, or in cases where extraneous or irrelevant considerations affect the exercise of the discretion. In the case at bar there was, however, no evidence of bad faith or reliance on irrelevant considerations arising from the mere failure to take legal proceedings, and no private cause of action can therefore arise.

For all of the above reasons I would allow the appeal, order the dismissal of the action against the City and attribute full liability to the respondents Hughes.

Appeal dismissed with costs, ESTEY and McINTYRE JJ. dissenting.

KIM V MISSISSAUGA (City)

Between
Ik-Soo Kim, applicant, and
The Corporation of the City of Mississauga and Argis Robezneiks, Chief Building Official, respondents

[1996] O.J. No. 2534
DRS 96-15867
Court File No. M13298/96

Ontario Court of Justice (General Division)
Milton, Ontario
Zelinski J.
July 3, 1996.

Counsel:
M. Virginia MacLean, Q.C. for the applicant.
Michal Minkowski for the respondents.

ZELINSKI J.:--

The Issues

[para1] The applicant seeks:

> ... an order declaring that the City of Mississauga Interim Control by-law 481-95 Interim Control By-law (the "ICB") does not prevent the construction or use of a car wash building on property owned by the applicant at 1455 Lakeshore Road East, Mississauga, (the "Property") because a building permit had been issued to the applicant prior to the passage of the ICB.
>
> In the alternative, the applicant seeks an order under s. 136 of the Municipal Act R.S.O. 1990, c. C.M.45, quashing the ICB for illegality by reason of bad faith and discrimination.

[para2] In addition to denying that there is merit in the application, the respondents take the position that it is out of time.

[para3] In simplest terms, the "bottom line" of this application is whether the ICB in question is enforceable against the applicant.

Statutes and By-laws

[para4] This application is brought pursuant to Rule 14.05(3)(d) which provides that a proceeding may be brought by application where the relief claimed is the determination of rights that depend upon the interpretation of a statute or municipal by-law.

[para5] Relevant statutory provisions are as follows:

> The Building Code Act S.O. 1992, c. 23 ("BCA").
>
> 1.(1) Definitions. In this Act, "building" means ...
>
> (c) plumbing not located in a structure, ...
>
> "plumbing" means a drainage system, a venting system and a water system or parts thereof;
>
> 3.(1) Enforcement. The council of each municipality is responsible for the enforcement of this Act in the municipality.
>
> (2) Chief Building Official, Inspectors. The council of each municipality shall appoint a chief building official and such inspectors as are necessary for the enforcement of this Act in the areas in which the municipality has

jurisdiction.

7. By-laws, Regulations. The council of a municipality ... may make regulations ...

> (a) prescribing classes of permits under this Act, including permits in respect of any stage of construction ...

8.(1) Building Permits. No person shall construct ... a building or cause a building to be constructed ... unless a permit has been issued therefor by the chief building official.

(2) Issue of Permits. The chief building official shall issue a permit under subsection (1) unless,

> a) the proposed building, [or] construction ... will contravene this Act or the building code of any other applicable law;

25.(1) Appeal. Any person who considers themself aggrieved by an order or decision made by an inspector or chief building official under this Act ... may, within 20 days after the order or decision is made, appeal the order or decision to a judge of the Ontario Court (General Division).

(2) Extension of Time. A judge to whom an appeal is made may, upon such conditions as the judge considers appropriate, extend the time for making the appeal before or after the time set out in subsection (1), if the judge is satisfied that there is reasonable grounds for the appeal and for applying for the extension.

(4) Powers of Judge. If an appeal is made under this section, the judge shall hold a hearing and may rescind or affirm the order or decision of the inspector or chief building official or take such action as the judge considers the inspector or chief building official ought to take in accordance with this Act and the regulations and, for such purpose, may substitute his or her opinion for that of the inspector or chief building official.

The Planning Act R.S.O. 1990, c. P.13, ("Planning Act")

34.(9) No by-law passed under this section applies,

> (b) to prevent the erection or use for a purpose prohibited by the by-law of any building or structure for which a permit has been issued under section 8 of the Building Code Act, prior to the day of the passing of the by-law, ...

38.(1) Where the council of a local municipality has, by by-law ... directed that a review or study be undertaken in respect of land use planning policies in the municipality ... the council of the municipality may pass a by-law, (hereinafter referred to as an Interim Control By-law) to be in effect for a period of time specified in the by-law, which period shall not exceed one year from the date of passing thereof ...

(4) Any person ... may, within 60 days from the date of the passing of the by-law, appeal to the Municipal Board ...

(8) Subsection 34 (9) applies with necessary modification to a by-law passed under subsection (1) ...

The Municipal Act R.S.O. 1990 c. M.45 ("Municipal Act")

136.(1) Proceedings to quash by-law. The Ontario Court (General Division) upon application of a resident of the municipality or of a person interested in a by-law of its council may quash the by-law in whole or in part for

illegality.

City of Mississauga By-law 428-93 The Building By-law issued under the BCA respecting permits and related matters) ("Building By-law")

2. Definitions

In this By-law;

(1)(g) "permit" means permission or authorization given in writing by the Chief Building Official to perform work regulated by the Act and Building Code, or to occupy a building or part thereof prior to its completion.

(h) "permit holder" means the person to whom the permit has been issued and who assumes the primary responsibility for complying with the Act and the Building Code.

3. Classes of Permits

Classes of permits for construction, demolition, change of use, or occupancy of a partially complete building are set forth in Schedule "A" appended to and forming part of this By-law.

SCHEDULE "A"

Permit Fees and Refunds

1. Fees

(1) Class of Permit

(a) Construct a building as defined by Section 1(b) of the Act, ... may be divided into the following classes of permits:

(i) Complete Building

(iv) Plumbing Component

(v) Drain Component

(b) For permits required in (a) when divided into part permits. [the permit fee is set out in Schedule "B" plus] $50.00 additional fee each for part permit ...

Agreed and/or Partially Admitted Facts

[para6] Facts relied upon by the applicant have been substantially admitted, or admitted with minor qualifications, as follows:

1. On October 2, 1995, the applicant, who had been looking to purchase real estate to be developed as a coin operated car wash, purchased the Property, a vacant parcel formerly used as an automobile service station and zoned AC (Automobile Commercial) which permitted the proposed development.

2. To develop the Property, the applicant required site plan approval and a building permit from the respondents.

3. A site plan application was submitted May 11, 1995 and revised on July 24, 1995; and, to make the proposed car wash building conform with setback and parking requirements of the zoning by-law, a variance application was made to the Committee of Adjustment on August 29, 1995.

4. A building permit application for a complete new building for a car wash was made on August 17, 1995 and, a building permit application for site servicing for the

construction of a private storm sewer, private sanitary sewer and water services on the Property (drain component class of permit) was made on September 27, 1995.

5. The September 28, 1995, Committee of Adjustment hearing on the variance application was adjourned to enable representatives of the nearby Peel Condominium Corporations 110, 170 and 415 (P.C.C. 110, 170 and 415) to meet with the applicant.

6. A Building Permit for drain component class of permit prescribed under the City's Building By-law, was issued to the applicant on October 12, 1995. Site servicing under the permit started October 15, 1995 and was completed October 17, 1995 at a construction cost of $55,175.00. [The respondents' admission is limited to the fact of the issuance of a permit for a drain component only.]

7. The applicant withdrew the variance application at the Committee of Adjustment meeting on October 20, 1995 because the site plan addressed the issues and to prevent delays to construction and, subsequently amended the site plan to comply with the zoning by-law. At the October 20, 1995 Committee of Adjustment meeting, representatives of P.C.C. 110, 170 and 415 requested the Committee to prohibit the car wash use on the Property which the Committee advised it could not do and suggested that the Condominium Corporations contact Councillor Corbasson, the Ward Councillor. [The respondents' admission is limited to the applicant's representative becoming informed of a proposed interim control by-law on November 15, 1995.]

8. On November 9, 1995, the said representative of the applicant Peter Chee, was advised by the respondent City's Planning and Building Department staff that the site plan was substantially acceptable and would be signed by a staff member authorized to do so, by by-law. Peter Chee re-attended on November 10, when he was advised that P.C.C. 110, 170 and 415 were opposed to the use and had contacted Councillor Corbasson and the site plan would be approved November 13, 1995. During the week of November 13, 1995, another representative of the applicant, Tony DiBella, was advised that the site plan would not be approved until the November 22, 1995 Council meeting and was advised by telephone that the application would be approved. On November 15, 1995, the applicant's representative Peter Chee, was advised that the respondent City intended to enact an interim control by-law to stop the applicant's car wash development and exempt some properties but not the applicant's. [The respondents' admission is limited to Chee's becoming informed of a proposed interim control by-law on November 15, 1995.]

9. The respondent City, at a meeting in Committee on November 13, 1995, of which the applicant had no notice, considered a planning report date October 30, 1995 that recommended that the Official Plan be amended to "allow car washes in Residential Districts subject to certain conditions", heard representatives of P.C.C. 110 and P.C.C. 170 opposed to the applicant's use, were advised that City staff supported the applicant's car wash use as appropriate, and requested City staff to report to the next Council meeting "with respect to an Interim Control By-law on all Automobile Service Stations with Car Washes in Residential Districts". [The respondents' admission is limited to the fact of a planning committee meeting being held on November 13, 1995 at which a staff report was received and a direction being given to staff, by the committee, to report to the next council meeting with

respect to an ICB.]

10. The respondents, at a meeting in Council on November 22, 1995, considered the requested staff report, passed a resolution that "a comprehensive planning study be undertaken to examine car washes within Residential Districts ... in terms of land use planning, zoning, locational attributes ..." and, passed an interim control by-law prohibiting for one year, car washes in all Residential Districts which had zoning to permit the use, while exempting four sites, two sites developed as gas bars [one of which was zoned AC-791], a vacant site in a Residential District not zoned to permit a car wash use, and a site for which a building permit for a car wash and gas bar was in process. Three of the four exempted sites were in response to a letter from Imperial Oil, and the latter was requested by the respondent City's staff.

11. The applicant appealed the ICB to the Ontario Municipal Board ("OMB") which has not scheduled a hearing.

12. The respondent City's Planning and Building Department prepared two Planning Reports in 1995 on the impact of car washes in Residential Districts. The first report was circulated for public input and reported to Council prior to the enactment of the ICB. The respondent City was made aware in the two Planning Reports that the Official Plan and the Zoning By-law were not consistent and, the February 13, 1995 Planning Report identified the impacts of car washes in residential zones. Neither report recommended the enactment of an ICB but recommended that the Official Plan be amended to permit the use which would not necessitate a zoning change. [The respondents' admission is limited to the fact of the consideration and circulation of planning reports prepared earlier in 1995 by the City's Planning and Building Department identifying inconsistencies in the City's hierarchy of official plan documents and between those documents the City's zoning by-law.]

13. The applicant paid $29,802.88 to the respondents for site plan approval and building permit issuance has posted securities and cash of $11,200.00 with the respondents to obtain the right to develop a car wash on the Property, and has paid $55,175.00 for site services which cannot be used for any use except a car wash. [The respondents' admission is limited to the fact of the payment of certain fees to the City.]

Additional Facts as Alleged by the applicant

[para7] The applicant also relies upon the following additional facts, which the respondents do not agree to:

1. On October 17, 1995 the applicant's representative met with representatives of P.C.C. 110, 170, and 415 and the respondent City's staff. The site plan was presented, it was explained that the car wash use was a lawful use and that the site plan incorporated the recommendations of noise expert and the city staff recommendations.

2. On November 21, 1995 the applicant's representative Tony DiBella, attempted to amend the building permit application to obtain a foundation to roof (superstructure) building permit, was advised not to amend the application by the respondents' staff because a building permit for the full building was close to issuance, and was advised that the applicant's file was marked "do not issue".

3. The applicant's representative requested an exemption

from the ICB for the Property on January 4, 1996 and was refused by the respondents' Council on February 14, 1995 because the only exemptions to be permitted would be for sites specifically zoned for a car wash and not sites zoned for automobile service stations and public garages.

4. As of February 27, 1996 the applicant had satisfied all Building Code requirements for the issuance of a building permit and on March 4, 1996 the respondents, Chief Building Official, refused to issue a building permit because of the ICB and because site plan approval had not been granted.

5. The sole purpose of the ICB is to prevent the applicant's development of a coin operated car wash on the Property.

Additional Facts Alleged By the Respondents

[para8] With respect to site plan approval issues, to the extent that approval is in issue, the respondents rely, in part, on applicant's delays in making the site plan applications. There were revisions presented and inconsistencies in approach. The respondents also cite changes in the applicant's representatives and similar as evidence of the applicant's responsibility for these delays. The respondents also rely upon the fact that the applicant was aware of the "risk of closing without site plan approval, having been informed of those risks".

[para9] The thrust of this approach by the respondents is that the applicant would have had the Building Permit for the entire building, had his application been pursued expeditiously and/or in a more sophisticated manner. This has
nothing to do with merit. Indeed, such an approach is consistent with entitlement in law altered only by the circumstances of the enactment of the ICB. The applicant's acceptance of the risk in such circumstances is, in my view, as consistent with recognition of the fact of his entitlement as it is with the applicant having assumed any risk, the consequences of which he must now bear.

[para10] With respect to the applicant's building permit application, the respondents also rely upon the following facts:

1. The applicant applied for a building permit on August 17, 1995 seeking the class of permit which would allow for "complete building" construction. The city's Building By-law specifically contemplates different classes of permits. Each class of permit is treated as an independent permit requiring a fresh application process.

2. While waiting for the "complete building" application to run its course, the applicant also applied on September 27, 1995 for a class of permit to allow for construction of the "drain component" only, the scope of work being defined as a "site servicing permit".

3. The applicant's agent who applied for the "site servicing permit", Peter Chee, admits he was told by City staff at the time of applying for this permit that its issuance was not a guarantee of the issuance of a building permit for construction of the car wash structure and that the issuance of the "site servicing permit" was at the applicant's own risk. Mr. Chee acknowledged that he also advised the applicant of this information.

4. The applicant further signed an acknowledgement in seeking the "site servicing permit" which expressly states:

That the granting of this permission in no way obliges the Chief Building Official to issue the building permit for the project.

5. When the respondents' CBO was asked on November 23, 1995 by the applicant's solicitor to render a decision on the building permit application, the CBO determined that they could not issue the building permit due to the enactment of the ICB and due to the long list of outstanding items still required to be completed by the applicant as a condition precedent to building permit approval. The applicant satisfied most (but not all) of the outstanding concerns only in late February of 1996, some three months after the ICB was enacted.

6. The applicant's agent admitted on cross-examination that the CBO was unable as of November 23, 1995 to issue a building permit, irrespective of the ICB, due to the list of outstanding matters still requiring compliance as a condition precedent to the issuance of a building permit.

7. The applicant is, to this date, not fully in compliance with the conditions precedent of the City to issuance of a building permit, not having secured clearance regarding a lot grading certificate and lot grading approval as well as site plan approval, the latter due to the applicant not having responded to requests for inter alia for an addendum to accompany a noise study and for the addendum to be certified by a professional engineer.

[para11] With respect to the ICB the respondents rely upon the following:

1. While zoning for the Property permits a car wash use, there was and is an inconsistency in the various primary and secondary official plan policies which govern development at this location. The [current] approved Official Plan does not permit car wash uses in highway commercial designations in residential districts, while the approved Secondary Official Plan (the Dixie Storefront Secondary Plan) does permit such uses, provided certain site development criteria can be satisfied. The City's new Official Plan, not as yet approved by the Minister, permits car washes, but the proposed new District Plan (the Lakeview District Plan) still awaiting Ministerial approval, does not permit such uses in the highway commercial policies for the District. [In oral submissions made, it was indicated that this ministerial approval has now been given.]

2. Council was and is also concerned with the absence of consistent development standards within the City's Zoning By-law for car wash uses within residential districts respecting matters such as issues of noise, ingress/egress, buffering and parking standards. These issues had not been studied in a comprehensive fashion in previous staff reports. The applicant's agent admitted on cross-examination that these matters constitute serious planning issues.

3. The only professional or expert planning evidence in this Application is that provided by the City through the affidavit of James Riddell. Mr. Riddell states that the ICB, under or in these circumstances, "is an approach in keeping with good planning principles."

4. The applicant through his agent Mr. Chee was aware approximately one week prior to November 22, 1995 that Council had requested City staff to prepare an ICB. The applicant, by admission of its agent on cross-examination, however, failed to take any substantive measures to track the progress of the ICB, or to take vigorous steps to represent the applicant's

interests, failed to seek a meeting with the Mayor or members of Council, and failed to appear before Council at a public meeting to make submissions.

5. In any event, the ICB does not target the applicant's property. It applies to numerous properties throughout the entire municipality of the City of Mississauga. The applicant's witnesses admitted on cross-examination that the ICB has City-wide application.

6. The applicant and several entities have filed appeals from the ICB to the OMB, including an entity represented by counsel for the applicant herein and an entity represented by Vince Serratore.

7. The enactment of the ICB was accompanied by a resolution requiring that a planning study be undertaken by staff to address Council's concerns, in accordance with the requirements of the Planning Act. This study with respect to car washes has now been completed and is to be presented to the Planning and Development Committee for direction.

8. While the applicant had the opportunity to submit an application for an exemption from the ICB, the applicant or his agents did not pursue this opportunity.

9. The applicant relies principally upon the affidavit of Vince Serratore to support the allegation that the ICB was targeted at 1459 Lakeshore Road East. Mr. Serratore swore his affidavit nearly four months after the November 13, 1995 Planning and Development Committee meeting.

10. Mr. Serratore admitted on cross-examination that:

a) he did not rely on any notes in preparing his affidavit;

b) the comments during the meeting of the Councillor for the Ward where the applicant's property is located were in the context of a concern over the inconsistency between the official plan policies and the zoning by-law applicable to the subject site;

c) the discussion among members of the Committee at the meeting mushroomed into a broader discussion on policy issues in general, without specific reference to any property, related to car wash uses in residential areas and closed automobile service station sites with respect to planning issues as identified above;

d) he conceded that it was simply his opinion that the ICB was targeted at 1459 Lakeshore Road East, but that he did not actually know if in fact is was so targeted; and

e) there is no reference anywhere in the Minutes from the Committee meeting of any Committee member specifically targeting or expressing an intent to target 1459 Lakeshore Road East to stop the construction of the car wash use at this site.

[para12] I find the respondent's concerns troubling. The position taken suggests that the applicant is not entitled to relief in these matters, in part, based upon his inattentiveness or lack of diligence.

[para13] It is the obligation of the municipality to assure that it uses its legislative powers in good faith in an objective, fair, impartial and unbiased manner.

[para14] The test is not whether the applicant was present, or represented, or even attentive, to assure that the municipality meets this standard. Even though the applicant

does not take steps to assure that the municipality behaves responsibly, he is entitled to rely upon the fact that the municipality will do so.

[para15] Indeed the municipality's approach is not supported by the case authorities which suggest that, while the initial onus is upon the applicant to establish that the ICB has a potentially adverse impact upon him, once this burden is met, the onus shifts to the respondents to justify the City's course of conduct (Gilbert v. Oakville, (1986) 31 M.P.L.R. 157 at 160). The latter onus is not lightly discharged. As stated by M. Rosenberg in Re City of Scarborough Interim By-law 22169-81 (1988) 22 O.M.B.R. 129 at 131:

> ICBs are extraordinary remedies given to cities and their application must be done with extreme caution. In this case, there was no rationale behind the passing (sic) this by-law other than to appease angry ratepayers and delay development of the site. There are no planning principles involved here that would justify the City of Scarborough's action.

Jurisdiction of the Court

[para16] The respondents have framed two challenges to the
Court's jurisdiction in these matters, as follows:

a) The application is not timely.

b) The OMB has complete jurisdiction to hear and determine the merits of appeals under the Planning Act as a consequence of the enactment of an ICB.

Timeliness

[para17] Section 25(1) of the BCA permits persons aggrieved by a decision made by a CBO to appeal the decision within 20 days after the decision is made.

[para18] On November 23rd, 1995, as a result of a telephone call from applicant's counsel, the CBO wrote to Ms. MacLean to advise of the enactment of the ICB the day previous. His "decision" in that letter was stated as follows:

> The by-law has the effect, as noted, of restricting the use of the property to those uses that existed on the date of passage of the by-law. As the property is not currently being used for the purpose of a car wash on November 22, 1995, the proposed use is not, at this time allowed. As a result, I am unable to issue the building permit applied for under the above noted application.
>
> Notwithstanding the ICB, I attach a copy of the current Application Status Report for the referenced application, detailing information outstanding and precedent to the issuance of a building permit or foundation to roof permit. (emphasis added)

[para19] The letter continued with an invitation to hold further discussions, including a discussion with Councillor Corbasson, to whom a copy of the letter was sent.

[para20] Notice of the passage of the ICB was published on December 13th, 1995, with the result that on December 20, 1995, the applicant appealed the passage of the ICB to the OMB.

[para21] Under the heading "Zoning Requirements" of the Application Status Report which accompanied the November 23, 1995 letter of the CBO, there were certain deficiencies listed as outstanding, including "Site Plan Approval, Payment of Development Charges, Lot Grading Certificate and Lot Grading Approval". Also outstanding under separate headings were a

number of Structural, Plumbing and HVAC requirements.

[para22] The applicant continued to resolve and remove the deficiencies referred to in that Application Status Report such that, on March 4, 1996, a further letter from the CBO was sent to applicant's counsel together with another Application Status Report. This latter letter, by the submissions of Ms. MacLean, constitutes the "decision" from which the 20 day appeal period referred to in s. 25(1) of the BCA begins to run. The March 4, 1996 letter stated:

> The above noted property is subject to an interim control by-law respecting the intended use of the property and Site Plan approval has not been granted for the proposed works.
>
> The Building Permit applied for under the noted code number can not be issued at this time.

[para23] In this letter the requirement of site plan approval was referred to. It had not been referred to in the earlier letter. Accompanying the March 4, 1996 letter was a more current Application Status Report which only noted, as outstanding deficiencies, certain zoning requirements. The previous requirement for "payment of development charges", was deleted. In the interim, payment had been made and accepted.

[para24] Counsel for the respondents, Mr. Minkowski, is of the view that time begins to run under s. 25(1) of the BCA when the decision was made, and reported, in the November 23,
1995 letter of the CBO to refuse the complete building permit.
In that letter, he advances, it is clear that the decision was final, "as a result" of the ICB. This situation did not change.

[para25] In the March 4, 1996 letter, the ICB was still the bar which resulted in the denial of the building permit although the requirement of the site plan approval was also noted. The effect of the ICB continues to the be bottom line at this time.

[para26] Mr. Minkowski contends that the passage of the ICB crystallized events. That was stated November 23, 1995. That same decision was simply restated on March 4, 1996. The restatement, based upon the same grounds, is not, by his submission, the commencement date of the 20 days within which to appeal notwithstanding that, in the interim, deficiencies had been resolved, and payments made.

[para27] This application was issued on March 14, 1996.

[para28] Counsel for the applicant disagrees. It is her position that, because of outstanding deficiencies which existed in November, the CBO could not have granted the building permit on November 23, 1995, even without the fact of the ICB. Those deficiencies, she states, have now all been resolved with the result that it is the March 4, 1996 letter which first addresses a decision which is based solely upon the enactment of the ICB.

[para29] Ms. MacLean distinguishes the still outstanding Zoning Requirements from other deficiencies on the basis that Site Plan, a Lot Grading Certificate and Lot Grading Approval are not proper requirements for the issue of a building permit. If they are, her position is lost because all requirements for the building permit are still not met, with the result that the court still cannot order the issue of the building permit.

[para30] It is not necessary to resolve the consequences of the presently outstanding Zoning Requirements as, in my view, the municipality's position is correct in that the decision not to issue the building permit was crystallized on

November 23, 1995.

[para31] Despite this, s. 25(2) BCA provides the discretion to extend the time for the appeal. Ms. MacLean has asked that I exercise this discretion if I do not adopt her primary argument.

[para32] Mr. Minkowski has argued that my discretion to extend time for making this appeal should only be exercised in exceptional and compelling circumstances, which are absent in the present application. I reject this.

[para33] I am required by s. 25(3) BCA to satisfy myself, that there are reasonable grounds both for the appeal and for applying for the extension. The reasonableness of the grounds for the appeal necessitates an assessment of the merit of the positions of the parties. That has necessitated a lengthy review of the facts on the basis that the motion to quash is not time limited, as well as hearing the arguments of the parties.

[para34] These reasons confirm that I have found that reasonable grounds exist for the appeal.

[para35] As to the reasonableness of the grounds for applying for the extension, I am of the opinion it would be unreasonable not to exercise my discretion.

[para36] As stated, the CBO was continuing to accept ongoing resolutions of deficiencies set out in his first Application Status Report and even accepted payment between the two letters in which he set out his reasons for denying the building permit.

[para37] There can be no prejudice to the respondents if time is extended, whereas the prejudice to the applicant, if relief is appropriate, is substantial. While not determining the issue at this stage, a plausible case has been made for political interference, inappropriate discriminatory treatment of the applicant and a lack of good faith by the municipality in its treatment of the applicant.

[para38] Similarly, while I recognize that I must assess the reasonableness of the grounds for the appeal separately from the grounds for applying for the extension, they are inextricably interwoven in this application in my view.

[para39] It would also be unreasonable that I determine that the grounds for appeal are reasonable and then go on to determine that the requisite extension is unreasonable, absent bad faith, misconduct or similar on the part of the applicant.

The OMB/Court Jurisdiction Issue

[para40] As I previously noted, it is the respondents' position that only the OMB has jurisdiction to determine questions of law on appeals under the Planning Act and from the enactment of an ICB. However, the appeal in question in this application is under s. 25(1) BCA, which specifically confers upon this Court the responsibility of determining appeals from orders or decisions of the CBO by persons who consider themselves aggrieved by those orders or decisions.

[para41] I am cognizant of the fact that the OMB is a specialized tribunal with particular knowledge and that the Court should exercise its discretion to intervene, when in competition with the OMB, sparingly and "only in the clearest of circumstances". Having regard to the fact that it is this Court which has the responsibility for appeals under s. 25 such considerations, have no relevance.

[para42] Pursuant to s. 25(4) BCA, I can:

(1) Rescind or affirm the decision of the CBO;

(2) Take such action as I consider the CBO ought to have

taken;

(3) Substitute my decision for that of the CBO.

[para43] I am aware that I also have the authority, in appropriate circumstances, to grant equitable relief, including mandamus. (Re Woodglen & Co. Ltd. and City of North
York (1984) 43 O.R. (2d) 289 at 300)

[para44] I repeat that the opinion of the CBO on November 23, 1995, confirmed on March 4, 1996, was that he was unable to issue the building permit in question because of the ICB, and other matters. His decision was unrelated to the validity of the ICB as it was necessarily based upon the presumption of the validity of that by-law. The CBO had no power to quash the ICB in question.

[para45] The issue, thus framed, is not whether the ICB is valid and enforceable but whether the CBO properly concluded that the ICB is enforceable against the applicant.

[para46] In my view, it is not so enforceable. This result is as a consequence of the interrelationship of the Planning Act in conjunction with the BCA and the Building

By-law of Mississauga.

Analysis

[para47] Under s. 8(1) of the BCA, no person shall construct a "building" without a "permit". A "building" by one definition, includes "plumbing not included in a structure". Plumbing is also defined. It includes a "drainage system".

[para48] Under s. 8(2) of the BCA, it is mandatory that the CBO issue a building permit unless the proposed building "will contravene this Act or the building code or other applicable law".

[para49] S. 7 of the BCA, permits municipalities to pass by-laws prescribing "classes" of permits including "permits in respect of any stage of construction". In its Building By-law, Mississauga has, in fact, prescribed classes of permits related to stages of construction. These are set out in Schedule "A", which provides for a "drain component" class of permit.

[para50] On October 12, 1995, a "drain component" class of building permit for "site servicing only" was issued to the applicant by the CBO.

[para51] The document which serves as the City's building permit is a composite document. It contains a heading "class of permit" under which are incorporated eight classes, including the "drain component" class. Boxes are available to be checked to distinguish the class of permit issued.

[para52] Also as noted, Mr. Chee, the applicant's agent in these matters, acknowledged that the issue of the "drain component" permit to the applicant did not guarantee that the applicant would be entitled to receive a different class of permit. The applicant was aware of this, and agreed. In the result, the municipality argues that the issue of the drain component permit was at the applicant's risk.

[para53] Under s. 8(2) BCA, the CBO is not entitled to withhold permits on such a basis. The permit in question is not, nor was it intended to be, a "conditional permit" pursuant to those provisions of the BCA which permit the issue of building permits in the discretion of the CBO when all of the requirements have not been met for its issue.

[para54] It is clear that the applicant was so anxious to

obtain the permit in question that he accepted it on the limited basis on which the CBO purported to issue it. Mr. Minkowski believes that, as such, his acceptance, without further guarantees, constitutes an agreement that is binding upon him, even if not statutorily authorized. He argues that it is imperative that CBO's have an inherent jurisdiction to place restrictions on permits which are issued. This necessity arises so as to enable a CBO to administer the BCA on a basis consistent with the needs of applicant, and the interests of the community.

[para55] It is not necessary that I resolve the appropriateness or the limits of that discretion if it exists. The applicant did not, in pursuit of the permit that was issued, waive any further entitlement consequent upon the fact of its issue. At the most he agreed that there was no guarantee, assuming the risk that he might not get the remaining permits for a complete building. He did not waive rights, statutory or otherwise, by this recognition of the lack of guarantee. His entitlement will therefore be determined in law, not on the basis of some notional contract that he was accepting the permit without further rights.

[para56] It is clear that the municipality considers a "class of permit" to be something less than a "building permit", on the basis that a "building permit" is the permit for a complete building. In the result, in Schedule "A" of its Building By-law, the basis of the fee it charges depends upon whether the permit is a "part permit".

[para57] S. 7 of the BCA does not authorize "part" permits. It authorizes "classes" of permits. It is axiomatic that a "part" of something is less than the whole of that thing, whereas a "class" of something is a category of that thing. "Classes" are distinguished by their differences, not by their completeness.

[para58] Funk and Wagnell's Standard Desk Dictionary includes, in the definition of "part", the following:

> N. (1) A portion of a whole; segment.

[para59] Included in its definition of "class" is the following:

> N. ... (3) A category of objects, persons, etc. based on quality or rank: of the first class
>
> (4) A number of things grouped together as having common properties; a category.

[para60] It is the submission of Mr. Minkowski that the legislative authority to identify different stages of construction contemplates that each class of permit will be treated as independent from other applications, each stage requiring its own application.

[para61] The issue of a class of permit will not, by this approach, be part of a continuum which binds the issuance of other classes of permit. It is irrelevant that the permit is in respect of something greater in the contemplation of the applicant (in this instance, a complete car wash building).

[para62] It is the position of the applicant that a class of permit having been issued in relation to part of the construction of the car wash, substantive rights become vested. Determinations based upon zoning have been favourably resolved and cannot thereafter be limited or encroached upon. It is only necessary for the applicant to meet the specific requirements which apply to each additional class of permit in order that the additional class of permit will issue.

[para63] Applicant's argument is that all necessary permits for the completion of the car wash must follow, provided that the applicant conforms to the "applicable law"

which, in terms of zoning, existed when the first permit was issued. An ICB cannot extinguish those vested rights. It is not only the fact that the drainage was properly designed, or similar, that was determined when the
drain component class of
permit was issued. The drainage component permit was related to a distinguishable building, a car wash. When issued there were no barriers to that facility, hence the vesting of the right to build that facility in its entirety.

[para64] S. 38 of the Planning Act authorizes the enactment of ICB's. S. 38(8) specifically provides that s. 34(9) of the Planning Act applies "with necessary modifications" to ICB's.

[para65] Section 34(9) provides that "no" such ICB "applies to prevent the erection ... of any building ... for which a permit has been issued" under s. 8 of the BCA, prior to the passage of the by-law "... so long as the building ... when erected is used for the purpose for which it was erected". (emphasis added)

[para66] Summarizing, the applicant's position is that a permit has been issued, albeit a permit for a limited purpose. Resolved in the issue of that permit is the entitlement of the applicant to operate a car wash on the site. Contrary to the position of the respondents (which is that only the Drain Component of the construction cannot be halted by the ICB), the ICB cannot prevent the erection of the building in respect of which the drain component is a part.

[para67] The real question then, is whether the car wash which was the greater building that was contemplated by the class of permit issued, can be prohibited by the ICB as a consequence of the fact of the issue of only a class of permit.

Statutory Interpretation

[para68] In 1121472 Ontario Inc. v. Corporation of the City of Toronto, (1995) 29 M.P.L.R. (2d) 221 at 228, Kiteley, J. conducted an "Analysis" of present practices applicable to the "plain and ordinary meaning" of words used in by-laws. Citing Wilson v. Jones, [1968] S.C.R. 554 (S.C.C.), she notes that the Supreme Court determined "any doubt as to the application of the by-law to prevent the erection of a specific building should be resolved in favour of such proposed use" whereas, without reference to that decision, in Bruce v. Toronto (1971) 19 D.L.R. (3d) 386 (O.C.A.) a liberal interpretation of a restrictive by-law was favoured with the result that, in matters related to the use of lands, "the rights of the community are paramount to the rights of the owner".

[para69] In Milton v. Smith, 32 M.P.L.R. 107 at 117, Clarke, J. states:

> I accept as a general principle that in the construction of a by-law words must be given their ordinary natural grammatical meaning unless there is an indication in the context to show that the particular words are being used in a special sense.

[para70] I adopt that statement as being equally applicable to the interpretation of statutes with the result that it has application both to the Building By-law of the respondent City and to the Planning Act.

[para71] Concluding, in the BCA and under the Building By-law, by definition, a building can be something considerably less than a complete building. Thus, by definition, "building" is "used in a special sense". Similarly "permit" can have different meanings.

[para72] Those special definitions or meanings are not set out, referred to, subsumed in or otherwise incorporated into

the Planning Act.

[para73] It is therefore possible to give the language of s. 34(9)(b) of the Planning Act an ordinary, natural grammatical meaning without reference to those special definitions contained in the BCA and Building By-law.

[para74] Indeed, it would offend ordinary grammar and natural meaning to import the special meaning of those words into the Planning Act.

[para75] A "building" which consists of "plumbing not located in a structure" (s. 1(1)(c) BCA) demonstrates the fact of that definition as "being used in a special sense".

[para76] Pursuant to s. 34(9) of the Planning Act, "no by-law", (which includes an ICB by virtue of s. 38(8)) can prevent the erection of "any building" for which "a permit has been issued under s. 8 of the Building Code Act", prior to the passage of the ICB.

[para77] The plain meaning and only reasonable conclusion
is that the building which cannot be prevented by the ICB is the car wash, not some lesser "building" as used in a special sense in another statute or by-law.

[para78] Concluding:

a) a permit was issued; albeit one of a class of permits;

b) it was issued under s. 8 of the BCA;

c) it was issued prior to the passage of the ICB.

[para79] In the result, the CBO was in error in refusing to issue the further building permit to complete the car wash which the applicant seeks to built at 1459 Lakeshore Road East, Mississauga, Ontario. That was the only building, using the ordinary natural grammatical meaning of a building, in respect of which "a" permit was issued. The declaration will therefore go that the ICB cannot be used to prevent the erection of that car wash building.

[para80] S. 8(2) BCA mandates that permits shall be issued provided that they do not contravene applicable law. By these reasons, the ICB does not constitute applicable law which prohibits such issue. Without determining the validity of the ICB, the applicant's lands are, by these reasons, exempt from the ICB.

[para81] Subject to payment of appropriate fees and the resolution of any outstanding Zoning Requirements or other deficiencies set out in the applicant's Application Status Report, I order the issue of those building permits, which, but for the ICB, the applicant requires for the construction and use of the car wash.

Section 136 of The Municipal Act

[para82] In view of the foregoing reasons, the question whether the ICB should be quashed by me, for illegality by reason of bad faith, becomes moot.

[para83] There is an appeal of the ICB to the OMB outstanding. That body has broad jurisdiction and is best able to deal with the validity of the ICB if the applicant wishes to proceed to resolve that issue.

[para84] I may be spoken to as to costs.

ZELINSKI J.

Hanson-Needler Corp. v. Kingsbridge Development Inc.

Between
The Hanson-Needler Corporation, Applicant, and
Kingsbridge Development Inc., Respondent

[1990] O.J. No. 2151
DRS 97-16376
Action No. RE 2818/89

Ontario Supreme Court - High Court of Justice
Toronto, Ontario
Saunders J.
Heard: January 3, 1990
Judgment: January 5, 1990

R. Barlow and D. McDuff, for the Applicant.
S. Block and L. Pan, for the Respondent.

SAUNDERS J. (endorsement):-- The applicant is the purchaser of lands from the respondent. The lands front on the south side of Eglinton Avenue. Following the conveyance to the applicant, the respondent retained the lands immediately to the east on which there is constructed a retail and commercial building.

The applicant is in the course of constructing a residential property on its lands which would include an underground garage. In order to excavate for the garage, the applicant obtained a subterranean easement from the respondent along part of the boundary between the two properties. It was believed by the parties that the easement was in the corridor where the electrical cable serving the respondent's property was located. Subsequently, but before closing, the possibility was raised that the cable might be partially located on the lands being sold. The applicant then took the position that if such were the case, the cable should relocated. The respondents undertook to do so. It turned out that part of the cable was, indeed, on the applicant's lands. This seems to have occurred because of a surveyor's error. Part of the cable was also in the respondent's lands that were subject to the easement. The respondent relocated the part of the cable on the applicant's lands on its own lands. Part of the relocated cable was placed in the lands subject to the easements.

The applicant takes the position that the relocation should have been carried out in such a way as to have no part of the cable on the easement lands. It asks for an order that the respondent carry out a further relocation at its own expense.

There are three documents that are relevant to the rights of the parties:

(1) Purchase agreement between the parties dated August, 1988 whereby the applicant as purchaser agreed to acquire the subject lands from the respondent as vendor. Paragraph 8(e) of that agreement provides in part:

> The Vendor agrees to permit the purchaser to encroach upon the vendor's subterranean title to the lands shown on Schedule "C" for the purpose of the Purchaser constructing an underground garage structure, which right includes the right of support easements, including easements for the purposes of the maintenance and repair, the total cost of which shall be borne by the Purchaser including any maintenance expense burden which shall be solely at the expense of the Purchaser.

(2) Easement agreement dated June 21, 1989. This document was exchanged and registered on closing, and under it the respondent transferred to the applicant an exclusive underground easement beneath certain lands of the respondent for the purpose of constructing and maintaining an underground garage. The agreement contained the following provision:

> The Transferee, during its construction, shall maintain and preserve and incorporate the Transferor's electrical cable and service in the Transferee's underground garage, or relocate same at the Transferee's expense, in the event that such electrical service is encountered in the said Parts 15 and 16 on Plan 43R - during the Transferee's construction.

(3) Undertaking dated June 21, 1989. The respondent gave an undertaking at closing with respect to the possibility that part of the cable might be on the lands to be sold to the applicant. It was given along with other unrelated undertakings at that time. The undertaking provided as follows:

> In the event it is determined that an underground hydro service for the benefit of Parcel 16-1, Section 43 Tor.
>
> Twp. 2 N.D.S. is located on Parcel 16-12 then, to the extent that it conflicts with construction by the Purchaser on Parcel 16-12, being located in parcel 16-12 being the two acre the Vendor shall relocate such underground hydro at its sole expense.

The obligation of the respondent under the undertaking was to relocate the cable to the extent that it conflicted with construction by the applicant on its lands. It is submitted that "construction" should extend to work on the easement lands as such work is part of the construction on the applicant's lands. I have difficulty with that submission. First, it requires a broad and generous interpretation of the language in favour of the applicant and second, it is inconsistent with the understanding of the parties. The words "conflicts with construction by the purchaser on parcel 16-12" were drafted by the applicant. The parties knew that part of the cable was on the easement lands when they entered the purchase agreement. Such was the case and that circumstance was dealt with by the easement agreement. The fact that part of it also turned out not to run through the entire south part of the easement lands was as the result of a surveying mistake. The undertaking was intended to deal with that possibility.

The respondent relocated the cable where it was supposed to be thereby restoring the situation to what the parties believed it to be when they entered the purchase agreement. The respondent says that relocating the cable further to the east would have interfered with the other services on the property and with the development plans for the respondent's lands. In my opinion, the respondent fulfilled the terms of the undertaking by moving the cable off the applicant's lands and that the terms of the undertaking did not preclude relocation on the easement lands.

The applicant now has several options in carrying out its construction. As has been said, the parties knew from the outset that part of the cable should be on the easement lands. In the easement agreement, they contemplated that the cable nevertheless might not be encountered during construction. If it was encountered, the applicant had the option of either maintaining, preserving and incorporating it in the garage, or relocating at the applicant's expense. The agreement does not specify where the relocation is to occur. Presumably, it could occur on the easement lands, the remaining lands of the respondent or the lands of the applicant.

What the applicant wants to do is relocate the cable to the east on the respondent's lands. The short answer is that it has no right to do so. I was directed to no agreement which provides such a right. The evidence is that such a relocation would be disruptive to the use and enjoyment by the respondent of its property and would interfere with its services and development plans. In my opinion, the easement agreement cannot be interpreted as giving an implied right to relocate on the respondent's property. If that had been intended a broader easement provision should have been drafted.

The applicant also wants to put construction hoarding to the east of the boundary line between the property and also east of the east limit of the easement lands. One effect of doing this is to reduce by one half the entrance way to the respondent's property from Eglinton Avenue. The applicant says it needs the hoarding for safety but the evidence is that hoarding along the edge of the excavation can be made safe. Again, the applicant cannot point to any agreement express or implied that would confer such a right and it would not be appropriate for the court on an application to provide him with such.

SAUNDERS J.

Kirby v. Coquitlam (City)

Between
Robert Michael Kirby and Karen Mary Kirby, plaintiffs, and
The City of Coquitlam, defendant

[1996] B.C.J. No. 600
DRS 96-08727
New Westminster Registry No. S0-8793

British Columbia Supreme Court
New Westminster, British Columbia
Sigurdson J.
Heard: November 8, 9, 10 & 16, 1995.
Judgment: filed March 21, 1996.

Counsel:
R. Keith Oliver, for the plaintiffs.
B. De Vita & E. Vanderburgh, for the defendant.

SIGURDSON J.:--

INTRODUCTION

[para1] The plaintiffs, Mr. and Mrs. Kirby, own a house which was constructed in 1966 and purchased by them in 1968. In early 1992 they noticed their home was sinking and cracks in the basement. This happened because the foundation was built on organic fill. The plaintiffs claim damages against the municipality for negligently inspecting the forms for the foundation, negligently issuing a building permit, and failing to ensure the foundations were placed on solid bearing ground. The defendant municipality denies that it had, or ought to have had, knowledge of possible unstable soil beneath the foundations and denies any liability.

FACTS

[para2] In 1992, the Kirbys noticed a large crack across their basement floor. From the lane at the back of their property, they could see a shift in the slope of the roof and a change in the line of the vertical and horizontal siding. To their dismay, their house was settling badly and the foundation had cracked. They retained a contractor who repaired the perimeter foundation by installing five piers, a steel reinforced beam, and a new floor slab. The repairs totalled $36,316.25 including Mr. Kirby's time. The parties agree on that amount for damages if the municipality is found liable.

[para3] The cause of the problem was explained in the expert report of Albert H. Losch, a professional engineer. A 1' layer of till-fill had been placed over a variable organic fill layer consisting of boulders, stumps, logs, topsoil, roots, etc., 10 to 12 feet deep which had been placed over the native dense sand till. The thickest amount of the variable organic fill was along the southern edge of the house and thinned out towards the northern portion of the house, which faced Lemax Avenue. The foundation cracked when the southern half of the house settled approximately six inches lower than the northern half.

[para4] The logs, boulders and stumps that made up the fill material was obviously unsuitable as foundation bearing material. This variable fill material, according to Mr. Losch, should have been removed to expose native dense sand fill prior to construction or, alternatively, after removal of the variable fill, the lot could have been raised with compacted granular structural fill.

[para5] The Kirby's home is located at 1960 Lemax Avenue in Coquitlam. The legal description is Lot 96, North half of Block 7, D.L. 358, Group 1, Plan 1729. Lot 96 was created by a subdivision plan of January 21, 1966. Immediately west of Lot 96, on Lemax Avenue, is Lot 2 where, in 1962, Ethel Dickie and her husband James Dickie lived. In 1962, there was no house on the subject property which later became Lot 96; it was undeveloped land.

[para6] According to Mr. Dickie, in 1962 the subject property was a gully with a creek that came halfway on and then ran off. Mrs. Dickie said this property sloped from front to back, dropping off in elevation over its length by 18

to 20 feet. She said that there was also a steep drop-off from their eastern property line to the subject property. Mrs. Dickie remembered that a creek ran through part of the subject property and came to within about 6 feet of the bank at the end of the lane along the back of their property.

[para7] One day Mrs. Dickie saw trucks arrive at the subject property and dump big boulders, old lumber, stumps, dirt, gravel, garbage and miscellaneous material. Mr. Dickie said that the owner of the properties to the east moved this fill around with a backhoe. Both Mr. and Mrs. Dickie agreed that, once the subject property was filled, it was covered with a layer of dirt and there was no evidence of the logs or the stumps; the organic fill, according to Mr. Dickie, was very well concealed.

[para8] After Lot 96 had been created by subdivision in January 1966, Van Dee Developments, in February 1966, applied for and received a building permit to construct a single family dwelling. The proposed house, about 44'6" wide by 44'8" in depth, was to be located on a lot approximately 115' x 64'. The Corporation of the District of Coquitlam, now the City of Coquitlam, issued the building permit. During the course of construction various inspections were carried out by the municipality. The records of the municipality indicate the forms for the foundation were inspected on February 1, 1966.

PLAINTIFFS' CLAIM

[para9] The homeowners contend that the defendant municipality is liable because:

a. The building inspector ought to have been aware at the time of his inspection of the presence of organic or variable fill on the property, and ought not to have approved the forms for the foundation.

b. The municipality was negligent in issuing a building permit when it knew that Lot 96 was located over the previous location of a creek and ought to have required a soil investigation before approving the forms.

c. The municipality was negligent in failing to comply with its own building by-law which required that the foundation be on solid bearing ground.

(a) Negligence of the Building Inspector:

[para10] The scope of the duty of a municipal building inspector was discussed in Rothfield v. Manolakos, [1990] 1 W.W.R. 408 (S.C.C.) at p. 415.

> The city adopted the relevant building by-law "for the health, safety and protection of persons and property" pursuant to s. 734 of the Municipal Act, R.S.B.C., c. 290, as amended. By application of the test formulated by Lord Wilberforce in Anns v. Merton London Borough Council, [1978] A.C. 728,...the city, once it made the policy decision to inspect building plans and construction, owed a duty of care to all who it is reasonable to conclude might be injured by the negligent exercise of those powers. This duty is, of course, subject to such limitations as may arise from statutes bearing on the powers of the building inspector.

[para11] In Petrie v. Groome (1991), 45 C.L.R. 132 at 144 (B.C.S.C.), Collver J. commented on the nature of the municipality's obligation to inspect and said:

> In Rothfield, Mr. Justice La Forest, in emphasizing that third parties are entitled to rely on the municipality to properly inspect construction to see that it conforms to the standards set out in the municipality's building by-laws, rejected the notion that the municipality becomes an insurer in respect of compliance. His Lordship stated, at pp. 1268-1269 [of S.C.R., pp. 224-225 of M.P.L.R.]:
>
> > It must be borne in mind that a municipality, once it has made the policy decision to inspect construction, is not bound to discover every latent defect in a given project, nor every derogation from

> applicable standards. That would be to hold the municipality to an impossible standard. Rather a municipality is only called upon to show reasonable care in the exercise of its powers of inspection.
>
> Accordingly, a municipality, whether the duty of care is owed to an owner builder or a third party, will only incur liability for such defects as it could reasonably be expected to have detected and to have ordered remedied. This is implicit in the decision of this Court in City of Kamloops v. Nielsen.

[para12] The defendant does not dispute that it owed the plaintiffs a duty of care to exercise its powers of inspection carefully. The central issue is whether, in the circumstances, a reasonably careful building inspector would have detected the presence of fill, or been put on his inquiry to make further investigations before approving the forms.

[para13] The plaintiffs' argument goes beyond negligent inspection. The plaintiffs assert that the building inspector, by the terms of the building bylaw, ought not to have approved the forms without ensuring that the ground was solid bearing. They also say that, because of general knowledge in the municipal offices that the lot was built over a creek, efforts ought to have been made to check the soil before the building permit was issued or, at least, before the forms were approved. I will deal with those claims later.

[para14] In 1966, the building inspection department consisted of Neil Wayneman, the chief building and plumbing inspector, and Melvin Robinson, the assistant building inspector who had started in 1961. Mr. Robinson did the inspection of the footings on February 1, 1966, but at trial he had no actual recollection of that inspection; that is not surprising as he did ten to fifteen a day. He described the general nature of the soil in the area of Lot 96 as sandy, good-bearing soil. He testified that if there was a known soil problem it would be indicated on the building permit, by the engineering department, that an engineer's design was required; in this case no such notation appeared.

[para15] There was no evidence of the usual practice of a reasonably prudent building inspector in 1966. Mr. Robinson described his standard practice this way. Prior to approving the forms for concrete, he walked and measured the side yards and found the surveyors posts on each corner to determine if the front and side yard setbacks were in compliance. He checked the height of the walls. He checked the thickness of the walls for compliance with the building code. He ascertained the grade when the house was finished, and determined if the house was high enough for proper drainage and that the forms were protected from water. He said he checked the soil for its bearing capacity as he walked around. The extent of his examination was only to see if there were roots, grass or anything like that visible. If there were, he would contact the contractor and have test holes dug to ascertain the true soil condition.

[para16] When Mr. Robinson was inspecting construction on a hilly site, or a deep excavation for a full basement (he said the house on Lot 96 had a small excavation), and he was suspicious about the soil, he would use a probe to check soil bearing capacity; he would not normally use a probe on a relatively level lot. Mr. Robinson described Lot 96 as relatively flat with a slight slope to the east. He said the existence of a creek on an adjacent lot would not raise his suspicions about the quality of the soil on the lot he was inspecting.

[para17] The municipality argued that the claim should be dismissed because there is no expert evidence that a reasonably prudent building inspector would have conducted himself differently than Mr. Robinson did in the circumstances. The municipality says the only evidence of a reasonable standard is that followed by Mr. Robinson. Although there is often expert evidence as to what a reasonably prudent building inspector would have done, or would have known of possible soil conditions of fill on a site, I do not think such evidence is always necessary. In appropriate cases such as this, I can use my own judgment and determine on the evidence whether a reasonably prudent building inspector ought to have been aware of the possible

presence of organic fill under the foundation.

[para18] Mr. Oliver, the plaintiffs' counsel, argues that the defendant's building inspector ought to have been alerted to the possibility of fill on the site and put on his inquiry to make further investigations of the soil conditions because:

(a) The depth of the excavation for the house itself should have alerted the building inspector to the presence of organic fill;

(b) A reasonable building inspector viewing the site from the street or the lane would have known of the likelihood of organic fill on the property.

[para19] The plaintiffs' argument really comes down to the contention that a reasonable building inspector on site, from the street and from the lane, and from the depth of the excavation for the house, ought to have seen conditions that put him on notice that there may be fill on the site and obligated him to make further inquiries before approving the forms. Mr. Oliver contends that this is found in the evidence of the defendant's building inspector.

[para20] Mr. Oliver points to the evidence of the inspector that the excavation to a depth of 5'8", the depth of the basement at the front of the house, means that, under expected soil conditions, you are certain to hit hardpan. Mr. Oliver suggests that an excavation of such a depth would indicate, over the length of the building site, when the hardpan disappeared; it would have indicated that the back half of the foundation was not on solid bearing ground. There appears to be some merit to this argument if a 5'8" excavation was required for the front of the basement. However, the house may, as the inspector believed, have only had a very small excavation at the front so that backfilling was done in order to raise the grade. Mr. Robinson did not know whether there was backfilling or not, and said the house had to be dug up to determine that now. There was no other evidence on that point at trial. I am unable to conclude, from the evidence, the depth of the excavation at the front. Therefore, on the evidence it is not apparent that the inspector would know the back of the foundation was on organic fill, or that the back of the house was not on hard pan.

[para21] The plaintiffs' counsel's other argument on the first issue is that the evidence of Mr. Robinson at trial demonstrates that it is as obvious now as it was in 1966 that there was fill on the property, and the building inspector ought to have made further inquiries to see if there was organic fill underneath the foundation.

[para22] Mr. Robinson said on cross-examination:

Q. Mr. Robinson, I take it that your present day observations of the lot would indicate to you that there is some fill on the lot -- just from siting down the property line and observing the difference between that one and the one immediately to the east?

A. The difference between the vacant lot and this one?

Q. Yes.

A. Yes.

Q. And if you had made those observations in 1966 you would have concluded that there was fill there?

MR. DeVITA:

My Lord, the question is deceiving, we are talking about two different types of Fill. And perhaps my friend might clarify the question. I am not sure where he is --

MR. OLIVER:

Well, my friend is trying to introduce a red herring, and I wished not to do so --

Q. Mr. Robinson, --

THE COURT:

I think the witness can answer the question. Ask the question again.

Q. The question was, if you made the same observation by siting down the property line in 1966, you would come to the same conclusion, wouldn't you?

A. Yes.

Q. And the conclusion is based only on topographical difference in the two lots. Not on any examination of material, correct?

A. Yes.

....

Q Okay. Now, I hate to belabour the point, but, in 1966 we know from the evidence of the neighbours, that we are dealing with a lot that had been filled.

We know as well, from the evidence of the neighbours that not only had it been filled, it had been smoothed out and there was no organic material shown. No roots, no stumps, no 2 x 4's sticking out of the dirt. All we've got is a nice, apparently flat sloping lot. Now that would be consistent with what you observed last week, correct? A nice flat sloping lot.

A I couldn't say it was like that with that difference in time. It's been all landscaped, so I don't know how the grades have been changed.

Q I'm not asking you to know how the grades have been changed. I'm just asking you to agree now it's a flat sloping lot. By flat I mean it doesn't go up and down, here there and everywhere, it's just in one plain or thereabouts. But it has a slope. It has a grade differential front to back and a slight grade differential in from side to side. And that's what we are dealing with, correct?

A Yes.

....

Q Mr. Robinson, you traversed the entire property?

A Yes.

Q You went right out to the corner. You went out to each corner, in fact? You did?

A Yes.

Q Okay. So you had to see that there was fill?

A Not necessarily. What I was determining was the location of the forms on the lot and if the bearing was suitable where they were built. And if there were slopes away from that, that didn't bother the foundation, I would make a judgment as to whether it was okay to pour or not.

....

[para23] On re-examination Mr. Robinson said:

Q. Mr. Robinson, you state that when you viewed the property last week, and when you viewed it, I believe from the east side of the property, there was something about the property that caused you to think that the lot had been filled. What was that, that caused you to believe the lot had been filled when you viewed the property last week?

A When I sited down the east property line I could see the natural grade of the lot next to it. And the lot in question had, I estimated, about oh, three foot rise, which was pretty well at right angles and

I assumed it was a retaining wall, up to the grade around the house.

Q. Was this three foot drop at right angles?

A. Yes.

Q. Is that what caused you to believe that the lot in question had been filled?

A. Yes. During landscaping probably.

Q. Why would you think it was during landscaping?

A. Because it wouldn't have been able to be maintained as a straight drop off.

Q. So that fill then, that you are referring to is, when you talk about the fill, the fill that is fill for the purpose of landscaping?

A. Yes.

....

[para24] The following rebuttal evidence was introduced by agreement. Douglas Oliver bought Lot 96 from Van Dee Developments. He did some landscaping but brought in no fill and did not erect a fence. Mr. Oliver did not know if landscaping or other fill was put in prior to his purchase by the previous owner or by the contractor. He sold Lot 96 to Mr. Kirby in 1968. It was also agreed that the lawn was in when Mr. Kirby purchased in 1968; Mr. Kirby put up some fences and did some incidental landscaping but brought in no fill. There is no retaining wall along the easterly boundary of Lot 96.

[para25] In addition to this evidence Mr. Oliver, counsel for the plaintiffs, argues that a view from the lane, if it was at the same height as Lot 96 at the back, would indicate that the lot was filled with organic fill. If Mr. Robinson, in 1966, had gone to the rear of the property, he would have seen that there was no hardpan but simply fill on the site. Mr. Oliver says that this can be deduced from the evidence as a matter of common sense.

[para26] Notwithstanding the fact that the site was relatively flat and any organic fill was well concealed, does the evidence of Mr. Robinson, set out above, and the agreed rebuttal evidence, indicate that a reasonable inspector should have been alerted, in 1966, to the possibility that the site was filled. Ought further inquiries to have been made before the forms for the foundations were approved?

[para27] The plaintiffs' argument, as I understand it, is that the building inspector, viewing in 1995 what he thought was landscaping fill and a retaining wall, ought to have realized at least that there was fill at the perimeter of the property and therefore that there might be fill on the lot. That, Mr. Oliver says, ought to have put him on his inquiry. To approve the forms, without doing tests, was negligent.

[para28] However, the building inspector, when he looked at the lot shortly before trial, mistakenly believed that there was landscaping fill supported by a retaining wall. The defendant says that such an incorrect observation shortly before trial cannot be substituted for quite a different observation in 1966 that might have alerted him to the possibility there was fill under the foundation. Mr. Robinson, for example, was not asked whether, if he saw landscaping fill and a retaining wall in 1966, he would have believed there might possibly be fill on the property.

[para29] I am unable to conclude from the observation of the building inspector, in 1996, that he should have been alerted to the possibility of fill being on site when he inspected the forms. In 1966, the presence of organic fill was very well disguised. The possibility of fill on site is not a logical, or necessary, inference from the mistaken observation of the inspector in 1996 that there was landscaping fill and a retaining wall to the east of the property.

[para30] I have reached the same conclusion with regard to Mr. Oliver's argument that a building inspector ought to have

known from standing at the lane that there was the possibility of fill on the property. I find Mr. Oliver's submissions on this point entirely speculative. They do not convince me, on a balance of probabilities, as a matter of common sense, or on the evidence, that a reasonable person, in the position of the building inspector in 1966, would have been alerted to the possibility that there was fill on the site at the location of the proposed building.

(b) Was the municipality aware that Lot 96 was over the earlier location of a creek and ought it to have made inquires either before approving a subdivision plan or issuing a building permit?

[para31] The underlying premise to this argument is that, prior to what became Lot 96 being filled, there was a creek that flowed through the subject property and this fact was known to the municipality. The Dickies' evidence was that there was a creek that came on to the subject property before it was filled. The plaintiffs argue that the records of the municipality confirm that it had knowledge of a creek on Lot 96 before it was filled. The plaintiffs argue that the defendant was negligent in issuing a building permit without at least noting on the permit that the soil conditions had to be investigated before actual construction on the property could be approved.

[para32] This argument rests entirely on the records of the municipality. The plaintiffs argue that the documents indicate the creek was relocated off the Kirbys' lot. The plaintiffs rely on a series of subdivision application documents filed with the municipality between May 1965 and January 21, 1966, when the plan for Lot 96 was ultimately deposited in the land registry office in New Westminster shortly before the building permit was issued.

[para33] A subdivision application dated May 14, 1965, requested subdivision in these terms: "of the most westerly lot. East property line to be the center line of the creek". A later letter dated June 25, 1965, from the engineering supervisor of the municipality to the owner, indicated preliminary subdivision approval in accordance with sketch B-1791A. That sketch was of a proposed five lot subdivision with a lot the size of the Kirby lot being the most westerly lot in the subdivision. Those documents, the plaintiffs suggest, indicate the municipality knew the creek either had to be relocated or that it was right at the boundary of what would become Lot 96.

[para34] Through 1965 there were other subdivision applications and a number of reports from the public works superintendent regarding work required for subdivision approval. Ultimately, however, in January 1966, final approval was not granted for a multiple lot subdivision because sewer connection was not available. Accordingly, only a one lot subdivision, Lot 96, was approved.

[para35] From my review of all of these documents it appears that at the outset the proposal was for a one lot subdivision with the creek as its easterly boundary. That evolved into an application for a five lot subdivision which ultimately, because sewer was not available, reverted to a one lot subdivision. The initial one lot subdivision with the creek as its border appears to have contemplated a lot that was perhaps 95.5 feet wide, whereas Lot 96 was ultimately only 64.5 feet wide.

[para36] These documents as a whole do not establish that the municipality was aware the creek was relocated from the subject property to create Lot 96. The contour maps and other maps filed in evidence also do not support the plaintiffs' contention. In fact, the only document in the file that indicates the location of the creek appears to indicate that the creek has been in the same position in 1965 as it was after Lot 96 was filled.

[para37] Accordingly, the plaintiffs have not demonstrated that the municipality was aware the lot was built over a creek and so ought to have required soil tests before a permit was issued.

(c) Obligation to find solid bearing ground.

[para38] The plaintiffs argue that the defendant breached

its obligation, apart from any question of negligence, by not following its building by-law and ensuring that "all foundations shall rest upon solid ground or piling". The plaintiffs argue that this is an absolute obligation on the part of the municipality. I think that argument misconceives the obligation of the municipality when it undertakes the regulation of home construction by inspection. To accede to the argument of the plaintiffs that there would be liability on the defendant in the absence of negligence would make the defendant an insurer, which is, in my view, contrary to the authorities. In the absence of negligence the municipality ought not to be liable.

RESULT

[para39] Accordingly, the plaintiffs' claim is dismissed. The defendant has liberty to speak to the question of costs if they are sought.

SIGURDSON J.

Leeds & Grenville County Board of Education v. Gerrard

Between
The Leeds & Grenville County Board of Education, Applicant,
and
Philip Gerrard and the Corporation of the Township of Oxford-on-Rideau, Respondents

Ontario Judgments: [1991] O.J. No. 1826
Action No. 1178/91

Ontario Court of Justice - General Division
Brockville, Ontario
Cosgrove J.
October 8, 1991

Application under The Building Code Act, R.S.O. 1980, c. 51, s. 15.

Paul A. Webber, for the Applicant.

William R. Hunter, for the Respondents.

COSGROVE J.:--

BACKGROUND:

By Notice of Application herein dated September 26, 1991, the following relief was sought:

(a) a hearing and appeal from a refusal by the Respondent Gerrard, the Chief Building Official of the Respondent Oxford-on-Rideau, to issue a complete and final building permit, including the proposed Heating, Ventilating and Air Conditioning system (HVAC) for the South Branch Elementary School being constructed by the applicant in the said Township;

(b) an order that the said refusal be rescinded and that such permit issue.

The application required two full days of hearing. In addition to the Records of both parties, each containing over one hundred and fifty pages of material, the court heard the viva voce evidence of two witnesses for each party before argument was made. This procedure was consented to by the parties to permit cross-examination without the delay of preparation of transcripts.

At the end of argument on October 4th, I gave my decision on the application in summary form and indicated I would prepare fuller written reasons.

FACTS:

The applicant, through its consulting engineer, applied for a building permit to construct a school (South Branch Elementary) in Kemptville in Oxford-on-Rideau Township.

Part of the heating, ventilating and air conditioning system (HVAC) for the school is proposed to be provided by a closed-loop geothermal heat pump system.

The closed-loop geothermal heat pump system is designed to remove natural heat from the earth and uses it to provide space and water heating in the school. The process is designed to reverse, so as to provide air conditioning in the summer. The system is comprised of two major components. The heat pumps, which are located inside the school, and a circuit of under ground piping adjacent to the building. In total, 104 Wells, 200 feet deep, were proposed within a few meters of the perimeter of the school, feeding various pumps in the school. The external underground piping is sealed, through which a heat transfer fluid passes to and returns from the various heat pumps. 80 gallons of a solution of Methanol was initially proposed for each of the 104 wells (a total, of 8,320 gallon's). This was reduced to 40 gallons per well or a total of 4,160 gallons of Methanol during the hearing of the application. The applicant also established that the number or depth of the wells (104 x 200 ft.) could vary, depending on ground conditions, but a total of 20,800 lineal feet of piping would be required. In the viva voce evidence of the

applicant's witnesses, the court was told that the toxic closed-loop solution of methyl-hydrate might be replaced by a solution of Potassium Carbonate, Potassium Chloride or Potassium Acetate.

The court learned that there are approximately 22,000 installations of heat pumps in Canada using methyl-hydrate anti-freeze, presumably in compliance with CAN/CSA C445-M89 Design and Installation of Ground and Water Source Heat Pump Standard. A revised standard M89 providing for the substitution for methyl-hydrate is being prepared.

The respondent expressed a number of concerns respecting the design of the heat pump system and the Ministry of the Environment was engaged as a consultant to the respondent Corporation.

As a result of some of the concerns expressed by the respondents, a number of changes to the heat pump design were proposed by the applicant, including a potential substitute for the methyl-hydrate and the general design for the construction of the 104 wells encasing the plastic pipe containing the exchange fluid.

In addition, two test bore-holes were drilled by a firm of consulting engineers and geologists retained by the contractor for the applicant. This work was unacceptable to answer the concerns of the respondents and the officials of the Ministry of the Environment with the result that an additional report by a hydro-geologist was commissioned by the applicant. This hydro-geological report had not been completed at the time of the hearing and was not introduced in evidence. (The respondents argued that such a report was necessary to evaluate the risk of contamination of drinking water in wells located adjacent to the school.)

While discussions continued between the parties respecting the proposed heat pump system (HVAC), the respondents issued a building permit for the foundation of the school (May 21, 1991) and a building permit for construction of the school's superstructure (July 12, 1991).

The parties attempted to resolve the respondents' concerns respecting the heat pump system by means of a collateral agreement. This attempted resolution failed and the present application was launched on an urgent basis.

ISSUES:

Counsel for the parties raised a number of legal and factual issues as follows:

1) Building Code Act R.S.O. 1980, c. 51, s. 1(b) ...

   Is the proposed heat pump system, including the under-ground piping included within the definition of "building" in the Building Code Act?

2) Building Code Act, R.S.O. 1980, c. 51, s. 6(a)

   Is the Environmental Protection Act, R.S.O. 1980, c. 141 "other applicable law" within the meaning of s. 6(a) of the Building Code Act, R.S.O. 1980, c. 51?

3) Environmental Protection Act, R.S.O. 1980, c. 141, s. 8(1) ...

   Is the applicant required to obtain a Certificate of Approval for the construction of the heat pump system, including the under-ground piping, pursuant to s. 8(1) of the Environmental Protection Act?

4) Does a Chief Building Official in the review process of an application for a building permit have a duty to take care not to injure persons (by the issuance of the permit) whose relationship with the respondents is

   sufficiently close that the respondents ought reasonably to have had such persons in their contemplation when reviewing the permit application?

5) Have the respondents acted reasonably in their refusal to issue the building permit for the heat pump system to the

applicant?

FINDINGS:

I intend to respond to the issues in order:

1) Building Code Act, R.S.O. 1980, c. 51, s. 1(b) ...

I am satisfied that the heat pump system herein is contained in the definition of "building" in the Code. S. 1(b) defines "building" as a structure ... "including all the works, fixtures and service systems appurtenant thereto, and includes such other structures as are designated in the regulations ..."

Witnesses for both parties agreed that the regulations in the Code do not presently include specifics for heat pump systems. It was agreed that such regulations would be valuable and are in the process of preparation. (If they were in the regulations, this dispute might have been avoided.)

In my view, the heat pump system, nonetheless, is included in the phrase "service systems appurtenant thereto" (whether or not there exist regulations respecting these). The language of the regulations clearly refers to heating systems as "service systems". The dictionary meaning of "appurtenant" (Oxford Universal Dictionary, 3rd Ed.) defines "appurtenant" as "that thing that belongs to another or an appendage". "Appendage" is defined as "that which" is attached to". It is patent from the evidence that the piping to the 104 wells is attached to the heat pumps within the building and are an important part of the system. These wells are all located a few feet from the perimeter of the walls of the school. In my view, it does not matter if the transfer pipes are on top of, within, under or beside the building; they are clearly "appurtenant" and, therefore, part of the building and, therefore, subject to a building permit.

2) Building Code Act, R.S.O. 1980, c. 51, s. 6(a) -- "other applicable law"

It is clear to the court that the Environmental Protection Act, R.S.O. 1980, c. 141, is "other applicable law" based on the rationale for inclusion of other similar legislation in the reported cases. It is not reasonable to disassociate the subject and purpose of the Environmental Protection Act from their logical and real nexus to the subject and purpose of the Building Code Act.

3) Environmental Protection Act, R.S.O. 1980, c. 141, s. 8(1)a ...

8(1) No person shall, except under and in accordance with a certificate of approval issued by the Director,

(a) construct, alter, extend or replace any plant, structure, equipment, apparatus, mechanism or thing that may discharge or from which may be discharged a contaminant into any part of the natural environment, other than water; or

It is patent from the applicant's material (Report, July 31, 1991, by Anrep Associates Ltd., Consulting Engineers) that the methyl-hydrate solution is highly toxic to humans, aquatic life and the environment generally. A leak or discharge from the system (whether by a fault in the system or by natural forces -- earthquake) could result in contamination of surface ground or rock through which the wells are sunk (potentially to a depth of 200 ft.). This discharge might eventually, by aquifers, reach wells, contaminating both the water content and surrounding rock formation. The "Ottawa Irrigation Ltd." analysis of the anti-freeze solution in the July 31, 1991, Anrep Report contains the following (p. 6) ...

ENVIRONMENT PROTECTION DATA

Steps to be Taken in the Event of a Spill or Leak:

Stop and contain discharge by constructing barriers (dykes, lagoons) or applying inert sorbent (e.g. sand, earth) for release to land or by damming and water diversion, if possible, for release to water. Collect product and contaminated soil and water for recovery or

disposal.

When the applicant itself contemplates remedial action for an accidental discharge of the contaminant, how can it (the applicant) or the Ministry argue that the clear description of s. 8(1)(a) ... "a contaminant into any part of the natural environment other than water ..." does not apply? In effect, the Ministry by its actions (and to its credit) in acting as a consultant to the respondent, recognized its essential role in this type of situation but without refusing a certificate. In my view, the heat pump system installation requires a certification by the Director and none has been issued.. Moreover, the witness employed by the Ministry echoed all the concerns which were relied upon by the respondent.

4) Does a Chief Building Official in reviewing an application for a building permit have a duty of care to others who may be affected by the issue (issuance) of the building permit?

I agree with counsel for the respondent that the role of a Chief Building Official performing his duties pursuant to s. 6(1) of the Building Code Act or pursuant to By-law 11-86 of the Corporation of the Township of Oxford-on-Rideau requires that the Chief Building Official act responsibly -- that is, professionally and reasonably. The Official is not a mere automaton, but is required to perform his duties in a reasonable and rational manner. I am persuaded that in performing the review function in response to building permit applications, the official has a duty of care to persons whose relationship was sufficiently close that they ought to have been reasonably within contemplation as like to be injured by a breach of that duty. (City of Kamloops v. Nielsen and Hughes, 1984, 2 S.C.R., 2)

In the present case, I believe the respondent, Philip Gerrard, Chief Building Official, has reasonably identified that future students of the school and residents of Kemptville are individuals who reasonably ought to be within his contemplation in the review process. My reasons dealing with issue number (5) should be considered in connection with this issue.

5) Have the respondents acted reasonably in their refusal to issue the building permit for the heat pump system to the applicant?

I believe the respondents' refusal to issue the requested permit is justified.

In his letter of September 3, 1991, addressed to Mr. P. Webber, Mr. Gerrard detailed his misgivings with the applicant's application for a permit. Mr. Gerrard's concerns were bolstered by the opinion of Myron Zurawsky, Hydrogeologist, Groundwater Unit with the Ministry of the Environment in his Review dated August 8, 1991. A Summary of Technical Concerns, October 1, 1991, prepared by Mr. Gerrard, was introduced as Exhibit Number Ten on the application herein.

Both Mr. Gerrard and Mr. Zurawsky in their viva voce evidence expanded upon the particulars set out in the above documents. Mr. Gerrard, for example, in examination-in-chief, was able to detail the contradictions in the applicant's material with the referenced Design Standards (ASHRE design manual, CSA C445 M89 and CEEA Installers Manual) set out in Paragraph 2 at Page 2 of his letter of September 3, 1991.

In my view, the validity of the concerns expressed by both these witnesses for the respondent were not diminished at all in cross-examination.

The concerns expressed by Mr. Gerrard and Mr. Zurawsky have to be seen in the context of the proximity of the under-ground wells in Kemptville to the school building. Exhibit No. 4 best details the location of the proposed 104 wells for the heat pumps adjacent to the building itself. This exhibit, in turn, is properly set in a context in Exhibit No. 7 which details the location of the school and three drinking wells located adjacent to the school: no scale is provided on the exhibit but it appears the well on the church property to the east of the school is approximately 30 meters from one of the wells in the heat pump system containing methyl-hydrate. The next drinking well adjacent to the

hospital is approximately 180 meters from the heat pump well and the large well in the Town of Kemptville which provides drinking water to the school is roughly 500 meters from the heat pump well installations proposed.

The Summary of Technical Concerns (Exhibit No. 9) raises questions respecting the construction and up-keep of the bore-holes, their location and depth and potential hydro-geological impact. After the hearing of the Application herein, I found the issues raised in the Summary (Exhibit No. 9) respecting the contractor's intentions concerning grouting were more confused than prior to the Application.

All of these concerns, in turn, must be considered in light of the aquifers identified in the Paterson & Associates Report to Anrep Associates Limited dated June 20, 1991. The applicant, through its counsel, agreed that a further hydrogeological report had been requested by the respondent and was being prepared. The applicant argued that this further report was unnecessary.

The potential for a spill of the toxic methyl-hydrate solution was referenced in the applicant's own evidence. I have already made reference to the Ottawa Irrigation Ltd. component of the Report prepared by Anrep Associates Ltd., July 31, 1991, under the heading ENVIRONMENT PROTECTION DATA
respecting steps to be taken in the event of a Spill or Leak. The Report under this heading provides further ...

> "Environmental Effects: Harmful to aquatic life at low concentration. No quantitative data are available. Deactivating Chemicals: None known. Waste Disposal Methods: Dispense of waste materials in an approved incinerator or waste treatment/disposal facility in
>
> accordance with applicable regulations. Do not dispose of wastes in local sewer or with normal refuse."

The evidence of the two witnesses on behalf of the applicant, rather than reducing the concerns raised by the respondents, served the opposite purpose to bolster the court's lack of confidence in the proposal for the heat pump wells.

Mr. Frank Anrep, the first witness, an engineer with an impressive curriculum vitae is the President of the consulting firm, Anrep Associates Ltd., Consulting Engineers. Unfortunately, by his own admission he was not the author of the main report prepared respecting the geothermal heat pump system of July 31, 1991, but had been consulted "to a degree" in its preparation. He stated his main role with the Anrep Corporation was as its Chief Administrative Officer and, as well, to provide general company policy. Mr. Anrep by his own admission was not familiar with the specifics of the C.S.A. C445 M89 standard; yet in examination-in-in-chief in answer to the applicant's counsel, he offered the view that the contradiction pointed out by Mr. Gerrard in the second paragraph at Page 2 of his letter of September 3, 1991 to Mr.

Webber was invalid.

The second witness for the applicant, Mr. Peter Scott-Smith is not licenced to practice engineering in Canada. He testified that he was the founding member of the Canadian Earth Energy Association and is its Executive Director. This association, he stated, provides management services to governments and to the industry dealing with earth-related energy technologies. The court was impressed with his wide knowledge of the history and world-wide practices of geothermal heat pump installations. On the other hand, when pressed respecting his knowledge of the details that would call for a concrete substitute or mix with bentonite in the bore-hole construction, he admitted he was not qualified to go into specific details.

In cross-examination, although he was of the opinion that toxic methyl-hydrate was, for him, a preferable solution in the heat pumps to newly recommended potassium salts, when pressed, if he would recommend the use of methyl-hydrate, he as quick to point out that the Association could not officially recommend any particular fluid.

In answer to the court, he testified that notwithstanding

the C.S.A. C445 M89 standard (and a revision numbered M91 soon
to be released) that no governmental approval (federal or provincial) exists for the use of methyl-hydrate or its proposed substitutes. The court was left with the distinct conclusion that a person who suffered harm from its improper use would have a difficult time in determining accountability and responsibility for the use of these fluids -- such a task would be equivalent to trying to catch wind in a burlap bag.

CONCLUSION:

For oral reasons given at the conclusion of argument and as a result of this decision, the Application is DISMISSED, with costs to the respondents.

COSGROVE J.

Littler v. Mission (District)

Between
Robert Littler, Kathy Littler and Val Kyrie Holdings Ltd. carrying on business under the name and style of Artisan Custom Log Construction, Plaintiffs, and
The Corporation of The District of Mission, Defendant

New Westminster Registry No. C861165

[1991] B.C.J. No. 2600

British Columbia Supreme Court
New Westminster, British Columbia
MacKinnon J.
Heard: October 10 - 12, 15 - 17, 1989, April 25 and 26 1991
Judgment: August 12, 1991

Counsel for the Plaintiffs: J.W. Conroy and A.D.P. MacAdams.

Counsel for the Defendant: V.R. Orchard and B.J. Freedman.

MacKINNON J.:-- This claim for damages arises out of an allegation the Corporation of the District of Mission (the Municipality) was negligent when, in 1981, it issued a business licence to the Plaintiffs permitting them to carry on the business of constructing custom log homes in a location, that unbeknown to the Plaintiffs, was contrary to the zoning by-law of the Municipality. The business licence was renewed each year until 1986, when the Municipality terminated it and thereafter refused to issue a business licence to the Plaintiffs.

The Municipality say they owed no duty to the Plaintiffs. If there was a duty, the Plaintiffs have not proven damages. Further, the Municipality submits the Plaintiffs were negligent in failing to ascertain the zoning restrictions.

BACKGROUND

In early 1977 Robert Littler and Kathy Littler moved their residence from Quesnel to Abbotsford, B.C. Robert Littler secured employment with the Fraser Valley College as an instructor in log building. At the time he was 22 years of age and had a Grade 12 education. He had previously built his own log home in Quesnel.

Fraser Valley College and the District of Mission Tree Farm came into an arrangement whereby a log building was constructed on the Municipal tree farm property by college students under Robert Littler's instruction and using tree farm logs.

The Littlers decided to go into the business of log house construction. It was their first business venture. They obtained a business licence in the name of "Custom Log Buildings" of 350 -2821 Tims Crescent, Clearbrook, B.C. (their residence at the time), to carry on the business of "log house building" on lands they had leased at the corner of Lougheed Highway and McMillan Road in the District of Mission.

The first business licence they obtained expired on December 31, 1977. About that time the Littlers received a notice that the licence fee was required for 1978 and to advise of any change in the nature of the business or the address from which the business was carried on.

The business licence notice form on file with the Municipality showed a change of address to 2921 McCallum Road in Abbotsford. The business licence provided that the business is licenced to carry on the business of "51 Contractor Building" located at the corner of the Lougheed Highway and McMillan.

In 1979 the business licence was renewed. Though the Littlers changed their address to 2921 McCallum Road, they continued to operate the business at their original site, Lougheed and McMillan in Mission.

The business licence issued for 1979 described the business as:

"DISTRICT OF MISSION
8645 STAVE LAKE . BOX 20, MISSION, B.C. V2V 4L9

826-6271
B U S I N E S S L I C E N C E

CUSTOM LOG BUILDINGS NO. CU842
2921 MCCALLUM RD.
ABBOTSFORD, B.C.
V2S 3R4

In 1980 the Business Licence was renewed and sent to the Plaintiffs at their new address (of which they gave notice). The licence was issued in the following form:

"DISTRICT OF MISSION
8645 STAVE LAKE . BOX 2O, MISSION, B.C. V2V 4L9
826-6271
B U S I N E S S L I C E N C E

NO. CU842
CUSTOM LOG BUILDINGS
2921 MCCALLUM RD
ABBOTSFORD B.C.
V2S 3R4
(my underlining)

For some reason unknown to the Littlers and unnoticed by them, the Municipality inserted on the face of the 1980 business licence, the words "As above Non-resident".

Such words could imply the Littlers were no longer at Lougheed and McMillan in Mission, but rather at McCallum Road in Abbotsford. That was not so. During 1980, the Littlers continued their custom log construction business from the original site of Lougheed and McMillan in Mission. They had merely moved their residence to McCallum Road in Abbotsford.

Because the owner required the lands used by the Littlers at Lougheed and McMillan, they found it necessary in 1980 to purchase other property. This was located at 10588 Shaw Road in the District of Mission. The Littlers obtained from the Municipality a building permit to erect a log house on the Shaw Road property. They continued their business, however, at the Lougheed and McMillan site.

When the Littlers received the business licence notice for 1981, Mrs. Littler deleted their former address, 2921 McCallum Road, Abbotsford, and inserted "10588 Shaw Road, Mission".

Copies of the business licence reflected the change of address and the remaining parts were as in the previous notices including "located at, as above, non resident". For some reason these words were not found in subsequent notices. Rather the space for location was left blank.

Once the 1981 business licence was issued, the Littlers commenced operation of the business at the Shaw Road site. licences were renewed each year from 1981 until 1986.

The Municipality received a complaint that the Littlers were operating a business contrary to its zoning by-law. As a consequence the Municipality refused to issue a business licence to the Defendants in 1986 and continued the refusal thereafter.

The Littlers appealed unsuccessfully and were unable to rezone the property or obtain permits to carry on with their business.

LIABILITY

There is no issue as to whether or not the business operated by the Littlers at the Shaw Road site was in breach of the zoning by-law of the Municipality. Indeed, there was a breach.

The claim arises from the act of the Municipality in issuing and renewing a business licence authorizing the Littlers to carry on a business contrary to the zoning by-law of the Municipality.

S. 20 of the Municipal By-Laws 18-1970 and 1116-1981, provides:

"20. Before any licence is granted in respect of any premises the Licence Inspector shall satisfy himself that the use for which the licence is sought shall not be in violation of the zoning by-law or of any by-law of the Municipality then in force in the Municipality, and no licence shall be issued if the carrying on of that business in the premises applied for would be contrary to any by-law of the Municipality."

The Littlers submit that the Municipality, in passing the business licence by-law, imposed an operational duty on the Licence Inspector to satisfy himself that the use for which the licence is sought, shall not be in breach of the zoning or any by-law of the Municipality.

Once there is imposed on the Licence Inspector the duty of satisfying himself there is no violation of the Municipal by-laws, he must act not to injure persons such as the Littlers. If the Licensing Inspector is negligent then liability arises.

The Licensing Inspector issued and renewed business licences over succeeding years and ostensibly permitted a business to be carried on in violation of the zoning by-law and it is submitted the Municipality should be held liable.

The Municipality argues there is no duty of care owed to the Littlers. It submits the methods and procedures used by the Municipality to enforce licensing and zoning requirements are policy matters. As such, there is no liability. If, however, there is a duty owed by the Municipality, it is argued, there was, in the circumstances no lack of care by the Municipality.

The Municipality submits that the Littlers had the responsibility of ensuring their business was to be carried on in compliance with the by-laws including the zoning by-law of the Municipality.

The Municipality relies upon s. 14(2) of By-Law 18-1970 which provides as follows:

"No person to whom a licence has been granted under the provisions of this by-law shall change the location of the premises in which he carries on the business without first having applied to the Licence Inspector in writing to have the licence altered in respect to the location of the premises set out therein and any person carrying on business at a premise other than the premise specified in the licence shall be guilty of an infraction of this bylaw. "

The Municipality says the Licence Inspector had no notice of the change in location of the business and consequently had no duty to determine whether or not there was compliance with the zoning or other by-laws on the Municipality.

It is argued that although the Littlers gave the Municipality a change in the address of the business, they did not give notice of the change in the location of the business.

The Municipality submits that it implemented a policy decision that the Licensing Department address compliance with the by-laws with respect of the initial application of a business licence or where there is a change in ownership or location of the business. Because of the large number of renewal application each year, the Municipality adopted a policy that it would not investigate renewals. This policy was adopted for fiscal considerations.

THE LAW

Kamloops v. Nielsen, Hughes and Hughes (1984) 5 W.W.R. 1 (S.C.C.) is the leading authority enunciating the principals that govern the issues raised in these proceedings.

DUTY OF CARE

In Nielsen (supra), Madam Justice Wilson considered Anns v. Merton London Borough Council [1978] A.C. 728, where Lord Wilberforce stated that the question of whether or not a private Law of duty of care exists, stated two questions that

must be asked:

"(1) Is there a sufficiently close relationship between the parties (the local authority and the person who has suffered the damage) so that in the reasonable contemplation of the authority, carelessness on its part might cause damage to that person? If so,

2) Are there any considerations which ought to negative or limit (a) the scope of the duty, and (b) the class of persons to whom it is owed, or (c) the damages to which a breach of it may give rise?

These questions, Lord Wilberforce said, must be answered by an examination of the governing legislation.

Lord Wilberforce categorized the various types of legislation as follows:

1) Statutes conferring powers to interfere with the rights of individuals in which case an action in respect of damage caused by the exercise of such powers will generally not lie except in the case where the local authority has done

what the legislature authorized but done it negligently;

2) Statutes conferring powers but leaving the scale on which they are to be exercised to the discretion of the local authority. Here there will be an option to the local authority whether or not to do the thing authorized but, if it elects to do it and does it negligently, then the policy decision having been made, there is a duty at the operational level to use due care in giving effect to it.

Lord Wilberforce found that the defendant in Anns was under a private law duty to the Plaintiff. It had to exercise a bona fide discretion as to whether to inspect the foundations or not and, if it decided to inspect them, to exercise reasonable skill and care in doing so. He concluded that the allegations of negligence were consistent with the council or its inspector having acted outside any delegated discretion either as to the making of an inspection or as to the manner in which the inspection was made."

Madam Justice Wilson then went on to examine the governing B.C. legislation and then stated:

> "It seems to me that, applying the principle in Anns, it is fair to say that the city of Kamloops had a statutory power to regulate construction by by-law. It did not have to do so. It was in its discretion whether to do so or not. It was, in other words, a 'policy' decision.
> However, not only did it make the policy decision in favour of regulating construction by by-law, it also imposed on the city's Building Inspector a duty to enforce the provisions of the by-law. This would be Lord Wilberforce's 'operational' duty. Is the city not then in the position where in discharging its operational duty it must take care not to injure persons such as the plaintiff whose relationship to the city was sufficiently close that the city ought reasonably to have had him in contemplation?"

By ss. 498 through 513 of the Municipal Act R.S.B.C. Ch. 290, the Municipality is given the discretion by by-law to regulate the licensing of businesses and to classify them according to type.
The Municipality chose to exercise its regulatory power when it passed by-laws 18-1970 and 1116-1981. In particular, s. 20 of by-law 18-1970, (supra) imposed upon the Licensing Inspector the duty of satisfying himself that the use for which the licence is sought shall not be in violation of the zoning by-law.

Thus, the Municipality like Kamloops (supra) had power to regulate the granting of business licences and did so through bylaws 18-1970 and 1116-1981.

I find that the Licensing Inspector (like the Building Inspector in Kamloops (supra), had an operational duty that he should take care not to grant licences to persons intending to use the premises in violation of a zoning by-law. I find that the relationship the Plaintiffs had with the Municipality was

sufficiently close that it ought reasonably to have had the Plaintiff's in their contemplation at the time of issuing the business licence and the renewals thereafter.

NOTICE

The Municipality submits that even though a duty may exist for the Licensing Inspector to take care that no licence is issued permitting a use contrary to the zoning by-law, that duty does not arise where the Municipality has not received notice from an applicant of the location of the business. Though the Plaintiff notified the Municipality of the location of the business when they took out the original business licence when operating at the site at Lougheed and McMillan, it is contended the Plaintiff contravened the Municipal by-laws when they failed to give notice of the change of the business to the Shaw Road property.

What the Municipality relies upon is the fact that the application for renewal of the business licence had printed on it the words "located at" and there was inserted the words "as above" and, "non resident". Thus, on the face of the licence it appeared as if the business was located at the same place as the address of the business. The Plaintiffs, however, were not responsible for inserting the words "as above" and "non resident".

The Licensing Inspector was aware in 1979 that the business was carried on at a site other than the address of the Plaintiffs.

In 1979 the Plaintiffs became aware of the fact they would have to relocate their business from Lougheed and McMillan property. Thus, they purchased the Shaw Road property when they received their renewal notice in 1981 and at that time they gave notice to the Defendants of their new address at Shaw Road in Mission. They did not direct their minds to the printed form other than giving notice of change of address. The form continued to have under the words "located at" the words (which they had not initially inserted) "as above" and "non resident".

Renewed licences were issued in the years thereafter until the refusal in 1985.

There was no concealment by the Plaintiffs of the fact the operation was carried on at Shaw Road. Their business cheques issued to the Municipality in payment of the business licence showed the business was "Artisan Custom Log Construction" of 10588 Shaw Road.

Secondly, the Plaintiffs applied to the Municipality for subdivision of the Shaw Road property requiring re-zoning. Inspections of the property by various authorities including the Municipality, was carried out during the time the business of the Plaintiffs was being carried on at the Shaw Road property.

Finally, in 1984, the Plaintiff erected at the front of the Shaw Road property a sign advertising "Artisan Custom Log Construction".

In all of these circumstances, the Municipality cannot be heard to excuse itself on the basis that the Plaintiffs failed to give notice to the Municipality of the fact they were carrying on business at the Shaw Road property.

Accordingly, I find the Municipality is not excluded from the duty it owed to the Plaintiffs. That duty springs from the obligation of seeing that a business licence should not have been issued to the Plaintiffs permitting them to carry on a business that was in violation of the zoning by-law.

I find the Plaintiffs relied upon the issuance of the business licence so as to believe they were operating in accordance with the by-laws of the Municipality.

The Municipality is therefore liable in damages.

DAMAGES

The Plaintiffs submit they are entitled to damages as follows:

1. Relocation expenses:$9,176

2. Loss of profits for the fiscal year 1985/86: $30,653
3. Loss of profits for the fiscal year 1986/87: $26,395

TOTAL: $66,224

4. Court Order Interest

RELOCATION EXPENSE - $9,176

I find such expenses were reasonable and that they were all incurred out of the necessity of having to move the business after having permission from the Municipality to operate in the five preceding years.

The Defendants, however, contend the Plaintiffs failed to litigate by not re-establishing sooner than they did. It is submitted that upon receiving notice they would not receive a renewal of the business licence, the Plaintiffs should have immediately taken steps to relocate. What they did, however, was to fight City Hall for a period of time in the hopes a solution could be found to remain where they were. That, in my view, was reasonable course of conduct and should not be considered as a failure to mitigate their damages.

As to the claim of contributory negligence of the Plaintiffs, I disallow this on the basis that I have already found that the Plaintiffs did not fail to give notice to the Municipality of the change of its location of their business operation.

Accordingly, the relocation expenses are allowed at $9,176.

LOSS OF PROFITS

As to the loss of profits, the claims made are on the basis the Plaintiffs would have been able to complete more houses had the Municipality left them undisturbed in a period between 1985 when notice was given and 1987 when the Plaintiffs had relocated.

In the fiscal year 1985/86, the Plaintiffs built 1.7 units. However, they had the capacity and the market to have built another 1.3 units. The reason the Plaintiffs did not produce the 1.3 units is that the Municipality had given its notice that the business could not operate. Based on the actual net profit they made in the work done during the fiscal 1985/86, evidence was led to show they suffered a loss of $30,653.

As to the fiscal year 1986/87, evidence was led to show the Plaintiffs lost income as a result of being unable to produce more sales at a total net loss of $26,395.

The Municipality contends that during a part of the fiscal year 1985/86, the Plaintiffs could have earned more income by entering into more contracts. They chose not to do so. It is further argued that if any damages are to be considered they should be based on the performance of the Plaintiffs in the period up to 1985, i.e. 1.9 log house contracts each year.

I find it is reasonable to base loss of profits based on the actual performance of the business operation during the fiscal years claimed rather than on the income earned in the years preceding 1985.

However, I am of the view some contingency reduction should be made as to the extent to which the Plaintiffs would be able to carry out contracts up to 3 each year.

In addition, there was some evidence put forth as to the availability of contracts that might have produced income if the Plaintiffs could continue their business. A Mr. Lob said he considered contracting with the Plaintiffs and decided against it because of the volatility of the relations between the Plaintiffs and the Municipality. He did not realize, however, there was nothing to prevent the Plaintiffs from building the log house on his property as distinct from illegally constructing it on the plaintiff's site and having it moved to Mr. Lob's property.

This and other circumstances may have affected the net income that might have been available from additional work. I deduct 15% for these contingencies.

Damages for loss of profits are therefore allowed for the fiscal year 1985/86 (85% of $30,653 $26,055.05) and for the fiscal year 1986/87 (85% of $26,395 1 $22,435.75).

Court Order Interest on the damages for fiscal year 1985/86 will be from March 1, 1986. Court Order Interest for the damages for the fiscal year 1986/87 will run from March 1, 1987. Court Order Interest on the relocation expenses of $9,176 will run from March 1, 1989. All Court Order Interest will be in accordance with the Registrar's schedule.

The Plaintiffs are entitled to costs.

Heard: October 15, 16 and 19, 1992
Judgment: October 28, 1992

Application under Section 15 of the Building Code Act, R.S.O. 1990, c. B.13.

Richard R. Arblaster and D. Miller, for the Applicants.
Harry Radomski and T. Friedland, for Price Club Canada Inc. and Price Club Real Estate Inc.
Lee A. Pinelli, for the Corporation of the Town of Ancaster.

FELDMAN J.:-- The applicants seek an order of this court revoking a building permit issued by the Chief Building Official of the Town of Ancaster on June 2, 1992 to construct a building in which to operate a Price Club. By way of preliminary order made on September 10, 1992, the applicants were held to be persons with standing under s. 15(1) of the Building Code Act R.S.O. 1990 c. B.13. to appeal the decision of the Chief Building Official to issue the permit.

The issue before this court is whether the proposed Price Club operation is permitted by the Ancaster Zoning By-Law, and in particular, whether a Price Club operation qualifies as a "wholesale establishment" within the meaning of the by-law.

THE ZONING BY-LAW OF THE TOWN OF ANCASTER - BY-LAW NO. 87-57

Page 1 of the by-law sets out its function and effect as follows:

> Prohibiting the use of land for or except for such purposes as are set out in the By-law.
>
> Prohibiting the erection or use of buildings or structures for or except for such purposes as may be set out in the By-law.
>
> Regulating the type of construction and the height, bulk, location, size, floor area, spacing, character and use of buildings or structures, the minimum frontage and depth of the parcel of land and the proportion of its area that any building or structure may occupy.
>
> Requiring the provision and maintenance of loading and parking facilities for buildings or structures to be erected or used for a purpose named in the By-law.
>
> Prohibiting the making, establishment or operation of pits and quarries in defined areas.

Section 6.6 provides that in the by-law, "shall" is mandatory not directory, and "building" includes part of a building. Section 7.1 provides:

> No person shall within the town of Ancaster use any land or erect, alter or use any building or structure except in conformity with the provisions of this by-law.

Section 7.9 deals with multiple uses, and provides: "Where any land, building or structure is used for more than one purpose, all provisions of this by-law relating to each use shall be complied with..."

The by-law divides the municipality into zones, within each of which certain uses and types of buildings are permitted as set out. There are 6 listed commercial zones and 6 listed industrial zones.

Section 23 deals with the Prestige Industrial M2 Zone wherein the Price Club lands are located.

The section again provides:

> No person shall within any Prestige Industrial M2 Zone... use any land, or erect, alter or use any building or structure except for such purposes and in accordance with the following provisions:
>
> Permitted Uses
>
> Manufacturing uses
> Wholesale establishments
> Warehousing
> Transportation depots and truck terminals
> Other industrial uses
> Non-retail commercial uses
> Lumber and building materials yards
> Motor vehicle gasoline bars, including servicing of motor vehicles
> Restaurants
> Banks, Convenience Stores
> Public Uses and operations
> Communication Facilities
> Union Halls
> Recreation facilities
> Existing agricultural uses except poultry farms, mushroom farms, fur farms, piggeries and greenhouses
> Uses, buildings, and structures accessory to the foregoing

Section 3 is the Definition Section containing 137 definitions. The opening words of that section state:

> For the purpose of this by-law all words shall carry their customary meaning except those defined hereafter.

The definition section of the by-law defines the following two terms:

> warehouse: means a building used for the bulk storage of goods, merchandise or materials and shall include wholesale establishments.
>
> wholesale establishment: means a building used for the bulk storage and sale of quantities of goods, merchandise and materials.

The by-law does not define the term "bulk". Nor does it contain a definition of the word "wholesale" nor of the word "retail", although there is a definition of the phrase "retail store" as follows:

> "Retail Store" means a building where goods, wares, merchandise, substances, articles or things are offered or kept for sale directly to the consumer.

Along with the references to retail and non-retail uses in the "permitted uses" section of article 23, prestige industrial zones, section 23.10 deals with "showroom or retail sales" as follows:

> A maximum of 10% of the floor area of an industrial building may be used for showroom or retail sale of products manufactured or assembled on the premises.

(That percentage has been raised to 25% in the particular zone in which the subject lands are located.)

THE PRICE CLUB OPERATION

The building permit under appeal was issued for the construction of a warehouse in an M2 Prestige Industrial zone.

Although there were several affidavits, cross-examinations, and responding affidavits filed by both sides with respect to the true nature of the business carried on by the Price Club, I am satisfied that the relevant facts are not in dispute in any material way and can be briefly summarized.

The Price Club operates out of a very large warehouse-type structure containing few finishing amenities, and typically located in an industrial zone with major highway access. The business involves storage of large quantities of a limited selection of all types of goods including food, clothing, large and small appliances, electronics, automotive accessories and many other categories. In many cases, the goods are sold out of their original packing boxes; in other words, they are not unloaded for shelf display. The goods are stored on metal floor to ceiling shelving and are sold directly from that storage. The Price Club sells only to card carrying members, who include 1) owners of businesses, and other associates in the business as well as spouses of the business card holders; 2) privilege members who are individuals who work for the most part in the public sector as well as professionals.

The Price Club seeks to be a supplier of goods to small business either of inventory for resale, or of goods used or consumed in the business, but also sells goods for home use to its members. It is acknowledged by Price Club that a not insignificant portion of its sales are to end-users or consumers and are retail sales as out of a retail store. It is also acknowledged that this portion of the business is part of the overall marketing strategy and concept of the Price Club. In fact, in correspondence from the Town to the Price Club, the Director of Planning confirms that the Price Club will be operating a "warehouse retail establishment" and that it comes within the "wholesale establishment" designation in the by-law.

Price Club sells in "quantities" or in "bulk" in two ways: one is by selling by the pallet or in cases, or by selling a number of units which have been packaged together. For example, Price Club will sell 3 packages of macaroni and cheese dinner which have been shrink-wrapped together. This format is ostensibly useful for a variety or convenience store to purchase inventory, in which case the package will be unwrapped and the items resold separately; it is also convenient for a household purchaser. The second method of "quantity" selling is by selling extra large sizes of products, which can be used in businesses or at home. For example, a restaurant may purchase an oversize container of ketchup which it will serve to patrons in smaller refillable squeeze bottles. Of course a homemaker may also find such large sizes convenient and economical.

It is acknowledged by all sides that the Price Club stores goods in bulk in its buildings. It is also acknowledged by Price Club that it sells goods in bulk or in quantities, but it also sells individual, regular size items, and there is no breakdown in the evidence as to what portion of the business involves the sale of individual items. Some clear examples, however, are clothing, electronics and appliances. The evidence is that Price Club sells at the same price to all of its members.

A Price Club outlet also contains a photo center, an optical center, and a restaurant. The photo center is for small business as well as consumer use.

THE ISSUE

Simply put, the issue is whether the business operation just described qualifies as a "wholesale establishment" within the meaning of the by-law.

The applicant's position is that the definition of wholesale establishment is not to be read only literally, that is with only 2 qualifications, bulk storage and bulk sale. Rather, imported into it is the common meaning attributed to the term "wholesale" which it says is sales for resale only and not to end-users or consumers; that is not sales at retail. The applicant supports this argument with the references to retail uses allowed elsewhere throughout the by-law, and says that there would be no point confining

retail uses to certain commercial zones with the restrictions and requirements in those zones for roads, parking etc. if one can easily avoid those requirements by setting up a retail outlet in an industrial zone. Or, why does the by-law specifically allow the limited 25% retail showroom as part of a manufacturing business in the industrial zone if one may operate a wholesale establishment which sells in unlimited quantities at retail in the same zone.

The position of the Price Club, supported by the Town, is that the definition is all-inclusive; because it is silent on who the sales may be made to, there is no restriction. They point to the introductory words of the definition section as a mandatory guide to the meaning to be given to words used in the by-law.

However, from an example within the definition of "wholesale establishment" itself, it became clear during argument that there may be some inconsistencies or anomalies within the by-law. This was demonstrated by the definition of the word "storage" which refers to outdoor storage, whereas a warehouse is a building for indoor storage. The respondents rely on the principle of statutory interpretation that if the definition given creates an absurdity, then it should be modified enough to avoid that absurdity. They argue however, that no such absurdity is created by the lack of reference to whom the sales may be made, and therefore nothing need be read in to clarify the meaning. There is no ambiguity and consequently no need to look outside the definition for clarification.

Price Club also disputes the meaning of "wholesale" as articulated by the applicants. Price Club led expert evidence that wholesale sales include not only sales for resale, but also sales to business for use in the business. The expert's evidence is that all sales are either retail, which means to the consumer, or wholesale, which encompasses all other sales.

The applicant's expert's opinion is that there are three types of sales, wholesale, which means for resale only, retail which means to the ultimate user (and this would include sales to businesses which use the goods in their business), and distribution transactions which are sales from the producer to another producer who adds value to the product before it can be sold in its final form through the wholesale and retail stages.

Both experts supported their respective opinions with dictionary and textbook definitions.

Price Club says that although its business includes transactions for non-business use, its primary business is wholesale including sales to business for resale or for use in the business, and therefore even if the common meaning of "wholesale" is imported into the definition of "wholesale establishment", its operations still qualify.

THE CASE LAW

An examination of the case law discloses that the disagreement over the meaning of "wholesale" and of "retail" has been ongoing over many years in this Province as well as in others and also in the United States. From the point of view of this by-law, the disagreement has been particularly interesting because one of the meanings attributed is dependant on the quantity of goods in the sale, rather than on the use the buyer will make of the goods. This of course, is the qualification contained in the Ancaster by-law definition as it reads.

A useful starting point is the comment of Maclaren J.A. in Townsend v. Northern Crown Bk. (1913), 13 D.L.R. 300 at 302:

> It is common knowledge that in Canada, as in other new countries, the lines between wholesale and retail have been very loosely drawn and have not been at all rigid; the sales by reputed wholesalers have been far from being confined to those who bought to sell again; and even the practice of confining the word "wholesale" to its original idea of purchases or sales in bulk or in large

> quantities has not been at all generally adhered to. Many merchants are described as selling both wholesale and retail, and many so describe themselves and advertise as such.

It is interesting to note that Price Club is described throughout the materials as a new concept in merchandising, combining wholesale and retail sales with warehouse amenities in order to effect cost savings for all the members both from buying and selling in bulk and from cheaper operating costs.

But the concerns raised about whether Price Club qualifies as a pure wholesale operation, are reflected in 1913 usage and practice as well.

In the case of Imperial Oil Ltd. v. City of Ottawa, [1943] 3 D.L.R. 78 (O.C.A.) the issue was the business assessment of two Esso gas stations in Ottawa which sold 90% products manufactured elsewhere by Imperial, and 10% other products. The decision appealed from confirmed the assessment of the gas stations as a manufacturer at the 60% tax rate, rather than as a retail merchant at a lower rate. The judgment below seemed to rest on the distinction between one who resells someone else's products and one who resells products of its own manufacture. However, in discussing the issue and finding that the appellant was a retail merchant, the court had this to say on the definitions:

> As the expression is commonly used, selling by retail is selling in small quantities, as distinguished from selling by wholesale, or in gross. The word comes to us through the French, and signifies the sale of commodities in small quantities. There is nothing in its derivation to suggest that it means reselling, nor is that its proper meaning in modern use. (See Murray's Dictionary) (p. 80)

Re Buchman & Son Lumber Co. Ltd. and Regional Assessment Commissioner, Region No. 9 et al. (1982), 141 D.L.R. (3d) 95 (Ont. Div. Ct.) was also an assessment case. The taxpayer was a lumber merchant which sold a small proportion of its low-grade lumber to persons for resale, while 90% was sold to businesses to make crates in which to ship their goods. Most of the taxpayer's lumber was sold in bulk. The issue was whether it was to be assessed as a wholesale merchant. It was agreed that sale in quantity is one of the tests for a wholesaler; the issue was whether the sales also had to be to a retailer rather than to an end-user. Here the sales were to businesses for use in the business, but the court accepted that those business were end-users of the lumber by making it into crates.

At page 98, the court quotes various dictionary definitions of wholesale as follows:

> Some dictionary meanings of "wholesale" are as follows: the Shorter Oxford Dictionary, "in large quantities, in gross (opp. to 'by retail')"; Funk and Wagnalls' Standard College Dictionary, American version, "The sale of goods by the piece or in large bulk or quantity: opposed to 'retail'"; the Canadian version of Funk and Wagnalls is as follows, "The selling of goods in large bulk or quantity, especially for resale: distinguished from 'retail'"; The Canadian Living Webster Encyclopedic Dictionary of the English Language, "The sale of commodities in large quantities, and esp. for the purpose of resale, as to retailers or jobbers rather than to consumers directly: opposed to 'retail'", Stroud's Dictionary, vol. 3, p. 2237, "As a general rule, 'Wholesale' merchants deal only with persons who buy to sell again, whilst "Retail' merchants deal with consumers"; The Oxford English Dictionary, vol. XII, defines "wholesaler" as "one who sells goods wholesale (to retailers)".

The court distinguished the Imperial Oil decision on the basis that the sales in that case were being made to the end-user and were therefore retail on that basis regardless. The court followed the decision of the New Brunswick Court of Appeal in Donovan v. Saint John, [1950] 4 D.L.R. 561, where a ship's chandler which sold goods and supplies to ships for

use by the crew on the ship was a retailer and not a wholesaler even though the goods were sold in large quantities, on the basis that they were not for resale. The court quoted with approval the following from the decision of Richards C.J. at p. 565:

> It will be noted that in the above definitions of retail two distinguishing features appear, namely, sale in small quantities and sale to the consumer. Sale in small quantities may seem to appear more generally, but it must be remembered that dictionaries usually give alternative or varying definitions, and a conclusion cannot be made from a few selected definitions. Consideration must be given to actual business practice and judicial authority.

The Divisional Court concluded that "the proper test of what a wholesaler is and, to be one, the sale must not only be in large quantities, but it must be to a person other than the end-user." (p. 99). Therefore the sales to businesses of lumber for crates did not qualify.

However, the dissenting opinion of Craig J. demonstrates that the term "wholesale" is one which has more than one common meaning or understanding in the community. Craig J. held that the "ordinary meaning " of "business of a wholesale merchant" "is descriptive of selling goods or merchandise in large quantities (usually, but not necessarily for resale)." (p. 102) He also refers to the several dictionary definitions, and the case law including the Imperial Oil case, as well as Heath v. City of Victoria (1892), 2 B.C.R. 276, where Begbie C.J.B.C. stated at p. 277:

> There is no doubt that a merchant who sells as above in large quantities to another trader, in order that the second may distribute piece-meal to actual consumers, is a wholesale merchant. The fallacy is in assuming that this, which is only an example of a class, exhausts the whole class. In fact, a wholesale dealer may know nothing, and certainly cares nothing, about the way in which his immediate customer deals with the goods.

I note that the latter comment applies with even more force to a municipality. It is not concerned with the use that Price Club shoppers will make of their purchases, and whether they are for business, for resale, or for home use. The municipality's concerns in the context of the zoning by-law are land-use related.

In analyzing the end-user qualification, Craig J. considered the very types of distinctions which were debated in argument in this matter. For example, a hotel may purchase food in bulk which it resells in its restaurant, and therefore its supplier would be a wholesaler. But its bulk purchases of towels, bedding or paper products which are used in the business and not resold as such would categorize those suppliers as retailers. Craig J. concluded that "no distinction can be made between any of the transactions mentioned in these examples; that is all of the suppliers come within the ordinary meaning of "wholesale merchant"" (p. 105). And at p. 104:

> In my opinion it is apparent from these definitions and authorities that the essential characteristic of a wholesaler is one who sells in large quantities. It is usual that he sells to a retailer for the purpose of resale, but that is not an essential characteristic. It is not a case where the language of the Act is ambiguous.

There was also a dissenting opinion in the Donovan decision referred to above. Hughes J. was satisfied that the taxpayer was not making retail sales to the ships because the sales were not in small quantities, and according to some dictionary definitions he refers to, sale to the ultimate consumer is not a necessary aspect of retail. He said that Donovan may not be a wholesaler either, but rather a jobber, or someone selling in some other capacity. This observation reflects the view of the applicant's expert that not all sales must be either wholesale or retail.

The final Ontario case cited by the applicants is

Provincial Fruit Co. Ltd. v. H.J. Fine & Sons (1980), 30 O.R. (2d) 262 (O.H.C.). The issue in that case was whether a retail fruit market attached to the defendant's wholesale food business was an accessory use within the meaning of the relevant by-law. In the course of his reasons, Southey J. discussed the meaning of wholesale and retail in the following way at p. 269:

> The function of a wholesaler is to buy large quantities of goods, pay for them to be transported to the area which he services, store them there in a warehouse, which in the case of some foods would probably be a cold storage facility, and then sell and deliver them to retailers in bulk, but in smaller quantities than those in which the wholesaler has purchased them.
> The retailer then deals with the consuming public by selling small quantities in stores located conveniently throughout the communities in which the consumers live.

Although the decision was reversed on appeal, this formulation of the concept of wholesale and retail in the context of the facts of that case was not questioned, and was implicitly accepted.

The applicants also cite two American cases for the proposition that the difference between a wholesaler and a retailer is that the person buying from a wholesaler does so in order to sell the article again, whereas the retailer sells to the ultimate user: Zehring v. Brown Materials Limited 48 F.Supp. 740 (California District Court); Haynie v. Hogue Lumber & Supply Co. of Gulfport, Inc. 96 F. Supp.214 (U.S. District Court, Mississippi).

Although the weight of authority in Ontario favours the definition of wholesale as large quantity or bulk sales to a reseller and not to an end-user whether consumer or business, each case is decided in the context of a particular statute, such as the Assessment Act, or of a particular set of circumstances. The ongoing nature of the debate in these various contexts confirms that there is not only one common or ordinary meaning of the word "wholesale".

In construing a by-law, one must look to the entire by-law "and construe one part with another or other parts, so as if possible to give effect to the whole." See In re Cameron and the Municipality of East Nissouri (1855), Ont. Q.B., Easter Term, 19 Vic. 190 at 192. In the M2 zone, retail uses are strictly delineated and limited, while retail stores are allowed in commercial zones but not in the prestige industrial zone. However, there is no provision anywhere in the by-law for a warehouse retail establishment which combines sales to consumers with sales for resale (or to businesses for use in the business, if the definition of wholesale extends that far). As the Supreme Court of Canada concluded in Bayshore Shopping Centre Ltd. v. Nepean Tp. (1972), 25 D.L.R. (3d) 443 at 450, where it was dealing with the words "shopping centre", the omission of those words from the permitted use sections of the by-law may indicate that in the view of the Municipality in enacting the by-law, the term was already covered by other permitted uses including in that case, "retail store", "service shop" and "department store".

In the Ancaster by-law, the proper conclusion may be that the term "warehouse retail establishment" is already covered by "wholesale establishment" in that the definition does not exclude retail sales directly to the consumer, but qualifies itself by the "bulk" requirement for storage and sale of goods.

In enacting a special provision allowing a limited retail showroom as part of a manufacturing industrial building, the municipality must have considered that such use might not be considered accessory within the meaning of the by-law, or it wished to limit that accessory use to the directed percentage. No such limit is set out for a wholesale establishment. The applicant says that this means therefore, that no retail sales are allowed from a wholesale establishment. The contrary conclusion is that retail sales are not prohibited in a wholesale establishment, therefore special permission is not necessary, or that the numbers of retail customers will be self-limiting by the requirements for bulk sale.

In my view, looking at the by-law as a whole, one is not compelled to the view that a wholesale establishment cannot permit sales directly to the consumer, or that if it does, it becomes a retail store. In the final analysis, the definition of "wholesale establishment" contained in the by-law itself must govern, as the definition section of the by-law directs that it must. That definition is silent on the issue of who may be the purchasers of the goods sold there. The definition has meaning as it stands, and as well accords with one of the ordinary meanings of wholesale, which is storage and sale in bulk. There is no absurdity which requires that any limiting words be read in: Dale Estate Limited v. The Town of Brampton

[1953] O.R. 659 at 684.

In my view, the Court is also entitled to seek guidance from the words of the Town of Ancaster Official Plan which deals with the area which includes the subject land. The Plan provides the area is to be developed as an Industrial Park including the permitted use of "wholesale activities (including direct sales to the public) warehousing and storage and other similar industrial uses." It is argued that by leaving out the bracketed words in the by-law, the municipality has not carried forward the inclusion of direct sales to the public into the meaning of "wholesale establishment" as opposed to the "wholesale activities" contemplated in the Official Plan. However, in my view, where the by-law is silent on the issue of who may purchase at a wholesale establishment, and the official Plan indicates that the municipality does not consider the term wholesale to mean only sales to retailers, the court may take that information into account in deciding whether the intention of the by-law is to import into the meaning of wholesale the very restriction it signified does not apply to that term.

It was urged upon me by the respondents that if there are alternative meanings that may apply, the court must construe the by-law strictly and in favour of the landowner. Several authorities were cited for the proposition that people may use their property as they deem fit except for acts of nuisance, entrapment, or in breach of a statute "and therefore by-laws restrictive of that right should be strictly construed." Bayshore Shopping Centre Ltd v. Nepean Tp. (1972), 25 D.L.R. (3d) 443 at 449. See also City of Thunder Bay v. Potts (1982), 142 D.L.R. (3d) 253 at 259/260 and cases cited therein. However, there is a contrary proposition, which is that because a by-law is enacted to set standards for the entire community, it is in the interest of the community that the by-law be given a liberal interpretation in order to ensure that those standards are achieved and applied fairly to all who choose to live and do business in that community: Re Bruce and City of Toronto (1971), 19 D.L.R. (3d) 386 at 391 (O.C.A.). I note that in the Bayshore case, the Supreme Court of Canada declined to interpret the by-law either strictly or liberally in the face of these two conflicting values (p. 449). I respectfully adopt the approach of the Supreme Court on this issue. In construing the by-law in favour of the literal interpretation and application of the definition of "wholesale establishment", I have not applied the rule of strict construction in favour of the landowner, Price Club.

CONCLUSION

I have concluded that the phrase "wholesale establishment" in the by-law should be given its literal meaning, which is a building used for the bulk storage and sale of quantities of goods, merchandise and materials. Price Club obtained a building permit for a warehouse which includes a wholesale establishment, and it is common ground that Price Club's intention was to erect a building for the purpose of carrying on there the activities described earlier in this judgment. It is clear on the evidence that some of those activities, that is the bulk storage of goods, and the bulk sale of goods in the two ways I have described, are permitted by the by-law. It is also clear that some of those activities, including the sale of individual regular size items, for example, appliances, clothing and electronic equipment are not permitted uses.

Counsel for Price Club fairly conceded that the retail portion of its activities is not an accessory use as it forms

part of the entire marketing scheme of the Price Club concept. It was not argued, nor do I believe it could be, that the sale of individual items, as opposed to sale in bulk or in quantity, is an accessory use to the wholesale establishment use. The evidence did not break down either gross or percentage figures for this portion of the business, but there was no suggestion that it is insubstantial or de minimus.

THE REMEDY

1. The Town took the position that it is premature to consider any remedy for anticipated use of the building that may not conform to the by-law as long as the building permit was issued for a building which as a structure is capable of being used lawfully in the zone. In this case, the permit was for a warehouse which is permitted by the by-law; the Town says the permit should be considered as properly issued, and the future use should be monitored by the Town to ensure compliance with the by-law, relying on the cases of O'Connor v. Jackson et al., [1943] O.W.N. 587; Re Coleman and McCallum, [1913] O.W.N. 1449; City of Toronto v. King (1923), 54 O.L.R. 100 (O.C.A.); Mackenzie v. City of Toronto, [1915]

O.W.N. 820.

In my view the wording of the Building Code Act and of the by-law preclude the application of these cases. Section 6(1) of the Act provides:

> 6(1) The Chief Official shall issue a permit except where,
>
> (a) the proposed building or the proposed construction or demolition will not comply with this Act or the building code or will contravene any other applicable law.

Other applicable law includes a zoning by-law: Woodglen & Co. v. North York (1983), 23 M.P.L.R. 13 at 16; Axelrod v. Corporation of the City of Toronto (1981), 15 M.P.L.R. 143 at 149.

The zoning by-law prohibits the erection of a building for a purpose not permitted by the by-law, as well as prohibiting its use. In my view it is clear that a permit is not to be issued to erect a building for a purpose not permitted by the by-law. It was never Price Club's purpose or intention to use the building only for storage. The general purposes it intended were made known to the Town which determined that those purposes, as described herein, fell within the meaning of "wholesale establishment" as defined. It is now clear that part of the Price Club operation will comply and part will not. The erection of the building for the latter purposes will therefore contravene the by-law. It is inappropriate to ignore that contravention at the building permit stage.

A similar conclusion was reached by A.R. Campbell J. in John Walker v. Corporation of the City of Kingston (1991), 6 M.P.L.R. (2d) 316 at 320, where he held that to allow construction to proceed on additions to a duplex for an illegal occupation and then await prosecution for any future illegal use "would frustrate the intent and meaning of the by-law and cannot be sustained."

2. All parties took the position that the only remedy available under s. 15 of the Building Code Act R.S.O. 1990, c-B.13 is revocation or rescission of the permit, and that the court could also make a declaration as to the meaning of the by-law for the guidance of the parties. The applicant asks that the decision of the Chief Building Official to issue the permit be rescinded and that the permit be revoked, and that all construction cease while Price Club reapplies. The respondents say that if the court should find that the intended use of the premises contravenes the by-law in some way, then the court should not revoke the permit, but should make a declaration as to the permitted uses under the designation of "wholesale establishment" so that the Price Club will be able to govern itself accordingly.

Contrary to the submissions, I believe the court has the power to make other orders under the Building Code Act pursuant to s. 15(3) which provides:

> Where an application is made to a judge for a hearing under subsection (1), the judge shall appoint a time for and hold the hearing and may rescind or affirm the order or decision of the inspector or chief official or take such action as the judge considers the inspector or chief official ought to take in accordance with this Act and the regulations, and for such purposes the judge may substitute his or her opinion for that of the inspector or chief official. (Emphasis added).

Under s. 8(2), "Where an inspector finds that any provision of this Act...is being contravened, the inspector may give to the person whom he or she believes to be the contravenor an order in writing directing compliance with such provision, and may require the order to be carried out forthwith or within such time as he or she specifies." There is no section of the Act which says that a building must be erected in accordance with the building permit issued for it. However, subsection 6(5) provides that:

> No person shall construct or cause to be constructed a building in a municipality except in accordance with the plans, specifications, documents and any other information on the basis of which a permit was issued or any changes thereto authorized by the chief official.

And subsection 5(1) says:

> No person shall construct...or cause to be constructed...a building in a municipality unless a permit has been issued therefor by the chief official.

It is implicit in these two sections, and the Act as a whole, that once a permit is issued, the building must be constructed in accordance with the permit. Another way of looking at it is that if the building that is being constructed is not authorized by the permit, then that building is being constructed without a permit in contravention of subsection 5(1).

In this case the permit was issued for the erection of a building to be used as a warehouse, and the evidence is that this was in its included meaning of a wholesale establishment. The evidence has now disclosed that part of the business of the Price Club for which the building permit was sought and issued is sale of individual items, not in bulk, which is not permitted in a wholesale establishment. Therefore there is a breach of the Act, as the permit is for a permitted use, but the building being erected under it is not.

In such circumstances, an inspector is authorized to issue a compliance order under ss. 8(2), and a stop work order under ss. 8(5) which is precisely what happened in John Walker v. Corporation of the City of Kingston (1991), 6 M.P.L.R. (2d) 316, and which action was approved by the court in that case as a proper procedure in accordance with the Act. (p. 320). There the inspector required confirmation that the use of the building conformed with the by-law. It did not and ultimately the permit was revoked.

In my view, some action is required under the Act when a building permit has been issued by the municipality in error, based on a misunderstanding of the facts or a misinterpretation of the by-law, so that an appeal under s. 15(1) must be allowed. (In this case, it is not clear which of these circumstances caused the error.) However, the judge is authorized not only to rescind or revoke the permit, but also to take such action as the judge considers the inspector or chief official ought to take.

In this case, it was agreed between the parties and made part of an early order of the court in this proceeding that there would be no stay of the permit pending this appeal, so that the building is in some state of completion at this date and is apparently targeted to open for business on November 5, 1992. In those circumstances, and having regard for the fact that the Town was not misled by the Price Club (although it is unclear how much information the Town had as to the extent of bulk sales at Price Club), and that

the Town led the Price Club to believe that its operation fit within the applicable M2 zoning, Price Club should be given an opportunity to comply with the Act before the permit is rescinded.

ORDERS

1. It is declared that a portion of Price Club's intended use of the proposed building is contrary to Zoning By-Law 87-57 of the Town of Ancaster. The prohibited portion is any activity that is not bulk storage or sale of quantities of goods, merchandise and materials or any proper accessory use to those activities.

2. Price Club shall have until November 4, 1992 to comply with the building permit by providing evidence satisfactory to the Town that it will modify its operations at the Ancaster location in order to comply with the zoning by-law, as declared in this judgment and the Town shall respond in writing.

3. If Price Club has not complied within the time limit set out in No. 2 above, then the building permit No. 2992/92 shall be rescinded and all construction of the building shall cease.

4. The respondent Chief Building Official shall provide the applicant with any documents contemplated or generated in connection with paragraph No. 2 of this order upon its request therefor.

5. The parties shall make arrangements to reattend to make submissions with respect to the costs of this application.

FELDMAN J.

Manchester v. North York, Chief Building Official, Corporation of the City of North York et al.

[Indexed as: Manchester v. North York (City) Chief Building Official]

18 O.R. (3d) 540
[1994] O.J. No. 1136

Ontario Court (General Division)
Divisional Court
Then, Dunnet and Adams JJ.
May 30, 1994

The reasons for judgment of the court were as follows:

BY THE COURT: -- Of the several grounds for appeal raised in this matter, only one merits an extended analysis. In all other respects, we find O'Brien J.'s decision unassailable. His finding of the existence of "extraordinary circumstances" is essentially factual and one plausibly open to him on the state of the record. While bad faith or discrimination was not alleged, the categories of what might reasonably be characterized as extraordinary are not closed. We find no error in principle in O'Brien J. deciding as he did.

On the issue of whether or not the respondent's proposed use constitutes a caretaker's residence, we note the matter was not squarely raised before O'Brien J. In light of this failing and given that the proposed use bears at least a rational relationship to the allowed use, we are not willing to entertain the appeal on this basis.

This leaves what we see as the principal issue. Was the interim control by-law 31983, enacted April 21, 1993, "effective", within the meaning of s. 38(7) of the Planning Act, R.S.O. 1990, c. P.13, for the 30 days following its "passing" and did it only cease being effective immediately thereafter as a consequence of the municipality's failure to give notice of the passage of the by-law as required by s. 38(3) of that Act? O'Brien J. found that it was effective and, therefore, that the passage of a subsequent interim control by-law with proper notice aimed at responding to or curing the municipality's earlier failure to give the required notice offended the three-year "cooling off" period provided by s. 38(7).

Section 38(1) to (8) provides:

38(1) Where the council of a local municipality has, by by-law or resolution, directed that a review or study be undertaken in respect of land use planning policies in the municipality or in any defined area or areas thereof, the council of the municipality may pass a by-law (hereinafter referred to as an interim control by-law) to be in effect for a period of time specified in the by-law, which period shall not exceed one year from the date of the passing thereof, prohibiting the use of land, buildings or structures within the municipality or within the defined area or areas thereof for, or except for, such purposes as are set out in the by-law.

(2) The council of the municipality may amend an interim control by-law to extend the period of time during which it will be in effect, provided the total period of time does not exceed two years from the date of the passing of the interim control by-law.

(3) No notice or hearing is required prior to the passing of a by-law under subsection (1) or (2) but the clerk of the municipality shall, in the manner and to the persons and agencies and containing the information prescribed, give notice of a by-law passed under subsection (1) or (2) within thirty days of the passing thereof.

(4) Any person or agency to whom notice of a by-law was given under subsection (3) may, within sixty days from the date of the passing of the by-law, appeal to the Municipal Board by filing with the clerk of the municipality a notice of appeal setting out the objection to the by-law and the

reasons in support of the objection.

(5) Where a notice of appeal is filed under subsection (4), subsections 34(23) to (29) apply with necessary modifications.

(6) Where the period of time during which an interim control by-law is in effect has expired and the council has not passed a by-law under section 34 consequent on the completion of the review or study within the period of time specified in the interim control by-law, or where an interim control by-law is repealed or the extent of the area covered thereby is reduced, the provisions of any by-law passed under section 34 that applied immediately prior to the coming into force of the interim control by-law again come into force and have effect in respect of all lands, buildings or structures formerly subject to the interim control by-law.

(7) Where an interim control by-law ceases to be in effect, the council of the municipality may not for a period of three years pass a further interim control by-law that applies to any lands to which the original interim control by-law applied.

(8) Subsection 34(9) applies with necessary modifications to a by-law passed under subsection (1) or (2).

In deciding as he did, O'Brien J. followed a line of Ontario Municipal Board cases according a strict construction to s. 38 and, in particular, Re Niagara-on-the-Lake (Town), unreported decision of O.M.B. Chairman, J.R. Mills, February 28, 1990, at p. 5, a case almost identical to the one at bar. The following reasoning of Chairman Mills at p. 5 in that case reflects both the general approach to s. 38 and the specific interpretation accorded to s. 38(7) which O'Brien J. adopted.

By-law 2032-89 was passed by the Town on May 27, 1989 with an effective date of May 29, 1989 and was in full force and effect up to and including June 28, 1989. As notice of its passing was not carried out in compliance with s. 37(3) it should have no force or effect since then. The Board agreed with Mr. Crossingham that for good record-keeping purposes the Town should repeal it. This panel of the Board agrees not only with counsel for the appellants but also with the previous decisions of this Board that because s. 37 is a punitive section of the Planning Act, it is imperative that municipalities follow its directions to the letter. The Stornelli case which involves individuals' rights and behaviour vis-à-vis that of municipalities, which is something like comparing amateurs with professionals, cannot be applied here.

By-law 2049-89 is not an amendment to By-law 2032-89 in any way, shape or form. It is a free-standing by-law and cannot fall under s. 37(2). By-law 2049-89 flies in the face of s. 37(7) as there is no doubt in the Board's mind that By-law 2032-89 was in full force and effect for 30 days. Therefore no other interim control by-law can be passed by Council for these properties before May 29, 1992.

Finally, the Board also agrees with Mr. Muratori that any municipal council could play games forever if every time an interim control by-law was found to be deficient, whether it be by council itself, as was the case here, or through the appeal process, a new interim control by-law could be passed on the same lands each time.

Is the Niagara-on-the-Lake approach to the failure of a municipality to give the required notice under ss. 38(3) out of tune with both the purpose and the wording of s. 38 when read as a whole?

A by-law enacted under s. 38 is authorized for the purpose of protecting the public interest in suitable zoning of an area in question and takes precedence over the right of affected land-owners to use their lands freely: see 715113 Ontario Inc. v. Ottawa (City) (1987), 63 O.R. (2d) 102 at p. 106, 46 D.L.R. (4th) 552 (H.C.J.). An interim control by-law is generally passed "as a quick response to the emergence of a specific problem for the purposes of stopping the problem from getting

out of hand and as a means of providing breathing space during which study can be done to determine the appropriate planning policy and controls for dealing with the situation": see Re Stuniah (Township) Interim Control By-law 1601 (1990), 24 O.M.B.R. 377 at p. 379. Indeed, an anticipated urgency to act explains the exceptional right accorded to a municipality to pass a by-law before giving notice.

Against this important purpose of s. 38 is the equally important interest of property-owners to use their land as permitted by existing law. The enactment of a by-law without initial notice is clearly an exceptional power.

All the parties before us accepted that the by-law was invalid upon a municipality's failure to comply with a timely giving of the required notices. Where they parted company was in respect of the consequence of that failure to the validity of the by-law during the 30 days immediately following its passage. The appellant municipality argued that the ruling of O'Brien J. had the effect of wrongly depriving the public of the benefits of s. 38. The respondent argued that the result was fitting given the exceptional impact of the section on pre-existing property rights, an impact that has reasonably given rise to the requirement of strict compliance with the section's provisions.

During submissions, the court drew counsels' attention to s. 38(4) which provides a right of appeal only to those who have been properly notified. The court was advised that this provision had been brought to the attention of O'Brien J. Is it likely that the legislature would have intended an interim control by-law to be treated as "in effect" during the first 30 days of its passage without providing an accompanying right of appeal for that period? In answer, the appellants submitted that the absence of a right of appeal for the 30-day period was a clear indication of an intention that a by-law is to be treated as void ab initio upon the failure of a municipality to provide the required notices.

While the absence of a right of appeal may, at first glance, support this view, on reflection it is just as arguable that any such appeal would be moot given a party's right to reapply upon the expiration of the 30-day period and the failure of a municipality to give the required notice. Moreover, even if the absence of a right of appeal appears anomalous, the void ab initio approach creates its own inherent problems. To accept the municipality's argument in this regard, initially lawful actions of a municipality during the first 30 days might be rendered retroactively unlawful by the subsequent failure of that municipality to give the required notice. Is it likely the legislature intended that result?

In all the circumstances, we concur with O'Brien J. The Niagara-on-the- Lake approach is supportable on the words of the statute as O'Brien J. found. Indeed, we prefer it to the contrary position advocated before us. The giving of the required notice is solely within the control of a municipality. The enactment power accorded by the section is exceptional and must be construed from that perspective. We see no reason to adopt a statutory interpretation, with its adverse impact on the legitimate expectations of a property owner, primarily to relieve a municipality from the burdens caused by its own carelessness. The appeal is, therefore, dismissed. Written submissions may be made on the issue of costs.

Thomas R. Lederer and Rhonda Cohen, for appellant, E. Yaman Uzumeri.

Sidney H. Troister, for appellant, Toronto-Dominion Bank.

Ian James Lord and Barnet H. Kussner, for respondent.

McDONALD'S RESTAURANTS OF CAN. LTD. v. HUMM et al.

Ontario County Court (Judicial District of Halton],
Blair Co. Ct. J.

Heard - November 2, 3, 4, 7, 8
and 9, 1983.
Judgment - December 19, 1983.

December 19, 1983. BLAIR CO. CT. J.: - This is an appeal under the Building Code Act, R.S.O. 1980, c. 51, from the decision of the chief official of the Town of Oakville, David A. Humm, not to issue a building permit to the appellant.

Section 6(1) of the Act provides as follows:

"6.-(1) The chief official shall issue a permit except where,

(a) the proposed building or the proposed construction or demolition will not comply with this Act or the building code or will contravene any other applicable law;

(b) the applicant is a builder as defined in the Ontario New Home Warranties Plan Act and is not registered under that Act; or

(c) the application therefor is incomplete or any fees due are unpaid."

Section 15 of the Act is as follows:

"15.-(1) Any person who considers himself aggrieved by an order given or decision made by an inspector or chief official under this Act or the regulations may, within twenty days after the order or decision is made, apply to the judge of the county or district court for a hearing and appeal.

…….

(3) Where an application is made to a judge for a hearing under subsection (1), the judge shall appoint a time for and hold the hearing and may rescind or affirm the order or decision of the inspector or chief official or take such action as the judge considers the inspector or chief official ought to take in accordance with this Act and the regulations, and for such purposes the judge may substitute his opinion for that of the inspector or chief official."

The above section refers to a "hearing and appeal". It is obvious that the proceeding under s. 15 cannot be an appeal in the ordinary sense. Presumably it might take the form of a trial de novo with viva voce evidence falling within the term "hearing". However, counsel have agreed that the appeal should be disposed of on the basis of certain affidavits filed by both parties with the exhibits thereto, together with the transcripts of the cross-examination of the deponents, Mr. Humm and Mr. John David Baskerville, an officer of the appellant.

The facts are not in dispute substantially and may be set forth chronologically as follows:

The Town of Oakville, being the owner of certain lands, registered a subdivision plan thereof as No. M-14.

On October 24, 1959, by transfer, registered No. 6179, the town conveyed to Roy Irwin part of Lot 3, Plan M-14, designated as Pt. 4 on Reference Plan H.R. 79. Subsequently, a further reference plan, 20R 5017, was deposited, dividing part 4 into parts 1 and 2. Part 2 is the property in question here. The lands in question in these proceedings are known municipally as 407 Iroquois Shore Road. The conveyance to Irwin was subject to certain restrictions as to use which it was stipulated would run with the land for a period of 25 years from June 1, 1966, for the benefit of other lands of the municipality described therein. These restrictions are such as would prevent the use of the lands for a restaurant. In particular, Covenant 9 provided that no part of any lot shall be used except for an industrial purpose.

By transfer No. 9655 on November 25, 1970, Irwin reconveyed to the town all the lands transferred by 6179, supra

On October 20, 1971, by transfer 14285 the town transferred the same lands, namely, part of Lot 3, Plan M-14, designated as Pt. 4, Plan H.R. 79, together with other adjoining lands being parts of 5 and 6, Plan H.R. 79, to the Orlando Realty Corporation Limited. The conveyance of Lot 3, Plan M-14, was made "subject to the covenants as set out in Sched. 'A' hereto". Schedule "A" sets out substantially the same uses as were restricted by the covenants in 6179, including the provision that "no part of the said lands may be used except for industrial purposes". There is no provision that the covenant shall run with the lands nor is there any reference to or description of lands to be benefitted thereby. Furthermore, the transfer document was not executed by the transferee.

It appears by notice registered as No. 14286 that there was an agreement attached thereto dated October 22, 1971, between Orlando and the town but the contents of that agreement are not disclosed in the material before me. On December 29, 1971, Orlando transferred its lands as above to Blechman (1971) Ltd. The transfer was not made subject to restrictive covenants.

An application was made on August 5, 1977, by Blechman (1971) Ltd. to the land division committee to mortgage a portion of its lands, which include the subject property, to RoyNat. The application was assigned No. B802-77 by the land division committee and on September 13, 1977, at its meeting, the committee granted the application subject to the following conditions:

"1. The applicant enter into a site plan agreement with

the Town of Oakville on the parcel separated.

2. Payment of all outstanding taxes."

On September 28, 1977, Blechman agreed in writing with the town on behalf of itself, its successors and assigns, to be bound by the covenants contained in the transfer to Orlando, registered No. 14285. The agreement recited the decision of the land division committee, the transfer by the town to Orlando by instrument No. 14285, subject to certain conditions, one of which was that if the owner of it builds on the lands it will have its site plan first approved by the town and lastly it recited that Blechman had purchased the lands from Orlando subject to those conditions.

On November 1, 1977, Blechman mortgaged to RoyNat. The certificate of the land division committee showing its consent dated December 1977 is stamped thereon. The mortgage was registered on January 11, 1978.

On November 7, 1977, notice of the agreement between Blechman and the town, above-mentioned, was registered as No. 103138.

On February 19, 1980, the municipality enacted a by-law pursuant to s. 35a (en. 1973, c. 168, s. 10; re-en. 1979, c. 59, s. 1] of the Planning Act, R.S.O. 1970, c. 349, designating the whole of the Town of Oakville as a site control area.

Blechman (1971) Ltd. applied to the land division committee further to consent to a conveyance of pt. 2, Reference Plan 20R5017 and on June 17, 1980, this consent
was given.

On the same date, namely, June 17, 1980, Blechman (1971) Ltd. applied to the town for an amendment to the zoning by-law to permit the construction on the lands of a "quality family dining facility". The lands at that time were zoned for industrial use only.

On September 8, 1980, the appellant leased the lands from Blechman (1971) Ltd. The lease contains a report on title wherein the landlord represents that it has good title subject to certain building restrictions set out in Sched. "C", which appear to be the identical restrictions contained in the deed to Orlando, supra. By the terms of the lease the lessee accepts such restrictions. However, there is an express provision for the right to terminate on or before January 1, , if the lessee fails to obtain permits and further on 30 day's notice if the operation of the restaurant on the premises is presented by reason of matters beyond control of the tenant.

Some time after the execution of the above lease, the appellant took over and assumed responsibility for the application to re-zone the above-mentioned.

On April 16, 1981, Blechman (1971) Ltd. conveyed the lands to 433425 Ont. Inc. with the consent of the land division committee. The material before me shows that the president of Blechman (1971) Ltd. is president and sole officer and director of the numbered company and that the appellant continues to make rent payments to Blechman (1971) Ltd.

On October 5, 1981, the council of Oakville rejected the application to re-zone and on November 16, 1981, McDonald's appealed that decision to the Ontario Municipal Board. After a hearing occupying eight days in July 1982, the Ontario Municipal Board on October 29, 1982, allowed the appeal and ordered the town to enact an amendment to the zoning by-law to permit the location of a restaurant on the lands in question. In its reasons reported (1982), 14 O.M.B.R. 184, the Board found that the re-zoning application did in fact conform to the then existing and approved official plan although not with the existing zoning legislation. A new official plan with which use o f the lands for a restaurant would be inconsistent had been recommended to council in October, 1981, by the planning and development committee and adopted by resolution of council but not by-law. The Board found that this unapproved official plan did not have any status. The decision of the Board as reported shows that counsel for McDonald's argued that the Board's decision should not be fettered by the existence of certain restrictive covenants alleged "and that the matter of the covenants would be dealt with at the building permit stage". The Board concluded that it would have no regard to restrictive covenants and said at pp. 192-93 [O.M.B.R.]:

> "The board believes that the right of any person to approach the board through legislation should not be frustrated by private agreements. The board will decide the appeal on its merits and the action to [be] taken subsequently, if at all, in regard to covenants or

agreements is at the discretion of the appellant and shall not affect the board in its consideration of the evidence and argument supporting the matter before it."

Subsequent to the decision of the Board, the town petitioned the Lieutenant Governor in Council on November 23, 1982. On April 21, 1983, the Lieutenant Governor in Council confirmed the decision of the Ontario Municipal Board.

Thereafter the appellant applied for site plan approval pursuant to the by-law enacted by council under s. 35a of the Planning Act. There was an appearance before the site plan committee of council on June 16, 1983. In the month of June also McDonald's applied to the town council for a waiver or removal of restrictive covenants against the lands.

On July 4, 1983, a site plan agreement was entered into between McDonald's and the town, executed by both parties. It recites that McDonald's (referred to as the owner of a leasehold interest) had applied for an amendment to the zoning by-law to permit a restaurant and that the town "considers the owner's request to be in the public interest provided certain conditions as herein set out are complied with". On July 5, 1983, the council enacted By-Law 1983-95 amending the zoning legislation to permit the location of a restaurant on the site in question, pursuant to the order of the Ontario Municipal Board.

On that same day, presumably after passage of the above by-law as would appear from the numbering sequence, council enacted By-law 1983-114 adopting a proposed new official plan under which, if implemented, a restaurant location at the site in question would not be permitted.

On July 11, 1983, the site plan committee of council approved the site plan submitted by McDonald's.

On July 15, 1983, McDonald's applied for a building permit.

On August 2, 1983, the town council denied McDonald's request to remove or waive restrictive covenants. The minutes of council on that date showed that it had approved the report of the Committee of the Whole, which had recommended that:

> "1. The Director of Buildings be directed not to issue a building permit, subject to such legal advice as he may receive. And
> 2. That McDonald's be advised that the Town intends to resist the subject restaurant based upon the restrictive covenants."

Thereafter, a representative of the appellant spoke to the chief building official on a number of occasions asking that the building permit be issued and finally on August 30, 1983, their solicitor by letter demanded the issue of the permit. It appears that on September 7 and 8, 1983, there was further discussion between Mr. Humm and Mr. Baskerville.

On September 12, 1983, Mr. Humm wrote a letter to the appellant in answer to a letter of September 8 in which he said:

> "In response to your letter dated September 8th, 1983, and further to our recent telephone conversation in which I indicated that I would be refusing to issue your building permit, I wish to advise you that, having now received legal advice, I shall not be making a decision respecting your application at this time."

On October 5, 1983, counsel for the appellant requested the Minister of Municipal Affairs to refer the designation of lands known as 407 Iroquois Shore Road in the proposed official plan to the Ontario Municipal Board for a hearing pursuant to s. 15(1) of the Planning Act, R.S.O. 1980, c. 379.

The issues which arise in this matter may be summarized as follows:

1. Is the appellant, not being the owner of lands in the usual sense, entitled to apply for a building permit?

(1) I may dispose of this issue immediately. Section 5 of the Building Code Act provides that no person shall construct a building unless a permit has been issued by the chief building official. Section 6 then, as above noted, provides for the issuance of such a permit by the chief building official. The Act does not otherwise limit persons who may construct buildings or who may receive permits and it would seem that the person who wishes to obtain a permit need have no ownership in the lands whatever. In any event, the appellant is the owner of a leasehold interest in the lands under a long-term lease.

(2) Section 15(1) permits any person aggrieved by "an order given or decision made" by a chief official to apply for a hearing and appeal. An issue arises in this connection from the submission of counsel for the respondent that the Chief Official has not given any order or made a decision to give status to the appellant.

(3) Counsel are agreed that paras. (b) and (c) of s. 6(1) of the Building Code Act are not relevant and further that with respect to para. (a) the proposed building complies with the Act, the building code and regulations to the extent that the permit would issue except for other factors. The issue therefore under this heading is, will the proposed building contravene any other "applicable law"?

(4) The last issue is: Are the respondents entitled to have an adjournment sine die which they seek as an alternative to dismissal of the appeal?

The first issue has been dealt with. The other issues will be examined.

2. The issue as to "decision":

It is submitted by counsel for the respondent that the official position taken by the chief building official with respect to the application for a permit is contained in his letter of September 12, 1983, in which he states in part that he "will not be making a decision at this time".

The word "decision" is defined in the Shorter Oxford Dictionary as "the making up of one's mind".

On his cross-examination Mr. Humm said that he first took a role in the processing of the application when he became aware of some resistance of council to the application. He had received a memorandum from the clerk setting forth the minutes of council of August 2nd which conveyed to him the position council was taking. Although he did not say he was bound to follow the direction of council, it appears to me from his answers that it is customary for council to give instructions to chief building officials and that he was very considerably influenced by those instructions in refusing the permit. Although council said that their direction was subject to the advice of counsel, in the last part of the recommendation which was forwarded to Mr. Humm, council indicated their unqualified opposition to the desire of McDonald's to locate a restaurant at the site.

On September 7, Mr. Humm stated in cross-examination that he had been visited by Mr. Baskerville and at that time he had told Mr. Baskerville that he was going to refuse the permit and would put his refusal in writing. Mr. Baskerville then composed a letter to Mr. Humm which he read to him over the telephone, asking at that time if Mr. Humm's response was ready. Mr. Humm said he wanted to review the material. Mr. Baskerville then delivered the letter to him on September 8th, and on September 12th Mr. Humm replied as above set forth. The conversation of September 8th and the letter of September 12th together may suggest that, having made up his mind on September 7th, Mr. Humm was now reversing his decision or was in some doubt about the matter. However, the contents of his affidavit sworn on September 30, 1983, and his answers in cross-examination lead me to conclude that in fact he had no thought of changing his mind and that the letter of September 12th was an attempt to delay matters. In his affidavit, referred to, he said in para. 3:

> "A building permit was not issued at the time of the applicant's request because I considered the application to fall within section 6(1)(a) of the Building Code Act, R.S.O. 1980, c. 51 (hereinafter called the Act). I am of the same opinion today."

He did not say at any time in his cross-examination that he had changed his mind or had any doubt as to the original reasons which motivated him to state, as he did on September 7th, that he would not be issuing the permit. On p. 27 of his cross-examination, Q. 136 is as follows:

> "136 Q. Perhaps we had better discuss that. Is It not in fact the case that you have decided not to issue a permit and you simply won't say so because you have been advised not to say so by somebody?
>
> A. That would be correct."

There Is no requirement that the decision be in writing or in any special form. Obviously, of course, it cannot be subjective and must be communicated in some manner.

I conclude that a decision was made on September 7th and that it still remains unretracted and unchanged giving foundation to these proceedings.

The notice of appeal referred to the decision not to issue the permit as having been made on September 12th. That letter, as indicated, refers to the refusal in a previous conversation which in fact occurred on September 7th. The whole matter was covered in the cross-examination of both parties and it does not seem to me that the respondents have been misled or prejudiced by a failure on the part of the appellant to define the refusal more accurately in the notice of appeal.

There is no suggestion by counsel for the respondent that the appeal was not launched in time by an application to a Judge within the 20 days stipulated by s. 15 assuming that the decision had been communicated as above indicated on September 7th. The notice of appeal is dated September 22, 1983, and appears to have been filed on September 23rd.

3. The issue as to "applicable law":

This issue arises from the position taken by the respondent that there are building restrictions which run with the land or are otherwise applicable and prevent the use of the land for a restaurant.

In Axelrod v. Toronto (1981), 15 M.P.L.R. 143, it was held that the phrase "applicable law" encompasses zoning legislation and in Woodglen & Co. v. North York (1983), 42 O.R. (2d) 385, 23 M.P.L.R. 13, 149 D.L.R.

(3d) 186 (Ont. Div. Ct.), Eberle J., in the Divisional Court, said that "zoning matters" must be considered. He referred to the Axelrod case and in my interpretation intended by the phrase "zoning matters" to include zoning legislation only.

The council of the Town of Oakville having passed a zoning amendment by-law at the direction of the Ontario Municipal Board, as above noted, it is clear that at the present time there is no zoning legislation in existence which prevents the use of the lands as a restaurant. Mr. Humm referred to the unapproved official plan as one of the factors which he had taken into consideration but counsel for the respondent now agree that that plan although adopted by council, does not come within the phrase "applicable law".

With respect to the restrictive covenants contained in Registered Transfer No. 6179 and the conveyance to Orlando, even if they be valid and binding on the present owners and the appellant, they do not, in my opinion, constitute "law" within the meaning of s. 6(1)(a). Agreements bind the parties thereto with respect to defined conduct as between themselves, enforceable by law at their instance, but such rules of conduct flow from the consent and agreement of the parties and certain factors may vitiate the consent and render them unenforceable, or their enforcement may be precluded by waiver or estoppel. The meaning of "law" must be related to the purpose of the section and it could hardly have been intended that the chief building official should judge the validity and binding effects of private agreements even though the town may be a party thereto. Apart from that conclusion, it does not appear to me that the covenants in 6179 would now be effective since a merger has resulted from the reconveyance of the lands from Irwin to the town. Merger has
related to what would normally be thought of as site planning. This conclusion is reinforced by the circumstances surrounding the imposition of the condition by the land division committee. It appears that the committee was aware not only that the land was regulated as to use by a zoning by-law but also had been advised by the report submitted to it that there were building restrictions. In particular, the planner of the Town of Oakville referring to the zoning by-law which restricted the use of the land to industrial use, said in his report that any industrial development in the conveyed parcel should be subject to site plan control and recommended approval on that basis. It seems quite unreasonable to suppose that the land division committee in the light of that advice would have intended to stipulate as a condition the entering into an agreement which controlled use as well as site planning and especially without detailing particulars as to what uses were to be controlled.

The conclusion to be reached, therefore, is that, although some of the agreement falls within the scope of the condition imposed, the rest of it does not. It follows that s. 29, subs. 12a, can be effective, if at all, only to the extent of rendering the agreement binding on succeeding owners with respect to that portion of the agreement which complied with or satisfied the condition imposed. That portion of the agreement, however, is irrelevant to the building permit and in any event would seem to have been supplanted as far as McDonald's is concerned by a new site plan agreement which has been entered into with the town.

Before leaving the three agreements above considered, all of which contain restrictions which would prohibit a restaurant, it is necessary to consider by-laws enacted by the town pursuant to s. 5, subs. 2 of the Building Code Act.

That section provides as follows:

> "Section 5
>
> (2) The council of a municipality may pass by-laws and the Lieutenant Governor in Council may make regulations applicable in the area In which the municipality or Ontario, respectively, has jurisdiction for the enforcement of this Act,
>
> …….
>
> (b) providing for applications for permits and requiring the applications to be accompanied by such plans, specifications, documents and other information as is prescribed;
>
> ……
>
> (f) prescribing forms respecting permits and applications for permits and providing for their use."

Pursuant to the power given by that section, the town passed By-law 1976-178 which prescribed a form of application for a building permit. Subsequently, on December 12, 1977, the council passed By-law 1977-139 amending the form of application so that the second opening paragraph of the prescribed application form reads as follows:

> "The undersigned hereby applies for a permit to do the above-noted work in accordance with this application and approved materials submitted with it and agrees to comply with the Building Code Act, 1974, its regulations, Town of Oakville by-laws and any agreement with the Town applicable to the subject lands."

It is contended by the respondents that the building, if proceeded with, will contravene the agreement of the applicant as contained in the above quotation which, it is submitted, presumably encompasses all the agreements which have been referred to and are applicable to the subject lands. It is argued further that since the form of the application has the force of legislation, having been prescribed by the by-law which council had authority to pass, it becomes "applicable law" which must be considered. In my opinion, there are a number of reasons why that argument cannot succeed.

In my view, s. 5(2) of the Building Code Act which gives power to council to enact by-laws as to the application forms should not be construed to allow council to extend its authority in effect by compelling the applicant to agree to do anything. The term "application" does not encompass in its natural meaning, in my opinion, an agreement by the applicant. On that basis, to the extent the by-law requires an agreement by the applicant, it is ultra vires. But even if It be regarded as an attempt to bind the applicant by agreement, in my opinion, it fails on the ground of a vagueness or uncertainty as to its meaning and also for lack of consideration. In addition, if It is to be given any meaning, In my opinion, It would be limited in its application to any agreement, which had been entered into by the applicant with the town.

I conclude, therefore, that none of the agreements referred to, containing restrictions on the use of the lands, should be considered as "applicable law" within the meaning of s. 6(1)(a). It should be added that, in my opinion, the resolution of council directing Mr. Humm not to issue the building permit is of no significance other than it tends to corroborate that the chief building official had made a decision to refuse the permit and had no intention of departing therefrom. Reference has been made to Re David Gallo Bldg. Co. and Toronto, (1973] 3 O.R. 892, 38 D.L.R. (3d) 536 where at pp. 543-44 Wright J. said as follows:

> "I have already said in R. v. City of Toronto (1971] 1 O.R. 451 at 454, 15 D.L.R. (3d) 553 at 556, that once a City Council has passed a by-law 'its employees are bound to do the business of the city, when they have a discretion to exercise, in accordance with the by-law, even if the by-law has not passed the Municipal Board'. But this can be asserted more broadly and can be extended to the duty of civic employees to conform to the declared intention or policy of Council, and of course to the normal obedience to direction that every employee, in the course of his duties, owes to his employer. In this case, once Council had expressed its intention to enact the by-law and had set in motion the machinery to do this, civic officials were bound to act accordingly. In acting as they did, they only did their bounden duty, in the circumstances."

It must be noted that this decision preceded the enactment of the Building Code Act, prior to which the issuance of a building permit lay within the power of the municipal council to control by by-law. The situation is now considerably changed by reason of the imperative obligation placed on the chief building official by the Act itself to issue a building permit except in certain circumstances. Furthermore, it appears that the principle expressed by Wright J. as to the obligation of employees is qualified by his words: "when they have a discretion to exercise". The issuance of the building permit by the chief building official under s. 6 clearly is not discretionary.

4. The issue as to adjournment:

The respondent seeks adjournment sine die of this appeal for the purpose, one assumes, of providing an opportunity to the town to have the official plan approved and thereafter to implement it by by-law so as to prevent the building which the appellant proposes.

Prior to the enactment of the Building Code Act in 1974, a person refused a building permit had no remedy other than an application for a mandamus by way of a prerogative writ.

In Hammond v. Hamilton, [1954] O.R. 209, (19541 2 D.L.R. 604 (C.A.), which was an appeal from an order adjourning sine die an application for a mandamus, Roach J.A., said at p. 216 (O.R.]:

> "Since the decision in Cridland v. City of Toronto a practice has been developing, which unless confined to very definite and limited circumstances threatens to make the Courts the medium through which legal rights may be denied. The practice to which I refer is the practice of adjourning a motion for a mandamus, with the result that when the motion eventually comes on for hearing the applicant finds himself faced with a restrictive by-law which has been enacted in the interim."

Although Roach J.A. said at p. 221 that "the judge before whom an application is made for a mandamus such as was sought by the appellants unquestionably has a discretion to adjourn the application." Earlier in the judgment, at p. 215, he said:

> "It is fundamental that in any well-organized system of jurisprudence the law should be certain and every person subject to that system should be able at any time to determine what his legal rights are and

be entitled to them."

and further indicated a general concern with adjournment for these purposes in a discussion with counsel reported at p. 211, as follows:

> "(Roach, J.A.: Would it not be a legal scandal if a Court, asked to determine the rights of parties as of a particular date, merely adjourned the matter because those rights might be changed by a by-law not yet passed? If that were to be done frequently citizens would never know what their present rights were.]"

Roach J.A. stipulated certain minimum requirements for the exercise of the discretion to adjourn on a mandamus application and these were substantially approved in Ottawa v. Boyd Bldrs. Ltd. (1965] S.C.R. 408, 50 D.L.R. (2d) 704. That was an appeal from the judgment of the Court of Appeal of Ontario which had allowed an appeal from the order of Schatz J., adjourning the hearing of a mandamus application pending the hearing of an application for approval of a by-law by the Municipal Board. Spence J. said at p. 705 (D.L.R.]:

> "An owner has a prima facie right to utilize his own property in whatever manner he deems fit subject only to the rights of surrounding owners, e.g., nuisance, etc. This prima facie right may be defeated or superseded by rezoning if three prerequisites are established by the municipality, (a) a clear intent to restrict or zone existing before the application by the owner for a building permit, (b) that council has proceeded in good faith, and (c) that council has proceeded with dispatch."

If read alone, those words may appear to suggest that a mandamus application might be dismissed if the prerequisites of which Spence J. spoke, existed. But in the context the prerequisites are tests only as to the exercise on a mandamus application of the Court's discretion to adjourn. In Re Cambridge Leaseholds Ltd. and Toronto, [1973] 3 O.R. 378, 37 D.L.R. (3d) 43 (Div. Ct.) the headnote correctly summarizes the judgment of Wright J. in this respect as follows:

> "Considerations of good faith, dispatch and clear intent to rezone prior to the application for the permit were relevant to the question of whether mandamus proceedings should be adjourned and not to the question of the right to a permit".

Counsel for the respondent submits that this hearing and appeal may be adjourned sine die applying the tests established in the Boyd case and in support thereof cites the judgment in Woodglen & Co. v. North York [now reported (1983), 42 O.R. (2d) 385, 23 M.P.L.R. 13, 149 D.L.R. (3d) 186 (Div. Ct.)] where it was held on an appeal under s. 15 of the Building Code Act, similar to the present appeal, that the Court had jurisdiction to adjourn the appeal for the purpose of allowing the municipality to perfect legislation, applying the Boyd "tests", although in the circumstances, the Court concluded that the municipality had not discharged the onus of showing the existence of those prerequisites.

With the greatest respect, I am not able to reach the conclusion that there is any discretion in an appeal under s. 15 to adjourn the hearing in order that the town may have an opportunity to validate legislation which will prevent the construction desired, when as the legislation stands at present, as I have found, the appellant has a legal right to a building permit. The Court, of course, has the right to adjourn or postpone the hearing under s. 15 on the usual grounds of fairness but the adjournment sought by the respondent here cannot be justified on that basis and would amount to a denial of the appellant's existing and positive legal right to have a building permit pursuant to s. 6.

The practice referred to by Roach J.A., supra, which has developed with respect to motions for mandamus in similar circumstances, can be understood, it would seem, only as an aspect of the discretion which is inherent in the jurisdiction of the superior Courts on such a motion. The remedy of mandamus by way of prerogative writ from earliest times was discretionary and not as of right or ex debito justiciae. That discretion is expressly continued in the Judicial Review Procedure Act. In R. v. All Saints, Wigan (Churchwardens) (1876), 1 App. Cas. 611 at 620 (H.L.) Lord Chelmsford said:

> "A writ of mandamus is a prerogative writ and not a writ of right, and is in this sense in the discretion of the Court whether it shall be granted or not."

In Re Burgin and King, (1973 1 3 O.R. 174, 36 D.L.R. (3d) 198 (Div. Ct.), Fraser J.A. at p. 177 quoted from the judgment of the Supreme Court of Canada in Rodd v. Essex (1910), 44 **SOCOR.** 137 at 143, with respect to the remedy of mandamus as follows:

> "Moreover, notwithstanding that an applicant may have made out a case of strict legal right, in the exercise of its discretionary power the court will consider his motives, and if not convinced of their propriety, will withhold relief."

In Homex Realty & Dev, Co. v. Village of Wyoming, (1980] 2 S.C.R. 1011 13 M.P.L.R. 234 at 256, 116 D.L.R. (3d), 1, 33 N.R. 475, Estey J., dealing with prerogative writs generally quoted from Wade on Administrative Law (4th ed., 1977) where the author describes certorari and other prerogative writs (at p. 560) as:

" discretionary and the court may therefore withhold them if it thinks fit"

and further (p. 257 M.P.L.R.1:

> "The discretion to withhold remedies against unlawful action may make inroads upon the rule of law, and must therefore be exercised with the greatest care. In any normal case the remedy accompanies the right."

As explained by Roach J.A., in Hammond v. Hamilton, supra, the Privy Council held in Toronto v. Toronto R.C. Sep. Schools Trustees, [1926] A.C. 81, 3 D.L.R. 880 (P.C.), that the legal right of a person to use his property as he sees fit and to have a building permit is to be judged as of the date of the hearing and is not in effect stabilized as of the date of the application for the permit. It would seem that to hold otherwise would be to preclude the council from legislating with respect to the subject.

But no rationale is clearly set forth in any of the cases as to why the discretion of the Court on a mandamus application should be exercised in favour of an adjournment which has the effect, as Roach J.A. stated, of denying legal rights. Rose C.J.H.C. made some approach to a basis for the adjournment in Re Robertson and Toronto, [1934] O.W.N. 429 at 431 (H.C.) where he said:

> "I think it would be unseemly that when the matter is so soon in the ordinary course to be considered by council, the Court should do something which would prevent the exercise by the Council of the power that has been entrusted to it".

It seems to me important to note with respect to those words that when they were spoken municipal councils had the right to make provision by by-law as to the issue of building permits and as has been noted above the situation may now be regarded as having been substantially changed by the enactment of the Building Code Act and in particular s. 6 thereof.

In any event, the appeal under s. 15 of the Building Code Act is not an application for a mandamus by way of prerogative writ or a motion in the nature of such under the Judicial Review Procedure Act and in the absence of an y provision giving to the Judge a discretion to deny the legal right of the appellant or to exercise a discretion in that respect, as the Legislature saw fit to do expressly in the Judicial Review Procedure Act, no such power exists in my opinion. It would be somewhat incongruous considering the mandatory provisions of s. 6 that, on an appeal given by the me Act to a person aggrieved by a refusal under s. 6, the appellant would be met with an adjournment which would have the effect of defeating his legal right by allowing the criteria in s. 6 to be altered by subsequent legislation.

The powers of the Judge on this appeal pursuant to s. 15 are to rescind or affirm the order or decision of the chief building official or to take such action as the Judge considers the chief official "ought to take in accordance with the Act". The words quoted, employing the present tense, in my opinion mean simply that the Judge should have regard to what the chief official should do under s. 6 having in mind the present state of the legislation. The use of the present tense, in effect, incorporates the principle established by the Privy Council in Toronto v. Toronto R.C. Sep. School Trustees, supra, that the right of the applicant is to be judged as of the date of the hearing.

The last part of s. 15(3) giving the Judge the right to substitute his opinion for that of the chief official is qualified by the words "for such purposes" and in my opinion give no discretion to go beyond the specific powers detailed.

It is submitted by counsel for the respondent that the use of the word "may" in s. 15 confers a discretion. In my opinion that word is "enabling" and gives no right except to choose among the particular courses which the Judge may follow. A quotation from MacDougall v. Paterson (1851), 11 C.B. 755 at 773, 138 E.R. 672, appears to contain the principle which may be applied:

> When a statute confers an authority to do a judicial act in a certain case, it is imperative on those so authorized, to exercise the authority when the case arises, and its exercise is duly applied for by a party interested, and having the right to make the application.
>
> For these reasons, we are of opinion, that the word 'may' is not used to give a discretion, but to confer a power upon the court and judges; and that the exercise of such power depends, not upon the discretion of the court or judge but upon the proof of the particular case out of which such power arises."

It seemed to me during the course of the argument in this matter that

the need to confine the powers of the Judge to what is expressly given by s. 15 is strengthened by the fact that the appeal is to "the Judge" of the Court and not to the County Court, but counsel for the appellant has not so argued.

Reference is made by counsel for the respondent to s. 33 of the County Courts Act which reads as follows:

> "33. Where in any Act an appeal to the County Court is provided for, the county court has the same powers upon the hearing and disposition of the appeal as the Court of Appeal has under the Judicature Act in civil matters, subject to any express provision in the Act that provides for the appeal."

It is submitted that this gives the Court on this appeal a broader jurisdiction than is implied or stated in s. 15. In my opinion, however, the qualifying words "subject to any express provision in the Act that provides for the appeal" limits the powers on an appeal under s. 15 to those which are set out in s. 15.

Counsel for the respondents refers also to sections of the County Courts Act and the Judicature Act which provide that the Court shall give effect to all equitable defences and rights. It is not clear to me, however, what circumstances in this matter attract equitable jurisdiction. The appellant does not claim any equitable relief and cannot therefore be met with the maxim "that those who seek equity must do equity" or that "he who comes into equity must come with clean hands." With respect to the allegation of binding restricting covenants there may be some waiver or estoppel as between the appellant and Blechman (1971) Ltd. but the appellant's right in this matter cannot be affected thereby. Nor, in my opinion, is there an estoppel of McDonald's in this appeal resulting from their having applied to the council for a waiver of building restrictions.

It should be stated that mandamus in the sense in which it has been properly claimed in matters of this kind heretofore, it not an equitable remedy but as pointed out above is an extraordinary remedy by way of prerogative writ which issued out of the King's Bench. The confusion which exists with respect to the use of the term "mandamus" is explained in Rich v. Melancthon Bd. of Health (1912), 26 O.L.R. 48, 2 D.L.R. 866 (C.A.).

In Woodglen & Co. v. North York, supra, Eberle J. said in declining to exercise jurisdiction on an application for a mandamus at p. 17 [M.P.L.R.J:

> "It is, therefore, my conclusion that the applicant had a right of appeal under s. 15; a right of appeal which was probably more expeditious than proceeding by way of judicial review and a right of appeal which was broader in scope and on the whole, more effective, than proceeding by way of judicial review."

later at p. 17 he referred to the remedy under s. 15:

> "Which is equally, if not more convenient, expeditious, beneficial and effective".

In my opinion Eberle J. was referring to s. 15 as a remedy from the point of view of an appellant only and was not adverting in any sense to the matter of adjournment sine die for the purpose which the respondent has in mind.

It should be added that in some applications for a mandamus the Court has used the word "equities" and this has been referred to by counsel for the respondent. In my opinion, the use of that word refers to certain aspects of fairness and justice and has no relationship to equity as a body of law formerly in the jurisdiction of the Court of Chancery.

I conclude, therefore, that there is no principle of equity, as that term is used in the Judicature Act and the County Courts Act, which is applicable in the present circumstances.

For these reasons this appeal is allowed and I find that the chief building official ought to issue the building permit applied for. An order will go, therefore, to that effect.

In the circumstances the appellant will have its costs. It appears to me that it was not necessary to join the Town of Oakville as a party to these proceedings but that was done on the application of the respondent and I see no reason therefore why the costs should not be awarded against both respondents.

Appeal allowed.

Re **McLear and Mason** et al.

65 O.R. (2d) 228
[1988] O.J. No. 1057

ONTARIO
High Court of Justice
Sutherland J.
July 12, 1988.

APPLICATION for an order declaring that the use of certain lands was contrary to a zoning by-law and for ancillary relief.

Chris J. Tzekas, for applicant.

Peter J. Johnson, for respondent, Wayne D. Mason.

John C.L. Ritchie, for respondent, Township of Tecumseth.

SUTHERLAND J.:-- The applicant is the owner of a 10-acre parcel of land (the "McLear Lands") in the Township of Tecumseth, in the County of Simcoe, and he brings this application under rule 14.05(3)(d) and (g) of the Rules of Civil Procedure, and s. 327 of the Municipal Act, R.S.O. 1980, c. 320, in respect of the use by the respondent Mason of an adjacent 24-acre parcel (the "Mason Lands") as a used-automobile storage and salvage yard.

The applicant submits that that use of the Mason Lands contravenes restricted area (zoning) By-law No. 81-37 (the "Zoning By-Law") of the Township of Tecumseth (the "Township"), and that the Township has failed to enforce the Zoning By-law despite many requests by him that it do so.

The applicant seeks an order:

(a) declaring that the use of the Mason Lands as an automobile storage and salvage yard is contrary to the Zoning By-law;

(b) declaring that such use is not a permitted use or a prior non-conforming use under the Zoning By-law;

(c) restraining such use of the Mason Lands, and

(d) awarding costs to the applicant on a solicitor-and-client basis.

The right of the applicant to apply for a restraining order is conferred by s. 327 of the Municipal Act, which section states as follows:

> 327. Where any by-law of a municipality or of a local board thereof, passed under the authority of this or any other general or special Act, is contravened, in addition to any other remedy and to any penalty improved by the by-law, such contravention may be restrained by an action at the instance of a ratepayer or the corporation or local board.

(Emphasis added.)

The respondent Township was represented at the hearing and through its counsel expressed views on the substantive issues of the application, but appeared to be primarily concerned to avoid any liability for costs and to recover its own costs from the applicant. The Township contended that under s. 327 of the Municipal Act it was not a necessary party to the application and so should have its costs. It was also stated on behalf of the Township that if the Zoning By-law was interpreted to mean that the use of the Mason Lands contravenes its provisions, the Township would co-operate with the applicant if he wished to have it launch a prosecution under the Zoning By-law.

Jurisdiction of the court

As a preliminary matter it was submitted on behalf of the Township that, as the facts necessary to dispose of the application had not been agreed to, the court ought not to, or was not entitled to, take jurisdiction. The submission was that the application to be successful requires the court to find as a fact that the Mason automobile storage and salvaging operation was an unlawful use at the time the Zoning By-law was enacted because it was an unlawful use under a prior by-law,

i.e., By-law No. 73-7, in force when the Zoning By-law came into effect, and that, there being a dispute as to that "fact" the court ought not to entertain the question on an application under rule 14.05(3)(d) or (g). The Township cites in support of its position the decision of Scott D.C.J. in, Re Reitzel and Rej-Cap Manufacturing Ltd. (1985), 53 O.R. (2d) 116, 7 C.P.C. (2d) 77, 38 R.P.R. 254, on an application pursuant to rule 14.05(3)(d), where the court referred to the decision of Van Camp J. in Anglo Canadian Fire & General Ins. Co. v. Robert E. Cook Ltd., [1973] 2 O.R. (2d) 385, to the effect that on a motion under a predecessor of rule 14.05(3), the court would not render any decision upon the construction of a document where, because of disputed issues of fact between the parties, the decision on the construction issue would not effectively dispose of the litigation between the parties.

With respect, that is not this case. In this case, as was found to be the case in the Reitzel decision itself, there is substantial agreement as to the underlying facts. With respect, while an interpretation of the Zoning By-law, one way or the other, could later be described as a "fact", the question to be decided on the interpretation of the Zoning By-law is a question of law and not a question of fact. And there are on this application sufficient agreed or readily and properly to be found facts to serve as a basis and background for the interpretation or construction of the relevant Zoning By-law provision as a question of law.

Accordingly the questions of whether this court has jurisdiction to, and should exercise jurisdiction to, interpret the relevant provisions of the Zoning By-law are answered in the affirmative.

The question of whether the Township should have been made a defendant, and the related question of costs, will be dealt with below.

Issue

The issue on this application is whether the use of the Mason Lands as a used-automobile storage and wrecking yard is contrary to the provisions of the Zoning By-law. As the lands are zoned for general agricultural use, and as the operation of a used-automobile storage and salvage yard is not an agricultural use under the terms of the by-law, the issue resolves itself into the question of whether such a non-conforming use is a permitted use under the Zoning By-law.

The only relevant exceptions to the use restrictions under the Zoning By-law are those found (i) in para. 5.5(a) (non-conforming uses), and (ii) in para. 6.2(b) (uses existing at the date of the passing of the Zoning By-law).

The first category of exceptions reflects the familiar concept of a lawful prior non-conforming use found in s. 39(9)(a) of the Planning Act, 1983, S.O. 1983, c. 1, and in predecessors of that provision. Paragraph 5.5(a) of the Zoning By-law is as follows:

5.5 Non-Conforming Uses

a) Continuation of Existing Uses

The provisions of this By-law shall not apply to prevent the use of any lot, building or structure for any purpose prohibited by this By-law if such building or structure was lawfully used for such purpose on the day of passing this By-law, so long as it continues to be used for that purpose.

(Emphasis added.) Under that provision if the Mason Lands had been lawfully used as a used-automobile storage and salvage yard immediately prior to the enactment of the Zoning By-law in October, 1981, such use would have been "grandfathered" and allowed to continue. It is, however, common ground that para. 5.5(a) does not exempt the present use of the Mason Lands, because immediately prior to the enactment of the Zoning By-law that use was not a lawful use. It was contrary to By-law No. 73-7 of the Township, a by-law passed pursuant to the Municipal Act, R.S.O. 1970, c. 284, in 1973 that prohibited the use of any land or structures in the Township of Tecumseth, "for storing used motor vehicles for the purpose of wrecking or dismantling them or salvaging parts thereof for sale or other disposal". The by-law exempted any person who was operating such a yard under a licence previously issued to him.

By-law No. 73-7 was in effect on October 14, 1981, when the Zoning By-law was enacted. At that time a used-automobile storage and salvage yard was being operated by Mason on the Mason Lands but no licence to do so had been issued to Mason under By-law No. 73-7, or a predecessor thereof. It is clear, and it is common ground, that Mason's use of the Mason Lands is not a non-conforming use within the para. 5.5(a) exemption, because it was not a prior lawful non-conforming use but rather an unlawful use.

The remaining issue, and the real issue on this application, is whether the exemption in para. 6.2(b) of the Zoning By-law -- which exempts

6.2 (b) uses existing at the date of passing of this By-law; exempts the present use of the Mason Lands. As those lands were clearly being operated as a used-automobile storage and salvage yard on the date of the passing of the Zoning By-law, the issue becomes whether or not under para. 6.2(b) the existing use had to be a lawful use in order to be exempt.

I believe that it will be helpful if I summarize more of the background facts before I deal with the submissions made on that issue.

Background facts

The McLear Lands have been owned by McLear for 18 years and have long been used, although not intensively, for agricultural purposes, latterly the growing of hay for sale to others.

The Mason Lands have been owned by the respondent Mason since 1971 and the two-storey residence on the property has been occupied by him and his family as a residence since that time. Prior to 1979 Mason earned his living as a truck driver.

In January, 1981, when he was operating a repair garage and gas station on other lands, Mason began bringing used automobiles onto the Mason Lands for the purpose of operating on part of those lands a used-automobile storage and salvage yard.

Prior to October, 1981, the Township had no restricted area (zoning) by-law. However, automobile storage and salvage or wrecking yards were prohibited throughout the Township of Tecumseth by the above-mentioned By-law No. 73-7, except for such yards previously licensed. Mason, of course, was not previously licensed because he did not begin his impugned operations until years later. Yet Mason was never prosecuted for being in breach of By-law No. 73-7.

The Zoning By-law did not repeal By-law No. 73-7. It did, however, make provision for the location of automobile storage and salvage yards on lands zoned M5 (industrial storage zones). The Mason Lands were not so zoned.

By-law No. 73-7 remained in force until April 25, 1983, when it was repealed by By-law No. 83-20, a by-law that dealt not with zoning but with regulation of the fencing, lighting, hours of active operation, inspection, cleanliness, noise levels and like matters at salvage yards, including those within the definition of an "Automobile Wrecking Yard" in the by-law.

According to Mason, when he was operating a repair garage and service station on other lands starting in January, 1981, he used to store used motor vehicles on the Mason Lands for the purpose of salvaging parts from them for use in his repair garage and as a supply of used parts to sell to others. McLear stated on his cross-examination that Mason appeared to be storing cars prior to October 14, 1981, but not to be wrecking them. Mason's evidence is to be preferred on this point, because it is supported by considerable detail including an aerial photograph, and because McLear did not examine the scene closely but was relying upon a general impression. Not much turns on the difference between the evidence of McLear and Mason on this point, because even if Mason had not by October 14, 1981, actually stripped any vehicles, it is clear that the vehicles were brought on the Mason Lands for the purpose of being used as a supply of used parts.

It is also quite clear that Mason's automobile wrecking activities on the lands have increased greatly, since October 14, 1981. According to Mason's own evidence he was by October,

1981, storing an average of 80 used vehicles in a space approximately 200 ft. by 600 ft., whereas by October, 1987, he ws storing an average of 300 used vehicles in a space approximately 400 ft. by 600 ft.

In 1983, at a cost of approximately $15,000, Mason put up on the Mason lands a 28-ft. by 40-ft. metal-clad workshop for use in his automobile storage and salvage business. He stated that he had a building permit to construct the workshop, but I find, based on the evidence of Peter Robertson, who, among several jobs for the Township, functioned as Township's chief building official, that Mason began the building without a building permit but obtained one before the construction was completed.

It is not clear whether Mason had submitted an application for a building permit before he began construction but it would be quite consistent with his practices with regard to applicable zoning and building regulations if he had not.

The Township was fully aware that Mason was operating a used-vehicle storage yard. Peter Robinson, under cross-examination on his affidavit filed, stated that as early as October, 1981, he reported to the reeve of the Township as to Mason's operations. Moreover, when the salvage yard by-law (By-law No. 83-20) came into effect the Township sent Mason a letter, dated May 20, 1983, and forming part of the supplementary record on this application, forwarding a copy of that by-law and pointing out that his operation would soon be inspected to see if it was in compliance with that new regulatory by-law. The letter indicated that Mason would have six months to bring his yard into compliance with the new by-law and that when he did so a certificate of compliance would be issued to him with respect to the new by-law. There was no suggestion that the Township regarded Mason's operation as other than a permitted use of the Mason Lands.

Mason was later prosecuted for non-compliance with By-law No. 83-20. He pleaded guilty and was fined and, according to the Township official, Peter Robertson, has since corrected the deficiencies in respect of which he was charged.

Peter Robertson, who began to work for the Township in April, 1981, was at all material times not only the Township's chief building official but also its muncipal law enforcement officer, its zoning administrator (under the Zoning By-law) and even its plumbing inspector. On his cross-examination Mr. Robertson stated, and I have no reason to disbelieve him, that it was not the practice of the Township to enforce municipal by-laws, particularly the Zoning By-law, on its own initiative but to act only upon complaint by a ratepayer or other interested party.

It was Peter Robertson's evidence that he was unaware of By-law No. 73-7 in 1981 or until its repeal in 1983. He was not aware of, and had never had his attention drawn to, the fact that the use of the Mason Lands was contrary to the provisions of By-law No. 73-7. For what it is worth Robertson expressed the opinion that Mason could have been prosecuted under By-law No. 73-7 prior to its repeal, but that after its repeal there was no basis upon which Mason could be prosecuted for a zoning by-law infraction. The latter opinion is based on Robertson's belief, which reflects that of the Township, that with respect to lands zoned for agricultural use para. 6.2(b) of the Zoning By-law made every use in existence on October 14, 1981 (and not prohibited by another by-law) a permitted use, regardless of whether such use was unlawful immediately prior to the coming into force of the Zoning By-law.

Peter Robertson was aware of at least three other used-automobile storage and salvage or wrecking yards in the Township of Tecumseth, only one of which was in a geographical area zoned (M5) for such activity. It had been the belief of Peter Robertson that except for the one in the M5 zone all of the other yards were permitted on the same basis that he had believed the Mason yard to be a permitted use, namely that para. 6.2(b) of the Zoning By-law made all uses in existence on October 14, 1981 permitted uses. When it was asserted on behalf of the applicant that all of the other yards were licensed as such when By-law No. 73-7 came into effect, in 1973, and so were not unlawful under that or any other by-law when the Zoning By-law came into effect and so were prior lawful non-conforming uses under para. 5.5(b) of the Zoning By-law, Robertson was not in a position to state whether or not that

was the case.

I am aware of nothing in the record to suggest that the applicant made a complaint to the Township about the storage yard on the Mason Lands before 1986, even though a 28-ft. by 40-ft. workshop building was built on the Mason Lands in 1983. The first of several letters from the applicant to the Township on this subject is dated June 15, 1986. Late in October, 1986, the applicant retained his present solicitors with a view to having the Zoning By-law enforced.

For several years the operation of the storage and salvage yard on the Mason Lands has been the main if not sole source of income for Mason and his wife.

Submissions

On behalf of the Township Mr. Ritchie submits that, as a Township is not obliged to enforce its by-laws, it is not obliged to express an opinion or take a position on the meaning of its by-laws. Mr. Ritchie adds that the Township has not by resolution expressed any opinion as to the meaning of para. 6.2(b) of the Zoning By-law.

It is clear from a letter from previous solicitors for the Township that, at least since shortly after it received the first letter of complaint from the applicant, the Township has been operating on the basis outlined by Peter Robertson and referred to above, i.e., on the basis that para. (b) of s. 6.2 of the Zoning By-law operates to make any use in existence on October 14, 1981, a permitted use.

On behalf of the respondent Mason his counsel adopts and supports the Township's position. It is also submitted on behalf of Mason that the Township has known all along what he was doing on the Mason Lands and did not prosecute him for violating either By-law No. 73-7 or the Zoning By-law. On behalf of Mason it is further submitted that the Township in inspecting his operation in 1981, in granting him a building permit in 1983 and in requiring him to comply with By-law No. 83-20, showed that they regarded his operation as lawful in terms of the Zoning By-law. The latter is put forth not so much as the basis for a defence of estoppel or laches but, as I understood it, as proof of the meaning of para. 6.2(b) of the Zoning By-law. That is not the way such meaning is to be determined. Mason is on stronger ground when he argues the plain meaning of the words in para. 6.2(b), and when he argues delay and laches. On behalf of Mason it is also submitted that a review of the whole of the Zoning By-law does not support the applicant's position but shows that the draftsman was aware of the difference between a prior lawful non-conforming use and a use described simply as an existing use (i.e., without distinction as to whether it was lawful or unlawful).

Faced with a Township with a "hands off" policy to by-law enforcement, and faced with the language of para. 6.2(b) of the Zoning By-law which I repeat, as follows:

6.2 Permitted Uses

. . . . .

(b) uses existing at the date of passing of this By-law;

the submissions of the applicant were necessarily more complex.

Firstly, counsel for the applicant acknowledged that it was within the legislative power of a municipality to provide by by-law that all land uses, existing at a certain date, whether previously lawful or not, were to be regarded as permitted uses and therefore lawful so far as zoning regulation is concerned.

The main submission on behalf of the applicant is that when the Zoning By-law is properly construed that is not what the Township has in fact done. The applicant submits, correctly I believe, that regard must be had to the whole of the Zoning by-law. The applicant submits further that when that is done the reasonable construction of para. 6.2(b) is one by which that paragraph is interpreted as though the existing uses that are made permitted uses thereunder are only those that are lawfully existing at the date of the passing of the Zoning By-law.

I accept the submission that, as stated by the learned editors of 22 C.E.D. (Ont. 3rd.), at p. 98-245, para. 336: "The

rules which have been formulated for the construction of statutes are applicable to determine the meaning of municipal by-laws." Prominent among the general rules of, or factors in, statutory interpretation, as summarized and discussed in excerpts from E.A. Driedger, Construction of Statutes, 2nd. ed. (Toronto, Butterworths, 1983), pp. 33-7, and 89-92, and from Maxwell on the Interpretation of Statutes, 12 ed. (London,

Sweet & Maxwell, 1969), pp. 58-64 and 105-8, introduced by counsel for the applicant, were the following:

(a) the rule that regard should be had to the whole of the statute or by-law;

(b) the proposition that in making a choice between alternative meanings, the court should favour the meaning that is in harmony with the purpose and the other provisions of the enactment;

(c) the proposition that a construction that avoids absurdity, injustice, anomaly, hardship and inconvenience should be preferred;

(d) the proposition that regard must be had to the scheme of the legislation, and each provision construed in a way that will, where possible, place a consistent, rational, and probable meaning on all of the provisions when read together;

(e) the proposition that the legislature should not lightly be assumed to have repeated itself by including a second provision that in effect merely repeats an earlier provision;

(f) the proposition that, as stated by Lord Reid in Gartside v. Inland Revenue Com'rs, [1968] A.C. 553 at p. 612, that:

> It is always proper to construe an ambiguous word or phrase in the light of the mischief which the provision is obviously designed to prevent, and in the light of the reasonableness of the consequences which follow from giving it a particular construction.

(g) the proposition that if there are two reasonable meanings to the language of a provision, the interpretation that will avoid penalty is to be adopted.

There is in my view limited advantage to be obtained from such general rules in this case. The general proposition in (e) above tells against the applicant because, by requiring that existing uses in para. 6.2(b) be confined to lawful existing uses, one would be adding a word that had the effect of making para. 6.2(b) in effect a repetition of para. 5.5(a) dealing with prior lawful non-conforming uses. From the point of view of the applicant the most important of the above canons of construction are those to the effect that regard should be had to the enactment as a whole and to its objects and its framework. I turn now to the consideration of the provisions of the Zoning By-law to which my attention was particularly directed by counsel for the applicant.

Explanatory note

In the explanatory note which accompanied the Zoning By-law the following appears under the heading "Explanation":

> The effect of the by-law is to require that any use of land or any erection or use of any building or structure comply with the provisions of the by-law. However, the by-law does not prevent or hinder any existing use of land, building or structure which was legally established on the date of the passing of this by-law, so long as it continues for that purpose.

(Emphasis added.) The applicant submits that that explanation sets forth the policy and main object of the by-law, and that under such policy only legal prior uses are "grandfathered".

I have no quarrel with that proposition as to the general purpose and effect of the Zoning By-law. Yet the explanatory notes must be viewed in their historical context. The Zoning By-law was the first comprehensive restricted land use by-law in the history of the Township of Tecumseth. The explanatory notes explained to the residents and others that thenceforth the whole of the township was to be subject to a restricted use by-law under which new land uses could be embarked upon only in

areas designated or zoned for such uses. Reasonable disclosure (to say nothing of good politics) would dictate that possible fears of such a sweeping change be allayed by informing the residents and other interested people that the new enactment would not render illegal uses that were lawfully carried on at the time of the new enactment. The concept of an exemption for lawful prior non-conforming uses is basic to the way in which planning legislation has evolved in Ontario, and it is notorious that such an exemption was an important ingredient in developing public support for such legislation. It is entirely understandable that the explanatory notes would communicate the important fact of exemptions to allow the continuance of prior, lawful, non-conforming uses. But the explanatory notes do not purport to summarize or deal with all the provisions of the by-law. A copy of the whole Zoning By-law accompanied the explanatory notes. I agree with the applicant's submission that the explanatory note quoted above sets out an extremely important feature of the Zoning By-law, the exemption of prior lawful uses that do not conform with the provisions of the Zoning By-law. However, it should be noted that para. 6.2(b) does not detract from that proposition. It is not in gross conflict with the representation in the explanatory note, in that it does not deny any exemption promised in that note. If the plain meaning of its wording is given effect it would add, in respect only of lands zoned general agricultural (A1) (and disregarding for the moment the provisions of s. 23.1 to be discussed below), a further permitted use in the sense of a permitted use not referred to in the explanatory note or within generally applicable, and statutorily mandated, rules as to prior lawful non-conforming uses.

There are in the Zoning By-law 18 zoning classifications. Paragraph 6.2(b) applies to only one of those categories and it is therefore not surprising that it was not referred to in the one page of explanatory notes sent to the ratepayers with a copy of the proposed Zoning By-law.

In my opinion the explanatory note is for those reasons not of significant assistance or effect in the interpretation of para. 6.2(b) of the Zoning By-law.

Paragraph 5.3(c)

Paragraph 5.3(c) of the Zoning By-law states, under the heading "Prohibitions", that: "Not more than one permitted use shall be allowed on a lot unless specifically permitted in this By-law." The Mason Lands were being used for residential purposes when the operation of a used-automobile storage and salvage yard was commenced in 1981. The applicant submits that this is a further ground for holding that the said use as a storage yard contravenes the Zoning By-law. The respondents argue that both uses were in existence on October 14, 1981, and so both are permitted uses under para. 6.2(b) of the Zoning By-law. It was not argued but it would also appear that s. 5.19 of the Zoning By-law permits a one-family dwelling, complying with the regulations in that section, for use in connection with a permitted use in an area not zoned residential. In my opinion s. 5.19 deprives this submission by the applicant of persuasive force.

Section 5.12

Section 5.12 of the Zoning By-law states as follows:

> Nothing in this By-law shall be interpreted to relieve any person from the obligation to comply with the requirements of the Building By-law or any other By-law in force within the Township, or from obtaining any permit, licence, permission, authority or approval required by this or any other By-law of the Township or from any other law in force from time to time.

(Emphasis added.)

The applicant states that s. 5.12 makes it clear that para. 6.2(b) of the Zoning By-law was not intended to, and did not, override the provisions of By-law No. 73-7 which made it unlawful to operate a used-automobile storage and salvage yard on the Mason Lands, at the time such use was commenced down to and including October 14, 1981, and on into 1983. It is submitted that unless the word "lawfully" is read into para. 6.2(b) that paragraph is in conflict with s. 5.12.

Although, again, it was not argued on behalf of the

respondents, it may in my opinion be questioned whether s. 5.12 should be interpreted as a provision having to do with zoning in the sense of restricted uses of property. The section appears with, or under, the heading "Licences, Permits and Other By-laws" and, despite the words "or any other By-law in force within the Township" contained therein, its reasonable construction would require, in my opinion, that it be interpreted as a provision to the effect that the zoning of land for a use under the Zoning By-law does not mean that such use can be embarked upon or continued without compliance with all other applicable requirements particular to that use, such as the obtaining of a building permit before a building is put up or, for example, the obtaining of required licences and officer of health clearances before food is sold or served. To hold otherwise would be to go against at least two of the general rules of statutory interpretation urged by the applicant and summarized above. Firstly, it would be contrary to the general proposition that the legislature is not to be assumed to have repeated itself -- a proposition sometimes discussed in terms of the desirability of avoiding redundancy or tautology. In that regard the interpretation urged by the applicant would give to s. 5.12, at least with regard to other by-laws, an effect that would be essentially the same as the effect of s. 23.1 of the Zoning By-law, to be discussed below.

The second relevant canon of statutory interpretation is the one to the effect that regard should be had to the whole of the enactment and to the scheme of the enactment. When I consider the Zoning By-law as a whole it seems to me that s. 5.12 was not intended to override other provisions of the Zoning By-law relating to zoning proper (restricted and permitted uses in a given geographical area), but to make it clear that zoning permission did not carry with it the right to ignore other regulations and licensing requirements. In my opinion s. 5.12 when considered in the scheme of the Zoning By-law as a whole is properly seen as concerned not with what category of use is made of a particular property but with the manner in which the use is carried out, in terms of the obtaining of all required licences and authorizations, and in terms of compliance with all applicable statutes, by-laws and regulations. Accordingly, I am of the opinion that there is no conflict between s. 5.12 and the plain wording of para. 6.2(b).

Section 23.1

Section 23.1 of the Zoning By-law is also relied on by the applicant. It is entitled "Existing By-laws", and states as follows:

> Where there is a conflict with any other By-law within the Township of Tecumseth then the By-law having the more stringent provisions shall apply.

Clearly there was a conflict between para. 6.2(b) of the Zoning By-law, as written, and By-law No. 73-7, and clearly the latter was the more stringent, for under it the operation of a used-automobile storage and salvage yard on the Mason Lands was prohibited. It follows that on October 14, 1981, when the Zoning By-law was passed the use in question was not a use permitted by para. 6.2(b), but a prohibited use. That result can be obtained by virtue of the provisions of s. 23.1 alone, quite apart from the question of whether the word "lawful" or "lawfully" should be added by implication to para. 6.2(b), as urged by the applicant.

The repeal of By-law No. 73-7

By-law No. 73-7 was repealed by the above-mentioned salvage yard regulatory by-law, By-law No. 83-20, which came into effect as of April 25, 1983. The more stringent by-law with respect to used-automobile storage and salvage yards was from then on out of the picture. The next question is whether it was in force for long enough to take the case of the Mason Lands out of the permitted use provision in para. 6.2(b) (assuming for this purpose that the word "lawfully" is not to be added by implication to that paragraph). To put the question another way, should para. 6.2(b) be restricted to cases in which it was effective to make the use in question a permitted use on the very day that the Zoning By-law came into effect, i.e., on October 14, 1981? If it is so restricted it would never make the questioned use of the Mason Lands a permitted use. Is it reasonable to so restrict it?

The plain meaning of the words of para. 6.2(b) is against

such a restricted construction. The words speak of uses in existence at the date of passing of the Zoning By-law. The use in question was in existence on that date. And one of the canons of statutory interpretation is that the mandatory or prohibitory provisions of a statute are to be regarded as speaking in the present tense and to be speaking continuously. On that basis when By-law No. 73-7 was repealed and there was thus no longer any provision more stringent than para. 6.2(b), the latter would still be speaking in the present tense and would from that day forward make the impugned use a permitted use -- unless, of course, the word "lawfully" is to be added by implication to para. 6.2(b).

In my opinion there is no reason to adopt the restricted view of para. 6.2(b) that would require it to have effect, if at all, on the date when the Zoning By-law first came into effect. I realize that that interpretation means that the zoning status of the Mason Lands is being changed by the repeal of another by-law, and that the effect may be tantamount to the amendment of the Zoning By-law, without compliance with the notice provisions and Ontario Municipal Board approval requirements that would be applicable with respect to an amendment or proposed amendment of the Zoning By-law itself. That lacuna was, however, present in the structure of the Zoning By-law itself from its beginning and the Zoning By-law received the approval of the Ontario Municipal Board. In my opinion, the last mentioned effect is not a sufficient reason for adopting the restricted view that would require para. 6.2(b) be effective on October 14, 1981, or not at all.

And so the issue comes down to whether the word "lawfully" should be read into para. 6.2(b).

Paragraph 6.2(b) of the Zoning By-law

On the question of whether the word "lawfully" should be read into para. 6.2(b), it should be pointed out that this is not a case where the wording of the provision itself is equivocal. Nor does the wording produce an impossibility (in the sense that an impossibility would be produced if there simply were not the legislative power to make all existing uses permitted uses) or an absurdity. And, because of the overriding effect given by s. 23.1 of the Zoning By-law to more stringent by-laws, the plain meaning of para. 6.2(b) does not, and never did, conflict with any other by-law of the township.

The applicant thus has the heavy burden of establishing that the paragraph in question should not be given its plain meaning and should have a key word deemed to be added thereto because of the general approach to non-conforming uses under the Planning Act, 1983 and its predecessors, and because of the planning philosophy developed under those Acts and reflected in most zoning by-laws.

As stated, it is acknowledged that the Township has, subject to the requirement of Ontario Municipal Board approval (here obtained), the legislative power to enact para. 6.2(b) in its present form.

It is a truism that terms are not to be implied except for compelling reasons. Where the legislative body has spoken unequivocally, the cases will be rare indeed wherein the court will take it upon itself to add a term where impossibility, absurdity or gross conflict with other provisions or enactments is not shown.

Nor does the structure or scheme of the Zoning By-law help the applicant. As stated, there are 18 zoning categories provided for in the by-law. They are provided for, respectively, in ss. 6 through 22 and s. 13A. Each of those sections begins with a subsection stating that in a zone of the designation in question no person shall use any land or erect, alter, enlarge or maintain any building or structure "for any use other than as permitted in [the] section". In every one of those sections the next subsection lists the permitted uses, under a heading "Permitted Uses". Thus in the scheme of the by-law the term "permitted uses" is not employed to designate a permitted exception to a general rule. Rather, the list of permitted uses is the primary means of stating what uses are permitted in the category in question.

Thus in s. 8 -- Estate Residential (R1) -- s. 8.1 states that in an R1 zone there will be no uses or building not permitted in s. 8. And it is provided in s. 8.2 that the permitted uses

are:

(a) a single family detached dwelling;

(b) an accessory building or use to the above use;

(c) a park.

And that is it; those are the permitted uses, period. Permitted uses are thus not exceptions; they are the very definition of the content and meaning of R1 zoning.

The same structure is evident in the sections setting up the other zoning classifications provided for in the Zoning By-law.

The wording of para. 6.2(b) is used with respect to permitted uses in only one other zoning category, and that is in s. 22 -- Urban Fringe (UF) Zone, where para. 22.2(a) is in exactly the same wording as para. 6.2(b). I am not persuaded that the wording was not a deliberate choice in each case, reflecting the intention of the Township council and the informed approval of the Ontario Municipal Board.

Further support for that view is found in the evidence as to the background to the repeal of By-law No. 73-7. But first it should be noted that the repeal of By-law No. 73-7 which was effected by By-law No. 83-20, was not necessary for the accomplishment of the main purposes of the latter by-law. The repeal provision appears to have been tacked on. And it will be recalled that Peter Robertson, although he was the Township's by-law enforcement officer and from October 14, 1981 on, the zoning administrator under the Zoning By-law, was not even aware of the existence of By-law No. 73-7 until some time in 1983 when he was working on By-law No. 83-20. His evidence was that until that time he thought that Mason's storage and salvage operation had the same legal status as the other salvage yards not in the area zoned M5. As no one at the township appears to have told Peter Robertson anything about By-law No. 73-7, it is quite possible that they had forgotten it or believed that it had lapsed or had been repealed by the Zoning By-law. It appears that as soon after October 14, 1981, as By-law No. 73-7 came to the attention of the Township council they repealed it. That in my view adds further credence to the submissions that in using the words in para. 6.2(b) the Township intended, with respect to the Mason Lands, to do exactly what the paragraph says, i.e., to make the existing use a permitted use.

Accordingly, the application will be dismissed.

In the circumstances it is unnecessary to deal with the assertions as to delay or laches by the applicant or by the Township.

Township a proper party

In my opinion, although under s. 327 of the Municipal Act the appellant could, if successful, have obtained an order restraining the respondent Mason without making the Township a party, the applicant did not do wrong in making the Township a party. The Township is a proper party to an application for a declaration as to the meaning of its Zoning By-law. The Township should not in my view be encouraged to persist in the belief that when it has enacted a comprehensive zoning by-law it should try to act as some sort of middleman or neutral stakeholder, when the issue is whether there has been a contravention of that by-law.

Costs

In my opinion, although the applicant was unsuccessful, this is not a case in which the Township should recover its costs from him. The application was at least in part necessitated by the unresponsive behaviour of the Township council, by its apparent ignorance in 1981 of the existence of one of its own by-laws, and by its eagerness to adopt a "hands off" policy. Moreover, the Township lost its preliminary motion with respect to the jurisdiction of the court to deal with this application. I have resisted the temptation to charge the costs of all parties to the Township. But the Township shall have no costs.

As between the applicant and the respondent, Mason costs shall follow the event.

Application dismissed.

Town of Midland v. Fred D'Silva Enterprises Ltd.

16 O.R. (2d) 657
ONTARIO

ONTARIO
COURT OF APPEAL
BROOKE, LACOURCIERE
AND BLAIR, JJ.A.
17TH JUNE 1977.

APPEAL from a judgment dismissing an action arising out of alleged breaches of building by-laws.

John Sopinka, Q.C., and Ronald McInnes, for appellant.

C. L. Campbell, for respondents.

The judgment of the Court was delivered by

BROOKE, J.A.:-- The plaintiff appeals from the judgment of the Honourable Mr. Justice Callon dismissing its action arising out of alleged breaches of its building by-laws. The appellant claimed for an injunction restraining the defendants, their agents, representatives, servants and employees, and those acting under their direction and control, from proceeding or continuing with the construction of a septic tank system or a portion thereof on lands within the boundaries of the town of Midland.

The case involves consideration of the effect of the annexation of part of lands upon which construction of a shopping centre was proceeding pursuant to a building permit issued by the municipality from whom the lands were taken. There is the additional question as to whether the building by-laws of the annexing municipality are applicable to require a building permit when, after annexation, changes were made in the plans for a weeping tile bed which was the only part of the septic system and the only part of the shopping centre on the annexed land.

Zongos and another (Zongos) owned a 10-acre parcel of land in the Township of Tiny which they intended to develop as a shopping centre. There was no zoning restriction of the township which prohibited or limited this plan. After negotiations with the township, the preparation of some plans and specifications, Zongos obtained a building permit from the Township of Tiny to build the shopping centre. There was no water system or sewer system available and part of Zongos' plan was for a plumbing system which included a septic tank and weeping tile bed, the latter to be laid in the ground along the north-east border of the 10-acre parcel. The permit was obtained on June 10, 1972. At the end of that month the Ontario Municipal Board made an order annexing to the appellant a 1.951- acre strip of land along the north-east border of the 10-acre parcel in which strip the septic tank and weeping tile bed was to be laid. The annexation became effective on January 1, 1973. However, by that time Zongos had done preparatory work and, indeed, the trial Judge found that when in March, 1973, the respondents purchased the land, Zongos had completed grading, some excavation, including some at the site of the weeping tile bed and, in addition, there was evidence that some footings for the buildings had been installed.

The respondents prepared new plans for some of the buildings and to alter the plumbing system by relocating the septic tank site outside the 1.951-acre strip so that the weeping tile bed alone remained there. In addition, some changes were made in the plan for the weeping tile bed after consultation with the Medical Officer of Health of the County of Simcoe. The appellant and the Township of Tiny fell under the jurisdiction of that officer and the same statutory by-law is applicable to each of them. The respondent obtained a second building permit from the Township of Tiny. It relied upon correspondence with that Medical Officer of Health as establishing that its plan for the weeping tile bed had been approved in writing by that authority. The learned trial Judge found in favour of the respondent in this regard. The respondent did not obtain any permit from the appellant with respect to the installation of the weeping tile bed.

The appellant had annexed the land as a buffer between the commercial development in the Township of Tiny and the appellant's residential area. The appellant's intention was

known to Zongos when he obtained the permit and started building. It was known to the respondents when they bought the land. But the strip was never zoned residential, although in May of 1973, the appellant adopted such a change to its official plan, and later proceeded to pass a by-law zoning the annexed land as residential. At all material times neither the amendment nor the by-law had received approval required so that it might become law.

The action was commenced on October 30, 1973, after the appellant's building inspector observed the respondents installing the weeping tile bed in the face of a stop order which the inspector had issued. No claim was made in the action for interim injunction and so no relief was sought. The weeping tile bed was in its place some time before the action came on for trial. What was sought at trial was relief in the form of a mandatory injunction to remove the weeping tile bed or, alternatively, an injunction to stop the respondents from using it.

The appellant contended that, because of the annexation, in order that they might install the weeping tile bed in the ground, the respondents required a building permit pursuant to By-law 2333 of the Town of Midland. The appellant further contended that the learned trial Judge was wrong in finding that the weeping tile bed was not a part of the building or part of the plumbing system and, in any event, a part of the structure within the meaning of its By-law 2916.

What is the effect of the building permit issued to Zongos by the Township of Tiny prior to the annexation and the fact that Zongos had proceeded with the work here in question? The validity of the building permit issued to Zongos that was in force at the time he did the work referred to and sold the land to the respondents was not attacked. It was valid in the hands of Zongos to whom it had been issued as owner pursuant to the by-laws of the Township of Tiny. There was no suggestion in the argument that Zongos could not have proceeded to install the weeping tile bed as planned and, in my opinion, if Zongos could have proceeded in that fashion, so also could his successor as owner. In my respectful view the annexation could not stop the construction proceeding under the permit validly issued prior to the annexation. That permit was issued on the primary basis that the proposed land use complied with the zoning and secondly that it met the requirements as to building: reference to s. 18 of the Municipal Act, R.S.O. 1970, c. 284; the Planning Act, R.S.O. 1970, c. 349, s. 35(7)(b); Mapa et al. v. Township of North York et al., [1967] S.C.R. 172, 61 D.L.R. (2d) 1; Re Walmar Investments Ltd. and City of North Bay et al., [1970] 1 O.R. 109, 7 D.L.R. (3d) 581 [varied [1970] 3 O.R. 492n, 12 D.L.R. (3d) 664n]; R. v. City of Barrie et al., Ex p. Bernick, [1970] 1 O.R. 200, 8 D.L.R. (3d) 52; City of Ottawa et al. v. Boyd Builders Ltd., [1965] S.C.R. 408, 50 D.L.R. (2d) 704 (as to the rights of Zongos, see Spence, J., at p. 410 S.C.R., p. 705 D.L.R.).

The evidence before the learned trial Judge was that the respondents relied on the permit issued to Zongos. I think they were entitled to, and that any other conclusion would be an unrealistic interpretation of the effect of annexation. It would strait-jacket construction to suggest that upon annexation building permits that had issued would come to an end or would end if the land was subsequently conveyed to a new owner or was otherwise dealt with.

When the Township of Tiny issued the building permit, it signified that the whole of the proposed development was satisfactory and that the respondents had the privilege to proceed with it subject to the obligation to comply with the building by-laws. The annexation did not end the respondents' privilege or obligations and the Town of Midland stood in the position of the Township of Tiny so far as the strip of land was concerned. The owner had the right to have the weeping tile bed installed in the strip but it was obliged to obey the building by-laws, if any, in relation thereto. If the building permit issued by the Township of Tiny was for the completed shopping centre development, including the weeping tile bed, and it had proceeded without change, perhaps the owner would not have been required to deal with the building inspector officials of the appellant. That is not what happened in this case. In May of 1973, the respondent obtained a second building permit from the Township of Tiny when it filed further plans for the erection of the buildings and alterations to its plumbing system so that the septic tank and connecting pipes

were located wholly within the boundaries of the township rather than in the strip annexed by the appellant. The amended plan also showed a revision of the construction of the weeping tile bed although in the same location in the strip as previously provided. The changes in the weeping tile bed were made pursuant to the directions of the Medical Officer of Health.

In such circumstances, the building permit issued by the Township of Tiny, the work done and the use made of the land settled the issue of land use. However, the proposed construction was beyond that authorized by that building permit and so the question arises whether the building by-laws of the appellant must be complied with so far as the construction of the weeping tile bed is concerned. In my opinion, the building by-laws of the appellant were applicable and this is the effect of s. 18 of the Municipal Act.

The by-laws of the appellant which must be considered are No. 2333, being a by-law to regulate the erection and safety of buildings and structures, By-law 2523, being a by-law to regulate plumbing and heating installations and to provide for certain charges therefor, and By-law 2916, being a further by-law with respect to building permits in a designated area. For convenience the relevant provisions of its by-laws, including the statutory by-law pursuant to the Public Health Act, R.S.O. 1970, c. 377, are now set out:

By-law 2333

Section 2 -- Administration

2. Scope This By-law is applicable to all types of buildings and structures hereafter erected within, moved into or within the boundaries of this municipality.

. . . . .

6. General -- Construction (a) Building Permits A building permit shall be obtained from the building inspector by the owner or his authorized agent for the excavation, erection, alteration, reconstruction, removal or wrecking of, or repairs to any building or part of any building which it is proposed to construct, and for any addition or alteration to a building, or for any sign or advertising device to be attached to a building in the fire area. No such work shall be commenced until the building permit is prominently displayed on the site of the work.

. . . . .

(e) Granting of Building Permits The application, plans and specifications filed by an applicant for a building permit shall be examined by the building inspector and if it appears to him that such plans and specifications are in conformity with the requirements of this By-law and that the proposed building or structure will not create a contravention of any land use (Zoning) or other By-law of this Municipality, the building inspector shall issue the building permit upon receipt of the required permit fee.

Paragraph 116 of By-law 2333 as amended by By-law 2964

116. Municipal Water Supply or Sewers not available --

When municipal water supply is not available a plumbing system shall not be mandatory, but any new plumbing system that is installed in any building, and any to which alterations or additions are made shall comply with the requirements of this By-law. When no municipal sewer is available to be connected to, or when no plumbing system is to be installed, no person shall be entitled to apply for any building permit and no permit shall be issued for any building on any such lot until the lot has been inspected by an inspector for the Simcoe County District Health Unit and a certificate of approval from such Unit is filed with the application. When no plumbing system is installed, or when a municipal sewer system cannot be connected to there shall be provided sanitary privies, chemical closets, septic tanks or other means for the disposal of human excreta as approved by the County Health Unit.

. . . . .

118. Quality, Design and Installation The quality, design

and installations of any plumbing system, or part thereof and including outlet drains shall conform to the Regulations respecting Plumbing and Sewers, under The Public Health Act

(Ontario).

Section 1 -- Definitions

"Plumbing System" means, severally and individually: the water distribution system; all fixtures and fixture traps, the drainage system; the house sewer; any private sewage disposal system; all leaders, together with all their devices, appurtenances and connections.

By-law 2523

1. No plumbing system as defined in By-law Number 2333 for the said Corporation, nor any hot air, hot water, steam heating equipment of any kind, shall be installed or constructed on premises within the Corporation until plans of the plumbing or heating system to be constructed, repaired, renewed or altered, and the locations of drains, pipes, traps and other works or appliances to be part of or connected with the said plumbing or heating system, have been produced and filed with the plumbing and heating inspector of the said Corporation and a permit obtained.

By-law 2916

1. No applicant shall be entitled to receive, and no permit shall be issued by the Building Inspector of the Corporation, or any other officer or servant or employee of the Corporation for the building of any structure on any lot or parcel of land fronting on any street or part thereof set out in Schedule "A" attached hereto and forming part of this By-law, and being zoned for residential purposes within the Corporation unless an agreement for the development of such street has been entered into with the Corporation, and also unless such lot or parcel is satisfactorily serviced for Municipal water and Municipal sewer facilities.

The National Building Code of Canada, 1970, s-s. 2.1.1.2, provides as follows:

Building means any structure used or intended for supporting or sheltering any use or occupancy.

The statutory by-law annexed to the Public Health Act as Sch. "B", s. 14, provides as follows:

14. No privy-vault, cesspool, septic tank or reservoir into which a privy, water-closet, stable or sink is drained shall be established until the approval in writing of the medical officer of health has been obtained.

The learned trial Judge correctly proceeded on the basis that the by-laws of the appellant were applicable. However, I agree with his conclusion that the by-laws do not require the appellant to obtain a building permit before installing the weeping tile bed in the ground. I think it is regrettably apparent that these by-laws were not prepared anticipating such unusual circumstances as these.

Mr. Sopinka urged that the learned trial Judge was wrong in his interpretation of By-law 2333 and that he ought to have held that a sewage disposal system as a whole was an integral part of a building. He contends the definition of building should be determined in the context in which the word is used. He argues that in a building by-law the term should not be construed so as to deprive the municipality of control over construction within its boundaries because the powers to regulate construction are intended for the benefit of the community and so they should receive a fair and reasonable interpretation. I agree that the by-laws referred to should be construed in this fashion. However, applying these principles the by-law is so worded that it cannot be given the effect contended for. By-law 2333 is by its title a by-law to regulate the construction and provide for the safety of buildings and structures. By s. 2(2) its scope is determined. It is applicable to all types of buildings and structures erected within or moved into or within the boundaries of this municipality. Section 6 is set out above. It requires a building permit be obtained by the owner for the erection, alteration, etc., of any building or part of any building which

it is proposed to construct, or the addition to any building. Building is nowhere defined in the by-law; rather it adopts the National Building Code definition. A weeping tile bed is not a building or structure within the ordinary meaning of that word. Nor is it "a structure used or intended for supporting or sheltering any use or occupancy". A weeping tile bed is simply a place in the ground where sewage and drainage from the septic system is deposited for absorption. The by-law by its terms is limited in application to buildings within the municipality and unless the weeping tile bed is a building or part of a building, and comes within that definition, no further consideration need be given to it. The by-law's sections do not stand alone. The plumbing system is a part of the building and this by-law proceeds on that basis. However, a weeping tile bed is, at most, a part of one of the systems included within the definition of plumbing systems. No doubt, in determining if a building permit should issue for a building being erected in the municipality, the sewage disposal system or drainage system must be examined and the weeping tile bed considered, but this by-law simply does not provide that the converse is true. I think the learned trial Judge was right in his conclusion.

Similarly, I think the learned trial Judge was right in finding By-law 2916 did not affect the respondent. I agree with his reasons and add one more, and it is simply that by its terms the by-law is limited to land being zoned for residential purposes. This land was not so zoned and the section can have no prospective effect.

With the greatest deference, I do not agree with the reasons of the learned trial Judge as to the application of By-law 2523. The by-law is entitled in part a by-law to regulate plumbing and heating installation. The effect of the by-law is to prohibit the installation of plumbing systems (as defined in By-law 2333) on premises within the municipality unless a permit is issued by the plumbing and heating inspector with whom plans for the system have been produced and filed. In my view, this by-law has a wider application than By-law 2333 which is confined to buildings. In this by-law the term "premises" is used. This term is colloquially used to mean buildings, but it is frequently used in the broader sense to mean lands whereon buildings are erected and lands immediately surrounding them: see Maunsell v. Olins et al., [1975] 1 All E.R. 16 at p. 19; Martin v. Martin et al. (1904), 8 O.L.R. 462 at p. 470. Having regard to the subject-matter of the by-law, being permits for a system which by definition includes drainage systems, private sewage systems, which of necessity must leave the building and be installed in the earth, I think a reasonable and fair interpretation of the word is in this broader sense. In my opinion, a weeping tile bed is a part of such a system. It is, according to the evidence, where the pipes end and the tiles are installed in a rock bed in an excavation. The question remains then whether the by-law is applicable to only a weeping tile bed, as opposed to the plumbing system of which it is a part, is installed in premises within the corporation.

The question has troubled me because it is obvious that Council in enacting the by-law set out to control through the use of permits, systems which might terminate in the ground as this one does. However, after anxious consideration I have reached the conclusion that the learned trial Judge was right. The section refers to a plumbing system and this means a (complete) drainage system or private sewage disposal system and not an individual part thereof or its parts separately.

Section 14 of the statutory by-law is quite different from the by-law last referred to and applies in the case at bar. No reference is made to buildings or premises but simply that no septic tank shall be established until approved in writing by the Medical Officer of Health. While this section refers simply to a septic tank, in my opinion, it should be taken to include a weeping tile bed into which the tank drains. The object of the legislation is to protect the health of the community and so I think it is reasonable that the statutory by-law should be construed as I have indicated. The learned trial Judge dealt with the correspondence and the evidence in relation to the meeting between the respondents and the Medical Officer of Health and he concluded that the respondents had satisfied the requirement of the statutory by-law. He stated:

From these two letters, it is abundantly clear that the Defendants fully satisfied the requirements of the Medical Officer of Health and that the installation of the sewage

disposal system as such met all of the requirements of that office and received its approval. The Medical Officer of Health did attach to this approval a condition that some agreement be reached with the Town of Midland on matters that were of no concern to her office.

Paragraph 1 of the letter of December 5, 1973, is a final approval of the septic tank system as installed. In attempting to append a condition that the Defendants, notwithstanding such final approval, reach a satisfactory agreement with the Town of Midland to permit the installation of the septic system within the boundaries of the Municipality, she went beyond her area of concern and jurisdiction and such a condition is, in my view, of no consequence or effect -- see Re Tenenbaum et al and The Local Board of Health for the City of Toronto, [1955] O.R. 44 at p. 47. The Defendants were entitled to act on this final approval being the approval required under Section 14 of Schedule "B" of the Act and to proceed with the use of the septic system.

I think he was right in this conclusion.

The appeal fails on all grounds and must be dismissed. I should like to add that even if I am wrong with respect to the application of by-laws, I do not think this is a case in which the Court should exercise its discretion in favour of the appellant and grant either a mandatory injunction or simply an injunction to restrain the respondents from using the septic system.

The appellant seeks through its building by-laws to enforce residential zoning which was never in effect at any material time. The use of the land for a weeping tile bed was lawful when the building permit was issued and the work done by Zongos in relation thereto "before and after annexation". Its continued use for this purpose by the respondents was lawful. I do not think that it can be said there was any detriment to the community by the installation or continuation of the weeping tile bed in its location. There is no suggestion in the evidence or argument that this is so or that it has been a nuisance in any sense. Indeed, I think the weight of evidence is to the contrary as the Township of Tiny was satisfied with the land being used for this purpose and the plans for the system, including the weeping tile bed, and I think it a proper inference from the facts that it met with the approval of the Medical Officer of Health at the time that the original permit was issued. In addition, the revised plans for the weeping tile bed were approved by that authority.

The respondent is the owner of the surface soil. Its use of the lands for other than residential purposes is not permissible under the by-laws that are now applicable and its development for that purpose is subject to them. To a very great extent then, the stated object of the annexation, being the creation of a buffer zone, was satisfied. I do not think that proof of a technical breach of a by-law will, of necessity, result in injunction.

Finally, having regard to the material to which we have been referred, the case was a unique one which the draftsmen of the by-laws in question did not contemplate.

For these reasons, I would dismiss the appeal with costs.

Appeal
dismissed.

Mortimer v. Cameron

Between

Stephen George Mortimer, Donald Mortimer, Mary Mortimer, Richard Mortimer, Carol Hiltermann, Adrienne Dawson Selby andEugenie Dmytar, Plaintiffs,

and

John Cameron, Stingray Holdings Limited, Sandra Hunt and theCorporation of the City of London, Defendants,

and

Marijo Kale, Third Party

Ontario Judgments: [1992] O.J. No. 764
Action No. 7458/85

Ontario Court of Justice - General Division
London, Ontario
McDermid J.
Heard: April 8-12, 15-19, 22-26, 29-30, May 1-3, 6-7, 13-16, 21-23, 27-31, 1991
Judgment: April 13, 1992

J.R. Morse, J.C. Kennedy, Q.C. and P. Downs, for the Plaintiffs.
D. Williams, C.M.V. Pensa, Q.C. and J.A. Beckett, for the Defendant, Cameron.
N.C. Brown, Q.C. and W. Woodward, for the Defendant, Stingray Holdings Ltd.
B. McCall, for the Defendant, Hunt.
J. Caskey, Q.C. and P. Conlon, for the Defendant, the Corporation of the City of London.
S.M. McTaggart, for the Third Party.

McDERMID J.:--

1. THE ACTION:

After writing an intermediate accounting examination on the morning of July 17, 1987, Stephen Mortimer made the fateful decision to go to a party at the apartment of a classmate, Sandra Hunt. The apartment she shared with Marijo Kale was on the second floor of a home owned by Stingray investments Limited.

People there were drinking and relaxing. The mood was convivial but subdued. No one was boisterous or unruly. After a time, Mortimer engaged another classmate, John Cameron, in some friendly conversation and horseplay in the hall of the apartment. From the hall, they travelled down the interior stairs, pushing each other back and forth until they reached the interior landing. Both had been drinking but neither was angry nor hostile.

Mortimer, who was moving backwards, tripped over the raised threshold to the apartment. He fell back and pulled Cameron toward him. Together, they tumbled onto an exterior landing, through its exterior wall and plunged to the ground about 10 feet below.

Cameron picked himself up, but Mortimer could not move. As a result of the fall, he sustained a permanent spinal cord injury at the C4-5 level that rendered him a complete quadriplegic without any motor function or sensation below the site of the injury.

This tragic event has spawned complex issues of liability and damages.

Mortimer sues Cameron on the basis of assault, battery, trespass to the person and negligence. He claims that Cameron applied force to him without due care and attention for his safety and caused him to trip and fall through the exterior wall of the stairway.

He claims that Stingray permitted him to use an exterior stairway that it knew or ought to have known was unsafe. He alleges it did not comply with the National Building Code of Canada, 1970, (the "NBC" or the "Code"), and the City's building by-law: No. B.-56-269, enacted July 5, 1971. He also claims that Stingray failed to warn him of the dangerous condition of the stairway and that it rented an apartment with a raised step or threshold that was dangerous and not readily apparent or obvious to users of the entrance.

He claims that Hunt invited or permitted him to attend upon the premises while the stairway was in a dangerous condition and failed to warn him of the unusual danger created by the raised threshold and of the dangerous condition of the stairway.

He also claims that the defendants, Stingray and Hunt, were in breach of the provisions of the Occupiers' Liability Act, R.S.O. 1980, c. 322, as amended.

Mortimer sues the City because it failed to enforce its Building By-law, which required that the exterior stairway be built in accordance with the Code. He alleges it was negligent in issuing permits or licences to build the stairway and failed to inspect it to ensure that it complied with the Code and the Building By-law.

Both Mortimer's parents, his brother and 3 sisters advance claims under the Family Law Act, S.O. 1986, c. 4, as amended.

Each of the defendants cross-claims against all the other defendants. The defendant Hunt commenced a third party action against her co-tenant, Kale, who pleaded into the main action.

2. THE SCENE OF THE FALL:

A scale drawing of the floor plan of Hunt's apartment that showed its orientation to Central Avenue was filed as Exhibit 135. A copy is attached as Appendix A. [See paper copy for illustration of Appendix A.]

Central Avenue runs east and west. 587 Central Avenue is on the south side of the street and its front door faces north. In 1963, the then owner, a Mrs. Danyluk, had a wood staircase built outside the exterior brick wall on the east side of the building to permit access to the second storey of her home. A copy of the building permit she obtained for that purpose was filed as Exhibit 25, Tab 1. In 1971, she obtained a second building permit, filed as Exhibit 99, to allow her to cover the staircase with a roof, but she never acted on it. In 1972, she obtained a third building permit, filed as Exhibit 25, Tab 2, to let her enclose the staircase. This work was carried out and was inspected and approved by the City's building inspector. It is the subject of Mortimer's claim against the City.

The entrance to this enclosed exterior stairway is set back some distance from the north end of the building. One enters the stairway through a door at ground level that faces north. One then proceeds south up a few stairs to the first landing, which is about 4 feet above grade. One proceeds further, straight up the stairs, still heading south, to the top of the exterior stairway where there is another landing that is about 10 feet above grade. It is the one from which Mortimer fell. One then turns right 90 degrees to face west, where an exterior and an interior wooden door are separated by a raised threshold. Next, one proceeds west over the threshold onto an interior landing inside the apartment occupied by Hunt and Kale. One then continues west up 5 interior stairs to a hall. It runs north and south between a kitchen and bathroom at its south end and a living room and bedrooms at its north end.

The interior and exterior landings of the stairway and portions of the interior of the apartment were shown in a number of photographs filed as exhibits, including Exhibits 2 and 64.

3. THE FALL:

Cameron and another classmate, Julia Ann Mead, gave 2 quite different and irreconcilable versions of how the fall occurred. Mortimer had an incomplete recollection of his fall. Several others at the party testified about the interaction between Mortimer and Cameron immediately before the fall.

Mortimer was sitting on a chair in the hall at the top of the interior stairs, and north of them, talking to Kale, who was seated on a cedar chest in the hall to the north of him. The chest is shown in Exhibit 2, photo 2. Cameron was sitting on a couch along the south wall of the living room. After talking to Mortimer for about 15 minutes and after finishing her drink, Kale went to her bedroom to pack because she was going away for the weekend. She thought she left Mortimer about 4:30 p.m.

Shortly after this, Cameron left the living room to go down the hall past the top of the interior stairs toward the kitchen to get another beer. He met Mortimer, who by this time was standing in the hall at the south corner of the top of the stairs. When Cameron approached, they began to talk. At no time was there any animosity or hostility between them.

Craig McCall was sitting at the north end of a table in the kitchen facing south and playing cards. At about 5:15 p.m., his attention was drawn to Mortimer and Cameron who were in the hall "horsing around", as he described it. When he turned to his left to look east toward them, Mortimer had a beer in his left hand. He was standing in the hall at the top of the interior stairs with his back to the stairway. Cameron was also in the hall facing Mortimer and they were "wrestling back and forth". He saw some beer come from the container Mortimer had and it looked to him as if some of it went onto Cameron's back. He agreed that might have resulted from their jostling. He thought Cameron was trying to "ward it off". He saw Mortimer and Cameron engaged in this activity for about 20 or 30 seconds. Because their activity caused him no concern, he returned his attention to his card game. He saw no one else in the hall other than Mortimer and Cameron. When he last saw them, they were both at the top of the interior stairs. Mortimer had one foot on the first step down from the level of the hall and his back was facing east down the stairway. Cameron had both feet on the floor of the hall at the top of the stairs and was facing Mortimer. About 30 seconds later, he heard a crash and when he looked up, they were both gone.

Just before the fall occurred, Hunt was changing a tape in her tape deck, which was in the northwest corner of the living room. She looked toward Mortimer and Cameron when she heard laughter in the hall. She saw them standing in the hall between the kitchen and the living room. From where she was standing in the living room, she could not see their bodies below their waists because her view was obstructed by a couch that was between her and them. Nor could she see the area east of the refrigerator at the north corner of the kitchen entrance, where in fact Mead was standing.

She could not recall whether it was Mortimer or Cameron who was holding a beer, but whoever it was appeared to be threatening to pour it down the other's back. I conclude this was Mortimer. It did not seem to her that he really meant to do so. The other person also looked to be interpreting it that way, because he was laughing but resisting. Then, it appeared to her as if they were disengaging and that no one was going to be harmed, so she turned her attention back to the tape deck. She had watched them for no more than 30 seconds. Next, she heard a bang that sounded "like somebody falling downstairs", although it might also have been the sound of plywood breaking. When she looked back, they were both gone. She had last seen them both standing at the top of the stairs.

Mortimer had an incomplete recollection of the events surrounding his fall. He had driven to the party but after he started to feel the influence of the alcohol he had consumed, he went to telephone his girlfriend to come for him later, rather than drive himself. The telephone was in Kale's bedroom but he was unable to use it because the door was shut. He did not remember whether he went back into the living room or spent some time in the hall. He did recall standing in the hall at the top of the interior stairway. He was leaning against the corner of the south wall of the stairway where it met the east wall of the hall, near the humidifier and the bannister. He said he stood at the top of the stairway between 20 and 30 minutes, during which time he spoke to McCall and Hunt initially, and latterly to Cameron, who joined the group later. He said that McCall left and Hunt had just been passing through. Mortimer and Cameron were then alone in the hall.

He said he spoke with Cameron for about 15 or 20 minutes. Mortimer had a beer in his hand and believed it was in his right hand. He did not recall the topic of conversation but he thought he was teasing Cameron and joking with him about the fact that they were the oldest students in the class and that Cameron was even older than Mortimer.

Mortimer's back was facing east toward the top of the

stairway and Cameron was to the west of Mortimer directly in front of and facing him. In his direct examination, Mortimer described his recollection of the fall as follows:

> I just continued to talk with John, to joke with him. And I approached him in our conversation, fooling around. And I don't recall whether I reached for him or if I gestured somehow, but we just ... We were at the top of the stairs and we were just sort of fooling around, joking. And the next recall, the next recollection that I have was one of falling backwards, just is if I'd gone over something or just gone down backwards. And I didn't have any recollection of what was around me or John himself. My next recollection was a loud noise. Excuse me. A loud noise, followed by a visual recollection. I was sort of lying on my back and looking, just sort of turned to look over my left shoulder, and I could see, from that view, the ground below. And I realized that I had broken through the plywood panelling in the stair case. And all of a sudden landing on the ground. And then my next recollection as far as sensation is a feeling of pins and needles spreading over my body. And I was laying on my back at the underside of the stairwell, and I could see that the panelling had pulled away in the corner and there was a gap between the plywood and the bottom of the stairwell structure.

He did not recall how he went down the interior stairway or where he was when he experienced the sensation of falling or whether he tripped over the threshold. He did not remember any physical contact between himself and Cameron or any intention to engage in such contact. He had no recollection of what happened to Cameron from the time he last remembered seeing him at the top of the interior stairway until he saw Cameron on the ground near him after the fall. He was not aware that Cameron had fallen with him until he saw Cameron on the ground. He could recall no sensation of the plywood offering any resistance to him.

On cross-examination, he agreed that he had suffered no brain injury from his fall. He was unaware of any other physical condition arising from the fall that would account for his lack of recollection, except perhaps the passage of time. He also agreed that he had initiated the "horseplay" and had precipitated the fall. He did not recall attempting to pour beer on Cameron and admitted that if he had done so, Cameron would have had "every right" to stop him.

Cameron testified that just before the fall, Mortimer was standing in the hall at the top of the stairs and was looking into the living room. After Cameron left the living room to go to the kitchen, he had to pass Mortimer in the hall, which he estimated was 3 or 4 feet wide. As he walked toward Mortimer, they began to chat and laugh a bit. He did not recall the details of the conversation, but confirmed that it was good natured. He said Mortimer had a beer in his left hand and went to put that hand behind Cameron's back. He barely got it above Cameron's waist when Cameron grabbed Mortimer's left wrist with his right hand. Although he had no idea what Mortimer's real intention was, he assumed that Mortimer was going to pour beer on him. In fact, Mortimer never did pour any beer on him.

Cameron was standing at the top of the stairs facing southeast. Mortimer's back was partially toward the opening of the stairs and partially toward the wall. In other words, he was standing "on an angle" facing northwest. Cameron used his right hand to try to pull Mortimer's left arm from behind Cameron's back. Cameron's left arm was on Mortimer's shoulder. Mortimer's right arm was on Cameron's left hip or midsection. Cameron applied enough force to Mortimer's hand to pull it out from behind Cameron's back. On cross-examination, he agreed that in the course of doing so, he pushed Mortimer and that this was one cause but not the sole cause of their going down the stairs. Mortimer took a step back and lost his balance and began to fall backwards. He grabbed at Cameron. Cameron said, "Suddenly, we were falling downstairs."

They lost their balance and were a little out of control. They tried to take the stairs one at a time. He said, "My vision is we were going down the stairs pretty well at the same time holding onto each other and losing balance on the stairs." He never regained his balance and his feet "were

trying to keep up with him". He believed that Mortimer was also off balance all the way down the stairs. Although there was a handrail on the south wall of the interior stairway, he was unable to reach it because Mortimer was between him and it. As they travel led down the stairs, they began to go faster. It took only 4 or 5 seconds to traverse the stairs. When they reached the interior landing, they were still off balance and in motion. As they tried to regain their balance, their feet hit the raised threshold and they tripped over it and Cameron fell sideways. He thought that if they had not hit the threshold, they would have regained their balance. He recalled going through the plywood panel that formed the exterior wall of the exterior landing with his left shoulder. The panel "popped off" without any resistance at all. He was certain that he went through the plywood before Mortimer.

Julia Mead had an excellent view of what happened on the stairway. She was standing on the west side of the hall, immediately north of the entrance to the kitchen at the top of the stairway. Exhibit 2, photos 2 and 3, show where she was standing. From her vantage point, she had a direct view east down the stairway. Also, standing where she was, she would not be seen by either McCall, who was sitting in the kitchen, in the chair shown in Exhibit 2, photo 3, or by Hunt, who was in the northwest corner of the living room at the tape deck.

She had consumed 2 drinks of rye and ginger ale between noon or 12:30 p.m. and 2:00 or 2:30 p.m., followed by 2 bottles of beer between then and the time of the accident, which she placed at about 5:00 p.m. She was very firm that she had nothing more than this to drink. I am quite satisfied that her powers of observation and recollection were not adversely affected by the alcohol she had consumed.

When she first saw Mortimer and Cameron, Mortimer was facing her and standing on the first step down from the hall with his back toward the stairs and, therefore, facing west. Cameron was standing in the hall, with his back toward her, facing Mortimer and, therefore, facing east. Mead was standing in the hall to the south and west of both of them. She could not recall what they were saying to each other, but they were laughing and joking.

Each had both his hands on the shoulders of the other. They were pushing each other back and forth but not in a hostile or angry way. Cameron was pushing Mortimer east down the stairs and Mortimer was pushing Cameron west up the stairs. They walked down the stairs simultaneously, one at a time. They continued to push each other in this way all the way down to the interior landing. This took about 30 seconds.

When they reached the interior landing, they stood near its northeast corner, still pushing each other back and forth as they had done on the stairs and were "kibitzing and laughing". They stayed on this landing another 20 or 30 seconds. In direct examination, she said that Mortimer was moving backwards and Cameron gave him a push. Mortimer seemed to catch the back of his heel on the raised threshold in the doorway between the interior and exterior landings. This caused him to fall backwards to the east and, in doing so, he pulled Cameron toward him. She did not see the exterior landing and did not know which of them hit the exterior landing wall. Her last recollection was of Mortimer tripping. She heard a crash and then ran down the stairs to see what had happened. She never saw both of them standing in the hall at the top of the interior stairs before they began to go down them toward the interior landing.

The following are some of the excerpts from the transcript of her evidence that relate to her description of how the fall occurred and the actions of Mortimer and Cameron on the stairs and on the landing. First, from her direct examination:

Q. In the course of Cameron and Mortimer going down the five steps on the interior stairwell of the Hunt apartment, did you observe whether either of the gentlemen had their feet leave the ground, both feet leave the ground, as they went down those five interior steps?

A. No. They walked right down the stairs.

Q. As they went down the stairs, what was Stephen

Mortimer trying to do, from what you observed about his actions?

A. He was pushing John Cameron back. John was pushing him and he was pushing back.

Q. Was Stephen Mortimer successful in pushing John Cameron up the stairwell?

A. No.

Q. Was John Cameron successful in pushing Stephen

Mortimer down the steps of the interior stairwell?

A. Yes.

The following 2 excerpts are from the transcript of her cross-examination by Mr. Williams:

Q. Now, when they were going down the stairs, as you have described it, this took a number of seconds?

A. 30 seconds, uh-huh.

Q. And they appeared to be fully in control of themselves, the two of them?

A. Yes. They weren't staggering or ...

Q. You didn't have any concern for either of their safety at that point?

A. No.

Q. And it appeared to you that what Stephen Mortimer

was doing was walking down one stair and John Cameron would follow?

A. Yes, walking down, yes.

Q. Walking down the stairs together?

A. Right.

Q. One step at a time?

A. Oh-huh.

Q. Yes?

A. Yes.

Q. And there wasn't any pushing or shoving that was helping them down the stairs, they were going down in a controlled way?

A. They were pushing and shoving each other all the way down the stairs.

...

...

Q. And would you be able to discern whether Mr. Cameron pushed Mr. Mortimer or whether Mr. Mortimer pulled Mr. Cameron toward him? I am suggesting to you that that movement might appear to be exactly the same thing to you.

A. Steve fell backwards first, so.

Q. Steve fell backward first?

A. Yes.

Q. And what caused Steve to fall backward was that four-inch rise that you described?

A. Yes.

Q. And as a result of John Cameron being attached to

him?

A. He pulled him automatically.

Q. Cameron was pulled toward Mr. Mortimer?

A. Yes.

The following is an excerpt from Mr. Brown's cross-examination:

Q. And then you say Cameron pushed Mortimer to the doorway?

A. No.

Q. And Mortimer tripped?

A. Mortimer tripped, yes.

Q. Yes. And pulled Cameron with him?

A. John, yes.

On cross-examination, Mr. Caskey asked her:

Q. All right. Do you recall whether Cameron would take the first step down and then end up on the step with Mortimer, or Mortimer who would take the first step back and be two steps lower than Cameron?

Q. No. They walked simultaneously down the stairs. They walked together down the stairs.

Q. So that what you saw was as if one of them said to the other, "Okay, go. Left foot. Right foot." So they both went down at exactly the same time?

A. John was one stair up and they just kept moving down.

She also stated that there was only one step between them at all times. They were never both on the same step together. They went down the stairs, Cameron one step higher than Mortimer, all the way to the landing just holding onto each other. It took approximately 30 seconds for them to do so.

She agreed that she thought they were on the landing for another 30 seconds and were engaged in "the same sort of motion where they were each controlling each other's shoulders". And then Mr. Caskey asked:

Q. And that's when Cameron appeared to push, to you, Mortimer back, as a result of which he caught the stoop?

A. Yes.

Q. Now, at that point in time, they were still holding onto each other?

A. Yes.

On direct examination and in cross-examination by Mr. Caskey, Head testified that Cameron pushed Mortimer on the interior landing and that Mortimer then fell backwards, after tripping over the threshold. On cross-examination by Mr. Williams and Mr. Brown, she seemed to say that Cameron did not push Mortimer before he tripped on the threshold. Mortimer and Cameron had been pushing each other all the way down the stairs and were still holding onto each other on the landing.

The evidence which Mead gave first and last was to the effect that Cameron had pushed Mortimer before he tripped. I conclude that this is probably what happened.

Counsel for the City and Stingray urge me to accept Cameron's version of how he and Mortimer traversed the stairs. Their position is that Mortimer and Cameron came hurtling down the stairs gathering momentum and, therefore, hit the plywood panel with terrific force; a force that resulted from an activity that they submitted would not constitute an expected and usual use of the premises.

In support of this position, Mr. Caskey points to the evidence that the vertical batten along the south side of the plywood panel, which was referred to in evidence as P1, was fractured horizontally about a quarter of the distance down from the top of the window above the panel, as shown in Exhibit 2, photo 7. Also, the horizontal batten across the bottom of P1, was fractured horizontally. The horizontal batten under the window at the top of P1 was pulled off when P1 came loose. Some of the nails pulled through P1 and remained in the stud frame, while others were pulled from the frame and went with the plywood.

However, Mr. Blaney, a consulting engineer called on behalf of the plaintiffs, testified that it looked to him as if the stairway had been built from salvaged or used "two by fours". The battens appeared to be made from tongue and groove material, more suitable to flooring. On cross-examination by Mr. Caskey, Blaney said that he had been on the site and the materials appeared to him to be "old and weathered". He would not speculate "on how much strength was left in them or the plywood or the nails". He would not agree that it was more probable, given these conditions, that the panel was dislodged and the battens were broken as a result of an excessive force being applied to the plywood, caused by Mortimer and Cameron hurtling down the stairs. I conclude that it would not have taken a great deal of force to do the damage to the battens and other wooden members that occurred when the P1 was dislodged, given the age and weathered condition of those members.

Mr. Quaile, another engineer called on behalf of Mortimer, in cross-examination by Mr. Caskey, said that the size of the people and the speed with which they hit the panel would be important factors. Cameron weighed approximately 180 pounds and was approximately 6 feet tall on the date of the fall. Mortimer weighed approximately 185 pounds and was approximately 5 feet 9 inches tall.

In cross-examination by Mr. Caskey, Blaney said in effect that if two people were standing on the interior landing, as Mortimer and Cameron were, and one of them with his back To the threshold fell backwards and the other one fell forward toward and on top of the first one, the forces generated would be aimed down toward the landing and not outward against the exterior wall of the exterior stairway. The lateral force against the wall would be much less than their weight because a lot of the force would be consumed by the impact on the landing. The impact with the wall would be like a "secondary collision" and their bodies would also absorb some of the energy of that impact. In his opinion, whatever momentum they had left when they hit the panel would not be very large.

Mr. Jablonsky, a consulting engineer called on behalf of the City, agreed, in cross-examination by Mr. Morse, that in a similar situation, where someone was walking backwards and tripped over the threshold and fell back toward the plywood, the force of gravity would be acting vertically and the other forces would be acting horizontally.

I accept Cameron's evidence that he encountered no resistance when he hit P1 with his left shoulder and that he hit it before Mortimer did. He suffered no serious injury from the fall. He had pain in his left shoulder, neck and head but suffered no broken bones. He did not see a physician nor did he lose any time from work. On cross-examination by Mr. Morse, he agreed that the pain to his neck and head came from his contact with the ground and not from hitting P1. I conclude that he really did not hit P1 with very much force.

There is other evidence to support this conclusion. Exhibit 2, photos 6 and 13, show that there was grass immediately under the stairway and for a very short distance to the east of it. Then, further east and contiguous with the grass was the driveway. According to Hunt, Mortimer landed with his head on the grass and the rest of his body on the asphalt driveway. His head was pointing west toward the building and his feet were pointing east away from it.

Cameron testified that he landed on the grass facing the house. His feet were to the north and his head was to the south. Cameron also stated on cross-examination by Mr. Morse that after going through P1, he fell nearly straight down and landed almost directly under the stairwell, as opposed to some distance to the east of it. He agreed this was because he had

very little momentum from falling on the landing. In fact, he agreed there was barely enough momentum to carry him over the landing once P1 had "popped off". He also agreed that this occurred after he tripped over the threshold.

Obviously, Mortimer and Cameron did not travel very far east after they went through the wall of the landing. It offered almost no resistance to Cameron's shoulder and there was barely enough momentum after hitting the plywood to carry them over the landing. If they had come down the stairway out of control gathering speed as they did, one would have expected them to have hit P1 with greater force and landed further east than they did, given the fact that P1 offered such little resistance to their passage. The fact that they landed on the ground so close to the stairway is consistent with most of the force of the fall, which resulted only from tripping over the threshold, being absorbed by the floor of the landing and a "secondary impact" of much less force against P1. In my opinion, it is much more probable that they hit P1 after simply tripping over the threshold, than after hurtling down the interior stairs.

One might normally expect that a person involved in an activity, such as Cameron, would have a better recollection of an event, especially such a traumatic event, than a bystander, such as Mead. However, Cameron has an interest in the outcome of the litigation, whereas Mead does not. She knew neither Mortimer nor Cameron personally before July 17, 1987. She had not spoken with Mortimer before that date and has not spoken with him since. She impressed me as being very neutral and objective in giving her testimony. On the other hand, Cameron seemed quite defensive, especially under cross-examination, which perhaps is not unusual given the allegations of negligence against him. Also, Head had an excellent vantage point from which to view what she described.

I conclude that Mead's version of the fall is more consistent with the evidence as a whole and therefore is more probable than Cameron's version. Her rendition is not inconsistent with the evidence of McCall or Hunt. Mortimer admitted that he had an incomplete recollection of his fall. Therefore, I accept Head's evidence as an accurate description of what transpired from the time she first observed Mortimer and Cameron on the stairs until Mortimer tripped on the threshold and fell backwards toward P1.

I do not think there is any real disagreement among the witnesses about what happened before Mortimer moved from the hall back down onto the first step. I conclude that Mortimer approached Cameron at the top of the stairs and began talking to him in a friendly way. After some time, he extended his left arm toward Cameron. They were still joking with each other. At the time, Mortimer was holding a beer in his left hand. Cameron, quite reasonably, thought that Mortimer was going to pour beer on him and grabbed Mortimer's left forearm with his right hand. He also put his left hand on Mortimer's shoulder and pushed him. Mortimer did not actually pour any beer on Cameron. At this point, Mortimer was standing with 1 foot on the top of the stairs and the other foot on the first step down from the top. These were the actions that McCall and Hunt viewed.

Mortimer put his hands on Cameron's shoulders and they then began to go down the stairs in the manner described by Mead. When they got to the landing at the bottom of the interior stairs, Mortimer and Cameron were still engaged in good natured shoving back and forth. In the course of this "horseplay", Cameron again pushed Mortimer, who went backwards and hit his heel on the threshold. This caused Mortimer to fall backwards and as he did, he grabbed onto Cameron, pulling Cameron toward him. Mortimer hit the floor of the exterior landing, with Cameron, the taller, on top. The momentum of the fall carried them forward and Cameron's left shoulder hit P1. Even though he hit it with little force and encountered little resistance from it, P1 became dislodged. The slight forward momentum that remained was sufficient to cause them to fall from the landing onto the ground below.

4. HOW THE INJURY OCCURRED:

The issue here is whether Mortimer sustained his injury when he was on the landing or when he hit the ground. First, as already indicated, I accept Cameron's evidence that it was his left shoulder that hit P1 and caused it to "pop out" and that Mortimer did not hit P1 with his head or any other part

of his body while on the landing. Secondly, as I have already observed, the degree of force required to dislodge P1 was not very great and certainly not of sufficient magnitude to cause the injury Mortimer sustained.

Dr. Gurr is an orthopaedic surgeon, who specializes in spinal cord injuries and the forces and biomechanics associated with them. He testified that Stephen's spinal cord injury occurred between C4 and C5. The C4 body had been displaced anteriorly and the posterior process of C5 splayed or opened up. In his opinion, the injury was caused primarily by flexion of the neck that may have been accompanied by some rotation to the left or right. In assessing causation from a biomechanical point of view, he said that the 2 most important factors were the magnitude and rate of application of force and the position of the head, neck and upper chest region. The first factor was the most critical one.

Dr. Gurr's opinion was that Mortimer's injury probably occurred as a result of his hitting the ground and not when he fell on the upper landing. He based that opinion on several factors. First, Mortimer recalled no resistance going through P1. Secondly, he had a sense of falling and turned to see the ground below him. Dr. Gurr did not feel that Mortimer would be able to rotate to the degree necessary to see the ground if he had sustained the injury from hitting the wall. Finally, and very importantly, he found it significant that Mortimer experienced no loss of sensation or strength nor did he experience the feeling of "pins and needles" until after he hit the ground. He explained it was likely that the spinal cord injury occurred almost at the time of experiencing the "pins and needles" because the electrical activity transmitted through the spinal cord would be almost instantaneously interrupted and would be appreciated by Mortimer almost immediately.

Despite the alternate theories advanced to Dr. Gurr in cross-examination by Mr. Brown and Mr. Caskey, I have absolutely no doubt that the injury which rendered Mortimer a quadriplegic occurred when he hit the ground and not before.

5. THE STAIRWAY:

(1). BACKGROUND:

I turn now to consider whether the stairway in question was built in compliance with the Code and the City's building by-law then in effect, or, in accordance with then prevailing good building practice.

Before the third building permit referred to in this case was issued, the City adopted Parts 2 to 9 inclusive of the 1970 NBC, by its by-law No. B.-56.269, which is described in the preamble to be:

> A by-law to safeguard life or limb, health, property and public welfare with respect to the design, construction and alteration of buildings by the provision of appropriate minimum standards.

In this case, much technical evidence was led about the provisions of Part 9 and Part 4 of the Code. I conclude that Part 9 was enacted to give easily understood instructions of a nontechnical nature based upon empirical rules. It was designed to guide home owners or general contractors in the construction of simple structures such as the stairway in question. Part 4 provided the technical design criteria that engineers would use to design more complicated structures.

The plaintiffs' position is first, that the stairway failed to comply with Part 9 of the Code. Secondly, if it had complied, Mortimer would never have fallen from the landing and sustained the injury he received from hitting the ground. Finally, the plaintiffs allege that the City's failure to enforce compliance with Part 9 was a direct cause of Mortimer's injury.

The City's, position is that this stairway was not specifically covered by Part 9 of the Code. However, the City claims it met the design criteria contained in Part 4, as demonstrated by load tests conducted by Mr. Jablonsky on full scale models. The City's position is that if the structure satisfied the requirements of Part 4, it did not matter if it failed to meet Part 9 criteria. Moreover, the City claims

that even under Part 9, its Inspector could approve structures that did not fit into any recognizable category of the Code, based on the City's "past practice".

Mr. Turner has been with the City's Building Department since 1960. He testified as the City's representative and explained, among other things, the procedure that would be followed when the City received an application for a building permit, with specific reference to the 3 building permits in this case.

First, the counter clerk in the Building Department takes the application and then sends it for a zoning check and to the Plans Examiner. The Plans Examiner reviews the plans submitted with the application. If the Plans Examiner finds the structure to be satisfactory, he or she approves the application. Then, it is sent to the Chief Building Inspector, who signs the building permit and directs that it be issued. The applicant receives the original permit and a copy is given to the City's Building Inspector.

The Plans Examiner does not inspect the property. He or she inspects only the plans. When the Building Inspector goes to the site to do his inspection, he does not have access to the plans that were filed with the application. Rather, he is guided by whatever might be noted on the actual permit itself in the section entitled, "Remarks". After completing his inspection, he then makes a written report by noting his comments about compliance or non-compliance on the back of the permit.

The 1963 permit provided the following in the "Remarks" section:

> Erect an Outside - Open Stairway - 10' High with 2"X12" Stringers, 2"X10" Treads with 2-Pltforms (sic) 3'X4' -
>
> Cut in Doorway, PROVIDE - HANDRAILS Or Balustrade on ALL
> OPEN SIDES.

The 1963 permit appears to have contemplated cutting a door into the side of the building at the top of the stairway, where a window then existed. The Inspector's report on this work made no mention of the raised threshold.

The "Remarks" section of the 1972 building permit read:

> To construct roof over outside stairway of existing dwelling, and close in.

Turner agreed that in 1972 part of the existing stairway from 1963 must have been eliminated. Probably, the stairway itself remained and the handrail or balustrade was removed. Turner agreed that the notation in the 1972 permit failed to set out any dimensions that might be used by the Inspector to evaluate the work that was done. The application for the 1972 permit, filed as Exhibit 101, under the heading "Brief

Description of Work", stated:

> Construct roof over outside stairway & close in. 2'x4' const. & plywood.

The application contained no other dimensions, nor were any plans filed with it. Turner agreed that without knowing the size of the members; their spacing and the method of construction, it would be impossible for the Plans Examiner to know whether the proposed structure complied with the By-law and the Code. The Inspector would have no idea from looking at the building permit, or even at a copy of the application, what the Plans Examiner thought about the structure. From looking at the permit, he would not be able to determine, for example, the spacing of the studs, their orientation, their height, the thickness of the plywood to be used or the manner of its attachment. Turner agreed that the Plans Examiner had abdicated his function and had left it solely to the Building Inspector to determine if the structure met the Code requirements. This was not the City's normal procedure.

The Building Inspector's report on the work done in 1972 was filed as Exhibit 40. Although the handwriting is somewhat difficult to decipher, I believe it reads as follows:

> Nov. 21/72 Completed - Plywood Construction 2 windows - less than 4 ft from Property line - Downstairs (?) window in enclosure, second means of egress through interior

apartment kitchen - report.

There is nothing that indicates non-compliance and the work was approved.

There is no evidence that the City ever asked the applicant to comply with the requirements of Part 4. I conclude that the work done under the 1972 building permit was approved on the basis that the structure complied with Part 9 of the Code, unless the Inspector was relying upon the City's "past practice". The applicability of Part 4 arose only during the course of this lawsuit. The city resorted to it in an effort to demonstrate, after the fact, that the plywood panel that failed had the capacity to resist "expected" lateral loads against it. The City took no steps at the time the permit was issued or at the time the work was inspected to make that determination using Part 4 criteria.

(2). EXPERT WITNESSES:

Four engineers testified on the issue of Code compliance. Mr. Blaney, Mr. Quaile and Dr. Nawwar testified for the plaintiffs and Mr. Jablonsky testified for the City.

Mr. Blaney and Mr. Jablonsky were both engineers of wide experience but Mr. Quaile, a consulting engineer, was more experienced in matters dealing with wood construction and the properties of wood. He obtained both a B.Sc. and an M.Sc. in Forestry before going into engineering. In his undergraduate work, he specialized in wood science, which had to do with technical specifications relating to the structural uses of wood. His Masters thesis won first prize in an international competition sponsored by the Forest Products Research Society for developing a way to test the shear strength of Douglas Fir beams.

He has been a consulting engineer for over 16 years and either alone or in conjunction with others has authored a number of publications dealing with test procedures for wood and the properties of wood. Mr. Quaile's curriculum vitae was filed as Exhibit 45. It revealed that he has been a member of the Canadian Standards Association Technical Committee on Engineering Design in Wood. In his professional work as President of his consulting firm, he has been involved in the inspection and testing of timber structures, including residential and commercial buildings. He has investigated failures and has done remedial design work for deteriorated and unsafe buildings. He has also engaged in research and development relating to new wood building systems. He has taught Mechanical Properties of Wood and Design of Timber Structures at the University of Toronto. He also supervised the preparation of the technical content of the Canadian Wood Council's 1990 Wood Design Manual.

He displayed an extensive knowledge of the properties of wood in an engineering context. He impressed me as a fair witness who, on cross-examination, was unwilling to yield on certain points, not out of partisanship to the plaintiffs, but simply because his training and experience led him to certain firm conclusions. At other times, especially in his evidence in reply, he readily admitted that he had made a mistake in one measurement and that one aspect of a test biased the result in favour of the plaintiffs. When he disagreed with

Mr. Jablonsky, he had a sound, professional reason for doing so. He impressed me as having more knowledge of the provisions of the Code relating to wood structures than either Mr. Jablonsky or Mr. Blaney. As a result, I have given great weight to Mr. Quaile's evidence.

Mr. Blaney has been the Executive Vice-President of Kleinfeldt Consultants Limited since 1986. In that position, he is responsible for the company's consulting activities. His background is in civil engineering. He also has been designated a consulting engineer by the Association of Professional Engineers of Ontario. His family has been in the construction business for 13 generations. He said he had been "around construction projects" since he was 3 years old. He worked for his father in the construction business in the summers while he was going to school. Even at that stage, he acted as a foreman for the construction of a shopping mall and an apartment building.

He testified that all engineers must have knowledge of the Building Codes and by-laws governing construction. He supervises Kleinfeldt's design work and oversees a staff of 26 in the Toronto office. Everyone ultimately reports to him through the department managers. His primary activity in recent years has been to investigate buildings and report to their owners about whether they comply with the relevant Building Code and good building practice. His usual clients are financial institutions, banks and pension funds. His extensive and varied project experience is set forth in his curriculum vitae, which was filed as Exhibit 31. I conclude that he has a very good knowledge of building Code requirements as well as practical, first hand knowledge of proper construction techniques.

Mr. Jablonsky was older than either Mr. Quaile or Mr. Blaney and has practised as an engineer longer than either of them. He is also designated as a consulting engineer. He is the managing partner of Jablonsky, Ast and Partners. As such, he has overall responsibility for all the firm's activities, including "senior technical contribution to the structural design of high rise and low rise residential, commercial and industrial buildings." His firm is involved principally in the design of new buildings and works for and with architects. They work with many different materials including wood. Although not as many of his professional opinions relate to wood, he said that he had studied under one of the foremost wood engineers in Germany and he "did the wood structures" at the Fort Erie Race Track.

His curriculum vitae was filed as Exhibit 103. Mr. Jablonsky was listed in the 1970 National Building Code as a member of the Joint CSA/NBC Subcommittee on Reinforced Concrete Design. However, prior to the load tests he supervised in connection with this case, he had never before conducted load tests on wooden structures. He admitted that he and his partner, Mr. Garshon, followed their own procedures for conducting the load tests. The tests were based on their experience in conducting load tests on materials other than wood. In his opinion, "A load test is a load test." However, judging from different CSA standards that apply to different materials, I conclude that materials such as steel and concrete have different properties than wood. Therefore, the methods appropriate to conducting load tests on such other materials may not necessarily apply to wood. For example, although he did not agree that it applied, he was not aware of CSA S307-M1980 before he read about it in Quaile's first report. However, after reading it, he changed his test procedures.

(3). PART 9 COMPLIANCE:

Mr. Caskey submits that in 1972, the then existing exterior staircase, built in 1963, was enclosed simply to prevent its exposure to the elements. Also, the enclosure protected the users of the stairway from wind, snow and rain. He refers to the exterior plywood as "cladding" and submits that the area through which Mortimer and Cameron plunged was not a "wall", within the contemplation of the Code. He suggests that because it was never intended as a wall, it should not be treated as such for purposes of assessing its compliance with the Code requirements. It is his position that the "sill" under the window constituted a "guard". It, together with the plywood panel affixed to it, constituted a "balustrade" within the meaning of the Code. Therefore, he submits that the staircase complied with Part 9.

In my opinion, if this had been an open, exterior stairway, as it clearly was before it was enclosed pursuant to the 1972 building permit, the Code provided in s. 9.8.7.3. that an exterior landing more than 2 feet above grade "shall be protected by balustrades on all open sides". A handrail was also required. A "balustrade" was defined in the Code as:

> a protective barrier that acts as a guard around openings in floors or at the open sides of stairs, landings, balconies, mezzanines, galleries, raised walkways or other locations to prevent accidental falls from one level to another. Such barrier may or may not have openings through it. [Emphasis added].

The function of a balustrade is "to prevent accidental falls from one level to another". If the protective barrier were a wall, such as that of which P1 was a part, then it

should have been constructed in such a way as to perform the same function.

If this were an interior stairway with more than 2 risers, s. 9.8.7.1. of the Code provided that:

> ... the sides of the stair and the landing or floor level around the stair well shall be enclosed by walls or be protected by handrails or balustrades, except that a stair to an unfinished basement or cellar in a dwelling unit may have one unprotected side.

Whether this particular structure is construed as an interior or an exterior stairway, there should have been in place a protective barrier, a properly constructed balustrade, or a wall that "enclosed" the "landing", that would prevent accidental falls from the landing to the ground below. In my opinion, the Code demanded no less and certainly good building practice required it.

I shall deal first with whether a properly constructed guard or balustrade was in place. I accept Quaile's opinion that if the window "sill" were to be considered as a guard, it would have to be part of a construction that extended down to the landing and the guard as a whole would have to be capable of meeting the safety and serviceability requirements of the Code. The last sentence of the definition of "balustrade" specifies that it must act as a barrier that may or may not have openings through it. In my opinion, this clearly supports Quaile's position that it must extend down to the landing. Otherwise, it would not constitute a "protective barrier" for the benefit of persons on the landing, 10 feet above grade.

On cross-examination by Mr. Williams, Turner agreed that the definition of "balustrade" contained in s. 9.8.7.1. was a definition that depended upon function, i.e., what a balustrade is intended to do. He agreed that it anticipated accidental falls from one level to another and that its function was to prevent that from happening. I agree with this functional approach, which is in keeping with the purpose of the By-law, namely "to safeguard life or limb".

According to Mr. Caskey's submissions, P1 was attached To the studs merely as "cladding" to protect the stairs and the people using them from the elements. If this is the case, then I conclude there was no intention to have P1 function as a balustrade. It certainly failed to do so because it permitted Mortimer and Cameron to fall accidentally from the landing to the ground below. In making that observation, I have not lost sight of the fact that, as far as the City is concerned, I am bound to look at the condition of the structure as it existed at the time it was inspected in 1972 and not at the time it failed in 1987. I shall have more to say about its condition in 1987 later when I deal with Stingray's position.

Notwithstanding Mr. Caskey's cross-examination of Quaile on the sections in Part 3 dealing with exits, the evidence of Jablonsky and Turner, the submissions of counsel for the City and Stingray, I find, on the basis of Quaile's evidence, that the sill under the window did not constitute a guard or balustrade within the meaning of the section. Nor did P1, because it was not fastened properly to the wall studs.

I accept Quaile's evidence that in order to comply with the 1970 NBC, the upper landing had to be enclosed by walls or protected by handrails or balustrades. I turn then to look at the adequacy of the enclosure as a wall of which P1 was a part in terms of Code compliance.

The construction of that wall was deficient in many ways. I find the following to be some of the contraventions of the City's Building By-law, which incorporated Part 9 of the 1970 NBC.

As already noted, the application for the building permit was not accompanied by drawings or specifications of the work to be done as required by s. 1.5.4. of the by-law. That section provided that the drawings should include:

> All information necessary to ensure that the building or structure, if constructed, will conform to all by-laws of the Corporation.

That was not done. The Plans Examiner, therefore, had

insufficient information to assess Code compliance, yet the City issued a building permit.

The 3 vertical 2x4 studs forming part of the frame of the east side of the landing were referred to in evidence as S0, S1 and S2. S0 was the most southerly and S2 was the most northerly of these 3 studs. They were installed "on the flat", that is with the 4" dimension parallel to the wall face rather than at right angles to it as required by s. 9.23.10.2. of the Code. P1 was 4 feet wide. Its south edge was nailed from the outside into the east or outside face of S0 and into S2 at its north edge. I am satisfied from the evidence of Blaney and Quaile, notwithstanding Jablonsky's evidence to the contrary, that studs at right angles would have been less likely to deflect and would have given greater strength to the structure and increased the wall's ability to resist lateral forces projected against it.

It is true that Table 9.23. 10.A of the Code provides that studs may be placed on the flat when they are not supporting a load. However, in that case, they must be spaced at not more than 16 inches on centre and must be not more than 8 feet high. Otherwise, Table 9.23.10.A provides for a maximum stud spacing of 24 inches. Here, these studs were supporting the roof and the snow load that would be upon it in the winter. They were also subject to wind loads. The vertical studs should have been spaced at not more than 24 inches on centre. In fact, Quaile's evidence was that good building practice required that the studs be spaced at not more than 16 inches on centre.

The distance between S0 and S1 was about 37 inches on centre. The distance between S0 and S2 was about 44.5 inches on centre. Between S0 and S1 there was a window above P1. The lower edge of its sill was about 44.5 inches above the floor of the landing. Quaile's opinion was that Cameron probably hit P1 toward the most northerly half of the panel but to the south of S1 at a point about 16 to 18 inches above the floor of the landing. Mortimer and Cameron went through the wall between S0, S1, the lower plate that was "toenailed" to the landing and the lower edge of the window sill.

This stud wall did not have a bottom plate as required by s. 9.23.11.2. of the Code. If a bottom plate had been installed with its wider surface resting on the landing, the vertical studs could have been fastened to the plate by nailing through the plate from below, up into the studs, before it was fastened to the landing. Then, it could have been fastened to the landing with nails driven vertically from above through the plate into the landing. Here, the 2x4 that joined S0 and S1 was installed with its 4 inch face parallel to the wall surface, "on the flat", rather than having that face lying on the landing. It was "toenailed" from above at its junctures with S0 and S1. "Toenailing" involves joining 2 wood members by driving a nail at an angle through 1 into the other. It is a much weaker method of fastening than the proper method of fastening studs to a base plate, as described above.

I have no doubt that if the east wall of the landing had been properly built with vertical studs at right angles to the face of the plywood and spaced at 24 inches on centre as required by the Code or at 16 inches on centre as required by good building practice and properly nailed to a properly installed base plate and window sill, it would have restrained Mortimer and Cameron and would have prevented them from an accidental fall to the ground below.

I accept the evidence of both Blaney and Quaile to the effect that if this structure had been built in accordance with Part 9 of the Code, it would have withstood the force resulting from Mortimer and Cameron falling against it. I am convinced that a vertical 2x4 stud, properly installed under the window between S0 and S1, would have resisted the force generated by Mortimer and Cameron when they fell against the wall. In 1972, the cost of a 2x4 stud approximately 44.5 inches long would have been insignificant. Such a stud could have been incorporated easily in the east wall of the landing when it was being built.

(4). GOOD BUILDING PRACTICE:

I turn now to consider whether the stairway, and particularly the wall of which P1 was a part, was built in

accordance with "good building practice" or the City's "past practice".

Mr. Caskey's position is that the Building Inspector was entitled to rely upon the "past practice" of the City in approving structures which did not fall into any recognizable category of the Code and that he had a certain amount of discretion in this regard. He relies upon s. 9.3.1.4. of the Code which provided:

> Materials, systems and equipment not specifically described herein, or which vary from the specific requirements in the Part, or for which no recognized test procedure has been established, may be used if it can be shown that the material, system or equipment is suitable on the basis of past performance, or good engineering practice or on the basis of tests described in Article 9.3.1.5. [Emphasis added].

and s. 9.3.1.5:

> Where no published test method exists the test shall be designed to simulate or exceed anticipated service conditions or shall be designed to compare the performance of the material, system or equipment with similar material, system or equipment that is known to be acceptable. [Emphasis added].

Quaile testified that the staircase was built employing conventional wood frame construction. Such construction was "specifically described" in Part 9 of the Code, which, therefore, applied to the exclusion of any City "practice".

Turner agreed that any "past practice" of the City would have to comply with and not be contrary to "good building practice". He agreed that the City would not develop a practice that established criteria less stringent than the minimum requirements of the Code. Also, the City would only establish such a practice where the Code was silent. If the Code were silent as to the requirements for balustrades for interior or exterior stairs, the City would develop a practice in accordance with good building practice. Between 1960 and 1972, the City had no practice that would permit the spacing of balusters on exterior stairs in excess of 24 inches.

Based on his 30 years of experience, Turner believed he was qualified to assess good building practice. He and the Chief Building Inspector, Mr. Cerminara, inspected the stairway after the accident on June 14, 1988. On cross-examination by Mr. McCall, Turner testified he told Cerminara that maybe they should have had a 2x4 between S0 and S1. If he had been the inspector for the work done in 1972, which he was not, he would have required the owner to use studs spaced at 24 inches on centre or he would not have approved the work. Nor would he have approved the work unless there had been a vertical stud below the window between S0 and S2. He would have issued a compliance order and if the owner had not complied, he would have issued a stop work order.

If he had examined the stairwell, he would have referred to the section of the 1970 Code that dealt with walls and the spacing requirements for exterior walls. He said that the usual practice of the City was to require studs to be spaced at 24 inches on centre in exterior walls. Therefore, he would have required the studs to be spaced at 24 inches on centre, because that was the usual practice applied by the City. He agreed that this stairway, lacking a wall built with vertical studs spaced at 24 inches on centre, did not comply with that practice.

He also agreed that P1 was not designed to resist lateral forces from someone falling on the landing against it, but was there for wind resistance. If someone had suggested to him that P1 was sufficient to resist lateral forces, he would not have accepted the application because he knew that 3/8 inch plywood, the thickness of P1, was not going to resist the lateral forces in that configuration.

Another very important deficiency in the structure resulted from fastening P1 to S0 and S2 with nails in withdrawal rather than in shear. P1 was placed on the east or outside surfaces of the studs and the nails were driven into the plywood from east to west, i.e., from the outside in.

Therefore, if a lateral load were applied to P1 from inside the landing toward the east, as was the case when Mortimer and Cameron fell, the nails would be much less likely to hold than if the lateral force were travelling in the opposite direction.

Blaney referred to the 1955 Wood Handbook: Basic Information on Wood as a Material of Construction with Data for Its Use in Design and Specification, prepared by the U.S. Department of Agriculture. An extract from it was found at Tab 5 of exhibit 34 where, at p. 165, it states:

> The withdrawal resistance of nails is greatly affected by such factors as type of nail point, type of shank, time the nail remains in the wood, surface coatings, and moisture content changes in the wood...
>
> The resistance of a nail to direct withdrawal from a piece of wood is intimately related to the density or specific gravity of the wood, ... the diameter of the nail, and the depth of penetration.

Blaney said that due to moisture in the wood, the wood around a nail can rot and when the nail is in tension it can "work out". He said this principle is known to people familiar with good building practice.

Using nails in withdrawal was contrary to CSA Standard 086-1970, which was made applicable by s. 4.3.2.1. of the Code. From the evidence of both Blaney and Quaile, I conclude that the use of nails in withdrawal did not accord with good building practice and that this fact was widely known.

Not only was this method not in accordance with good building practice, it is probably the case that the nails used were of insufficient size. Blaney made certain observations when he attended at the scene on April 6, 1988. He said that the nails used to fasten the plywood to the frame appeared to be 2 or 2.5 inches long. He based this conclusion on the size of the nail heads because he did not pull any from the wood. On cross-examination by Mr. Caskey, he admitted that he never made an examination to see what length the nails were and agreed that he was engaging in speculation and conjecture. However, he said that judging from the size of the head of the nails, he would "be generous in saying they were 2-1/2 in. long". He said he could estimate the length of the nail by looking at the size of the hole and the location where it used to be. Based upon his experience in construction, I accept this statement.

Cameron testified that when he saw the plywood lying on the ground after his fall, the nails reminded him of one and a half inch finishing nails, but he could not be sure. He also noted that the nails were rusty. On cross-examination by Mr. Morse, he said he thought they were finishing nails because they were "skinny" and he thought they were approximately 1.5 inches long.

The day after the accident, Mortimer's father went to the scene and found a piece of plywood leaning against the wall of the building. The painted, exterior side of the plywood was against the wall and the interior side was facing him. A strip of the vertical 2x4 to which the plywood had been attached on the north side of the structure was still adhering to the plywood. There was a "hole" in the wall of the landing where the plywood had been. He inspected the plywood and testified that the wood was soft at the bottom and was rotten. He said that the nails had pulled through the bottom of the panel and that there were rusty nails on the bottom "of the hole" in the frame where "the weather had gone in". He said there were no nails in the vertical studs of the stairwell; they were in the plywood on the ground. He said a lot of them were quite bright but there were a few rusty ones at the bottom of the panel, i.e., on the north and south side of the panel and all along the bottom. The nails he found still in the stairwell and in the plywood were round nails. They had no screw, twist or spiral to them.

Turner agreed that if the nails initially used to fasten P1 to the frame were finishing nails, they would not be capable of fastening the plywood properly.

Based on this evidence, I conclude that it is more

probable than not that the nails used to attach P1 to S0, S2, the sill under the window and the plate at the bottom were of insufficient size. Even without this finding, I conclude that the construction fell far short of good building practice. Based upon Turner's statement that any past practice of the City would have to comply with and not be contrary to good building practice, it follows that this construction could not comply with the City's past practice. If it did, then the City's practice was unreasonable and unacceptable.

(5). PART 4 COMPLIANCE:

I turn to consider whether the stairway complied with Part 4 of the Code, as incorporated in the City's building by-law. The evidence in support of the applicability of Part 4 came principally from Jablonsky. While agreeing that Part 9 applied to small buildings such as the one at 587 Central Avenue, he said that Part 4 provided the design criteria that applied to all buildings and he found nothing in Part 4 that excluded small buildings.

Mr. Jablonsky relied upon s. 4.1.1.3.(1), which read:

> Buildings and their structural members shall be designed to have sufficient structural capacity to resist safely and effectively all effects and influences that may be expected, and shall in any case satisfy the requirements of this section.

Section 4.1.1.4 provided that "buildings and their structural members shall be designed by one of the following methods": the design procedures and practices provided by sections 4.2 to 4.8 inclusive, or, l of the following 3 bases of design: analysis based upon generally recognized theory; evaluation of a given fullscale structure or a prototype by a loading test, or, studies of model analogues, "provided the design is carried out to the satisfaction of the authority having jurisdiction by a person especially qualified in the specific method applied and provided the design ensures a level of safety and performance at least equivalent to that provided for or implicit in design carried out by the methods referred to in Clause 4.1.1.4(a)."

Jablonsky decided to conduct load tests because he felt if he could demonstrate that the structure had been "designed to have sufficient structural capacity to resist safely and effectively all effects and influences that may be expected", it would not matter if the requirements of Part 9 relating to a stud wall had not been met.

Blaney also considered Part 4 of the Code, but he did not perform load tests. Rather, he utilized one of the other 3 bases of design provided for in s. 4.1.1.4.(b) of the Code that involved certain mathematical calculations. As a result, he concluded that the plywood sheathing did not meet the minimum design loads required by Part 4. On cross-examination by Mr. Caskey, he agreed that the full scale model test was the more accurate method. He also agreed that in the engineering field actual tests were in many cases better than mathematical analysis.

However, he said it has been known for years that one should not nail in withdrawal. He also said that the Code was very specific in Part 9. Therefore, he felt it unlikely that anyone would do a load test because "a recognized test procedure has been established" within the meaning of s. 9.3.1.4.

When asked by Mr. Caskey to agree that the wall would not contravene the Code if it withstood the forces set out in part 4, it was Blaney's opinion that the wall did not meet part 9 for many reasons and that an engineer would be imprudent to ignore the Code and build it another way. In doing so, he or she would be taking a risk.

He also took s. 4.3.1.4. into account and concluded that it had been violated because the plywood, if it were considered a balustrade, had failed to prevent Mortimer's fall. Moreover, the plywood was nailed to the exterior of the frame by nails in withdrawal and had probably been attached using nails of insufficient length. In these circumstances, he concluded that the thin plywood sheathing could not have been expected to resist lateral loads from the inside of the

stairway. In his opinion, the stair lacked any form of fall protection.

Jablonsky did not take issue with the accuracy of Blaney's calculations. However, he said that Blaney used the design criteria of the 1975 Ontario Building Code rather than the 1970 NBC criteria. He also felt that one of the problems with testing by mathematical calculation was that one had to make a great number of assumptions. Therefore, he felt a better way to answer the question was to do load tests on a full-scale model.

Initially, he did 4 load tests, on February 21, 1991. He described them in a report dated February, 1991, that he sent to the City's solicitors. He based his prototype on the model described in Blaney's report. However, after receiving another report, he realized that his first prototype had been constructed using vertical studs at right angles to the surface of the plywood, rather than on the flat as in the "as built" structure. Therefore, the results were misleading because the structure tested was not the same as the "as built" structure.

In his second try, he did 6 more load tests, (Numbers 5 to 10 inclusive), on March 27, 1991. The results were incorporated in his second report dated March, 1991. Then, he received Quaile's first report and yet another sketch with a different configuration for the construction of the stair enclosure at the upper landing. Quaile had reviewed both the Blaney and Jablonsky reports and found mistakes in each that he referred to in his first report. Jablonsky accepted the fact that the Quaile sketch was "the correct one and the other sketches were incorrect." It showed S1, which had been missing from the other sketches, and had correct dimensions for the window sill, which was not shown on the flat.

Therefore, on April 8 and 9, 1991, Jablonsky conducted a third set of load tests, (Numbers 11 and 12), on a revised prototype, the results of which were incorporated in his third report, dated April, 1991.

Finally, he decided to do 2 more load tests because he did not like the fact that one of the studs had broken in the third set of tests and he wanted to repeat the tests to see if the stud might just have had a weak spot. Tests 13, 14 and 15, done on April 9 and 11, 1991, were the subject of the fourth report, also dated April, 1991.

In the first 4 tests, Jablonsky employed both the loads prescribed by the 1970 National Building code and the 1975 Ontario Building Code. The National Building Code provided for a line load of 150 pounds per lineal foot. The 1975 Ontario Building Code prescribed a line load of 100 pounds per lineal foot plus a uniformly distributed load of 20 pounds per square foot. Test 5 used the 1975 OBC criteria. In Test 6, he used the 1970 NBC criteria. In Test 7, the load was 110 pounds concentrated at the centre line of the panel. In Test 8, he used a line load of 55 pounds per lineal foot, plus a concentrated load of 220 pounds at the centre line of the panel. In Test 9, he used the load prescribed by the 1970 NBC. In Test 10, he tried to determine the ultimate capacity of the panel and loaded it at its centre line to a maximum load of 1,045 pounds. When the load was increased to 1,100 pounds, one of the studs failed in bending. In Test 11, he employed a uniformly distributed load of 50 pounds per square foot. In Tests 12 to 15 inclusive, a line load of 250 pounds per lineal foot was used.

On the basis of all these tests, Jablonsky concluded, in his reports and in his direct examination, that the original "as built" assembly was capable of sustaining the loads prescribed by Part 4 of the 1970 NBC. After a relatively brief cross-examination by Mr. Williams and Mr. Brown, Mr. Morse then began a detailed, lengthy and persistent cross-examination.

During the course of it, Mr. Jablonsky agreed to the following:

1. His thesis was that if P1 could withstand the load prescribed under Part 4, it did not matter that there was no stud under the window, as required by Part 9 of the Code.

2. The method he used to prove his hypothesis was to

evaluate the capacity of the "as built panel".

3. Initially, he intended to prove his hypothesis by building a prototype to simulate the "as built" condition described by Blaney.

4. He set out to test the prototype using the criteria in the 1975 OBC, as identified by Blaney, and the 1970 NBC criteria, which Blaney had not used, but which Jablonsky knew were relevant.

5. The first four load tests, described in his first report, did not confirm his hypothesis that the "as built" structure had the capacity to withstand the

lateral forces required by the 1970 NBC, because:

(1) the model employed studs at right angles to the surface of the plywood, rather than "on the flat", which was the configuration of the "as built";

(2) the dimensions for the height and width of the panel were understated;

(3) the face grain of the plywood on the model was placed on a different axis from the "as built";

(4) Ardox (spiral grooved) nails were used in the model, whereas smooth nails were used in the "as built".

6. P1 should have been capable of providing the structural capacity to resist the lateral load prescribed by Part 4 and prevent a fall to the ground below.

7. P1, S0, S1 and S2 are "structural members" and as such must all satisfy Part 4 of the 1970 NBC and conform to CSA Standard 086-1970, "Code of Recommended Practice for Engineering Design in Timber", as contained in NBC Supplement No. 4, Canadian Structural Design Manual, 1970 and as made applicable by s. 4.3.2.1.

8. When designing a structure, one should have regard to both the strength and performance or serviceability of a structural member. One of the features of performance is deflection and Part 4 of the Code provides for allowable deflection. If he were an engineer who was considering the use of his seal to confirm compliance with the 1970 NBC, he would conform to CSA 086-1970 and would ensure that the structure met all the requirements of that standard and specifically the deflection requirements. At first, he did not believe that this structure had to comply with the deflection requirements of CSA 086-1970, but agreed that if he were wrong, the structure clearly did not meet the deflection limitations prescribed by it. Later, he agreed that he would test the east wall of the landing for both strength and deflection, but said that the deflection requirement was secondary to the strength requirement.

9. If there were a lateral deflection of the studs due to wind loads, one might expect to see the tops of the studs, where they were fastened to the roof joists, become unfastened. If this occurred, the structure would not perform as expected by the Code. After viewing the lower photo in Exhibit 91 and Exhibit 125, which showed the separation of the roof stringer from the roof joist at S3, S4 and S5 and that S3 had been nailed to the stringer with nails in withdrawal, he agreed that the separation could have been caused by wind suction due to normal winds. If that were the case, the stairwell failed to comply with the 1970 NBC. He agreed that it was not good engineering or building practice to have the roof stringers and joists joined by nails in tension or withdrawal. It was then evident to him, contrary to his earlier belief, that the stairwell did not conform to the 1970 NBC.

10. When testing the capacity of P1 to satisfy the requirements of the Part 4 load criteria, he was concerned with the area of the plywood between S0 and S1 and between the lower and upper studs to which P1 was attached, i.e., the "sill" under the window and the lower plate. With respect to the tests reported upon in the third and fourth reports, part of the load was placed upon the panel and part of the load was placed upon the studs. This was referred to as "load sharing". Therefore, he could not say how much of the load was borne by the panel and how much was borne by the studs and was not reporting on the capacity of the plywood alone to meet the load requirements of the 1970 NBC.

11. He could "not exactly" point to any test in reports 1 to 4 to show that the plywood panel between S0 and S1 below the sill under the window and above the lower plate met the Part 4 requirement of 150 pounds per lineal foot.

12. Table 2 dealt with the first prototype built as per the information in the Blaney report with the studs at right angles to the face of the plywood. Table 12 dealt with the "Quaile panel", with the studs "on the flat". Under the 1970 NBC line load of 150 pounds per lineal foot, the deflection reading for the plywood panel on Table 2 was 14 mm, whereas on Table 12 it was about 32 mm. The CSA 086-1970 deflection limit was about 14.5 mm. When the studs were at right angles to the face of the plywood, as required by Part 9 of the Code, the deflection of the plywood panel was dramatically reduced and within the prescribed limit, whereas when the studs were "on the flat", the deflection was well in excess of twice the deflection limit. In addition, when the studs were "on the flat", some of them failed or broke at less than Part 4 design criteria, whereas when they were at right angles to the face of the plywood, they did not.

13. Employing limit states design, he used a safety factor of 1.5 times the 1970 NBC design load of 150 pounds per lineal foot and a resistance or "phi" factor of 0.9. He determined the test load as follows: 150 (pounds per lineal foot) x 1.5 (safety factor) / 0.9 (resistance factor) = 250 pounds per lineal foot x 4 (the width of the panel in feet) = 1,000 pounds. Limit states design was a relatively new method that "came out" in 1989, and was therefore not available in 1972 when the application for the building permit was made. Unless there were something wrong with the model tested, if members of the models that were tested failed when less than 1,000 pounds was applied, it could not be said that the "as built" structure met the Part 4 requirements. The outcome of the 1,000 pound test on the "as built" structure was reported in Table 12. The stud broke at 850 pounds before the load of 1,000 pounds was achieved and therefore did not meet the Part 4 requirements. Table 13 dealt with the second model tested in accordance with the limit states design formula. It failed after 4 hours. He discarded the results of this test because it was learned that the ends of the "sill" under the window were not nailed to the studs S0 and S1. Tables 14 and 15 showed deflections greatly exceeding the CSA 086-1970 deflection limit and, therefore, non-compliance with Part 4 of the Code.

14. The resistance or "phi" factor of 0.9 was not appropriate to measure the capacity of the plywood. A more appropriate "phi" factor would be 0.6. Using a factor of 0.9 biased the results in favour of the City. Applying a "phi" factor of 0.6, Jablonsky calculated the load would be 375 pounds per lineal foot. When applied to the 4 foot panel, the total load would be 1,500 pounds. The "phi" factor of 0.6 did not take into account the fact that the nails were in withdrawal and, therefore, would have even less resistance.

15. With reference to Table 14, he had no idea whether the "as built" model would have sustained a load of

1,500 pounds. More likely than not the "as built" model would have failed under a load of 1,500 pounds in tests 14 and 15.

16. If the plywood had been fastened into the studs with nails in withdrawal, as was the case in the tests reported in reports 3 and 4, the "as built" panel did not satisfy the requirements of Part 4 of the Code.

At the very least, Mr. Morse's cross-examination of Jablonsky greatly weakened the City's contention that the "as built" structure met the requirements of Part 4 of the 1970 NBC. Quaile's evidence dispelled any lingering doubt. He testified that in his opinion the structure clearly failed to comply with Part 4. Jablonsky recognized Quaile as a person who was authoritative in matters relating to wood design and an expert in fastenings in wood and agreed he would defer to Quaile's opinion in such matters.

Contrary to Jablonsky's position, Quaile stated that one cannot simply disregard the geometric requirements of Part 9 of the Code, particularly those relating to the spacing of the studs. Quaile's opinion was that one should first determine whether a structure meets the requirements of Part 9. If not, then calculations could be done to satisfy Part 4 and finally one would perform a load test, if necessary. He said that if the wall frame did not meet the requirements and one wanted the plywood to perform the function of providing protection, one would have to look at how it was fastened. Here, P1 was fastened on the outside of the frame with nails in withdrawal, which was contrary to good building practice as set out in such publications as the Timber Design Manual, which was in common use in 1972.

He concluded that the wall was intended to be a conventional stud wall but was not built to conform with the minimum standards of Part 9 of the 1970 Code and that analysis under Part 4 confirmed that the wall was inadequate.

When he testified in reply, Quaile dealt with the tests referred to in Jablonsky's last 3 reports, issues arising from Jablonsky's cross-examination and Quaile's interpretation of the test data obtained from the load tests he had instructed Morrison Hirshfield Limited to do.

He testified that of all the tests referred to in Jablonsky's last 3 reports, only numbers 5 and 6 appeared to correspond with the stated objective of the authors, in that line loads and/or uniform loads were applied to the panel. In tests 7 through 10, the authors used loading patterns that did not correspond with the stated objective. He agreed that tests 11 through 15 were done using the 1970 and/or the 1975 design loads. However, in tests 11 through 15, tee weights

used to apply the line load were allowed to rest on the stud framing rather than on the plywood panel alone. Therefore, it was not just the plywood that was being tested, but the entire assembly. The results would give a false impression of the capacity of the plywood to withstand the design loads prescribed by the Code. He was also of the opinion that the load configuration produced both an "arching effect" and a "wedging effect", which was not accounted for in the results and which biased the results in favour of the plywood and its fastenings.

Quaile had recommended in his first report that guidance about relevant test procedures be sought from CSA Standard S307-M1980, entitled, "Load Test Procedure for Wood Roof Trusses for Houses and Small Buildings." It was filed as Exhibit 126. Jablonsky had questioned its applicability because it dealt with roof trusses rather than stud walls and because it was not published until 1980 and was therefore not available in 1972.

Quaile testified that CSA Standard S307-M1980 dealt with both serviceability and strength requirements. He believed that it was useful in determining what test procedures should have been followed by Jablonsky when he was testing the prototypes.

In this regard, it is interesting to note that CSA 086-1970 provides in s. 6.4.2.1 that, "The deflection of plywood structural assemblies shall be calculated using

standard engineering formulae." It is also interesting to note that s. 9.1 of CSA 086-1970, which deals with the different types of timber fastenings, does not even mention nails as a recognized method of fastening.

The serviceability requirement of CSA S307-M1980 was that after 1 hour the deflection measurement was not to exceed acceptable limits under 1 1/3 times design load. The strength requirement was that the panel should support 2 2/3 times design load for 24 hours without collapse. With respect to the serviceability requirement, Quaile recognized the difference between roof trusses and the stud wall in question and said that 1 times design load should be used. However, with respect to the strength requirement, Quaile believed that 3 times design load was more appropriate because P1 had been nailed to the frame using nails in withdrawal.

In Jablonsky's Test 5, the deflection reported was 33 mm under a total load of 510 pounds. The load represented only 75% of the full design load and the deflection represented 2 1/2 times the permitted maximum deflection. In Quaile's opinion, this test demonstrated a clear failure of the serviceability requirement.

In Test 6, the strength test load of 770 pounds represented 1.28 times design load and in Quaile's opinion was inadequate for testing purposes.

In Tests 11 through 15, the strength load was only 1.66 times design load and, again, was inadequate. With respect to the serviceability requirements, the deflections recorded at 1 times design load for Tests 11 through 15 were as follows:

Test No. 11	23 mm
Test No. 12	35 mm
Test No. 13	20 mm
Test No. 14	30 mm
Test No. 15	26 mm

All these deflections exceeded the prescribed limitation by a substantial margin and therefore failed to meet the serviceability requirement.

Next, Quaile outlined the instructions he had sent to Morrison Hirshfield Limited with respect to the load tests he wished them to conduct. The sketch and instructions he sent them were filed as Exhibit 138. In his sketch, the "intermediate 2x4 stud", i.e., the stud to which P1 was nailed at the top, also referred to as the "sill" under the window, was placed 45 1/2 inches above the top of the landing. He admitted that this was an error and that the intermediate 2x4 should have been 44 1/2 inches above the top of the landing. He said that this would bias the test results against the City but only in the 1975 OBC design load tests and only by about 1%. He said there would be no bias in the 1970 NBC design load test. He also stated that the omission of the battens might bias the results by as much as 10% against the City. However, neither bias would alter the opinion he derived from the data from the Morrison Hirshfield load tests.

Also, the clear space between S0 and S1 was shown on the sketch to be 33.5 inches. Upon receipt of further information, Quaile instructed Morrison Hirshfield to adjust the load for an actual width of 34.5 inches.

He instructed them to use the following loads: first, the 1970 NBC design line load of 150 pounds per lineal foot and secondly, the 1975 OBC uniformly distributed load of 20 pounds per square foot and 100 pounds per lineal foot. He also instructed them to load only the area of the plywood between S0 and S1 and between the underside of the "window sill" and above the stud plate at the "landing". He directed Morrison Hirshfield to make the line load as narrow as practical and they were able to narrow it to 1 or 1 1/2 inches, compared to about 12 inches in the Jablonsky tests. The line load was centred at 42 inches above the top of the lower 2x4. He also asked for the deflections to be measured not only at the centre of the panel but also at the studs, S0 and S1, because he felt that the maximum deflection might be at a point other than the centre of the panel.

In the first test, he instructed them to apply the 1975 OBC design loads and to hold them for 1 hour and then to continue loading both types of loads in stages to 2.5 times

design criteria and to hold the loads for 24 hours without failure and measure the deflections at each stage. He thought that 3 times design load was more appropriate but used 2.5 times as a safety factor, which, in his mind, biased the results in favour of the City. For the second test, which applied only the 1970 NBC line load of 150 pounds per lineal foot, he instructed them to measure the deflections after 1 hour and then to increase the load in stages to 2.5 times design load, measuring the deflections at each stage.

The result of Test No. 1 was that at 1 times design load, the one hour deflection was 40 mm at the centre of the plywood panel, which was far in excess of the prescribed deflection limitation. In fact, the deflection limitation was exceeded at S1 and at the centre of the panel after 5 minutes and at S0 after about 22 minutes. At 585 pounds, or 1.16 times design load, the specimen failed. The mode of failure was nail withdrawal from the "window sill".

In Test No. 2, the specimen failed at 1 times design load. The total design load was applied within 20 minutes and at that point the prescribed deflection limitations were exceeded at all 3 points. He did not feel it would be significant whether the plywood was 5/16 of an inch thick or, as Turner measured it and as Blaney described it, 3/8 of an inch thick.

In his opinion, the load tests conducted by Jablonsky demonstrated that the prototype did not comply with the design criteria set out in Part 4 of the 1970 NBC and that the actual structure did not meet those criteria, either when it was built or when the plywood panel failed. In addition, it was his opinion that the tests conducted by Morrison Hirshfield showed that the 2 assemblies failed at loads considerably lower than those reported by Jablonsky and confirmed that the "as built" structure failed to meet the Part 4 requirements of the 1970 NBC, either when it was built or when it failed.

(6). CONCLUSION:

I have dealt with the "engineering evidence" in more detail than usual because much emphasis was placed upon it by counsel for Mortimer and the City. Although I have not referred to all the evidence, I have reviewed and considered the whole of it. The City did not spend much time trying to justify the stairway under Part 9, although Mr. Caskey certainly did not abandon that position. Most of the evidence adduced for the City on this issue sought to establish that the structure met the requirements of Part 4 and, therefore, it did not matter if it failed to meet the requirements of Part 9.

I accept Quaile's position that the logical method of dealing with an application to construct a "simple structure", such as that which was the subject of the 1972 building permit, would be to determine first whether it complied with Part 9. If the proposed structure did not meet Part 9 requirements, then the next and least expensive step would be to do calculations, using standard engineering formulae, to establish that the structure met the design criteria of Part 4 of the Code. Only as a final alternative would one resort to the more expensive load testing procedures.

As I mentioned earlier, this was not a case where the City required the applicant to resort to Part 4 in 1972. It gave approval on the basis either of compliance with Part 9 criteria or the City's "past practice". In fact, it did not comply with either. The City's resort to Part 4 in this action was an attempt to justify the structure "after the fact".

Also as mentioned earlier, I give a great deal of weight to Quaile's evidence. His approach was fair and logical. In my opinion, his testimony established quite clearly that Jablonsky's opinion that the structure complied with Part 4 design criteria, though honestly held, was wrong. While I do not believe that any of the models used in the load tests exactly duplicated the "as built" structure, I conclude that those used by Morrison Hirshfield Limited came closer to doing so than those used by Jablonsky.

I prefer the approach taken by Quaile, which in my opinion was reasonable and was based upon his superior knowledge of the properties of wood and of wood fasteners. I

also prefer and accept his evidence with respect to the stairway's failure to comply with Part 9. On the whole, Blaney's evidence gives support to the positions taken by Quaile, though sometimes their evidence was in conflict. Turner's evidence in cross-examination also lends weight to the plaintiffs' position.

Accordingly, I conclude that the stairway and particularly the east wall of the top landing, of which P1 was a part, did not comply with good building practice, Part 9 of the 1970 NBC, the City's building by-law, the City's "past practice" or Part 4 of the Code.

6. THE ISSUE OF THE CITY'S NEGLIGENCE:

Pursuant to a predecessor of s. 242 of the Municipal Act, R.S.O. 1980, c. 284, as amended, the City enacted Building By-law No. B.-56-269, dated July 6, 1971, "to safeguard life or limb, health, property and public welfare with respect to the design, construction and alteration of buildings by the provision of appropriate minimum standards". Having made the policy decision to pass the By-law and to inspect building plans and construction, the City's operational activities under the by-law were subject to the ordinary principles of tort law. That is, the City owed a common law duty of care to all who it was reasonable to conclude might be injured by the negligent exercise of its powers: Rothfield v. Manolakos, [1990] 1 W.W.R. 408 (S.C.C.) per Wilson J. at p. 415.

However, the City was not "bound to discover every latent defect in a given project, nor every derogation from applicable standards": Rothfield v. Manolakos, supra, per LaForest J. at p. 416. The duty on the City was to use reasonable care in the exercise of its powers of inspection. It should incur liability only for such defects as it could reasonably be expected to have detected and to have ordered remedied: Rothfield v. Manolakos, supra, per LaForest J. at p. 416.

While the City's Building Inspector might have had some discretion in the carrying out of his duties, such discretion was exercisable under the umbrella of the City's operational activities, which are actionable.

At the time the 1972 building permit was issued and at the time the work done under it was inspected, it was reasonably foreseeable that persons coming down the interior stairs of the upper apartment at 287 Central Avenue and out onto the top landing might trip over the raised threshold, or might fall independently of tripping over it, and tumble against P1. Such a fall might result from any number of causes, many of which might occur during normal and anticipated use of the stairway and landing. For example, if two persons were carrying a sofa or other large, heavy object down the stairs and the lower person, going backwards, tripped, it is reasonably foreseeable that he might fall against P1. It is quite conceivable that the force applied to P1 from such a fall might greatly exceed that applied when Mortimer and Cameron fell, as described above. Although it was not prudent for Mortimer and Cameron to be engaging in horseplay on the stairs and interior landing, I cannot conclude that their use of them was so unreasonable and rare or unexpected as to fall outside the reasonable contemplation of the City, especially given the manner in which the fall occurred and the rather minimal degree of force that was applied to P1 as a result of their fall.

It is not reasonable to expect the City to foresee every possible means by which force might be applied to P1. However, it should reasonably have foreseen that even in the most ordinary use of the stairway someone might readily trip and fall against P1 with a comparable degree of force to that which resulted from Mortimer and Cameron's fall. That rather minimal degree of force falls within the meaning of the words "all effects of loads and influences that may be expected" in s-ss. 4.1.1.3(1) and 4.3.1.4. of the Code.

The City owed a duty to persons in Mortimer's position to exercise reasonable care in the inspection of the plans for the proposed work to the stairway and in the inspection of the construction authorized by the 1972 building permit which the City issued. As a guest of the tenants, Mortimer would have to use the stairway to gain entrance to their apartment. As one of a class of persons who might reasonably be expected to

use the stairway, he was a person who it was reasonable to conclude might be injured by the negligent exercise of the City's powers of inspection under its Building By-law. Therefore, he was entitled to rely on the City to use reasonable care in issuing the 1972 building permit and in inspecting the construction done under it.

In the context of this case, the City owed a duty to persons in Mortimer's position to take reasonable care to see that the stairway was constructed so as to guard adequately against accidental falls from the landing to the ground that was 10 feet below. It had ample power to ensure compliance with its Building By-law. Under the By-law, the City had the power to revoke the building permit or to issue a stop work order or to remove the structure if the work was done contrary to its provisions.

The City failed to satisfy its duty. The Plans Examiner failed to exercise reasonable care in dealing with the application. Section 1.5.4. of the Building By-law required that the application be accompanied by specifications and drawings containing "All information necessary to ensure that the ... structure, if constructed, will conform to all by-laws of the Corporation". No plans were submitted. The application otherwise failed to provide sufficient detail to indicate whether the proposed structure would comply with the Building By-law. It was not reasonable to issue a permit on the basis of the information provided in the application.

Moreover, the Building Inspector failed to exercise reasonable care in inspecting the work. The deficiencies in the stairway, particularly in the east wall of the landing, of which P1 was a part, were obvious and major departures from the Code requirements and good building practice. If they truly were in accord with the City's "past practice", then that practice itself was unreasonable and unacceptable. The City's officials were negligent in several respects:

1. If, as Mr. Caskey urges, they viewed the work described in the 1972 application as merely providing shelter from the elements, then they were negligent in failing to foresee the hazards inherent in such construction and the potential danger to people using the stairway and the landing, particularly the danger of accidental falls from the landing caused by someone falling against P1.

2. The situation on the top, exterior landing represented a potential hazard "to life and limb". If the City's officials were in any doubt about whether the structure was an "interior" or an "exterior" stairway or about what criteria applied to it, they should have been guided by the purpose of the by-law, as expressed in its preamble. Accordingly, they should have required a mode of construction that complied with the 1970 NBC Part 9 or Part 4 criteria and good building practice and that guarded adequately against accidental falls from the landing to the ground below.

3. They acted unreasonably in issuing the permit on the basis of inadequate information and contrary to the City's standard procedures.

4. The Inspector failed to note glaring departures from Part 9 criteria and good building practice. In particular:

   (1) He allowed S0, S1 and S2 to be installed "on the flat";

   (2) He allowed the studs to be spaced much further apart than permitted;

   (3) He allowed P1 to be affixed to the outside of the stud frame by means of nails in withdrawal;

   (4) He allowed the frame of the east wall of the landing to be constructed without using a bottom plate and permitted that plate to be fastened to S0 and S1 by "toenailing".

As a result, the stairway was not built in accordance with the provisions of Parts 9 or 4 of the 1970 NBC or the

City's Building By-law. It did not conform to good building practice, nor was it justified on the basis of the City's "past practice". If the Building Inspector had made a proper inspection and had ordered these conspicuous deficiencies to be remedied, Mortimer would never have sustained the injury he did.

Following on the evidence of Blaney and Quaile, Turner's testimony is also most telling against the City. He said he would not have approved the work unless the studs had been spaced not more than 24 inches apart on centre. In particular, he would have required a vertical stud below the window between S0 and S1. The cost and difficulty of compliance were minimal, especially if the deficiencies had been ascertained at the time of the application when plans should have been submitted and before construction began.

On the balance of probabilities, I am well satisfied that the City was negligent in failing to take reasonable care to inspect the application for the 1972 building permit and the construction done pursuant to it. If the City had exercised such reasonable care, it could reasonably have been expected to have detected the obvious deficiencies in the construction and to have ordered them remedied. It was reasonably foreseeable that someone might fall against P1. Mortimer's injuries are the direct result of the City's negligence.

Accordingly, the plaintiffs should succeed in their claim against the City.

7. THE ISSUE OF CAMERON'S NEGLIGENCE:

Stairs in residential buildings are potentially dangerous. They connect two different levels, usually about 8 or more feet apart. Stair treads provide a relatively small surface area upon which to place one's foot. Unless one uses a handrail, one has to balance all one's weight first on 1 foot and then on the other when ascending or descending stairs. If one is not careful, one is liable to fall and sustain injury, which is sometimes serious. Therefore, generally, one ought not to engage in horseplay on a stairway because, in an already potentially dangerous situation, there is an increased risk of harm from falling.

In these potentially dangerous circumstances, Cameron was under a correspondingly high duty to act so as not to cause harm to Mortimer. With respect to the issue of Mortimer's contributory negligence, Mortimer was under a similar duty to act so as not to cause harm to himself. Mortimer and Cameron travelled down the stairway in a controlled manner. The force used by each against the other was measured and not excessive. Each had hold of the other. They managed to traverse the stairs without falling or losing their balance and reached the interior landing safely. At that point, the risk of harm from falling on the interior stairs had expired.

After they had traversed the interior stairs, the action that then set in motion the immediately ensuing chain of circumstances that resulted in Mortimer's injury was the push Cameron gave Mortimer that caused him to trip over the threshold. When he had entered the apartment, Cameron had noticed he had to step over the threshold and he was aware it was 3 or 4 inches high. When Cameron pushed Mortimer, he created the risk that Mortimer might trip over the threshold and fall through the open doorway onto the exterior landing or against the exterior wall of that landing and injure himself. A reasonable and prudent person would not have pushed Mortimer on the interior landing as Cameron did. Therefore, Cameron was in breach of his duty of care to Mortimer when he pushed him.

In Fridman, The Law of Torts in Canada (1989), Vol. 1 at pp. 320 to 329, the learned author deals with the issues of "causal connection" and "causation and remoteness". He observes that a plaintiff must establish a causal connection between his or her loss and the negligence of the defendant. He also notes that the "confused situation" in this area of the law in Canada "is a reflection of the uncertainty that prevails in England as a result of various contradictory decisions in the last thirty years."

In reviewing some of those decisions, he refers first to the "directness approach" to causation, as set forth in Re Polemis, (1921) 2 K.B. 560 (C.A.), which in effect held that a

defendant is liable for the direct consequences of his or her negligence, whether or not those consequences are foreseeable. He states this rule was subject to 2 exceptions: the "thin skull" situation, and a foreseeable intervening act, perhaps by a third party, an animal or a natural event such as a storm, that occurred in the form and manner that was foreseeable.

At p. 327, he states "... the directness approach to causation, as stipulated in Re Polemis, was rejected" in The Wagon Mound (No. 1), (1961) A.C. 388, which held that a defendant would only be liable for foreseeable consequences. Anything which could not be foreseen by the reasonable man in advance of his acts or omissions as being the probable outcome would be too remote and could not be attributed to his negligence.

The law in this area was further qualified by The Wagon Mound (No. 2), (1967) 1 A.C. 617, which held that, "... as long as what happened was within the realm of what was reasonably foreseeable, the defendant did not have to foresee the precise manner in which it came about."

At p. 328, Fridman observes:

> In view of these changes of policy, direction and theory that have been expressed in English case law, it is hardly surprising to find that Canadian courts have found it difficult to determine whether to adhere to the old directness test of causation as expressed in Re Polemis or to adopt the more modern, remoteness of damage orientation of The Wagon Mound (No. 1).

Bearing these principles in mind, I find first that Cameron's actions did not constitute the proximate or effective cause of Mortimer's injury. If exactly the same sequence of events had occurred except that P1 had not given way, Mortimer would not be a quadriplegic today.

Mortimer's injury was caused from hitting the ground. He would not have hit the ground if P1 had held or if a vertical 2x4 stud had been inserted properly under the window between S0 and S1. Even though Quaile said he would have expected someone to be hurt if P1 had remained in place, I am not prepared to infer from all the evidence that Mortimer would have been seriously injured from striking P1 if it had not given way. To the contrary, Cameron hit P1 with little force and suffered no serious injury from doing so, although admittedly it gave way. It would be unreasonable to infer that Mortimer would have sustained anything more than relatively superficial injuries from hitting P1 after Cameron, even if it had held. There is certainly no evidence from which to infer that he would have been rendered a quadriplegic.

Even though there was a failure on Cameron's part to exercise the care that the circumstances demanded, his failure of care was not the proximate cause of Mortimer's injury. The damage ensuing to Mortimer was too remote a consequence of Cameron's breach of his duty to render him liable for its occurrence.

That leads me to the issue of foreseeability. On cross-examination by Mr. Morse, Cameron agreed that when he ascended the exterior stairway on his way into Hunt's apartment he knew there was a drop from the landing. However, he assumed that the wood construction was there to prevent people from falling. If it had been obvious to him that it was possible to fall 10 feet, he would have protected himself against that possibility. Also, he would not have been engaged in pushing and shoving with Mortimer on the interior landing if he had appreciated that there was a 10 foot drop from the exterior landing only 3 feet away from them. That is eminently reasonable and I accept his evidence on the point.

As Quaile testified, the wall of the landing through which Mortimer and Cameron fell gave the appearance of a wall but not the protection that a reasonable person would expect from a wall. Blaney testified that P1 was a "trap" because it would not be obvious to Mortimer or Cameron that it failed to provide suitable fall protection. He said if it had been an open stairway with a guard, it would have been obvious that they would have had to be careful. However, when they saw the plywood, they would take comfort from that. In other words, the wall of which P1 was a part incorporated a hazardous condition that was not readily apparent to them. Its appearance lulled them into a false sense of security. This was confirmed by Cameron during his cross-examination by Mr. Morse, as noted above.

We are conditioned to believe that a wall, properly constructed, will prevent us from falling out of a residential building. In the circumstances, it was reasonable for persons using the stairway to regard P1 as part of a wall and to expect that it would offer fall protection. It was reasonable for them to rely on it as if it were a wall in terms of regulating their conduct and having regard for their own safety. They would not expect P1 to give way if someone fell against it with rather minimal force.

Therefore, it was not reasonably foreseeable when Cameron pushed Mortimer on the interior landing that P1 would give way and permit Mortimer to fall from the landing to the ground below. It was not reasonably foreseeable when Cameron pushed Mortimer that Mortimer would be rendered a quadriplegic or even that he would be seriously injured. The probability of the sequence of actual events occurring was extremely remote, though obviously possible. In other words, what actually happened was not within the realm of what was reasonably foreseeable.

Next, I turn to deal with Mortimer's claim against Cameron for damages for assault, battery and trespass to the person. Mortimer admitted he was the one who initiated the contact between them. He agreed that if he had been trying to pour beer on Cameron, the latter would have "every right" to resist the attempt. Neither was seeking to inflict injury on the other in the course of a violent confrontation. Cameron responded in a measured and proportionate way to the reasonably perceived threat that Mortimer was going to pour beer on him and never used excessive or unreasonable force to countermand that threat. Moreover, Mortimer implicitly consented to the force employed by Cameron during the friendly "horseplay", which included pushing and shoving by both participants all the way down the interior stairs and onto the interior landing, so long as Cameron's response was within reasonable bounds and was proportionate to Mortimer's own conduct. I find that was the case.

Accordingly, no liability should attach to Cameron's acts or omissions and the claim against him should be dismissed.

8. THE ISSUE OF MORTIMER'S NEGLIGENCE:

The position against Mortimer is as follows. He was the one who initially set in motion the entire chain of events that culminated in his injury. He agreed that he initiated the horseplay and precipitated the fall. He made a motion with the container of beer in his hand that Cameron reasonably interpreted as an attempt to pour beer on him. Cameron responded in a measured and proportionate way to prevent that from happening. The horseplay followed and carried on down the stairs and onto the interior landing. The allegation against Mortimer is that he failed to take reasonable care for himself and so contributed to his own injury.

Although volenti non fit injuria was pleaded it was not seriously advanced in argument. I find it has no application here. Mortimer had no knowledge of the risk of catastrophic injury presented by the condition of P1. Accordingly, he could not and did not accept the risk of serious injury resulting from participating in conduct that he could not reasonably foresee might cause him to fall into P1 and subsequently onto the ground, as in fact occurred. The real issue is whether he was contributorily negligent.

Mortimer was "modestly intoxicated" at the time of the horseplay and the fall. Two experts testified about the level of his intoxication: Dr. Hirst for the defence and Dr. LeBlanc for the plaintiffs. Dr Hirst has a Ph.D. in both chemistry and pharmacology. Dr. LeBlanc has a Ph.D. in pharmacology. Both were very knowledgeable about the effects of alcohol consumption by humans. Dr. LeBlanc has done extensive research through the Addiction Research Foundation on the behavioural effects of alcohol.

As Dr. Hirst explained, when one consumes alcohol, there are two opposing processes at work: absorption and elimination. Based upon assumptions that conformed closely to the evidence, he calculated Mortimer's blood alcohol level at 4 different rates of elimination, (70, 100, 120 and 150 milligrams of alcohol per kilogram of body weight per hour), assuming that consumption of 2 bottles and 6 cans of beer began at either 11:00 a.m., noon or 12:30 p.m. The resulting figures represented milligrams of alcohol in 100 millilitres of blood and were incorporated into a table. Dr. LeBlanc

provided corresponding figures assuming consumption began at 11:30 a.m.

The first issue was the time at which Mortimer began consuming beer. Cameron testified that Mortimer began to drink beer at about 12:15 p.m. or 12:30 p.m. at Spooner's Restaurant. Cameron had gone to another class after writing the examination that Mortimer also wrote. However, Mortimer did not go to a class after the examination. He went directly to Spooner's. He thought the examination was either 2 or 3 hours long and began at either 8:00 a.m. or 9:00 a.m. According to Hunt and McCall, the examination ended at 11:00 a.m. I accept their evidence and conclude that Mortimer began to drink beer at about 11:30 a.m.

Dr. Hirst concluded that Mortimer had experienced "a modest level of intoxication at or about 5:00 p.m." and Dr. LeBlanc concurred. On cross-examination by Mr. Morse, Dr. Hirst agreed that he would not describe Mortimer as being "severely" or even "moderately" intoxicated. Dr. Hirst also testified that Mortimer's actions, as described to him, were consistent with that conclusion. The fact that Mortimer did not exhibit any physical signs of intoxication was consistent with his findings, because while 2/3 of the population would show such signs, 1/3 would not.

Dr. Hirst said one would expect to see some change in the behaviour of a person who was modestly intoxicated. The person would likely be more relaxed and convivial. Effects on mood would be obvious as well. The person's judgment would very likely be impaired and one might see some changes in reaction times to various stimuli.

I find that the only visible change in Mortimer caused by his consumption of alcohol was that he became more relaxed and gregarious than normal, but not to the point of becoming rude or boisterous. Mortimer recognized the alcohol he had consumed was having an effect upon him and that it would be unwise for him to drive his automobile. He tried to telephone his girlfriend to have her come and get him rather than drive himself. Dr. Hirst testified this would indicate Mortimer was experiencing the effects from the alcohol and was making a proper judgment of those effects within him. He had earlier stated that one's ability to judge his or her own condition can itself be impaired by alcohol. Therefore, he concluded that Mortimer had greater than normal sensitivity to the effects of alcohol within him.

On cross-examination by Mr. McCall, Dr. Hirst agreed that if Mortimer displayed none of the usual signs of intoxication, no one at the party would be concerned about Mortimer's behaviour or his ability to care for himself.

On cross-examination by Mr. Morse, Dr. Hirst acknowledged, "in general terms", that, as a guest in someone's home, Mortimer was not putting himself at risk for physical harm by being in a modestly intoxicated state. He also agreed that Mortimer was conducting himself in accordance with norms for behaviour in society for people who consume alcohol. However, these questions were asked in the abstract and not in relation specifically to the "horseplay" on the stairs and interior landing.

Some evidence suggested that Mortimer had 1 or even 2 more containers of beer than the 2 bottles and 6 cans he first testified he consumed. He had 2 bottles of beer at Spooner's. He said after he finished the 6 cans he brought with him to the party, he asked Cameron for 1 of his cans and started to drink it before the fall. McCall also recalled Mortimer asking him for a beer. At first, he thought it might have been around 3:00 p.m. or 3:30 p.m., but he was not certain. He could not recall if the beer he brought to the party was in cans or bottles. On cross-examination by Mr. Morse, McCall was reminded of a statement he had given on September 1, 1987, when he said that he had given Mortimer one of his "bottles" of beer "just before the accident". He agreed that his recollection was better at the time he gave the statement than at trial. I accept what he said at that earlier time as being accurate.

Hunt was not sure if Mortimer was holding a can or a bottle of beer when she saw him and Mortimer together at the top of the stairs just before the fall. Mead could not recall if either Mortimer or Cameron had a beer in his hand when she saw them going down the stairs. Based on the evidence of Mortimer, Cameron and McCall, it is probable that between

about 11:30 a.m. and about 5:00 p.m. Mortimer had consumed 2 bottles and 7 cans of beer and had scarcely started another bottle at the time of the accident.

Based on the assumption that Mortimer initially began drinking beer at 12:15 p.m., rather than the actual time of 11:30 a.m., Dr. Hirst testified that if Mortimer had begun to drink a ninth beer at about 4:30 p.m. and had barely finished it at 5:00 p.m., then he would have absorbed only about 3 or 4 grams of additional alcohol. Therefore, very little of the alcohol from the ninth beer would be in his blood at the time of the fall.

When asked to assume that Mortimer had begun to consume a ninth beer shortly before 5:00 p.m., Dr. LeBlanc said that because there had been an even pattern of consumption, there would be some beer in Mortimer's system that would not have been absorbed. He did not feel there would be any significant absorption of the ninth beer. There would be only a modest effect on the figures contained in the table. In this, he and Dr. Hirst were in agreement.

According to the table, if Mortimer had an average tolerance for alcohol and an average rate of elimination, his blood alcohol level would be 93.5 milligrams of alcohol in 100 millilitres of blood at about 5:00 p.m. If he had an above average tolerance and rate of elimination, his blood alcohol level would be 69.5 milligrams of alcohol in 100 millilitres of blood. Those calculations were based upon Mortimer consuming 2 bottles and 6 cans of beer, starting at 11:30 a.m. and finishing at about 5:00 p.m., at rates of elimination of 120 and 150 milligrams of alcohol per kilogram of body weight per hour respectively. Based on Mortimer's peculiar circumstances, including the fact that he was a healthy, experienced drinker, Dr. LeBlanc concluded that his rate of elimination would fall between 120 and 150 milligrams of alcohol per kilogram of body weight per hour and would be closer to the latter rate. Based on the table, Dr. LeBlanc opined that Mortimer's blood alcohol level at the time of the accident would be about 80 milligrams of alcohol in 100 millilitres of blood. Based on the evidence of both Dr. Hirst and Dr. LeBlanc, the ninth beer and the very small portion of the tenth beer, would have some additional effect, but not a marked one.

Therefore, I conclude that the ninth and the very small portion of the tenth beer would cause Mortimer's blood alcohol level to rise somewhat above the figures Dr. LeBlanc gave for consumption of 2 bottles and 6 cans of beer, commencing at 11:30 a.m. I accept the fact that at the time of the accident Mortimer was indeed "modestly intoxicated". I also accept Dr. LeBlanc's opinion that based upon Mortimer's particular circumstances he would most likely be closer to the 150 than to the 120 milligrams of alcohol per kilogram of body weight per hour rate of elimination. It is difficult to be precise about Mortimer's blood alcohol level at the time of the accident because of the variables. However, it seems to me probable from all the evidence that it did not exceed 100 milligrams of alcohol in 100 millilitres of blood.

Dr. LeBlanc also described the "Melanby effect", namely that a certain blood alcohol level reached quickly is more impairing than one reached over a period of time. Here, Mortimer consumed the alcohol over a period of several hours. Therefore, the effects of Mortimer's blood alcohol level would be less than might be expected, given the time taken to reach it. He also said that the absence of any "classical signs of impairment" was consistent with a blood alcohol level in the range of 69 to 90 milligrams of alcohol in 100 millilitres of blood on the table prepared by Dr. Hirst. He testified that in the case of experienced drinkers, one will see marked departures from driving norms at the 110 level and visible symptoms become more pronounced at levels of 130 or 140.

He also stated that an effect was caused by circadian rhythms. If one consumes alcohol in that part of the rhythm when one would normally be asleep, the effect of alcohol is greater. Here, Mortimer consumed alcohol in the afternoon when the effects would be lower than if consumption occurred after midnight.

Alcohol is a depressant of the central nervous system. Generally, the severity of the effects of its consumption are dependent upon its concentration in the blood stream, and the greater the concentration, the more visible the effects. As noted, with the exception of Mortimer's more relaxed mood, he showed no outward signs of intoxication. Based on the

evidence of Dr. Hirst and Dr. LeBlanc, which I accept, it is probable that the amount of alcohol Mortimer consumed made him more prone than usual to engage in uncharacteristic activity and had an effect on his mood, judgment and motor skills, but not to a marked degree.

Even though Mortimer initiated the horseplay and was modestly intoxicated, his legal position is not substantially different from that of Cameron, who had also been drinking and whose level of intoxication, according to Dr. LeBlanc, was probably close to Mortimer's. The same reasoning applies in the case of Mortimer as in Cameron's case. If exactly the same sequence of events had occurred, including Mortimer's initiation of the horseplay and his level of intoxication, but P1 had not given way, Mortimer would not be a quadriplegic today, nor would he have been seriously injured. Given the raised threshold and the fact he was going backwards, Mortimer probably would have tripped over it and lost his balance whether he had been sober or intoxicated to the degree he was. Neither his action in initiating the horseplay nor his level of intoxication was the proximate cause of his injury, nor, as in Cameron's case, was what happened to him within the realm of what was reasonably foreseeable. If P1 had held, he and Cameron probably would have picked themselves up from the exterior landing and returned to the party. Accordingly, no liability should attach to Mortimer's acts or omissions.

9. THE ISSUE OF STINGRAY'S NEGLIGENCE:

Mr. Morse submits that Stingray was in breach of its affirmative duty under s-s. 3(1) of the Occupiers' Liability Act, R.S.O. 1980, c. 322, as amended:

> ...to take such care as in all the circumstances of the case is reasonable to see that persons entering the premises ... are reasonably safe while on the premises.

The plaintiffs' position on this issue is as follows. Stingray was under a positive duty to inspect the premises and more particularly the stairway. Bird, one of the principals of Stingray, lacked the expertise to conduct a reasonable inspection. If he had conducted a reasonable inspection, he would have discovered wood rot in P1. Also, there were several other obvious conditions affecting the safety of the stairway that a reasonable inspection would have revealed. Although none of them may have constituted an effective cause of Mortimer's fall, they should have put Bird on notice of structural problems that would move a reasonable owner to have an inspection made by a knowledgeable person capable of discovering the defects that in fact existed.

Moreover, Mr. Morse submits Bird had alterations made to the stairway in 1985 without obtaining a building permit when one was required. If the permit had been obtained, not only the work done under it but the entire stairway would have been inspected, thereby revealing the dangerous condition of P1. The Building Inspector would have ordered it corrected and Mortimer would never have fallen to the ground and been injured.

The plaintiffs submit that Stingray was also in breach of its duty under s-s. 96(1) of the Landlord and Tenant Act, R.S.O. 1980, c. 232, as amended. Section 96 reads:

> (1) A landlord is responsible for providing and maintaining the rented premises in a good state of repair and fit for habitation during the tenancy and for complying with health and safety standards, including any housing standards required by law, and notwithstanding that any state of non-repair existed to the knowledge of the tenant before the tenancy agreement was entered into.
>
> (2) The tenant is responsible for ordinary cleanliness of the rented premises and for the repair of damage caused by his wilful or negligent conduct or that of persons who are permitted on the premises by him.
>
> (3) The obligations imposed under this section may be enforced by summary application to a judge of the county or district in which the are situate and the judge may,
>
> (a) terminate the tenancy subject to such relief against forfeiture as the judge sees fit;

(b) authorize any repair that has been or is to be made and order the cost thereof to be paid by the person responsible to make the repair, such cost to be recovered by due process or by set-off;

(c) make such further or other order as the judge considers appropriate.

(4) This section applies to tenancies under tenancy agreements entered into or renewed on or after the 1st day of January, 1970 and to periodic tenancies on the first anniversary date of such tenancies on or after the 1st day of January, 1970 and in all other cases the law applies as it existed immediately before the 1st day of January, 1970.

The plaintiffs' position is that even though Mortimer was nota party to the lease between Hunt and Kale as tenants and Stingray as landlord, he has an independent cause of action against Stingray for breach of its statutory duty under s. 96. The plaintiffs allege that Stingray failed in its duty to keep the premises "in a good state of repair and fit for habitation" and to comply "with health and safety standards, including any housing standards required by law".

Regarding the latter, Mr. Morse submits that Stingray was in breach of several provisions of the City's Property Standards Bylaw C.P.-1079-35, enacted on February 29, 1984, before Mortimer's fall, and subsequently amended. A copy was filed as Exhibit 136. I find Stingray was an "owner" of the property at 587 Central Avenue within the meaning of the word as defined in s-s. 1(e) and was therefore liable to comply with the By-law. Section 2 of the by-law provided:

2. The standards for maintenance and occupancy of property set forth in Schedule "A" to this by-law are hereby prescribed and adopted as the minimum standards for the City of London and said Schedule "A" is hereby enacted and adopted as part of this by-law.

Subsection 1. i) defined "unsafe condition" to mean:

... any condition that could cause undue hazard to life, limb or health of any person authorized or expected to be on or about the property.

The plaintiffs submit that Stingray failed in its duty under sections 9 and 13, the relevant portions of which read:

9(1) Unsafe conditions on property shall be abated forthwith to the satisfaction of the Property Standards Officer.

9(2) Where there is a condition on the property which is unsafe, the Ontario Building Code shall apply to the extent necessary to abate the unsafe condition.

9(3) Without limiting the generality of subsections 9(1) and 9(2), abating an unsafe condition includes:

a) the provision or repair of stairs, balustrades,

railings, guards and screens so as to minimize the risk of accident; ...

13(1) Every ... stair, verandah ... balcony and every appurtenance attached thereto shall be maintained ... or repaired so as to be ... safe to use and capable of supporting the loads to which it may be subjected as specified in the Ontario Building Code.

13(2) Without restricting the generality of subsection 13(1), the maintenance ... or repairing includes:

a) repairing or replacing ... treads or risers that show excessive wear or are broken, warped, loose or otherwise defective;

b) repairing, renewing or supporting structural members that are rotted, deteriorated or loose;

c) providing, repairing or renewing balustrades, guardrails and railings; and

d) painting or the applying of other equivalent

preservative.

I find that Stingray contravened the by-law by allowing unsafe conditions to exist in the stairway and by failing to abate them forthwith, or, indeed within a reasonable time. I shall outline those conditions later when dealing with conditions of non-repair of the stairway that might have alerted Stingray to the need for an independent inspection. Those conditions of obvious non-repair were not in themselves causative of Mortimer's fall, apart from acting as a warning of the need for an inspection. However, their lingering existence indicates that Bird was either failing to exercise reasonable care in inspecting the stairway or was deliberately ignoring known and potentially unsafe conditions.

Stingray's position is as follows. There was no defect in P1 that was apparent or would have been apparent on reasonable inspection by Stingray or the tenants. Any defect that might have existed in P1 was not an effective or proximate cause of its failure. There was no circumstance that would have imposed on Stingray a duty to consult engineers or architects to assess the state of the structure. Mortimer's fall was caused not by any lack of repair on

Stingray's part, but because of the failure of the original construction to comply with the Building Code and good building practice. If the failure of P1 was the result of its lack of compliance with the safety requirements of the Building Code, Stingray acted reasonably in relying on the Building Department's approval of the structure.

Regarding the last point, in fact, Stingray did not question the City about whether a building permit had been issued for the stairway or whether the work had been inspected and approved. If Stingray had made such inquiries, no doubt the City would have replied affirmatively. However, it is wrong to say that Stingray relied upon the City's inspection. Bird's testimony on cross-examination by Mr. Morse on the issue of his knowledge of the existence and contents of Building Codes was contradictory, evasive and lacked conviction. I conclude Bird had no idea whether a permit was ever obtained for the construction of the stairway. At best, he assumed that was the case and in my opinion it is unlikely he even directed his mind to the question.

Mr. Brown submits that the work done to the stairway in 1985 constituted "repairs" and did not require a building permit. He also submits that Mortimer has no cause of action against Stingray solely under s. 96 of the Landlord and Tenant Act.

I shall deal first with the issue of Mortimer's right to sue Stingray under s. 96 of the Landlord and Tenant Act. In McDonald v. Town of Goderich, [1950] O.R. 619, the Ontario Court of Appeal considered whether a landlord's duty to repair under a lease could found a cause of action by a third party. In doing so, it quoted with approval at p. 629 from Salmond's Law of Torts, 10th ed. 1945, p. 500, as follows:

> ... Such a contract is res inter alios acta, and confers upon strangers no rights against the landlord which they would not have had without it.

This statement was made in relation to the landlord's duty at common law and before the enactment of s. 96. Section 96 creates a statutory duty of repair and the breach thereof by the landlord founds a cause of action in the tenant: Fleischmann v. Grossman Holdings Ltd. et al. (1976), 16 O.R. (2d) 746 (C.A.). at p. 747, referring to Cunningham et al. v. Moore, [1973] 1 O.R. 357.

However, there is a difference of judicial opinion as to whether a third party has a right of action against the landlord of residential premises for breach of his statutory duty to repair; e.g.: Lindstrom v. Basset Realty Ltd. (1979), 34 N.S.R. (2d) 361, aff'd, 103 D.L.R. (3d) 654 (N.S.C.A.) (family members of tenant living with tenant successfully sued landlord for failure to repair); Zavaglia v. Mag Holdings Ltd. 50 B.C.L.R. 204 (Lamperson, Co. Ct. J.), aff'd 6 B.C.L.R. (2d) 286 (B.C.C.A.) ("... a landlord who breaches his

statutory duty will be liable in tort to the tenant and perhaps immediate members of his family, but this right of action does not extend to visitors and friends of the tenant."); Alexander v. Candy 8 O.R. (2d) 270 (C.A.) (breach by a non-occupier landlord of a contractual or statutory duty to repair does not render him liable to a stranger/licensee who is not a party to the rental contract); Dav v. Chaleur Devs. Ltd. (1985), 63 N.B.R. (2d) 313 (N.B.Q.B.) (landlord's breach of obligation to maintain and repair founded a cause of action in favour of tenant's guest). Personally, z find attractive the view that a residential landlord's breach of his statutory duty under s. 96 should give rise to a cause of action in favour of a tenant's guests who have been injured as a result of that breach. In 1972, the Ontario Law Reform Commission issued its Report on Occupiers' Liability. In it, the Commission expressed the hope that the proposed draft Act, which was different in several respects from the one eventually enacted, would, among other goals:

> . . . restore the field of occupiers' liability to the area of the general law of negligence and . . . widen the areas of recovery, based on the "neighbour" concept of negligence, and not by the creation of legal fictions.

This appears to reflect a general trend in the law, including the law of landlord and tenant. At common law, apart from contract or fraud, a landlord of unfurnished premises was not responsible for injury to tenants or others caused by the dangerous state of the premises. From that position, the law has evolved in Ontario to the point of enacting s. 96, which has enlarged the rights of tenants.

In Donoghue v. Stevenson, [1932] A.C. 562, a "neighbour" was defined as a person so closely and directly affected by one's acts that one might reasonably be expected to have him or her in contemplation. Section 96 of the Landlord and Tenant Act creates a statutory duty that is imported into every residential tenancy agreement by virtue of s. 82 and cannot be ousted by waiver or agreement. Therefore, the duty arises not voluntarily from contract but from the imperative nature of the statute. In these circumstances, it seems reasonable that a landlord should be expected to have guests of a tenant in contemplation as persons who would be directly affected by his failure to comply with his mandatory statutory duty. It is reasonably foreseeable that such persons would suffer harm from the landlord's breach of his statutory duty to repair. However logical this seems to me, I feel bound by the decision of Goodman J.A. in Alexander v. Candy, supra to the contrary. It may be that Alexander is distinguishable on the ground that the duty of care owed by a non-occupier landlord to a third party licensee is different from the duty owed under s. 3 of the Occupiers' Liability Act. In any event, the same result, i.e., affixing liability to the landlord, may be achieved in this case by resorting to s. 8 of the Occupiers' Liability Act.

I turn then to consider that Act. I find that Stingray was not only a "landlord" but an "occupier" of the premises, or at least of the exterior stairway, at 587 Central Avenue within the meaning of the word as defined in s-s. 1(a)(ii) of the Occupiers' Liability Act. It is not necessary to resort to s. 96 of the Landlord and Tenant Act even to demonstrate that Stingray bore responsibility for the condition of the premises. Bird agreed that Stingray rather than the tenants was responsible for repairs to the building and the exterior stairway or structural problems. Therefore, in the words of the definition, Stingray was a person that had "responsibility for and control over the condition of the premises" and in particular of the exterior stairway and was therefore an "occupier" as defined by s-s. 1(a)(ii) of the Act.

Even if Stingray were not an "occupier" as so defined, as a "landlord" it would still owe a duty to Mortimer, apart from s. 96 of the Landlord and Tenant Act, under s-s. 8(1) of the Occupiers' Liability Act, notwithstanding the fact that Mortimer is not a "tenant". Section 8 reads:

> 8. (1) Where premises are occupied or used by virtue of a tenancy under which the landlord is responsible for the maintenance or repair of the premises, it is the duty of the landlord to show towards any person or the

property brought on the premises by those persons, the

same duty of care in respect of dangers arising from any failure on his part in carrying out his responsibility as is required by this Act to be shown by an occupier of the premises.

(2) For the purposes of this section, a landlord shall not be deemed to have made default in carrying out any obligation to a person unless his default is such as to be actionable at the suit of the person entitled to possession of the premises.

(3) For the purposes of this section, obligations imposed by any enactment by virtue of a tenancy shall be treated as imposed by the tenancy, and "tenancy" includes a statutory tenancy, an implied tenancy and any contract conferring the right of occupation, and "landlord" shall be construed accordingly.

(4) This section applies to all tenancies whether created before or after the commencement of this Act.

The duty owed by the landlord is "the same duty of care in respect of dangers arising from any failure on his part in carrying out his responsibility as is required by this Act to be shown by an occupier of the premises", which duty is defined in s-s. 3(1). Part of the "responsibility" a landlord must carry out is its duty under s. 96 of the Landlord and Tenant Act. In fact, that section states that in addition to being "responsible" for maintaining the premises in a good state of repair and fit for habitation, the landlord is also "responsible" for "complying with health and safety standards, including any housing standards required by law...". If this is the case, the terms of the City's Property Standards By-law become "pertinent to any inquiry as to whether the [landlord] did exercise reasonable care to ensure that the premises were in a proper state of repair": Gaul v. King and King (1979), 33 N.S.R. (2d) 60 (N.S.S.C.) at p. 75.

However, in deciding the issue of Stingray's liability, I need not go beyond considering the duty expressed in s. 3 of the 11 Occupiers' Liability Act, without reference to s. 96 of the Landlord and Tenant Act or the Property Standards By-law. The nature of that duty was canvassed in Waldick v. Malcolm, [1991] 2 S.C.R. 456, a judgment of the Supreme Court of Canada, released June 27, 1991. There, Iacobucci J. stated:

> . . . the statutory duty on occupiers is framed quite generally, as indeed it must be. That duty is to take reasonable care in the circumstances to make the premises safe. That duty does not change but the factors which are relevant to an assessment of what constitutes reasonable care will necessarily be very specific to each fact situation thus the proviso "such care as in all circumstances of the case is reasonable". . . . [The emphasis is Iacobucci J.'s.].
>
> The goals of the Act are to promote, and indeed, require where circumstances warrant, positive action on the part of occupiers to make their premises reasonably safe. [Emphasis added.].

In Sauve et al. v. Provost et al., 71 O.R. (2d) 774, (Ont. H.C.), Granger J. also held that s. 3(1) of the Occupiers' Liability Act imposed a positive duty upon the occupiers in that case to inspect their premises. There, the occupiers had made no inspection and shad no knowledge of the rotted condition of a wood railing that failed and caused injury to the plaintiff. Granger J. found that if the occupiers had inspected the premises periodically, the defect would have been discovered. At page 780, he stated:

> Absent any knowledge on the part of the purchaser of any defects, purchasers of new homes may be entitled to refrain from inspection for a reasonable time, relying on the expertise of the building contractor. However, a duty starts to arise to inspect as the premises age. Homeowners must be taken to know that wood rots.
>
> ... An occupier cannot escape liability by failing to inspect his premises and thereafter rely on his lack of

knowledge.

At the same time, the courts have recognized that, "The duty is not absolute and occupiers are not insurers liable for any damages suffered by persons entering their premises.": Waldick v. Malcolm, (1989), 70 O.R. (2d) 717, (C.A.), per Blair, J.A., at p. 723.

I turn then to consider the "circumstances of the case" and "the factors that are relevant to an assessment of what constitutes reasonable care" under s. 3 of the Occupiers' Liability Act in this particular situation.

David Bird and Angus Black are the principals of Stingray. About 1972, Stingray purchased an automobile body shop on the southwest corner of Adelaide St. and Central Avenue. From it, Stingray carried on an automobile body shop business for about years. As properties became available next to the body shop, Stingray purchased them. The properties had originally been single family residences but had been converted to duplexes or triplexes before Stingray acquired them. 587 Central Avenue was Stingray's fifth and last purchase, which it completed in 1979, from John Danyluk, who Turner said was a sewer construction inspector for the City of London.

When Stingray purchased 587 Central Avenue, it was already a triplex and the stairway in question was in place. Before the purchase, Stingray never assessed it for structural integrity nor did it order a survey or an engineering or architectural opinion about the soundness of the structure. Bird said "it never crossed [his] mind" that the stairway was in a state of disrepair or failed to comply with the Building Code. He was more concerned with the building's cosmetic aspects and whether it was the type of property that Stingray might let for rent at a profit.

The stairway was built of wood in 1963 and enclosed with wood at the end of 1972. Stingray had painted it in 1979 and 1985. The wooden enclosure of the stairway, including P1, was almost 15 years old at the time of Mortimer's fall on July 17, 1987.

After acquiring the building, Stingray installed a kitchen upstairs and some carpeting and did some interior and exterior painting. Bird said that in September or October, 1985, Stingray sandblasted the exterior, installed new eavestroughs, replaced a step and the lower door on the exterior stairway, reinforced a stringer from S7 to S10 at the bottom of the exterior stairway and installed a new pole, (WP1), under the south east corner of the top landing. The work was done by Hogan's Contracting, which was owned by Bird's brother. The pole, (WP2), under the north east corner of the upper landing was not in place at the time of Mortimer's fall. It was replaced later.

Bird said when the work was done to the stairway in 1985, he instructed his brother to inspect the staircase and to repair it as needed. After the work was completed, he was satisfied that the stairway was in good repair and fit for the purpose for which it was intended. I reject his testimony that he asked his brother to effect whatever repairs were necessary. His explanation for the difference in his evidence at trial and on his examination for discovery on this point was unconvincing.

Bird did not live in the building, which was divided into 3 apartments and rented to tenants. In particular, the upstairs apartment, which depended on the exterior stairway as the sole means of ingress and egress, was rented to Hunt and Kale, 2 young students with no knowledge of the requirements of the Building Code or good building practice. Bird said he "went through" the properties every 4 to 6 months to see what items of repair or maintenance might be required and effected them. Also, if a tenant called about, for example, a plumbing problem, he would look at the situation and have the repairs completed. Based on these "inspections", he said no repairs were required to the house or staircase from December, 1985, to July, 1987. As noted below when dealing with the deficiencies that existed in the stairway in addition to those serious departures from the requirements of the Code and good

building practice, I find this was not so.

When he made his periodic inspections of the building, he simply "looked at its general condition". He arranged eventually to have corrected any defect that was patently obvious or about which the tenants complained. He admitted he understood that wood deteriorates and does so more quickly if exposed to the elements. Yet, he never examined the exterior of the stairway to determine if there was any wear and tear from the weather or wood rot.

He agreed that repairs to the building and the exterior stairway or structural problems were Stingray's responsibility and not that of the tenants. He received no complaints about the stairway from any of the tenants but agreed that he was not relying upon Hunt or Kale to advise him of any structural inadequacy in the stairway.

While Stingray owned the 5 properties that included 587 Central Avenue, Bird maintained a full time job selling automobiles. He had no background in construction or property management. He was unfamiliar with the requirements of the National Building Code, the Ontario Building Code or the

City's relevant by-laws, but was the only person at Stingray who was involved directly in managing the properties. He did so in his spare time. He did not possess the knowledge or experience to make an adequate assessment of the stairway's structural integrity except for glaringly apparent deficiencies. Even then, as for example when WP2 went missing, he did not act quickly to correct the situation.

Bird did not learn of the fall until "a couple of days" after it happened. When he then went to Hunt's apartment, P1 was back in place, because Hunt and her boyfriend had replaced it, and he found no change in the structure of the stairway. After he talked to Hunt and learned that someone had fallen, he had his brother send a workman to drive some additional nails into P1 for security. The faulty stairway was removed after the accident and replaced with the existing one, which is shown in Exhibit 2, photograph 15, but not until October, 1988.

The grave structural defects involving P1 that resulted from failure to comply with the Building Code and good building practice were plainly visible to anyone with knowledge of those requirements. Although they were not readily apparent to someone like Bird who lacked such knowledge, they were not "hidden" from view in the way that a defect concealed within an enclosed wall would be. In addition to these structural defects, there were several other deficiencies in the stairway: WP2 was missing; there was a broken tread on the stairway; the outer exterior door at the top of the landing was rusted open; S1 was not fastened at its bottom; roof rafters had separated from the roof stringers of the stairway; there was wood rot along the bottom of P1.

The plaintiffs' position is as follows. These were manifest deficiencies in the stairway that should have alerted Bird to the fact that it was not in a proper state of repair. Bird either failed to conduct a reasonable inspection or ignored a situation of danger. If he had conducted a reasonable inspection, he would have discovered wood rot in P1, the absence of WP2, the separation of the roof rafters in the stairway and the dangerous condition represented by the raised threshold to Hunt and Kale's apartment.

Although none of these conditions might constitute the proximate cause of Mortimer's injury, nevertheless Stingray then should have retained someone with the requisite knowledge and experience to conduct a proper assessment of the stairway and to effect repairs or alterations. In doing so, the condition of P1 would have been discovered and corrected.

Similarly, Stingray had work done to the stairway in 1985 without obtaining the required building permit. If a permit had been obtained, the Building Inspector would have discovered the dangerous condition of P1 and ordered it rectified.

Stingray was in the business of renting residential properties for a profit. In addition, it also had some hope of making a profit from the development of the property for

other uses in the future. It should not be able to escape liability by relying upon an examination conducted by a principal of Stingray who lacked the knowledge and experience to conduct a meaningful inspection. Such an inspection would not be "reasonable".

Stingray's position is as follows. There was nothing about the appearance of the "wall" of which P1 was a part or its method of construction that would alert Bird to the potentially dangerous condition of P1. This submission is based on Quaile's evidence that he did not believe the easterly enclosure of the landing, of which P1 was a part, was really a wall. However, he acknowledged that a Building Inspector, Mrs. Danyluk and Bird would think of it as a wall. Therefore, he agreed one would not expect Bird to retain an engineer to conduct tests upon it.

Moreover, neither the existence of the threshold nor its disrepair was the proximate cause of Mortimer's injury. The same applies to the absence of WP2 and the separation of the woodrafters. The wood rot was not discoverable upon a reasonable inspection. The stairway had been used for 15 years without incident. The tenants had never complained about it. These circumstances and the other deficiencies in the stairway would not cause a reasonable person in Bird's position to question its structural integrity or to seek a professional opinion about it.

A building permit was not required for the work done in 1985 because it was in the nature of "repairs". The City's Building By-law did not require a permit to effect repairs.

I shall deal first with the issue of the threshold. Bird was familiar with the raised threshold at the entrance to Hunt's apartment. He said it was not difficult to see because it was white, a different colour from the surrounding surfaces. He agreed that it was in Poor condition and needed to be replaced but he did not expect the tenants to remove it. Bird agreed that a person moving backwards might trip on the threshold and fall against P1. He had not directed his mind to this possibility before the trial, but if he had, he would have thought P1 had the capacity to prevent that person from falling through it.

I find that persons using the stairway would have a reasonable expectation that P1 would prevent them from falling through it if they tripped and fell against it: There was nothing in the Building Code at the time that regulated the height of the threshold. Neither tenant regarded it as a hazard. No one had fallen on it or tripped over it during their tenancy. Even though it was in need of repair, its state of disrepair was not the proximate cause of Mortimer's injury. In the circumstances, Stingray's failure to repair or remove the threshold was not the proximate or effective cause of Mortimer's injury and should not attract liability.

I turn next to consider whether Stingray made adequate inspections and, if not, whether a reasonable inspection would have revealed the structural deficiencies that resulted from failure to comply with the Building Code and good building practice or the presence of wood rot. As I understand the law, an occupier is not required to protect the plaintiff against risks or dangers of which the occupier could not reasonably have been aware.

I am not impressed by the manner in which Stingray conducted its inspections or maintained the stairway. Unsafe conditions prevailed for unreasonable lengths of time. The failure to inspect the exterior of the stairway was certainly unreasonable. However, even if Bird had conducted a proper inspection, I conclude there was nothing about the appearance of the construction of the east wall of the landing per se that would have alerted him to the danger that existed there, because he lacked the expertise to recognize the departures from Code compliance and good building practice.

With respect to the wood rot, Mortimer's father said that when he examined P1 the day after the accident it was soft along the bottom. He stated, "It was rotten, actually." The nails had pulled through the bottom of the plywood and, at the bottom "where the weather had gone in", they were rusty.

Blaney attended at the scene on April 6, 1988, and took some photographs, 3 of which were entered as Exhibit 30. He

said they revealed some tearing around what would be the lower right corner of P1 when viewed from the exterior but that this might have happened when P1 came away from the frame. However, he also stated they disclosed water damage along the lower right edge of the panel, when viewed from the outside. The bottom of P1 was covered on the outside by a batten measuring about 3/4 inches thick and 3 3/4 inches high. Blaney testified that rain could collect under the batten and cause the bottom of P1 to rot. He also said that when the wood around a nail in withdrawal rots, the nail can "work out".

Quaile confirmed that nails in withdrawal lose up to 75 per cent of their tensile strength over time, even apart from weathering. Looking at Exhibit 46, Quaile said he suspected decay in the lower right corner of P1. However, Exhibit 46, reproduced in Exhibit 30 as photograph 2, was taken by Blaney in April, 1988, after P1 had been reinstalled and had been exposed to the weathering effect of the winter of 1987-1988. Exhibit 64, photograph 2, was taken about a week after Mortimer's fall and it is more representative of the condition of P1 at the time of Mortimer's fall. I have no doubt that the condition of wood rot existed along the bottom of P1. Nevertheless, having viewed Exhibit 64, photograph 2 very carefully, I cannot say it is more probable than not that wood rot would be visible to the naked eye. What is apparent in the photograph may very well be damage caused when P1 gave way.

In Sulmona v. Serraglio, a decision of the British Columbia Court of Appeal delivered May 16, 1986, the plaintiff, with another man, was carrying a stove down the upper tier of a two tier flight of wood stairs that was attached to a deck. The stairway collapsed and he was injured. The cause of the failure was dry rot at the point where the stair risers were attached to the deck. The Court of Appeal upheld the trial judge's conclusion that there was no reason for the defendant to examine the stairs closely. Even if he had, he might not have noticed the dry rot because it was under the top step and "not discernable without minute inspection". The defendant had noticed some water seeping through the unpainted deck and the fact that some of the plywood was weathered and worn. However, the Court found there was nothing to indicate the stairs would not hold the weight of two men and a stove. The Court held: "An occupier of premises is not an insurer. He cannot guard against every eventuality." The Court found the defendant was not in breach of his statutory duty under s-s. 3(1) of the Occupiers' Liability Act, R.S.B.C. 1979, Ch. 303.

That case was decided in 1986. The age of the stairway was not noted but the trial judge found the deck was unpainted and the plywood deck was weathered and worn. To the extent that it suggests the occupier was under no positive duty to inspect, the decision might be considered no longer of persuasive value in view of the more recent decision of the Supreme Court of Canada in Waldick v. Malcolm, supra. On the other hand, the proposition that an occupier will not be held liable for damage caused by a condition of disrepair that could not be discovered by reasonable inspection remains sound.

In the circumstances, it would be beyond the scope of a reasonable inspection to require Bird to remove the battens to search for evidence of wood rot, if none were otherwise visible or readily ascertainable. The fact that Bird failed to inspect the exterior of the stairway is thus immaterial because, in the circumstances, even if he had, it is not probable that he would have seen any evidence of wood rot.

"I turn next to consider the other "deficiencies" in the stairway, particularly the absence of WP2 and the separation of the roof rafters. On cross-examination by Mr. Morse, Bird agreed that he absence of WP2 created the potential for a problem regarding the support and stability of the upper landing, which might result in harm to persons using the stairway. Anyone who looked at the underside of the upper landing, which was easily seen, and saw the hole at its north east corner could not fail to appreciate that WP2 was missing. The hole is clearly visible in Exhibit 64, photograph. From looking at Exhibit 2, photograph 9, Bird agreed that the bottom of S1 appeared to be visible through the hole where WP2 had been. From the time Stingray purchased the property until Mortimer's fall, Bird would have "inspected" the premises

about 15 times, yet WP2 was not replaced before the fall. Again, the explanation he gave of his efforts to replace WP2 when he learned it was missing was most unconvincing.

However, Stingray's position is that the absence of WP2 had no effect on the stairway's structural integrity and certainly did not cause or contribute to Mortimer's fall. Turner testified that, during the trial, he measured the joists that supported the upper landing. In his opinion, although the stairs had been changed, the old floor joists had remained. He said they were 2x10s that had been inserted 6 feet into the building, 15 inches on centre. Because two-thirds of their length had been set into the building, there was a cantilever effect and the posts, WP1 and WP2, would be superfluous as far as the safety of the structure was concerned. As a result, he said the City would not require any posts under the upper landing. I accept this evidence. However, Turner later said on cross-examination by Mr. Morse that if he had seen the hole in the landing created by the absence of WP2 in September, 1985, he would have been concerned that the stairway was not in a proper state of repair. He stated that the hole was suggestive of changes that would cause him as a prudent inspector to investigate.

Upon Stingray lay the primary burden of repair and responsibility for maintaining the stairway in a reasonably safe condition. At the best of times, a stairway is a place of potential danger. Wood is subject to deterioration over time, caused by exposure to the elements and ordinary wear and tear. In the circumstances of this case, it is my opinion that a "reasonable inspection" of the wood stairway by Stingray should have included a periodic, thorough examination of interior and exterior areas that were exposed to view. The absence of WP2 was apparent on even a cursory examination. The separation of the roof rafters was conspicuous to anyone who took the trouble to shine a flashlight on them. These 2 conditions were also obvious, even to someone with Bird's limited knowledge and experience, as deficiencies that might relate to the structural integrity and safety of the stairway.

It is true that Mead said she found the stairway dark at midday. Also, Quaile testified it was not reasonable to anticipate that roof rafters would become separated because, if properly constructed, they should perform appropriately over long periods of time, sometimes up to 150 years. He thought home owners should not be expected to conduct inspections of the roof rafters to see if they were separating. He also confirmed the common sense proposition that the tendency on ascending or descending stairs is to look at the stairs ahead and not direct one's attention at the roof members.

Also, several formal inspections of the stairway were conducted following Mortimer's accident by engineers and building inspectors, all but one of whom failed to note the separation of the roof rafters. The persons making those inspections all knew that there had been a very serious accident and their specific purpose was to determine the structural soundness of the stairway. With one exception, none of these individuals, all of whom were familiar with good building practices and Code requirements, noticed the separation between the roof rafters and the roof stringer.

Unlike the situation of a home owner who would have to crawl into an attic to examine roof rafters, all Bird had to do was shine a flashlight upward to illuminate the roof rafters of the stairway that were then plainly visible. In this case, a cursory examination conducted by Bird while he was simply walking up or down the stairs would not be sufficient to constitute a reasonable inspection as I have defined it. The fact that even engineers did not discover the separated roof rafters is not surprising. They were there to examine the condition of the east wall through which Mortimer and Cameron fell, for the specific purpose of assessing its structural adequacy. On the other hand, the duty on an "occupier" in Bird's position is wider in scope. He had a duty "to take such care as in all the circumstances of the case is reasonable to see that persons entering the premises are reasonably safe while on the premises".

Bird did not have the experience or knowledge to appreciate that WP2 was not required due to the cantilevered landing joists. Turner, who had that knowledge, said the absence of WP2 still would have caused him to investigate. A

person without that knowledge or experience would conclude that the landing was supported by WP1 and WP2. Therefore, in that person's mind, the absence of WP2 would leave the landing in a potentially unsafe condition. In fact, Bird's view was indeed that the absence of WP2 created a situation that might result in harm to the tenants. The absence of WP2 and the separation of the roof rafters should have raised concern about the structural integrity of the stairway in the mind of a reasonable person in Bird's position. That concern, in turn, should have led such a reasonable person to retain a knowledgeable individual to assess and correct these problems.

It is probable that in evaluating the potential structural harm done by the breaking of WP2, such a knowledgeable individual would have discovered the dangerous condition on the landing that involved P1 and informed Stingray accordingly. Having been advised of the danger, a reasonable person in the position of Stingray could and should have foreseen that someone might trip on the landing, fall through P1, land on the ground and sustain extremely serious injuries. A person in that position would have been duty bound to correct the situation. If that had occurred, Mortimer would never have been injured. Therefore, in my opinion, this omission on Stingray's part constitutes an actionable breach of its duty under s. 3(1) of the Occupiers' Liability Act.

In the event that I am wrong in this conclusion, I turn to consider the final issue raised under s. 3. It arises from the work done in 1985. Bird said that in that year the stringer at the bottom of the staircase from S7 down to S10 was reinforced. An inspection was made of the remaining stringers at that time. He did not know whether the plywood sheets were removed when the stringer was removed and replaced.

Turner said that the vertical studs S8 to S10 inclusive were installed at right angles and that the upper ones had been installed on the flat. S8, S9 and S10 were installed 16 inches on centre, while those between S2 and S7 were 24 inches on centre. The space between S0 and S1 and between S1 and S2 was neither 16 nor 24 inches. He could not understand why S8, S9 and S10 were installed at right angles and the rest were on the flat. He assumed that one person would install them all one way or the other. I infer that they were originally on the flat and were changed when the work was done in 1985 to the stringer that ran from S7 to S10.

Turner testified that the vertical studs of the stairway are considered structural members because they support loads. Therefore, if Stingray were going to replace any of them or repair the stairway, it would have to obtain a building permit. Mr. Brown submits the City's by-law contained no such requirement.

Section 1.2.4.(d) of the City's Building By-law No. B.-56-269 provided:

> Where ... (d) a building is altered, this by-law applies to the whole building except that the by-law applies only to part if that part is completely self-contained with respect to the facilities and safety measures required by this by-law. [Emphasis added.]

It does not state specifically that a permit must be obtained for building "repairs". The by-law is silent about the meaning of the word "altered". To alter something is to make it different, modify it or change it. As previously noted, the stated purpose of the By-law is "to safeguard life or limb, health, property and public welfare with respect to the design, construction and alteration of buildings by the provision of minimum standards". The purpose of the by-law is consequently to regulate the design, construction and alteration of buildings with a view to making them safe for their occupants and other persons and property within them. Section 1.5.1. prohibits an owner from commencing any of the works described in s. 1.2., including "alterations", without first making application in the prescribed form and obtaining the required permit. In this way, the municipal authority has a means of knowing about and regulating construction that might have an impact on the degree of safety provided by a structure.

The evidence of Blaney and Quaile and the results of some of the load tests established that the orientation of the

vertical studs in the east wall of the landing changed their ability to withstand the loads imposed on them. They were more resistant to lateral loads when they were installed at right angles to P1 than on the flat. Also, the spacing of the vertical studs influenced the structural integrity of the stairway and the degree of safety it afforded persons using it. Both the orientation and spacing of the studs affected the safety of the structure. As it turned out, the alterations to S8, S9 and S10 were positive in terms of Code compliance. However, because they were structural members that were being changed, with a possible impact on the degree of safety provided by the structure, Stingray should have applied for building permit. A simple "repair" that did not require the modification of a structural member or that did not have a potential impact on safety would not require a building permit.

Turner testified that if an application had been made for a building permit when the stairway was altered in 1985, the work would have been inspected. He said if he had inspected that work, he would have observed the condition between S0 and S1. He would have ordered the owner to install a vertical 2x4 stud between S0 and S1, below the window. If the owner had refused, he would have pursued the enforcement remedies available to him under the Building By-law. Failing compliance by the owner, Turner would have "taken him to court". From Turner's evidence, I conclude it is probable that any Building Inspector would do the same thing.

Therefore, I find that if Bird had obtained a building permit for the work done in 1985, as he was required by the City's Building By-law to do, the dangerous condition of the upper landing would have been discovered and corrected and Mortimer would never have fallen or been injured as he was.

Owners in the position of Stingray must be taken to know that alterations that may affect the degree of safety provided by a structure require an application for a building permit. This is especially so in a case such as this where Bird was totally lacking in the knowledge or expertise necessary to assess the safety factors himself. The necessary expertise would be provided by the City's Building Inspector, assuming he was acting properly.

By virtue of s. 8 of the Occupiers' Liability Act, Stingray, in failing to apply for a building permit, thereby breached its duty under s. 3 to persons in the position of Mortimer "to take such care as in all the circumstances of the case is reasonable to see that persons entering the premises ... are reasonably safe while on the premises". Stingray's failure to comply with the requirements of the Building By-law and apply for the permit resulted in the continuation of the hazardous condition of the exterior landing that would have been discovered had the application been made.

The fact that Mortimer was not reasonably safe while on the stairway was at least partially a direct result of Stingray's breach of that duty, which in turn resulted in foreseeable harm to him. Therefore, even though the harm accruing to Mortimer was the result of the initial failure of the structure to comply with the Building Code and good building practice, which resulted from the City's negligence, some liability must also attach to Stingray due to its failure to meet its duty under s. 3. Had it done so, Mortimer would not be a quadriplegic today.

Before leaving this issue, I wish to deal with the effect of s-s. 8(2) of the Occupiers' Liability Act as it applies in this case. The reference in the subsection to the landlord's default being actionable at the suit of the tenant, has been held in some cases to import the common law requirement that a landlord must first be notified of the state of non-repair before he can be held liable for any injury caused by it. In this case, the tenants did not advise the landlord of the state of P1, because they did not know of it. Nor did they notify Bird about other deficiencies of which they may have been aware that could have led to the discovery of the condition of P1. Therefore, it might be argued that because this condition of notification was not fulfilled, Stingray cannot be held liable to the plaintiffs.

However, in this case, Bird testified specifically that Stingray was not relying upon the tenants to notify it of conditions of non-repair. He agreed that Stingray had assumed

responsibility for maintaining the stairway in a good state of repair and for correcting structural problems, independent of any communication from the tenants. In these circumstances, Stingray is deemed to have waived reliance upon s-s. 8(2). Therefore, that subsection does not constitute a bar to the plaintiffs' action against Stingray.

10. THE ISSUE OF THE NEGLIGENCE OF HUNT AND KALE:

In addition to Mortimer's claim against Hunt under the Occupiers' Liability Act arising from the condition of the premises, Stingray and Cameron crossclaimed against her in relation to the issues of alcohol and the conduct of her guests and thereby raise the issue of her liability as a social host. Both rely upon s-s. 3(2) of the Occupiers' Liability Act:

> (2) The duty of care provided for in subsection (1) applies whether the danger is caused by the condition of the premises or by an activity carried on on the premises. [Emphasis added.].

Hunt in turn commenced a third party action against Kale, her tenant.

The position of Stingray is as follows. Hunt supplied alcohol to Mortimer, permitted Mortimer and Cameron to become intoxicated and failed to restrain their conduct. She allowed them to remain on the premises when she knew or ought to have known that Mortimer's conduct might result in his injury and she failed to warn him of that fact. Cameron's position is similar. In addition, he alleges Hunt allowed Mortimer to remain near the stairway when she knew he was intoxicated and unable to care for himself.

The witnesses who testified about the party stated unanimously that it was a subdued affair. Some of the guests drank alcohol, some played cards or a board game, others copied school notes or sat and talked. The atmosphere was universally friendly. No one was visibly intoxicated, boisterous or unruly. There was no physical contact between any of the guests prior to the incident involving Mortimer and Cameron.

Hunt did not supply alcohol to Mortimer or Cameron. Each brought his own beer. The evidence of Drs. Hirst and LeBlanc established that Mortimer was modestly intoxicated, as probably was Cameron. Although Mortimer was somewhat more gregarious than usual, neither exhibited any overt signs of intoxication. Therefore, an objective observer would have no reason to be concerned about their behaviour or to suspect that either posed a danger to himself or others. Hunt herself consumed very little alcohol. Her judgment was not adversely affected by the amount she did consume.

Neither Mead nor McCall, both of whom saw Mortimer and Cameron at the top of the stairs, was sufficiently concerned about their behaviour to intervene. Mortimer and Cameron were engaged in friendly "horseplay" that did not appear to present a danger to either of them. Hunt said she heard laughter and turned to see them at the top of the stairs. One had his arm raised as if pretending to pour beer on the other. Then, they appeared to be "disengaging". Having no concern for their safety, she turned her attention back to the tape deck.

In these circumstances, I find there was no prior conduct that would alert a reasonable person to the likelihood of any dangerous activity taking place. Hunt could not reasonably have anticipated such an unexpected occurrence as Mortimer's fall through P1 or any other injury based on the general tone of the party and the preceding conduct of Mortimer and Cameron. Therefore, she had no reason to intervene between them.

In the circumstances, she is not liable as a social host either at common law or under the Occupiers' Liability Act for the consequences of supplying alcohol, because she did not supply it, or for permitting a dangerous activity to take place on her premises.

I turn then to consider the affirmative duty that Mr. Morse submits applies not only to Stingray but also to Hunt and Kale under s. 3(1) of the Occupiers' Liability Act. As tenants, Hunt and Kale were "in physical possession" of the

premises and also had responsibility for and control over the activities carried on and the persons allowed to enter there. Therefore, they were "occupiers" who owed to Mortimer the duty prescribed by s. 3 of the Act, as amplified by the Supreme Court of Canada in Waldick v. Malcolm, supra. In dealing with the issue of the tenants' liability under s. 3(1), as compared to that of the landlord, I am mindful of the words of Iacobucci J. in that case that the duty does not change. However, he also stated that "...what constitutes reasonable care will necessarily be very specific to each fact situation...". In other words, the duty to take reasonable care remains the same but what constitutes reasonable care may vary depending upon the "all the circumstances".

The position of the tenants is as follows. By virtue of ss. 82 and 96 of the Landlord and Tenant Act, the primary obligation for maintenance and repair and compliance with health and safety standards, including housing standards required by law such as the City's Property Standards By-law, fell upon Stingray as landlord. Even apart from s. 96, Bird confirmed that Stingray was responsible for repairs or structural problems and did not rely upon the tenants to advise him of any structural inadequacy in the stairway.

Hunt and Kale also understood that Stingray was responsible for maintenance and repairs. In these circumstances, it was the duty of the landlord and not of the tenants to inspect for the specific purpose of determining structural adequacy and identifying unsafe conditions. At its highest, the tenants' duty was to report to their landlord those conditions that obviously affected their safety and that of their guests and that related to structural or design features about which the landlord might otherwise be unaware.

The tenants submit this is logical and reasonable because one of the primary reasons, apart from economic considerations, for persons electing to rent residential premises rather than own them is to relieve themselves of the concern and expense associated with property maintenance and repair. In this regard, they point to the following passages from pp. 36 and 44 of the Interim Report of the Ontario Law Reform Commission on Landlord and Tenant Law Applicable to Residential Tenancies published by the Department of the Attorney General in 1968:

> It is an economic fact that the modern residential tenant is less likely to be able to bear the cost of undertaking repairs. In the typical urban apartment tenancy, which is usually of quite a short duration, the landlord is generally considered to be the person having the major interest in the condition of the leased premises. It is the landlord who receives not only the rent, but also the benefit which results from improvements to the property, including repairs. It is the landlord, therefore, who ought to bear the primary responsibility to repair. He should be required to provide premises which are fit for human habitation and are in a good state of repair and he should be primarily responsible for keeping them in that condition.
>
> At p. 44:
>
> If the obligation to repair is left on tenants then the tenant at the time when repairs are effected must immediately bear the entire cost of the repairs. This precludes the spreading of such costs over a reasonable period and among the subsequent tenants who would also benefit.

The tenants' position is that under s. 96(2) of the Landlord and Tenant Act they were responsible only for the ordinary cleanliness of the premises and for the repair of damage negligently or wilfully caused by themselves or their guests. It is their position that the Legislature incorporated the philosophy of the Ontario Law Reform Commission into s. 96 and imposed upon the landlord the primary obligation for "providing and maintaining the rented premises in a good state of repair and fit for habitation during the tenancy and for complying with health and safety standards, including any housing standards required by law". Accordingly, they, as tenants, were entitled to assume, in the absence of some clear evidence to the contrary, that the landlord had complied with his statutory duty and that the premises were safe and in a condition of good repair.

On the other hand, Mr. Morse submits that Hunt and Kale are prevented by s. 5(1) of the Occupiers' Liability Act from relying upon their status as tenants, and the corresponding obligation of the landlord to effect repairs, to shield themselves from performing the duty they owed under s. 3(1) of the Occupiers' Liability Act. Section 5 reads:

> 5.(1) The duty of an occupier under this Act, or his liability for breach thereof, shall not be restricted or excluded by the provisions of any contract to which the person to whom the duty is owed is not a party, whether or not the occupier is bound by the contract to permit such person to enter or use the premises.
>
> (2) A contract shall not by virtue of this Act have the effect, unless it expressly so provides, of making an occupier who has taken reasonable care, liable to any person not a party to the contract, for dangers due to the faulty execution of any work of construction, maintenance or repair, or other like operation by persons
>
> other than himself, his servants, and persons acting under his direction and control.
>
> (3) Where an occupier is free to restrict, modify or exclude his duty of care or his liability for breach thereof, he shall take reasonable steps to bring such restriction, modification or exclusion to the attention of the person to whom the duty is owed.

Mr. Morse also submits that when the landlord failed to make the repairs necessary to keep the premises safe, the tenants, in order to meet the duty imposed upon them by s. 3 of the Occupiers' Liability Act, were obliged to move in a summary way pursuant to s-s. 96(3)(b) of the Landlord and Tenant Act for an order authorizing the repairs at the landlord's expense. That subsection reads:

> (3) The obligations imposed under this section may be enforced by summary application to a judge of the county or district court of the county or district in which the premises are situate and the judge may,
>
> (a) terminate the tenancy subject to such relief
>
> against forfeiture as the judge sees fit;
>
> (b) authorize any repair that has been or is to be made and order the cost thereof to be paid by the person responsible to make the repair, such cost to be recovered by due process or by set-off;
>
> (c) make such further or other order as the judge considers appropriate.

While both Stingray and the tenants were "occupiers", and therefore subject to the duty prescribed by s. 3, the "circumstances" of Hunt and Kale were different from those of Stingray. This is important because what constituted reasonable care for Hunt and Kale depended upon "all the circumstances".

In addition to what has already been noted about their status as tenants and their relationship with Stingray, their other circumstances were as follows. Both had come from the small community of Seaforth where they had gone to high school together and were in their second year at Fanshawe Community College. Hunt moved into the apartment in September, 1985. Kale moved into it in September, 1986. They were 21 on the day of Mortimer's fall. They had limited financial resources. As students, they found attractive the monthly rent of $360.00, which was funded by their parents. They moved their furniture into the apartment with the help of friends. In the course of moving their furniture and their daily use of the stairs, they never experienced any problem with the staircase or threshold. There was never any indication of instability in the staircase and neither tenant saw anything that gave rise to concern for her safety. Neither had experience in construction, knowledge of good building practice, or of Building Code requirements. Hunt was an accounting student. Kale was in the medical laboratory technology programme. Hunt's understanding of her obligation in relation to the stairway was that she had only to keep it clean. She said if

she had seen something obviously wrong she would have informed the landlord about it.

As noted, the duty cast upon Hunt and Kale was to "take such care as in all the circumstances of the case is reasonable to see that persons entering the premises ... are reasonably safe while on the premises". What is "reasonable" must depend not only on the particular factual situation but also upon its legal context, which they are deemed to know. Clearly s. 96(1) of the Landlord and Tenant Act casts the primary but not exclusive duty to maintain the premises in a safe condition upon the landlord. Section 8 of the Occupiers' Liability Act extends the benefits flowing from the statutory duty on the landlord beyond tenants to embrace as well third persons to whom the landlord owes no contractual duty. The object of the Occupiers' Liability Act is to make premises reasonably safe for persons and objects entering them by casting a duty of reasonable care upon "occupiers" whether they be landlords or tenants.

With respect to the effect of s-s. 5(1) of the Occupiers' Liability Act, it applies to the situation where an occupier, in a contract to which a person in Mortimer's position is not a party, attempts to restrict or exclude his liability for breach of the Act. That is not the case here. There was no written tenancy agreement between Stingray and the tenants Hunt and Kale to limit the scope of their duty to Mortimer. They rely upon s. 96 of the Landlord and Tenant Act, to cast the primary responsibility for maintaining the premises in a good state of repair upon Stingray. By virtue of s. 82 of the Landlord and Tenant Act, s. 96 is imported into every tenancy agreement, whether oral or written. Therefore, it is not a situation where the tenants, as occupiers, have had some choice and have attempted by contract to limit their liability under the Occupiers' Liability Act toward persons in Mortimer's position. Their duty under that Act remains as stated in s. 3(1), but part of their "circumstances" is the fact that as tenants they are in a relationship with Stingray that casts on it the statutory duty of repair set forth in s. 96. Therefore, I conclude that s-s. 5(1) of the Occupiers' Liability Act does not prevent Hunt and Kale from relying upon s. 96 of the Landlord and Tenant Act to assist them.

In the circumstances of this case only, and I stress that the following is not meant to be taken as a principle of general application, I do not believe it is reasonable to expect the tenants to have conducted thorough, periodic inspections to determine the structural integrity of the stairway in the same way as Stingray. Stingray bore that statutory burden under the Landlord and Tenant Act, was not relying upon the tenants to fulfil it and had assumed that responsibility unto itself.

In my opinion, if an obvious and imminent condition of danger had been present, at the very least Hunt and Kale would have had a duty to advise Stingray immediately and to do what they could to protect their guests or others using the stairway from the condition, including warning them adequately of its existence. If Stingray failed to correct the condition within a reasonable time, then, depending upon the circumstances, it might even have been part of the tenants' duty either to make the repairs themselves, or, if the cost to them was prohibitive, to apply in a summary way for an order under s. 96(3) of the Landlord and Tenant Act to authorize the repairs and require the landlord to pay for them.

I do not believe that in the face of an obvious and imminent danger they would be entitled simply to rely upon the duty of repair cast upon the landlord under s. 96 to shield themselves from liability to a third party. On the other hand, it would be reasonable for them to assume, in the absence of evidence to the contrary, that the landlord was complying with his statutory duty to maintain the premises in a safe condition.

In all the circumstances as outlined above, I conclude that it is not reasonable to expect the tenants to have looked for and discovered the type of structural conditions that were implicated in Mortimer's fall. As far as they could tell from their ordinary use of the stairway, it was safe and there was no obvious condition of instability or danger. The condition of P1 would certainly not be evident to them. As noted, Quaile confirmed the common practice on ascending or descending stairs of looking at the stairs ahead and not

directing one's attention at the roof members. Accordingly, the state of the roof rafters was not one that Hunt and Kale, as tenants, would reasonably be expected to discover. Obviously, the same was not true for Stingray. As already noted, upon Stingray, as a landlord who had waived reliance upon the tenants for notice of conditions of non-repair, lay the primary obligation for maintaining the stairway in a good state of repair and in a safe condition. Although several engineers inspected the stairway after Mortimer's fall without discovering the separated roof rafters, they attended for the specific purpose of evaluating the east wall of the landing through which Mortimer and Cameron fell. They were not subject to the positive duty to inspect the entire stairway that was imposed on Stingray by s. 3(1) of the Occupiers' Liability Act.

Even if such conditions as a broken or splintered stair tread and the absence of WP2 constituted evidence to the contrary that required the tenants to report them to Stingray, I conclude, based on its demonstrated history of tardy repair, that Stingray probably would not have remedied such conditions before Mortimer's fall and that the reporting of such conditions by the tenants probably would not have led to the discovery of the dangerous condition of P1. With respect to the absence of WP2 in particular, I base that conclusion on my finding from the evidence that WP2 was likely missing at the time Stingray purchased the property and was not replaced until after Mortimer's fall. In addition, Bird testified that he had replaced WP1 before Mortimer's fall but the manner in which it was replaced obviously did not lead to the discovery and correction of the dangerous condition of P1. I conclude this was because Stingray was concerned to effect only absolutely essential repairs in the least expensive way possible.

I conclude further that in all the circumstances a reasonable person in the position of Hunt and Kale, even in the face of the conditions of non-repair referred to, could not have foreseen that P1 would give way as it did and result

in Mortimer being injured.

In "all these circumstances", I conclude the tenants should not be held liable to Mortimer; If I am wrong in this conclusion and it is decided elsewhere that the tenants are liable, then, in my opinion their liability should be apportioned at 5 per cent each and they should be entitled to succeed in their claim for complete indemnification from Stingray on the ground that Stingray had the primary burden of inspection and repair and was not relying in any way upon the tenants to discharge it. For the same reasons, Stingray must fail in its bid to be indemnified by the tenants. In any event, Stingray did not claim indemnity from Hunt for any negligence on her part related to the condition of the premises, but only on the ground of her liability as social host and her alleged failure to restrain dangerous activity on the premises. Accordingly, the action and all crossclaims against Hunt and the third party action against Kale are dismissed.

11. APPORTIONMENT OF LIABILITY:

On the one hand, if the City had complied with its duty, the fateful condition of the stairway would never have arisen. On the other hand, if Stingray had fulfilled its duty, the condition of P1 could have been discovered and the deficiency remedied before Mortimer was injured. While I find both parties at fault, I conclude that the City must bear a far larger proportion of liability for the following reasons.

The departures from Code requirements and good building practice were egregious and ought to have been noticed by the Building Inspector. In fact, based on the application, a building permit should never have been issued in the first place. This is especially so given the fact that the permit was issued in relation to a stairway, which is known to be a part of premises that is potentially more dangerous than others. Moreover, this was an exterior stairway where the potential for injury was greater still. The condition of P1 that resulted in its failure and that was the proximate cause of Mortimer's injury would not be apparent to the average lay person, who would regard it as part of a wall and would rely on it to provide the fall protection that a wall would afford. As described by Blaney, P1 represented a "trap" because it

would not be obvious that it failed to provide suitable fall protection. Therefore, the City permitted the creation of a particularly insidious condition, especially given its mandate to safeguard life and limb. In the circumstances, its failure represented a marked departure from the applicable standard of care.

Accordingly, I fix the City's liability at 80 per cent and Stingray's liability at 20 per cent.

12. SPECIAL DAMAGES:

Mortimer claims special damages in the sum of $514,542.01. The defendants do not dispute O.H.I.P's subrogated claim of $343,940.82 for past services as of March 14, 1991, nor the subrogated claim of the Ministry of Community and Social Services (COMSOC) for $57,364.20. Nor Do they dispute Mortimer's claim for out of pocket expenses totalling $14,086.99. The only amount in issue is his claim for loss of income to trial in the sum of $99,150.00, which Mr. Morse calculates as follows:

May 1/88 - Apr. 30/89	$27,500.00
May 1/89 - Apr. 30/90	$32,500.00
May 1/90 - Apr. 8/91	$35,336.54
4% Vacation pay based on $37,500.00	$ 3,813.46
TOTAL	$99,150.00

At the time of his injury, Mortimer was completing his second year of a 3 year business programme at Fanshawe Community College in London. Mr. Anthony Kelly is a placement officer at the employment centre at the College. He explained that Fanshawe offered 2 business courses: a 2 year Business/Accounting course and a 3 year Business Administration/Accounting course. Only those who attained a B average in second year could enrol in the third year. A person who completed the 2 year course successfully gained 9 of the 18 credits necessary to get the Certified Management Accountant (C.M.A.) designation. He said a person who completed the 3 year course would have 15 credits. Only students with a B average, such as Mortimer, were eligible for the co operative work programme. He described Mortimer's transcript of marks, (Exhibit 4, p. 10), as "better than average".

Despite a prior lacklustre scholastic record and peripatetic academic and work history, Mortimer had settled on a career as a C.M.A. His former modest academic achievements were not the result of lack of intelligence but were the consequence of lack of direction, interest and application. He did so poorly at the University of Western Ontario and at the University of Calgary that both institutions prevented him from continuing his studies. Besides being an extremely intelligent young man with an I.Q. of 130, he has an engaging personality and handsome appearance. As with many young people, it took Mortimer some time to find his niche. However, once enroled in the Business Programme, he began to garner grades that were consistently in the A and B range. I find that he had finally achieved some equilibrium in his life and that his goal of becoming a C.M.A. was realistic and one that he would have realized but for his injury.

During his first work term in the summer of 1986, Mortimer worked for the Royal Canadian Mounted Police in Ottawa at the rate of $245 a week. His second work term ran from January, 1987, to the end of April, 1987. During it, he worked for Mr. F.C. Hoffner, C.A. in Strathroy at the rate of $210 a week with some additional overtime pay in April. Mortimer's income tax returns reveal that he earned a total of $4,331.60 from the R.C.M.P. and $4,112.32 from Mr. Hoffner.

Although the R.C.M.P. did not provide an evaluation of his work, Hoffner furnished very positive comments and ranked Mortimer with his "previous winning students". His detailed evaluation sheet ranked Mortimer highly and he stated that if he needed an employee he would not hesitate to hire Mortimer.

Mr. Robert Dye is the Executive Director of the Society of Management Accountants of Ontario, which has 10,000 members and 8,000 student members. He explained the differences among 3 different classes of accountants: a C.G.A. (Certified General Accountant), a C.M.A. (Certified Management

Accountant) and a C.A. (Chartered Accountant). Dye stated that while the education, training and positions held by a C.M.A. and a C.G.A. were similar until about 3 years ago, the C.M.A. is now a higher level accounting designation than the C.G.A. As of 1989, only persons holding university degrees in business administration are eligible to apply for admission to the course. Because Mortimer was in the Fanshawe College programme, he would have been exempt from this requirement. Dye said persons holding the C.M.A. designation usually work in management accounting positions within an organization, business or government, although they also might be in private practice. In the latter case, they would do most of the functions of a C.A. except audits. A C.A. is "geared to audits and verification of the financial statements of corporate bodies as required by regulatory agencies". He believes that in 5 or 6 years the business community will assume that all persons with a C.M.A. have a university degree. A similar situation occurred when those entering the C.A. programme had to have a university degree.

He also testified that after Mortimer's third year at Fanshawe College he would require 4 more credits, as opposed to the 3 suggested by Kelly, and 1 year of work experience to qualify for his C.M.A. He added that Mortimer would have the option of completing the remaining 4 credits by taking 1 course per semester, twice a year, in the evenings at the University of Western Ontario, while he was working. He said it was likely that Mortimer would have obtained his C.M.A. designation 2 years after graduating. This pattern was consistent with the history of other college graduates he had seen.

If Mortimer had graduated from Fanshawe College with all his third year courses, he would have been classified as a Level 4 student. There were 5 levels, of which Level 5 was the highest. Dye said in 1988 the salary range for Level 4 students in Toronto and the "Golden Horseshoe" was between $30,000 and $35,000. It would be about 6 per cent less, ($28,200 to $32,900), in Southwestern Ontario. A Level 5 student would earn between $35,000 and $40,000 a year in 1988 and a C.M.A. graduate in that year would start at $45,000. Those rates probably would "have moved up $3,000 to $5,000" a year in 1990.

The Society offers a free employer referral service to its members. It encourages prospective employers to make use of the resumes it receives from C.M.As. or students looking for employment. The Society received the following number of requests in the respective years noted: 1987 - 1,585; 1988 - 2,017; 1989 -1,918; 1990 - 1,374. Dye based his salary figures on an analysis of the salaries that were on these requests. He agreed that one might expect a salary differential depending upon the type of business the employer operated. He also admitted that there was no "union scale" and that an individual's salary depended upon his or her arrangement with a particular employer. Further, a person might take a lower salary to stay in a particular area. I note that these salary figures pertain to few of the total 10,000 members and 8,000 student members of the Society. They may not represent a true cross-section of the profession in Ontario.

According to Kelly, 18 people graduated from the 3 year programme at Fanshawe College in 1988. Of the 17 responding to his questionnaire, all found employment. In 1988, the lowest starting salary of those reporting was $14,820, the highest salary was $25,260 and the average was $18,895. In 1989, the comparable figures were: $16,000, $29,000 and $21,000. In 1990, the low salary was $16,000, the high was $35,000 and the median (rather than the average) was $22,000. These figures also may be slightly misleading. For example, Hunt took a temporary job upon graduation in 1988 until she could secure permanent employment at $27,000 a year.

Mr. Peter Ross, of Associated Economic Consultants Ltd., is a labour market economist with a M.A. in economics. He completed his doctoral course studies in the late 1960s, but never obtained his Ph.D. He testified for the plaintiffs. For the period from September, 1988, to March 25, 1991, he calculated Mortimer's loss of income at $59,230, using income data for Certified General Accountants (C.G.A.) and at $44,090, using data for graduates of community colleges generally who were not accountants. He obtained these data from the 1985 Census. Neither category applied exactly to

Mortimer.

Mr. J.B. Patterson is an actuary and president of Actuarial Consultants of Canada Limited. For the purposes of his calculations, he "assumed" that Mortimer would have earned $36,500 a year in 1988 dollars or $41,779 in 1991 dollars, allowing for 3 years of inflation. It is not clear how he arrived at this salary level.

As for those of Mortimer's classmates who testified, Hunt, age 24, is an acting Senior Financial Officer for the Ministry of Community and Social Services. She earns "slightly over $50,000 a year" and a full range of benefits equal to 10 to 15 per cent of her salary. After graduating from the 3 year course at Fanshawe, she took temporary employment with a firm in Seaforth at $6 an hour. She stayed there until June, 1988, when she secured employment with the Ministry under a 2 year contract of internship leading to a position as a Financial Analyst. Her initial salary was $27,000 a year without benefits. After 53 weeks, she received a promotion as "underfill" to a Financial Analyst and her salary increased to approximately $35,000 a year with benefits. In April, 1990, she got another salary increase to $43,000 when her employer removed her "underfill" status and she became a Financial Analyst. In April, 1991, she became an Acting Senior Financial Officer and her salary increased again to "slightly over $50,000 a year".

With respect to further promotion, Hunt said that while the C.M.A. designation would be looked on favourably, it would not be the only thing considered. She said there are people at her level in the Ministry and higher who lack any type of accounting designation but have excellent management skills.

When Hunt graduated from the third year of the programme at Fanshawe, she had 12 of the 18 credits needed for her C.M.A. She has obtained some of the remaining 6 through night classes and others by correspondence, while she has been working. She expected to complete the last course by the Summer of 1991 and had 1 additional examination to write that she deferred from January, 1991. At the time of trial, she did not have her C.M.A. designation, nor did any of Mortimer's other classmates who testified.

McCall also began to work after graduating from the 3 year programme at Fanshawe. Initially, Ellis Don hired him at a salary of approximately $22,000. He was there for about 6 months and then worked at "odd jobs" until January, 1990. Then, Laidlaw Transport hired him at a salary of $27,000, which was increased to $32,000 a year. He receives medical and dental coverage, the value of which he does not know. Also, he participates in a plan that permits him to purchase shares in his employer's corporation at less than market value. He has 14 of the 18 credits he needs for his C.M.A. and is still hoping to obtain it. He recalled that Mortimer was one of the better students in the course. McCall had missed some courses but "made them up" and generally got a B grade.

After graduating from Fanshawe College, Cameron took a position as an intermediate accountant with Loeb. He is now 34 years old and works as a financial analyst for the Blackburn Group at a salary of $35,000. His employer pays 50 per cent of the cost of dental and medical coverage. He also benefits from an "insurance package". There was no evidence about the cost of these benefits. As of the date he testified, he was working on his eighteenth C.M.A. credit, which he expected to complete in the Summer of 1991. He also expected to receive his C.M.A. designation in 1991. Because of this, he anticipated earning more money, though apparently not from his present employer.

Mead, who is 24 years old, obtained her diploma from the 2 year course at Fanshawe College in 1987 and is now a Level 4 C.M.A. student. She obtained a position as an accounts receivable clerk with the Great Lakes Environment Group in October, 1988, at an annual salary of $18,000 and benefits. After a year, her employer promoted her to her present position as office manager and site accountant. Her current annual salary is $25,000 with full benefits, including dental and medical coverage and life insurance and as of the time she testified she had received a bonus of $1,500 for the year to date.

In assessing what Mortimer probably would have earned, I note his very positive evaluation by Hoffner, his better than average academic record, his winning personality and his high level of intelligence. According to Ross, while intelligence is strongly related to educational attainment, earnings are more directly related to education than intelligence. Yet, he also recognized that differences in employment earnings generally were dependent upon a variety of factors including age, sex, education, occupation, motivation and parents' socio-economic status.

As to the latter factor, Mortimer's parents have been hard working people all their lives. They were born in England and came to Canada in 1956. His father is 76 and his mother is 72. Each has the equivalent of a Grade 8 education. Mortimer's father was unable to continue his education and he began to work at an early age. He served in the Royal Air Force and rose to the rank of Acting Wing Commander. After coming to Canada and working at other jobs, he spent 16.5 years employed at General Motors Diesel Plant in London before his retirement 10 years ago. Mortimer's mother was also young when she began to work. Some of her jobs were heavy, including working in a munitions plant in England during World War II. Their first few years in Canada were hard. They had a total of 5 children, of which Stephen Mortimer was the youngest. Besides working in the home, Mrs. Mortimer took part time work outside the home from time to time. They showed the value of the work ethic to their children by their example. Their children seem to have maintained the pattern they established.

Mortimer's older brother, Richard, who was born September 17, 1943, has a Ph.D. in Organic Chemistry and works as a research chemist for Health and Welfare Canada in Ottawa. His sister, Adrienne Dawson Selby, born February 29, 1948, is a Registered Nurse, who works in the neonatal intensive care unit of St. Joseph's Health Centre in London. His sisters, Carol Hiltermann and Eugenie Dmytar, both live in Calgary. Eugenie, who is 36 years old, is also a nurse who is completing her B.Sc. in nursing at the University of Calgary. Carol is 49 years old. She did not complete her secondary school education but worked at a community college in Calgary for several years as a secretary and in other positions.

After considering all the factors enumerated by Ross, and Mortimer's earlier lack of direction, I conclude that as an intelligent, personable, young man from a hard working family, he probably would have enjoyed a successful and remunerative career as a C.M.A. As to his salary level, Mr. Morse submits that if Mortimer had not been injured, his earnings would have been close to those of Hunt and emphasizes that she still does not have her C.M.A. designation. However, compared with her other classmates who testified, Hunt's experience is atypical. Her success to date may result from her managerial skills and factors other than her C.M.A. training. As she stated, there are people at her level in the Ministry and higher who lack any type of accounting designation but have excellent management skills.

Based on Dye's evidence and my assessment of Mortimer's intelligence, personality and motivation, I accept Mr. Morse's submission that Mortimer probably would have attained his C.M.A. after 2 years. In coming to this conclusion, I have not overlooked the fact that none of Mortimer's classmates who testified fit Dye's pattern of obtaining the C.M.A. designation 2 years after graduating from the 3 year community college course.

According to Dye's figures, if Mortimer had remained in Southwestern Ontario, he could have expected a minimum salary of $45,120 upon obtaining his C.M.A. I base this figure on Dye's evidence that in 1988 a C.M.A. graduate would start at $45,000 and that his or her annual salary would increase at least $3,000 by 1990. Applying the 6 per cent discount for salaries in Southwestern Ontario, I arrive at the figure of $45,120 for 1990. According to Dye, if Mortimer had gone to Toronto or elsewhere in the Golden Horseshoe, he had the potential to increase his salary for that year to a maximum of $48,000. Dye also stated that a C.M.A. with 10 years of experience should be earning $75,000 a year and that some members of the profession who get very senior management positions earn substantially more.

Kelly bases his figures on somewhat small samples that comprised graduates of the 3 year course at Fanshawe College. They did not appear to cover persons who had subsequently earned the C.M.A. designation. Ross based some of his calculations on average salaries of community college graduates generally and of Certified General Accountants. Neither category represented Mortimer's anticipated position exactly. As Executive Director of the Society of Management Accountants of Ontario, Dye would have a better idea of the respective salary ranges for Level 4 and 5 students and C.M.A. graduates in the periods in question than either Kelly or Ross. As compared to Kelly, he was dealing with a larger sample. As compared to Ross, he was dealing specifically with C.M.A. students and graduates.

However, as noted, I believe that Dye's figures are not necessarily representative. They were not the result of a salary survey of the profession as a whole and do not necessarily represent average incomes. Except for Hunt, Mortimer's other classmates who testified earned substantially less than the ranges proposed by Dye. So, I conclude his figures may be somewhat optimistic.

Hunt testified that she began to work in June, 1988. Cameron said he finished his third year at Fanshawe in April, 1988. This is consistent with Mortimer's claim for loss of income commencing May 1, 1988. Also, Kelly testified that all the 1988 graduates of the 3 year course who responded to his questionnaire secured employment, although admittedly he did not say when they obtained it.

The amount claimed by Mortimer for loss of salary does not include the value of the contribution his employer probably would have made to benefits. Even so, I think it is slightly high. I believe it is reasonable to infer that he would have started working at a salary of $25,000 a year, that he would have earned $30,000 the next year and, following receipt of his C.M.A. designation, $37,500 in his third year. Apportioned for that part of the year from May 1, 1990, to April 8, 1991, this equals the amount claimed of $35,336.54. Since Cameron earned $35,000 in his third year without a C.M.A. designation, I do not feel Mortimer's claim for this amount is at all unreasonable. I also allow the claim for 4% Vacation pay based on $37,500.00 in the amount of $3,813.46, for a total of $94,150. Therefore, I allow Mortimer special damages in the sum of $509,542.01.

13. MORTIMER'S LIFE EXPECTANCY:

Mortimer was born March 6, 1960. At the time of his injury, he was 27 years old. At the date of trial, he was 31 years old. Dr. Allat and Dr. Geisler, who were called for the plaintiffs, and Dr. Frankel, who was called for the City, each gave an opinion about Mortimer's life expectancy. Both Dr. Geisler and Dr. Frankel are experts of international renown in the treatment of spinal cord injuries.

Mortimer entered Victoria Hospital in London on July 17, 1987, the day of his fall. He was transferred to Parkwood Hospital, London, on August 5, 1987, for rehabilitation, but was returned to Victoria Hospital on August 7, 1987 for acute haemoptysis. He was readmitted to Parkwood on August 27, 1987, and discharged to University Hospital, London, on January 31, 1988, for electroincision of the bladder neck. He was transferred from University Hospital back to Parkwood on February 11, 1988, and remained there for rehabilitation until September 22, 1988, when he was discharged to Lyndhurst Hospital in Toronto to obtain additional assessments. He was discharged from Lyndhurst to Parkwood on December 16, 1988, for assistance with community placement. On July 13, 1989, he was transferred to St. Joseph's Health Centre, London, to undergo a second electroincision of the bladder neck. He was readmitted to Parkwood on July 18, 1989, where he remained until his discharge in January, 1990.

Dr. Allat was Mortimer's attending physician at Parkwood Hospital. Therefore, he was able to observe and assess him over a considerably longer period than either Dr. Geisler or Dr. Frankel. In his report dated October 11, 1989, Dr. Allat expected Mortimer to live another 27.4 years, if he had excellent supervision and outpatient care. He based his opinion on "a recent epidemiological study reported in Spinal

Cord Injury: The Facts and Figures, published in 1985." At trial, he predicted Mortimer's life expectancy to be about 25 years or perhaps even longer.

The defence raises the possibility that Dr. Allat based his opinion about life expectancy on data for incomplete rather than complete quadriplegia. In his report dated October 11, 1989, he called Mortimer an "incomplete quadriplegic . . . injured in his early 20's". In fact, he was 27 years old when injured. However, Dr. Allat said in his oral testimony that Mortimer was a complete rather than an incomplete paraplegic. All the other medical evidence supports this conclusion. On page 2 of his report, he said that a C4 fracture on C5 subluxation was noted that was "associated with a C4 complete quadriparesis". In the summation section at page 6 of his report, under the heading "Disease Diagnosis", he states at item (ii), "Complete C4 quadriparesis with slight C5 motor sparing." Yet, in the Opinion section of his report, under the headings Survival Prognosis, Psychological, and Respiratory System, there are at least 4 references to "incomplete quadriplegics", including the one set out above.

If Dr. Allat made his calculations on the assumption that Mortimer was an incomplete quadriplegic, his resulting estimate of life expectancy would be invalid because according to the authoritative study conducted by Dr. Geisler, the relative mortality rate for complete quadriplegics was 7.67 times normal whereas for partial tetraplegics it was 2.09 times normal. Dr. Allat, a specialist in rehabilitative medicine, was Mortimer's treating physician. I have no doubt he was well aware that Mortimer was a complete quadriplegic and that he estimated Mortimer's life expectancy on that premise.

Dr. Allat said that he based his opinion of Mortimer's life expectancy on the study published in 1985, which was in turn based on retrospective data collected in the United States since 1972. Because of the advances in care and management of spinal cord victims since 1972, he said one might have an even more optimistic outlook about Mortimer's life expectancy now. He also stated that the statistics included people who died within the first year after their injury, which "shifts the curve to the shorter end". Because Mortimer had survived his critical first year, he had enhanced his chances for a longer life than the average figure.

Dr. Frankel acknowledged that Dr. Geisler had co-authored the authoritative paper on the subject, entitled Survival in Traumatic Spinal Cord Injury, which was filed as Exhibit 13B. Dr. Geisler in turn agreed that Dr. Frankel's reputation exceeded that of Dr. Allat as an expert in the field of spinal cord injuries.

Dr. Geisler based his opinion about Mortimer's life expectancy upon his examination of Mortimer on December 12 and 13, 1988, at Lyndhurst Hospital in Toronto, the medical reports that he read, the history he took from Mortimer over 3 or 4 hours and his paper. As Dr. Geisler stated very fairly, it is a difficult thing to predict life expectancy. From his study, which he conducted on patients in Ontario, he concluded that complete quadriplegics had a relative mortality rate 7.67 times normal. He applied that rate to 1975-77 Ontario Population Mortality tables to calculate theoretically derived life expectation. He said that the mortality tables showed the life expectancy of a 31 year old normal male to be 42.7 years. To that figure he applied the relative mortality rate for complete quadriplegics and arrived at a life expectancy of 23.1 years for Mortimer.

Dr. Frankel based his opinion upon his examination of Mortimer in Mortimer's home on February 16, 1991, the history he took from him, a review of the previous hospital records, Dr. Geisler's study and Dr. Geisler's report of December 18, 1988. He also had the results of an ultrasound examination of Mortimer's urinary tract and a magnetic resonance imaging report of his cervical spine, which he obtained after he examined Mortimer. He believed Mortimer has a life expectancy of approximately another 20 years from February 22, 1991.

The range of expert medical opinion about Mortimer's life expectancy as of the date of trial is therefore between about 20 and 25 years.

Although there was some divergence among them, I believe all 3 physicians took into account the major relevant risk factors that might tend to shorten Mortimer's life expectancy and the major positive factors that might tend to lengthen it. First, the negative factors include the height of the lesion at C4 and its adverse effect on Mortimer's ability to breathe and cough and to clear mucus if he suffers even a simple upper respiratory infection. Of the population of quadriplegics, Steven Mortimer is in the most significantly injured 5%. He has experienced past urinary tract infections, severe episodes of autonomic dysreflexia, pulmonary emboli and unexplained fevers. If his elderly parents and Stephanie are no longer available to help him, he may be forced to live in an institution where life expectancy is not as high. The positive factors include Mortimer's character and ability to cope. He enjoys a good psychological state, is cooperative, cheerful and has come to terms with his injury. He is intelligent, knowledgeable about his condition and can direct care givers that he might hire. His disposition is such that he is not likely to antagonize them, thus minimizing the likelihood that he would have to replace them frequently. He is living at home, which increases his survival potential. Since 1980, there has been an improvement in the life expectancy of the general population. Also, there have been medical advances in the last decade in the care of quadriplegics that are expected to improve their life expectancy.

The 3 physicians did not all consider every one of these factors and placed somewhat different emphasis even on the ones that were common to them all. Also, Dr. Allat used a different statistical base as a reference in reaching his opinion. Dr. Frankel had never heard of that study. It was based upon an American population, whereas Dr. Geisler's study was based upon an Ontario population, which would therefore not require any adjustment. I accept Dr. Geisler's study as the one currently considered authoritative in the field.

The defence submits that Dr. Geisler reached his conclusion by simply applying the relative mortality rate for complete quadriplegics to the mortality tables for normal males, which yields a life expectancy of 23.1 years, whereas Dr. Frankel also took into account specific positive and negative factors. However, as noted, Dr. Geisler also examined Mortimer and his medical records and took a history from him. When asked to compare the opinions of Dr. Allat and Dr. Frankel about Mortimer's life expectancy, Dr. Geisler stated that he believed "Dr. Allat's opinion was going to be a little closer in its optimism than Dr. Frankel's was in its down side". I conclude Dr. Geisler based that opinion on all the information he had about Mortimer.

In fact, Dr. Geisler believed his figure might underestimate Mortimer's life expectancy for the following reasons. His study did not consider the positive effect of intermittent catheterization. Mortimer can understand his condition and potential complications. The life expectancy of the general population has increased since he completed his study.

Dr. Frankel used Dr. Geisler's paper in arriving at his opinion. That study relied upon the 1975-77 Ontario Population Mortality rate tables. It gave the results of a study of 1510 persons in Ontario with spinal cord injuries that was conducted between December 1, 1973, and December 31, 1980. Dr. Frankel also considered the fact that only 5 percent of the group in Geisler's study of complete quadriplegics represented individuals with lesions as high as C-4 and that most were at the C-5,6 level. Dr. Frankel used Table XIV from Dr. Geisler's paper to compare the life expectancy for a person who had become a complete quadriplegic at 20 years of age in 1980, (30 years), and at 30 years of age, (23 years). He concluded that the rate of change was .7 per year. He then applied that factor to the life expectancies shown in Table XIV. He calculated that because Mortimer sustained his quadriplegia at age 27, he would have a life expectancy from that time of 25.1 years. From the date of trial, 4 years after the fall, it would therefore be about 22.3 years, (25. 1-[4x.7]). After next considering all the positive and negative factors that applied to Mortimer, Dr. Geisler discounted that figure by a further 10 per cent to arrive at his estimate of about 20 years. He admitted candidly that it was an estimate and the most accurate figure that he could reach in the circumstances.

I believe the actuary, Patterson, used the most accurate mathematical method of calculating Mortimer's life expectancy. I prefer it to Dr. Frankel's method. Patterson used more current Life Tables and calculated the normal life expectancy of a 31 year old Canadian male to be 44.107 years. Compared to the analogous figure from the 1975-77 Ontario Population Mortality tables of 42.7 years, this reflects the general trend to increased life expectancy. Applying Dr. Geisler's relative mortality rate for complete quadriplegics of 7.67 times normal mortality, he calculated Mortimer's life expectancy would be 23.723 years. Admittedly, this was a strict mathematical calculation, without consideration of Mortimer's particular circumstances.

It should be noted that the relative mortality rate of

7.67 is based on data that does not consider the experience of the last decade. During that time, the medical profession has made considerable advances in the treatment of spinal cord injured patients. These advances also can be expected to have a positive effect on life expectancy.

I have considered all the risk factors raised by the medical evidence that might tend to decrease life expectancy and the positive factors that might tend to prolong it. Mortimer is a very intelligent man who is extremely knowledgable about his problems and what he should do to manage them. Also, he is well able to direct his care givers in that regard. Since he began to live in his own home in January, 1990, he has avoided bed sores and other major episodes similar to those he experienced while in hospital. He has formed a relationship with Stephanie Brocklehurst that everyone hopes will blossom into marriage. Through her, and his parents and sister Adrienne, he presently has the advantage of "loving care", the lack of which Dr. Frankel described as a negative factor in life expectancy. Also, he is living in his own home rather than in an institution, which is a further positive factor in life expectancy. Because of this judgment, he will have adequate attendant care, which is another positive factor in life expectancy.

The figures contained in Dr. Geisler's last study covered the period between December 1, 1973, and December 31, 1980. All 3 physicians expected that the life expectancy of complete quadriplegics should continue to improve over those figures because of advances in their management and care in the last decade. In fairness, Dr. Frankel said this was a factor he considered in arriving at his opinion.

On balance, I conclude that a reasonable estimate of Mortimer's life expectancy is 24 years.

14. NON-PECUNIARY GENERAL DAMAGES:

In making an award under this head of damages, I follow the principles enunciated by the Supreme Court of Canada in Lindal v. Lindal, 129 D.L.R. (3d) 263. Those principles mandate a functional approach that "attempts to assess the compensation required to provide the injured person with reasonable solace for his misfortune" and awards money because it can be "used to substitute other enjoyments and pleasures for those that have been lost".

Here, Mortimer has suffered a catastrophic loss and is in need of proportionately abundant solace. Because of the height of his spinal cord lesion, he is totally paralysed below the neck. As shown by the videotape filed as Exhibit 5, he is completely dependent upon others for all the normal activities of daily living. He is unable to participate in the many athletic endeavours he formerly enjoyed or even such a simple activity as a pleasurable walk. He no longer has normal bowel, bladder or sexual function. Although he wants to father children of his own, he is unlikely to realize that wish. He has difficulty breathing and clearing mucus from his respiratory tract. He suffers from spasms. He has experienced the other conditions noted above in the section that deals with life expectancy. He has undergone several operations and extensive hospitalization and rehabilitation. Not only will he now have a considerably shorter life, but also its quality will be diminished immensely during his remaining years.

I conclude readily that in these circumstances Mortimer

should receive the maximum award. According to Patterson, the equivalent of the $100,000 limit on non-pecuniary damages mandated by the Supreme Court of Canada in the "trilogy": Andrews v. Grand & Toy Alberta Ltd., [1978] 2 S.C.R. 229, Arnold v. Teno, [1978] 2 S.C.R. 287, Thornton v. Board of School Trustees of School District No. 57 (Prince George), (1978) 2 S.C.R. 267, adjusted for inflation to the date of trial is $232,745. I have no hesitation in fixing Mortimer's non-pecuniary damages in this amount.

15. LOSS OF FUTURE INCOME:

(1). PRINCIPLES:

In assessing Mortimer's damages for future pecuniary loss, I have firmly in mind the principle that to recover compensation for such loss he need not establish his claim on a balance of probabilities but need show only a real and substantial risk of future pecuniary loss: Schrump v. Koot (1977), 18 O.R. (2d) 337 (C.A.); Giannone v. Weinberg (1989), 68 O.R. (2d) 767 (C.A.) [leave to appeal to S.C.C. refused (Wilson, LaForest and Cory JJ.)].

(2). LOSS OF SALARY:

As noted above, I believe that Mortimer would have earned his C.M.A. designation in 1990, 2 years after graduating from Fanshawe College in April, 1988. I have concluded that as a C.M.A. he would have been earning $37,500 a year at the date of trial. Then, he was 31 years old, having been born on March 6, 1960. According to Patterson, Mortimer's pre-accident life expectancy was 44 years.

In deciding what income Mortimer likely would have earned in the future, I have considered the evidence of Patterson, Ross, Dye, Kelly, the experience of Mortimer's classmates in the labour market and Mortimer's own unique characteristics.

With respect to Ross' evidence, I have given careful consideration to Exhibits 71 and 72, being his reports estimating Mortimer's future economic loss. On page 7 of Exhibit 72, Ross showed the maximum median income for a C.G.A., (as opposed to a C.M.A.), certified in 1977 and before, gained from the 1990 Salary Survey of the Certified General Accountants Association of Ontario, as $63,000. In fact, in his calculations, he capped Mortimer's income at $53,000, (expressed at current salary levels), attained 13 years after graduation from Fanshawe College. His projection is more conservative than Dye's evidence that a C.M.A. with 10 years of experience should be earning $75,000 a year. Ross agreed that the figures he used were for "the average - typical".

Ross also did a projection of future earnings for a Southern Ontario male with post-secondary, non-university education based on "accountant" earnings from the Census of Canada, (Exhibit 72, Appendix A, Table 3, Column 3b). The classification "accountant" is occupation No. 1171 of the Canadian Classification and Dictionary of Occupations. It incorporates accountants of all kinds, except those who might advance to become managers within a corporation, and includes chartered accountants who tend to earn more on average than other kinds of accountants. However, Ross testified that chartered accountants are such a small proportion of the category that their earnings would not significantly affect the average. The Census of Canada reports the average income of accountants at 5 year intervals. According to Ross, the figures include a "built in productivity factor". Because it is a projection based upon actual Census data for accountants, I give it some weight.

Having considered all these factors, I believe that, calculated in 1991 dollars and ignoring contingencies and benefits, Mortimer probably would have progressed steadily from his salary of $37,500 to $60,000 over a period of 15 years and that he would have maintained that level until his retirement at age 65.

Using these assumptions and a discount rate of 2.5 per cent, Patterson has calculated the present value of Mortimer's total loss of earnings over the course of his working life expectancy between the date of trial and age 65 to be $1,160,844.

According to Ross' calculations, the present value to Mortimer of $1,000 per year in lost income to age 65 is $22,104, as compared to Patterson's figure of $21,980. Patterson determined that Mortimer's average yearly income over the period in question would be $52,813.60. Using Ross' multiplier, the present value of Mortimer's loss of future income would be $1,167,391.80. Although the difference is small, I accept Patterson's calculations because in my view he has greater expertise in this area than does Ross.

(3). LOSS OF CANADA PENSION PLAN BENEFITS:

From Tables D and E and Section A II of Table H of Exhibit 82, I conclude that the present value of Mortimer's loss of Canada Pension Plan income, after retirement at age 65, is $22,280. The present value of the savings realized from not having to make annual C.P.P. contributions is $19,322, for a net loss of $3,498. Ross also testified that his calculation of Mortimer's loss of future earnings did not include the value of an employer's contributions to benefits. At page 9 of his report he wrote,

> In employment where contributions are restricted to programs required by statute, including Unemployment Insurance, Workers' Compensation and the Canada Pension Plan, contributions would add 5% to 8% to the value of compensation. In employment with a complete package of private plans including dental, health, welfare and private pension plans, contribution would add 12% to 18% to the value of compensation (see Appendix B).

As noted above, all Mortimer's classmates who testified receive benefits besides their salary. The extent of the benefits varies as does the proportion the employer pays. Except for Hunt, there is no evidence about the cost or value of these benefit packages. Hunt said her full range of benefits was worth 10 to 15 per cent of her salary. Hunt and Head described their plans as "full benefits". McCall's benefits comprised medical and dental coverage and participation in a share purchase plan. Cameron's plan included medical and dental coverage and life insurance. I took from the evidence that Hunt did not contribute to her benefits and that Cameron contributed equally with his employer. The situation was not clear with respect to the others.

I note that all these plans are provided to persons who do not yet have their C.M.A. designation. There is no evidence whether obtaining that designation will increase the scope of benefits provided or the amount contributed by the employer. It may be that persons in the position of Mortimer's classmates are in the same category as those who hold a C.M.A. for purposes of benefit plans provided by their corporate employers.

Mr. Caskey submits that Mortimer's future health needs will be covered through the subrogated claims of O.H.I.P. and COMSOC and that no award should be made for loss of benefits. In passing, I note that the parties accept O.H.I.P.'s estimate that Mortimer will require an average of 3 weeks hospitalization a year at an annual cost of $8,602.07. Patterson calculated the present value of that cost over Mortimer's remaining life expectancy of 24 years to be $149,408. I accept that figure.

This is not a case where Mortimer had a benefit package in place at the time he sustained his disabling injury, even though I think he probably would have had one comparable to those enjoyed by his classmates if he had been working at that time. In my opinion, Mortimer will not sustain any loss of medical, hospital, Unemployment Insurance benefits or programmes, Canada Pension Plan pension benefits, or Workers' Compensation benefits that will not be made good by the defendants as a result of the parts of this judgment that deal with loss of future income and the cost of future care.

It is true that if he had been employed he might have been able to participate in plans providing dental coverage, life insurance and the right to participate in profit sharing or share purchases. Whether he would have to contribute to these plans or how much is not at all clear. As far as these benefits are concerned, he may have suffered a loss, but there is insufficient evidence from which to make any intelligent

assessment of their cost or value.

In the circumstances, I allow nothing for loss of benefits.

(5). AMOUNT LIKELY TO BE EARNED BY MORTIMER IN THE FUTURE:

In calculating Mortimer's loss of future income, I must deduct any income he is likely to earn between the date of trial and his sixty-fifth birthday, given his present disability. His goal is to secure remunerative work in the future. After his final discharge from hospital, he abandoned the 3 year Business Administration Accounting course but enroled in the Business Finance programme at Fanshawe College. He hopes to finish it in May, 1992. With his 2 year diploma from the Accounting course and a financial background, he believes he will be more employable. Whether he will pursue further education depends upon his prospects for employment then. If the circumstances are right, he is prepared to move from London to secure employment.

One of the 4 courses he took was an investment course based on the Canadian Securities Course. He testified that he had never managed his own savings, had never invested in equities and had invested only in Canada Savings Bonds or Guaranteed Investment Certificates.

Darryl Horst was a rehabilitation consultant who testified for the defence. He stated he had completed the requirements for a B.A. and a B.S.W., but he holds no university degrees. His curriculum vitae was filed as Exhibit 85. Although he met personally with Mortimer, for the most part he did no independent assessments but simply commented upon the reports of other experts called by the plaintiffs. He felt very strongly that Mortimer was employable and that he could obtain full time employment of 35 or 37 hours a week within 4 to 6 years. In this regard, I take note of the fact that Mortimer attended in court all day every day of the trial. Yet, although Mortimer is intelligent and well motivated, the preponderance of the medical evidence leads me to conclude that he probably will not secure gainful employment in the future. I give much more weight to that evidence than to Horst's opinion on this issue.

(6). "PRODUCTIVITY FACTOR":

Dr. J.L. Carr holds a Ph.D. in Economics and is the Acting Chairperson of the Department of Economics at the University of Toronto. Based on his evidence, Mr. Morse submits that the discount rate of 2.5 per cent prescribed by r. 53.09 should be reduced by 1 per cent. He argues this is necessary to reflect the historical fact that wages have increased 1 per cent per annum more than the rate of inflation. The result would be to increase the amount awarded under this head.

Rule 53.09 reads as follows:

> The discount rate to be used in determining the amount of an award in respect of future pecuniary damages, to the extent that it reflects the difference between estimated investment and price inflation rates, is 2 1/2 per cent per year.

I believe Dr. Carr's position on this issue may be stated as follows. Rule 53.09 in effect establishes the real interest rate at 2.5 per cent. The "real interest rate" is the difference between the "nominal interest rate" and the "rate of inflation". However, with respect to a claim for loss of future income, one must recognize that wages increase for two reasons: inflation and normal productivity. Historically, wages have grown by 1.1 per cent over inflation. Therefore, the productivity factor is about 1 per cent per annum. To reflect this fact, the discount rate should be reduced by 1 per cent. The way to calculate a loss of future income is to keep the income constant and discount it by the market interest rate (the nominal interest rate) minus the future inflation rate and minus the rate of increase in productivity. Rule 53.09 addresses only the difference between the nominal interest rate and the rate of inflation. Therefore, if one applies the 2.5 per cent discount rate, one will fail to reflect the fact that wages exceed inflation by 1

per cent and Mortimer will not be compensated fully for his loss of future salary.

On cross-examination by Mr. Brown, Dr. Carr agreed that the productivity factor of 1.1 per cent represented an average from 1961 to 1988 across the entire country based on the average industrial wage. It was not specific to accountants. He conceded that statistics gained from looking at a particular occupation to determine the productivity gains for that occupation would be more relevant than his figure of 1.1 per cent. In particular, he agreed that a better approach here would be to analyze both "the lifetime earnings profile of Accountants" generally and the work record and salary history of the particular plaintiff in question before the accident, if such history existed. He conceded that information obtained from Census Canada for accountants would be a better guide to productivity than his evidence. That was the kind of information Ross used in his projections and to which I gave some weight in deciding what Mortimer probably would have earned.

On cross-examination by Mr. Caskey, Dr. Carr agreed that he had placed his present theory of productivity before the Morden Committee, which formulated Rule 53.09, and that the Committee had rejected it. He agreed that one reason for the Rule was to eliminate expert evidence on the issue of inflation rates and interest rates and to achieve some consistency of result. He emphasized, however, that Rule

53.09 addresses only the difference between the nominal or market interest rate and the rate of future inflation. It does not deal with productivity. He admitted that productivity considerations are different for different plaintiffs and that management or investment expense is another category or variable that is not included in Rule 53.09.

In principle, I accept the logic of Dr. Carr's position. In fact, the Court of Appeal appears to have given tacit acceptance to it: Giannone v. Weinberg, 68 O.R. (2d) 767 at p. 777:

> In so far as other factors may bear on the calculation (such as future wage increases over general price inflation, or the relevant individual's income from employment increasing at a faster rate than the general increase) and it is felt that they may reasonably be given effect to in the discount rate, then the 2 1/2 % starting point may be adjusted. ... the rule should not be departed from unless there is evidence one way or the other on the factors other than future investment and price inflation rates.

However, Carr gave no evidence about the productivity of Certified Management Accountants or even accountants in general. His evidence about productivity was based on the average industrial wage across Canada. There is no evidence about whether accountants are more or less productive than this standard. On the other hand, the projections Ross made were based upon Census data for accountants that incorporated productivity gains, which I have already taken into account in projecting Mortimer's probable future income. Therefore, I decline to make any further adjustment for productivity, especially given the fact that Carr's evidence on this issue was not specific to Mortimer's probable occupation.

(7). POSITIVE AND NEGATIVE CONTINGENCIES:

A useful review and exposition of the legal principles applicable to the issue of contingencies that might affect future employment may be found in the judgment of Doherty J.A. in Graham v. Rourke, 75 O.R. (2d) 622, commencing at p. 634.

In particular, I bear in mind the following passage at p. 634 of the same judgment:

> A plaintiff who establishes a real and substantial risk of future pecuniary loss is not necessarily entitled to the full measure of that potential loss. Compensation for future loss is not an all-or-nothing proposition. Entitlement to compensation will depend in part on the degree of risk established. The greater the risk of loss, the greater will be the compensation. The measure of compensation for future economic loss will also depend

> on the possibility, if any, that a plaintiff would have suffered some or all of those projected losses even if the wrong done to her had not occurred. The greater this possibility, the lower the award for future pecuniary loss: Personal Injury Damages in Canada, supra. at pp. 91-92.

Clearly, I must consider both positive and negative contingencies, which may be divided into 2 further categories: "general" contingencies, i.e., those that are common to everyone, which need not be supported by evidentiary proof, and "specific" contingencies, i.e., those that are peculiar to a particular plaintiff, which require evidence to support the conclusion that the contingency is a realistic as opposed to a speculative possibility: Graham v. Rourke, supra, at p. 636.

Here, Mr. Morse submits that the contingencies are all positive. First, with respect to specific contingencies he emphasizes Mortimer's intelligence and good prospects for advancement within his chosen profession. He also submits that Certified Management Accountants enjoy stability in their profession and that they are almost immune to economic cycles. In this regard, he points to the maximum unemployment rate of 3.8 per cent projected by Ross in Table 3 of Appendix A of his report. It was also his position that the nature and extent of the benefit package that Mortimer might reasonably have expected to receive as part of his compensation would "cushion him against adverse contingencies": Bresatz v. Przibilla (1962), C.L.R. 541 (Australian High Court).

In addition, before his fall Mortimer was in good health and active physically. There is no evidence that his parents, who are in their seventies, or his siblings suffer from any physical or mental condition that might be expected to hasten premature mortality or debilitating disease. This is a positive factor in terms of normal life expectancy and future earning capacity as far as hereditary diseases are concerned.

However, many fatal or crippling conditions can arise from the cumulative effects of the environment, "lifestyle" choices or job related stress. These can have an adverse effect on future earning capacity.

Mr. Morse also stressed that the work ethic of Mortimer's parents and siblings supports the conclusion that Mortimer himself is likely to work hard when he is motivated. As further evidence of this fact, he points to the grades Mortimer achieved at Fanshawe College after he had decided to become a C.M.A. compared to those he obtained at university when he lacked a specific goal.

Dealing with specific negative contingencies, Mr. Caskey submits that before Mortimer commenced his studies at Fanshawe College, he was an "under achiever" without much direction in his life. He described Mortimer's past as "unsettled" and "filled with failed starts". After completing secondary school, Mortimer enroled at the University of Western Ontario, but did not finish his year. He then moved to Calgary to live with his sister and brother-in-law and worked for a roofing company. When he was laid off, he enroled at the University of Calgary. However, he dropped some of his courses and obtained a job as a labourer. When he was laid off again, he enroled for another semester at the University of Calgary. His academic achievements were so poor that these 2 universities prohibited him from continuing his studies with them. He moved back to Ontario to live with his parents. He travelled in England for 4 weeks and met his father there. When he returned to Ontario, he got a job doing concrete work as a labourer. Then, he decided to enrol in Fanshawe College. Before doing so, he was considering employment with the Fire Department. Mr. Caskey's position is that because of this history, it is a realistic possibility that Mortimer might tire of working as a C.M.A. and change careers in mid path or become disenchanted and continue in the profession but function at a lower than average level. Also, he points to Ross' evidence that earnings are more directly related to education than to intelligence.

I also note that my assessment of what Mortimer was likely to earn in the future already reflects some productivity gains. It assumes a progressive, uninterrupted growth in real income over the first 15 years of his practice. The projection of his income does not take into account the decrease in the number of accountants who work full time

during their last 5 years before retirement, based on the Census data Ross used to prepare Table 3 of Appendix A of his report. Nor does it make an allowance for any negative labour market contingencies.

In fact, Ross believed it was appropriate to deduct 11 per cent for labour market contingencies such as periods of unemployment due to lack of available work, illness, injury or other disability and the fact, already referred to, that some persons may wish to work only on a part time basis, especially in the 5 years immediately preceding retirement. He felt that a factor of 11 per cent was perhaps too conservative and said he would not be uncomfortable with a factor of less than 8 per cent.

Mr. Brown reminds me of Dye's evidence that his Society received from prospective employers the following number of requests for employees in the respective years noted: 1987 - 1,585; 1988 - 2,017; 1989 - 1,918; 1990 - 1,374. Mr. Brown submits that these figures support the conclusion that there has been a significant reduction in job prospects for C.M.A.s. and that economic cycles do indeed affect employment in that profession.

He also submits that even if Mortimer cannot obtain full time employment, he might earn some income in the future and that the assessment for loss of future income should recognize this potential. As already noted, I do not think this is a realistic possibility.

As to general positive contingencies, there is the possibility that Mortimer might have wished and been able to work past age 65. This does not seem very likely if he worked for a corporate employer. There is also the possibility that he might have achieved a very senior management position that would pay him substantially more than the amount projected. He has shown his courage, perseverance and motivation in response to the tragedy that has befallen him and has coped with it while maintaining generally a positive and healthy state of mind. On the one hand, it is not unreasonable to conclude that he might have brought the same character traits to bear on the lesser adversities one might expect to arise from employment. On the other hand, given his previous cavalier attitude, it may be that these character traits would not have been so pronounced had Mortimer not been so seriously injured. It should also be noted that in the world of business even character traits such as Mortimer now exhibits are not always sufficient to ensure promotion to a senior management position.

With respect to general negative contingencies, there is also the possibility that Mortimer might have retired early. There is the possibility that rather than working for a corporate employer he might have been self-employed. In that case, he would have had to provide for his own pension income and benefits.

It might be argued that there should be some discount because of the possibility of premature death. Yet, as I understand the evidence, Patterson used the 1985-87 Male Canadian Life Table to calculate the present value of the loss of future income. That table is based on average Canadian male mortality experience. In other words, the tables already reflect deaths from all causes. In a particular case, a plaintiff might be at greater risk of early death because of, for example, a proven genetic predisposition to a particular disease or because of the dangerous nature of the occupation or recreation in which he regularly engages. Conversely, there might be some reason to conclude that a particular plaintiff is likely to live longer than average. As Dickson J. wrote at p. 714 of his decision in Lewis v. Todd, [1980] 2 S.C.R. 694:

> A trial judge should consider whether there is any evidence which takes the deceased's situation outside the "average"; whether there are any features of which no account was taken in the actuarial tables either because the factor is entirely personal to the individual or, because the "average" is not adapted for the category or class to which the person belongs. [The emphasis is Dickson J.'s].

The evidence before me does not support the conclusion that Mortimer's risk of death was greater or less than average before his injury. Accordingly, I make no adjustment for either possibility.

Mr. Caskey and Mr. Brown urge me to discount the award for loss of future income by 20 per cent. They cite as authority such cases as: Andrews v. Grand & Toy Alberta Ltd., supra, (20 per cent); Thornton v. Board of School Trustees of School District No. 57 (Prince George), supra, (10 per cent); Arnold v. Teno, supra, (20 per cent); Giannone v. Weinberg, supra, (20 per cent); Penso v. Solowan, 22 C.C.L.T. 161 (B.C. C.A.) (19 per cent); Meulemeesters v. Smith, 38 O.R. (2d) 735 (O.H.C.J.) (20 per cent); Whealy v. Torbar Ltd., a judgment of the Ontario High Court of Justice, per Hollingworth J., released August 30, 1983 (20 per cent). Yet, there are other cases where no deduction was made for contingencies: e.g., McErlean v. Sarel, 61 O.R. (2d) 396 (C.A.); Sked v. Henry, a judgment of the Ontario Court of Justice, per Campbell J., released March 12, 1991.

The issue is not addressed by employing a "traditional" or "customary" rate of discount but by applying to each case the principles set out in Lewis v. Todd, supra.

I respectfully adopt the following comment of Doherty J.A. in Graham v. Rourke, supra, at p. 634:

> A trial judge who is called upon to assess future pecuniary loss is of necessity engaged in a somewhat speculative exercise.

This is especially true when it comes to considering whether any adjustment, either positive or negative, should be made for contingencies. Many factors I have canvassed in relation to Mortimer are rather speculative. There are, however, some factors to which I give some weight.

Those militating in favour of a reduction are: the projected loss of future income is generous because it assumes a progressive, uninterrupted growth in real income over the first 15 years of practice, includes recognition of a productivity factor, makes no allowance for a diminution of income in the last 5 years before retirement or for loss of income due to periods of unemployment caused by periodic declines in the economy, illness, accident, injury or other disability.

Those militating in favour of an increase are: the fact that Mortimer, because of his newly acquired work ethic and combination of personality, intelligence, motivation and good health, might reach a senior management position where his income would be much higher.

The lack of any evidence that Mortimer would likely have enjoyed anything other than an "average" life expectancy weighs in favour of making no adjustment.

Mortimer strikes me as a man who would have led a balanced life and not one who would have devoted himself exclusively to his profession. I conclude it is much more likely that he would have suffered periodic loss of income for the many reasons stated than that he would have received a senior management position. In all contingencies is appropriate.

(8). ASSESSMENT:

Accordingly, I assess Mortimer's damages for loss of future income in the amount of $1,160,844, less 15 per cent for contingencies, making a total of $986,717. In addition, I assess the sum of $149,408.00 for O.H.I.P's subrogated claim and $3,498 for loss of Canada Pension Plan benefits.

16. FUTURE CARE COSTS:

I have attached as Appendix B a list of the initial care costs and the future care costs. I shall restrict my reasons to those items about which there was some controversy, or about which there is need to comment.

(1). ATTENDANT CARE:

Counsel for the defendants all recognize Mortimer's need

for attendant care. The issue is the extent to which it should be made available to him. Based upon the evidence of Drs. Geisler and Allat and Jane Staub, Mr. Morse submits that Mortimer requires such care 24 hours a day. Dr. Frankel's opinion was that Mortimer needed "people around him most of the day available to help, but not necessarily attending him".

The position of counsel for the defendants is as follows. Something less than 24 hour care is adequate, given the fact the Stephanie Brocklehurst lives with Mortimer. He has been left alone for short periods of time in the past and can continue in the future to manage without 24 hour care. Horst, himself confined to a wheel chair, testified that Mortimer could manage with something less than 24 hour care.

In deciding this issue, I must determine what type and standard of future care is reasonable in the circumstances in which Mortimer now finds himself. The medical evidence is clear that Mortimer is completely dependent upon others for all the normal activities of daily living. The videotape, filed as Exhibit 5, which showed part of his daily routine, illustrated this graphically.

Counsel for the defendants seem to agree that the provision of such care in a home environment rather than in an institution is likely to be a positive factor in prolonging Mortimer's life expectancy. Although his physical limitations are absolute, he is an intelligent man whose mental faculties are unimpaired. He is fully aware of his surroundings and wishes to live in his own home. Obviously, no amount of money can return Mortimer to the position he was in before his injury. To the extent that money can help prolong his now shortened life expectancy and supply a more enjoyable and private environment through home care, such care is entirely reasonable. I have no hesitation in finding that the provision of home care is reasonable and appropriate here.

Now, persons hired by the Cheshire Outreach Program visit Mortimer twice a day. These care givers provide all bowel and bladder care, wash and dress him in the morning and undress and prepare him for bed in the evening. As well, they feed him breakfast. They visit two to three hours, seven mornings a week, but only 1 to 1/2 hours, five evenings a week. In addition, he receives about 10 hours per week of housekeeping and home making services. To avoid pressure sores, he has to be turned in bed every four hours. On alternate mornings, someone has to initiate his bowel routine, which is necessary to stimulate elimination and to help augment the natural function that he has lost. Ms. Brocklehurst, who works full time as a physiotherapist, has been performing the evening care on weekends, rolling Mortimer in bed in the middle of the night and rising on alternate mornings to start his bowel routine at about 5 a.m.

Stingray's position is that Mortimer needs only some additional care to supplement what he is already receiving. According to Horst's analysis, if Mortimer receives an average of 10.5 hours a day of care and spends an average of 4.8 hours a day at school, there are only 8.7 hours when he receives no assistance and presumably he will sleep most of that time.

On cross-examination, even Horst agreed that Mortimer needed 24 hour care if his family and Ms. Brocklehurst are unable to provide it. All three physicians agreed that it would place additional strain on Mortimer's relationship with Ms. Brocklehurst to have her continue to provide the care she has given to date. It is only because she is living with him that he can reside outside an institution now. Otherwise, without other attendant care, he would likely be confined to a chronic care facility. Although, apart entirely from their emotional relationship, it is very important to his general well being that she should continue to live with him, there is no guarantee that she will.

I believe it is inappropriate for a variety of reasons that Mortimer be left alone. Although he is mobile while in his special motorized wheelchair, which he operates by movements of his head, he is subject to spasms. There have been times when they have caused his foot to become dislodged from its rest on the chair. He is then unable to move for fear that it might be caught in the chair and injured. He must simply sit and wait for someone to replace his foot. He employs a mouth stick to activate a computer keyboard. Once, while doing so, he suffered a spasm that caused his head to

move backwards in the chair. This movement caused the chair to accelerate forward and almost impaled him on the mouth stick. Fortunately, Ms. Brocklehurst was at home at the time and extricated him without serious harm. Should there be a fire or other emergency while Mortimer is in bed and alone, he is absolutely helpless. I am satisfied that an alarm system would not be an appropriate substitute for a human attendant in such a situation.

Mortimer's parents are somewhat elderly and may not be available to help in his care much longer. Although everyone is optimistic that Mortimer and Ms. Brocklehurst will marry, his condition creates unusual pressures. Dr. Frankel testified that a care giver must have periodic reprieves because patients like Mortimer become "emotionally depleting of the resources of the people around them". He felt this was especially so for a spouse. He observed that Mortimer's parents and his girl friend could not "keep up what they have been doing".

For these reasons, I conclude it is reasonable in all the circumstances that Mortimer should be provided with 24 hour attendant care.

The care givers need not be registered nurses or other professionals. Mortimer's needs can be met by any reasonably intelligent person. He understands his care requirements, can explain them to others and can train his care givers. His personality is such that he is not likely to alienate them, thereby creating a constant turnover of staff.

The cost of such care is also very much in issue. According to Staub, if Mortimer were to hire his own attendants, the cost in London would be approximately $12.68 per hour. If he secured his attendants through an agency, the cost would be $13.95 per hour, which translates into an annual cost of $118,434.24, including GST and surcharge for statutory holidays. She recommended that he use an agency because it has greater resources with which to provide uninterrupted care. On the other hand, Horst's evidence was that such care could be obtained in London for $12.50 an hour. There is no evidence that Mortimer has made any plans to leave London. Ms. Vivian Logan, the owner and manager of Q C Personnel, suggested that her company could provide a live-in attendant 24 hours a day at a cost of $100 a day if Mortimer were to assume all the payroll functions for the attendants, or, $110 a day, (about $4.58 an hour), if Q C Personnel accepted that function. Mr. Caskey submits that Mortimer has training as an accountant and could manage the payroll function himself.

A secure and reliable supply of care givers is necessary for Mortimer's well being. Therefore, I conclude that they should be provided through an agency.

Staub based her cost projection on the assumption that the Employment Standards Act prevents around the clock live-in care. Logan based her cost projection on the assumption that there was no such impediment. Mr. Caskey submits that the Act classifies the type of domestic employee proposed by Logan as "a companion for ill members of the household". His position is that they are exempt from the provisions of the Act dealing with hours of work, minimum wage, overtime, holidays, etc.

However, Logan admitted on cross-examination by Mr. Morse that she had not reviewed any of Mortimer's medical reports, as Staub had done. She could not comment on his need for attendant care, except for what she had been told. She did not appreciate the type of attendant care Mortimer needs and lacked expertise in assessing it. By way of contrast, Staub's curriculum vitae, filed as Exhibit 20, was most impressive. She has worked in the field of rehabilitation for 40 years. She has spent 27 of those years with The Hugh MacMillan Rehabilitation Centre and School. For the past 22 years, she has been its Director of Psychological Services. Her academic credentials include a Bachelor of Physical and Health Education, a M.A. in Counselling Psychology and certification as a Registered Psychologist. She has a post graduate diploma in Prosthetics and Orthotics for Rehabilitation Counsellors, 2 years of post graduate study in anatomy, physiology, neuroanatomy and neurophysiology. She belongs to many professional associations, has published several learned papers, engaged in research and has given a number of invited addresses over her years in the field. She interviewed Mortimer and reviewed his medical records. She based her

recommendations on her training, experience and knowledge of Mortimer's specific situation.

Logan has been employed by Q C Personnel since 1980 and has been the owner-manager since 1985. The firm has been in London since 1974. It is a fee for service agency that lacks employees. If a member of the public requires domestic or housekeeping services, child or "senior's" care or care for the disabled, he or she calls the agency. Logan defines the need and arranges for someone from a pool of workers to provide the service. She checks the background, qualifications and references of these workers. Her agency has provided care to quadriplegics in the past, including housekeeping, cooking, bathing, catheterization, bowel care and chauffeuring, "probably on and off since 1989, but more off than on". For persons who need 24 hour care, she provides a minimum of 2 workers on a 3 day rotation. For example, worker A begins Monday at 9:00 a.m. and leaves Thursday at 9:00 a.m. Worker B begins Thursday at 9:00 a.m. and works until Sunday at 9:00 a.m. Worker A then returns and the cycle is repeated. The workers are available 24 hours a day during their shifts.

Even if the Employment Standards Act allows the arrangement proposed by Logan, in my opinion, using Staub's words, "common sense precludes staff working this many hours a day". I accept Staub's opinion that "Mortimer would never be able to be looked after by one live-in staff as his care needs span the full twenty-four hours . . .". Even Horst, who was called by the defendants, stated in his report, (filed as Exhibit 86), that $12.50 per hour should be allotted for an attendant "in order to obtain good reliable staff". Therefore, I prefer Staub's opinion and conclude it is appropriate to allow such care at the rate of $12.68 per hour, being the rate quoted by Staub for London. With GST, the hourly rate is $13.57. Adopting Staub's costing based on 349 days a year and a 50% surcharge for 10 statutory holidays, the annual total is $115,171.92.

I also adopt Staub's rationale with respect to the need for a care giver to accompany Mortimer on vacation 2 weeks a year so that he might continue to travel as he did before his injury. This adds $2,605.44 to cover the cost of wages for 12 hours for 16 days and $1,000 to cover the cost of the care giver's transportation, food and accommodation over the 16 day period. The total cost of providing such attendant care for 1 year is therefore $118,777.36.

From this should be deducted the cost of providing care during the average period of 3 weeks each year when it is expected that Mortimer will be hospitalized, in the sum of $6,839.28 ($13.57 X 24 X 21). This results in a cost of $111,938.08 annually for attendant care.

(2) Other Personnel

(a). Physiotherapy and Occupational Therapy:

Besides attendant care, Mortimer, in Staub's words, "will need routine physiotherapy and occupational therapy advice from time to time". I believe the main use for such personnel will be to instruct Mortimer's care givers about specific techniques that he is unable to demonstrate or describe adequately himself, e.g., raising sputum when he develops an upper respiratory infection. She costs this at $516 annually, based on an average of 1 visit a month at $43 a visit.

Mortimer could receive this service without charge from Home Care, which the Ministry of Health administers, unless he moves to an area of the Province (or outside the Province) where it is not available. There is no evidence that Mortimer intends to leave London or to live where Home Care will not be available to him. Because Mortimer will not become gainfully employed, he will not have to move to secure employment. In his condition, it is to his advantage to live where the specialized medical care he requires is readily available. I am not satisfied there is a real and substantial possibility that Mortimer will be required to pay for this service. Therefore, I decline to make any award for it.

(b). Housekeeping:

Because Mortimer cannot do any housekeeping, Staub proposed that a sum should be awarded to provide this service.

I anticipate that his attendants will do light cleaning, look after his laundry, prepare light meals and help him with his shopping and banking. The sum recommended by Staub was to cover the cost of more major cleaning. She recommended 1 visit a week at a cost of $50 a visit. I conclude this is reasonable and allow the sum of $2,500 per year.

(c). Home Maintenance and Repair:

Similarly, Mortimer will be unable to complete those items of minor home maintenance and repair that most homeowners can do for themselves. Mr. Brian Twynstra testified that the average annual cost of maintaining the interior and exterior of the average home is $4,325. This includes such items as painting, lawn care and snow removal but not major repairs, e.g., to the electrical system or roof, which would be "subcontracted out". The sum of $4,325 does not include replacement materials or supplies. He based it on an hourly labour rate of $15. Because Mortimer does not presently own a specific home, it is difficult to assess the need for maintenance and repair. Obviously, a newer home requires less immediate attention than an older one. In addition, it is likely that Mortimer would have hired people to do some of these chores even if he had not been injured, especially as his income increased and his time became more valuable. Finally, the defendants ought not to bear the cost of repairs that a normal householder would retain skilled help to effect. Therefore, on balance, I allow the sum of $2,000 per year to cover these costs.

(d). Child care:

On the assumption that Mortimer will either father or adopt a child, Staub proposed an allowance for child care. It was meant to pay the cost of hiring someone to carry out the responsibilities that most fathers assume in this area. Also, if his spouse died or were disabled, he would be left to this task himself and would have to hire someone to act in his place. Staub felt that during the week, Mortimer's attendant would have some time to devote to child care with Mortimer present. Still, she thought it would be normal for a mate to provide a prolonged period of relief to the other spouse on at least 1 day of the weekend. She felt that someone should be hired for at least 4 hours each weekend to fill this role for Mortimer. In my view, there is no real and substantial possibility that Mortimer will father children and whether he will even adopt a child is highly speculative. Consequently, I believe it inappropriate to make any award for this item.

(e). Counselling:

Staub recommended that $2,000 be provided annually to cover the cost of counselling with a registered psychologist to help Mortimer and Ms. Brocklehurst deal with the psychological consequences of the trauma that has changed Mortimer's life so suddenly and so completely. One category recorded in Table XII of Dr. Geisler's study, (Exhibit 13B), was the number of deaths from suicide, which he noted was "alarmingly high when compared to the normal population". Understandably, total disability can lead to severe depression that in turn can lead to suicide. Fortunately, Mortimer now appears well adjusted psychologically, which is not to say that he or Ms. Brocklehurst will not have need for some counselling in the future. However, such counselling is readily available from a psychiatrist whose fee are covered by O.H.I.P. Therefore, it is inappropriate to award any sum for this item.

(3). TRANSPORTATION:

Mortimer is physically incapable of operating a motor vehicle himself. Indeed, he does not wish to do so, because he feels it would be unsafe. Now, he uses the Paratransit system within the City of London. Before his injury, he owned and operated his own motor vehicle and it is probable that as an accountant he would have continued to do so. Given his present circumstances, he needs a van, rather than a standard passenger sedan for transportation. However, the van must be converted or modified to accommodate his wheel chair.

In considering what would be reasonable and appropriate, I have weighed the expert evidence of Margaret Young, from the Hugh MacMillan Centre, Staub and Horst. I give considerable weight to the evidence of Young who has been certified to

prepare van prescriptions by the Association of Driver Educators for the Disabled. She graduated from the physiotherapy and occupational therapy course at the University of Toronto in 1963 and has specialized for many years in the needs and concerns of disabled drivers. Indeed, Horst deferred to her expertise in this area. Also, I prefer the general approach outlined at page 17 of Staub's report, (Exhibit 23), which I have modified somewhat, to that proposed by Horst.

The most suitable vehicle is an extended version of the Chrysler Minivan. It permits Mortimer to sit beside the driver, is more fuel efficient than the alternatives and fits into a regular garage and standard car wash. The alterations Young outlined are appropriate and cost $18,950.

Mortimer also should receive a sum to compensate him for the extra capital expense incurred in purchasing a van as opposed to the standard passenger type of vehicle he owned and operated before his injury. Based on Staub's evidence, I fix this item in the sum of $8,000. Also, I allow $500 as the initial cost of a cellular telephone. Mortimer's initial additional transportation cost is therefore $27,450.

Moreover, I think it is proper to allow the difference in annual operating costs, exclusive of depreciation, between a standard passenger sedan and the van he will now have to maintain. Again, based on Staub's evidence, I assess this item in the sum of $4,500 annually.

I also allow the sum of $498 for portable ramps, which are to be replaced at 10 year intervals.

To be fair to both Mortimer and the defendants who will be called upon to pay, I deem it reasonable that the van and cellular telephone should be replaced every 6 years. There is no need to deal with any depreciation differential because the additional capital costs incurred by Mortimer arising from his injury will be borne entirely by the paying defendants.

(4). ACCOMMODATION:

I conclude that if Mortimer had not been injured he probably would have purchased his own home. Counsel suggested other alternatives. These included continuing to live in the cooperative, geared to income, rented premises where he now resides, or in Cheshire Homes. The latter manages support service living units in the London area that the Ministry of Community and Social Services funds in conjunction with the Ministry of Housing. However, to force either of these alternatives on Mortimer would violate the principle of restitutio in integrum. As far as money can do so, he should be placed as nearly as possible in the position he would have been in had he not been injured. As a C.M.A., it is probable that he would have lived in his own home.

This, of course, he would have purchased himself. In my opinion, the defendants should not have to pay any part of the acquisition cost of a home, as suggested in the report of The Barrier-Free Design Centre, filed as Exhibit 60. Ms. Carol Kelly of the Centre testified that the size of home Mortimer could have afforded before his injury is too small to meet his present ergonomic requirements. She proposed that the defendants should be responsible for the "extraordinary cost of purchase". This represents the difference in cost between what he could have afforded before the injury and what he now requires because of it.

First, she based this position on the assumption that before his injury Mortimer could afford a home worth $87,000 and that he alone would be contributing to its purchase price. I do not think it probable that Mortimer would have purchased his own home immediately upon beginning work as a C.M.A. Also, given the relationship between Mortimer and Ms. Brocklehurst and because she works full time as a physiotherapist, it is not unreasonable to expect that she will contribute to the purchase of a home and that they might afford one of a size that Mortimer's ergonomic needs now dictate. However, there is always the possibility that Ms. Brocklehurst and Mortimer may not marry or continue to live together. I must then consider what likely would have happened if Mortimer had not been injured. It seems likely to me that he might have married someone who worked outside the home, as his mother did, who would have contributed

financially to acquiring their home. Also, I have projected a steady increase in his real income during the first 15 years of his practice, which would eventually have put him in a position to purchase the size of home he now needs to meet his ergonomic requirements. Finally, there is an element of "betterment" for which I feel the defendants should not be held responsible, notwithstanding Mortimer's present ergonomic needs. Accordingly, I decline to award anything for the "extraordinary cost of purchase".

Still, because of his injury, he must modify his new home to fit his special needs and he should be awarded the

reasonable cost of doing so. Ms. Young's report presented several possible options and outlined the cost of each. They represented a variety of possibilities to "identify the range of housing options that are available to Mr. Mortimer". She based the options on 3 actual homes in London and 2 in Calgary and included 2 single storey bungalows, a townhouse condominium and 2 apartment condominia. Because in my opinion it is unlikely that Mortimer will leave London, I have concentrated on the 3 London options. The proposed renovation costs were as follows: Bungalow: $61,897; Townhouse Condominium: $35,310; Apartment Condominium: $18,480. The average is $38,562.33, which Horst proposed as the amount that should be allowed.

Although the cost is not noted, the estimates for the London bungalow and townhouse include the cost of changing the garage door to accommodate a van. Yet, according to Ms. Young, the Chrysler Minivan will fit in a standard garage and therefore it will not be necessary to change the garage door. Also, among the housing criteria in the report she noted "some potential for separate living quarters for a live-in attendant". If the attendants are going to work 3 eight hour or 2 twelve hour shifts per day, as anticipated by Staub, I do not believe it is necessary to provide for their separate living quarters. Still, I believe it is reasonable to provide for an area where, in Staub's words, "they can have their breaks in relative privacy although in direct communication by an intercom type of apparatus". Each of the first 2 options in The Barrier-Free Design Centre report allows $10,000 for the cost of finishing a basement apartment for a live-in attendant. Something less would be required to provide the private area anticipated by Staub. The sum of $6,000 should be sufficient for this purpose.

Staub recommended that Mortimer should be allowed the cost of 2 home conversions. She assumed that he may move at least twice in his life and that it will be necessary for him to convert both his homes to meet his special needs. It is true that Mortimer lived both in Calgary and London before he was injured. Still, as noted above, I do not believe he can secure gainful employment. Therefore, he will not have to move to further a career or to pursue advanced education. In any event, the latter is available to him in London. Again, the specialized medical care he has needed has been and remains available to him in London. His parents and sister Adrienne live in London. I am not prepared to conclude on the evidence that there is a real and substantial possibility that Mortimer will move twice in his remaining years. As noted above, I anticipate that toward the end of his life expectancy there is a substantial possibility that he will return to live in an institution. Accordingly, I allow the cost of only one conversion.

In my opinion, among the options presented, the bungalow is the most widely available form of accommodation and the most adaptable to Mortimer's special needs, including his need for safety and as much independence as his condition permits. Therefore, it is reasonable to conclude that this is the style of home he probably will purchase. Based on these considerations, I allow the sum of $55,000 for one conversion of a standard home to Mortimer's special needs, including the cost of providing an area for his attendants.

(5). EQUIPMENT, SUPPLIES AND MEDICATION:

Beginning at page 12 of her report, Staub listed the equipment she felt Mortimer needed and the initial and annual cost of providing it. There is little disagreement with her position. She believes that he should have 2 electric wheel chairs. One would be maintained as a backup chair to be available when his regular chair is being serviced or

repaired. Therefore, she included the cost of a second chair in the sum of $11,000. There is a more expensive wheel chair available that Staub felt would be more suited to Mortimer's needs. However, she discussed it with him and he prefers the type he now has. I do not believe it is necessary for Mortimer to have 2 electric wheel chairs. I accept Horst's alternative of having a manual wheel chair as a backup at an initial cost of $1,300, amortized over 5 years at an annual cost of $260. I also accept Horst's evidence that the Ministry of Health, through its Assistive Devices Programme, will pay 75 per cent of the cost of the electric wheel chair, the ROHO cushion and seating insert without subrogation. Accordingly, only 25 per cent of the cost of these items should be allowed.

Based on the evidence of Dr. Frankel, I conclude it is not necessary to provide Mortimer with a hospital bed with safety sides.

Mortimer was active in several sports before his injury. It is probable that if he had not been injured he would have spent money on athletic and exercise equipment. Accordingly, I decline to allow any sum for exercise equipment.

Staub fixed the annual cost of bladder and bowel care at $3,600, based on the assumption that the condom drainage system Mortimer uses will require 3 condom changes a day. I accept Dr. Frankel's evidence that 1 change a day is sufficient. However, it is not appropriate simply to reduce the amount by two-thirds. The $3,600 also provides for 4 sets of drainage bags a month, clean gloves, lubricant, incontinent pads and 6 flip-top enema bags. To provide the items in this category, I allow the sum of $2,000 per year.

The other items included in Staub's list are reasonable and appropriate and I accept them. I also include under this heading the sum of $1,200 per year identified by Horst as an extraordinary clothing expense occasioned by Mortimer's injury.

(6). VOCATIONAL REHABILITATION, AND COMMUNICATIONS NEEDS:

Because of the extent of his disability, Mortimer must depend not only upon human care givers but upon technological devices to accomplish the tasks of ordinary living that he would have done for himself had he not been injured. I stress that providing the technology does not eliminate the need for an attendant or vice versa.

In Mortimer's circumstances, I conclude it is reasonable to provide him with a voice activated system for his computer. The DragonDictate System advocated by Ms. Monica Ackermann, a professional engineer and partner in Assistive Vocational Technology Associates, whose report was filed as Exhibit 67, is appropriate. Also, I accept the evidence of her partner, Ms. Inge Martin, with respect to the need for an environmental control system. Speaking generally, Ackermann's approach is reasonable. Still, there are some areas where the proposed costs should be reduced or disallowed.

Ackermann proposed that $12,000 be allowed to secure the computer hardware necessary to run the DragonDictate system. The price quoted was for an IBM computer using the Intel 80386 microprocessor operating at 20 mhs or faster. Fully compatible clones of equal power and configuration are available for less money. Mortimer already has a computer, although no one testified about its specifications. As an accountant, it is reasonable to infer that he would have maintained a computer at home for both personal and business use. Still, he would not have required one with 8 megabytes of RAM, (random access memory), such as he will need to run the DragonDictate System. I conclude that before his injury Mortimer could have provided himself with a hardware system suitable to all his needs for a maximum of $6,000, including taxes. I therefore allow the sum of $6,000, which represents the cost of providing the extraordinary configuration necessary to run the DragonDictate system.

I also allow $200 for a microphone, $300 for a modified trackball and $900 for a tape backup system. However, I am not satisfied that Mortimer would not have had a modem before his injury, so I allow nothing for this item. I allow $3,000 for an ergonomic workstation tailored to Mortimer's needs,

$3,000 for a Reference Carousel with motor and 3 carousels and $5,000 for an environmental control system.

The authors of the report recommended that $2,000 be awarded to purchase the software programmes Mortimer will require apart from the DragonDictate system. In my opinion, he would have purchased them if he had not been injured, as well as upgrades from time to time, and therefore I make no allowance for this item.

The proposed cost of $2,000 per year for professional assessment services is based on 24 or 25 hours a year, including travelling time and report writing. This seems excessive to me. I allow the sum of $800 per year. I allow the sum of $1,350 for the training costs of the DragonDictate System. An optical character recognition system might help Mortimer to "input information into the computer", and an internal fax card might permit him to "create and transmit written materials without the need to handle paper". Still, he will have an attendant to help him. I see these items more as luxuries than necessities and therefore make no allowance for them. I allow nothing for the cost of computer supplies because this is an expense that Mortimer would have incurred even if he had not been injured.

Exhibit 68 is a letter from Ackermann to Patterson outlining some additional information about the cost of Mortimer's technological needs. Ackermann estimates that after the expiry of the initial parts and labour warranty, which lasts for the first year, the annual cost of a computer hardware service contract is about 20 per cent of the initial purchase price. It does not seem likely to me that a microphone or trackball would be the subject of a service contract. Twenty per cent of the initial cost of the additional computer hardware expense and the tape backup system is $1,380. I conclude that $1,000 a year, after the first year, is a proper sum to allow for this item.

I accept Ackermann's statement that the computer hardware and peripherals should be replaced every 4 years. I make no allowance for upgrades to the DragonDictate System at 2 year intervals, as she suggests, but I accept her position that it be replaced every 4 years, at the same time as the hardware. The workstation itself should be replaced at 10 year intervals, but the moving parts should be replaced at a cost of $400 every 2 years. As to the reference carousels, I allow $100 a year for service and the cost of replacement every 4 years. The environmental control system should be replaced at 5 year intervals.

(7). ASSESSMENT:

In accordance with Appendix B, I assess the initial

future care costs in the sum of $120,996. According to Patterson's calculations, which I accept, the present value of the recurring items of future care specified in Appendix B is $2,462,156.

17. GROSS UP FOR INCOME TAX:

(1). GENERAL PRINCIPLES:

Should I "gross up" the lump sum award for the cost of future care to compensate for the income tax that will accrue on the income earned when Mortimer invests the future care fund? If I do not, the fund will be depleted before Mortimer has to return permanently to an institution, thereby under compensating him and defeating the purpose for which the award is intended.

The Supreme Court of Canada has stated recently that an allowance should be made for the impact of taxation on an award for the cost of future care where the evidence supports it: Watkins v. Olafson, [1989] 6 W.W.R. 481 at p. 495. Here, the evidence does support such an award.

As the Court of Appeal states in Nielsen v. Kaufmann, 54 O.R. 188 at p. 201:

> The calculation of a tax gross-up is a complex and difficult process. It involves not only assumptions with respect to the nature of the investments in the fund (e.g., bonds or corporate shares) and the amount of the

> other income of the recipient of the income of the fund . . . but also such matters as the present and future federal and provincial income tax rates, the range of taxable income to which the rates will apply, and the amount and applicability of exemptions and other deductions.

I turn then to deal with the assumptions underlying the calculation of the gross up for income tax.

(2). THE RATE OF FUTURE INFLATION:

The Income Tax Act taxes nominal rather than real income. As inflation increases, so does the real rate of taxation, because it is the higher nominal interest rather than real interest that attracts tax. So, a higher rate of inflation produces higher interest income and a higher rate of taxation. Our tax system is not inflation neutral, i.e., it taxes that part of income that is the result of inflation. Also, as Patterson noted, currently, tax credits increase by 4 per cent annually, while income is increasing by about 7 per cent annually. The predicted rate of future inflation, therefore, will have a marked impact on the amount awarded to compensate for the tax that the income from the future care fund will attract.

Dr. Carr testified that it is the monetary and fiscal policy of the Government of the day that causes inflation. Yet, there is a lag in time between the implementation of the policy and its effect upon the rate of inflation. Accordingly, economists believe they can forecast what the rate of inflation will be over the short term, e.g., 1 or 2 years, by observing current monetary and fiscal policies. To predict the rate of inflation over the long term, e.g., 25 or 30 years, economists would have to foresee the monetary and fiscal policies of the Government for that same period - an impossible task. How then does one go about predicting the rate of inflation over the long term?

Carr recommended looking to the long term capital market. The people in this market are not engaging in a detached, abstract, academic exercise, but are lending their money based on their expectations of the rate of future inflation. The market expectation of inflation can be determined by subtracting the real rate of interest, (2.5 per cent), from the nominal rate of interest. The Government Bond Index is the average of many different issues of bonds having a maturity date of 10 years or longer.

From the Bank of Canada statistical Summary, Carr determined that the rate of interest on long term Government of Canada bonds as of April 17, 1991, was 9.83 per cent. The difference between this rate and the real rate of interest is 7.33 per cent and represents the average rate of inflation over the long term. He also noted that rate is not out of line with the 7.3 per cent average rate of inflation in the Canadian economy over the last 15 years. To be on the conservative side, he recommended the adoption of 7 per cent as the rate of future inflation. He admitted that because it was an estimate, it might be slightly too high or correspondingly too low.

In making his calculations, Patterson assumed a rate of future inflation of 6.5 per cent, although it is not clear to me from the evidence upon what basis he did so. Both he and Carr agreed that it was very difficult to forecast rates of future inflation. The defendants adduced no evidence on this issue.

The Government recently announced policies designed to lower the rate of inflation to 2 or 3 per cent within the next year or two. Still, Carr said that economists and capital market participants have heard such pronouncements before and have become accustomed to their going unrealized. He said capital market analysts know that the Government has a large deficit. There is always the temptation to take the easy and more politically popular way out and to finance it by printing more money. This leads to increased inflation. Once inflation is built into the system, governments are generally unwilling to take the hard and unpopular action necessary to eliminate it. He said the market is influenced by action, not by policy statements. Investors are motivated by past experience with the rate of inflation as well as by future expectations.

When asked whether the G.S.T. might be a source of reducing some of the debt, he replied that he did not know. He added that the Government announced it was going to be a tax neutral measure and that the rate of inflation has increased since its introduction. He also stated that in the past when taxes have increased, the result has generally been elevated Government spending rather than debt reduction. In the short term, he foresaw an election, a time when the Government makes expensive promises. All these factors tended to reinforce his belief in a long term inflation rate of about 7 per cent.

Trial judges have been directed not to decide the gross-up figure arbitrarily but to base it upon the evidence adduced and the findings made: Davies v. Robertson, (1984), 5 O.A.C. 393 at p. 398 (C.A.). On the other hand, they have been criticized for accepting the evidence of experts and the results uncritically: McErlean v. Sarel, supra, at p. 435.

Bearing these principles in mind, I note Carr stated that the rate of inflation in the early 1960's was less than 2 per cent and then "creeped up" to about 4 per cent. In the 1970's, it got as high as 12.5 per cent and stayed there for a good part of the decade. In the 1980's, it began to fall to about 4 per cent 2 or 3 years ago. It slowly rose to about 5 per cent until the Government implemented the G.S.T. He said that as of the date of trial it was above 6 per cent. Carr agreed that the double digit inflation of the 1970's was atypical. This would tend to increase the average rate over the last 15 years. Since investors look to past experience, current market expectations of a 7 per cent rate of inflation over the long term might be influenced by those atypical rates. Also, if a longer period of past experience had been chosen, the lower rates of the 1960's would have lowered the average.

Bearing in mind all these factors, I conclude that a reasonable estimate of the annual rate of future inflation is 6.5 per cent.

(3). TYPE OF INVESTMENTS:

The rate of tax levied on income depends, in part, on the type of income. The Government taxes dividend income and capital gains at lower rates than interest income. The amount of the gross-up is therefore directly related to the type of investments made with the future care award.

As the Court of Appeal states in Nielsen v. Kaufmann, supra, at p. 205:

> There is no doubt that an assumption based on total investment in long-term bonds substantially increases the amount of the gross-up and, in effect, substantially imposes the relevant future risks on the defendant. On the other hand, while an assumption based on an investment in stocks ameliorates the position of the defendant, at the same time it also imposes well-known investment risks on the plaintiff who, of course, is not the wrong-doer. A reasonable balance has to be found on the facts of any given case.

Given the reason for the award, the primary investment goal of the future care fund should be safety of capital. The vehicles that come first to mind are fixed-interest securities such as the long term bonds mentioned in Nielsen that yield interest income, which the Government taxes at the highest rate. To pay for his care, Mortimer will have to liquidate some of his investments periodically until eventually he exhausts the fund. The probability of, for example, the Government defaulting on bonds is very low. Therefore, the return of capital with interest is most likely, if he holds the bond to maturity. However, if he has to sell the bond before maturity to pay for care, the return of his capital is not assured. It is common knowledge that when interest rates rise, bond prices fall and vice versa. Therefore, there is the potential for capital gains or losses, depending upon short term fluctuations in interest rates, especially for long term bonds. In other words, there also can be risk, and sometimes substantial risk, in owning long term bonds, if they have to be sold before maturity.

Maximization of after tax income with minimal risk is

another reasonable and complementary goal. This might be achieved by acquiring the shares of many "blue chip" corporations that pay regular dividends. They generate dividend tax credits and are therefore taxed at more favourable rates. They also have the potential for capital gains (and losses).

Portfolio diversification is advisable to avoid negative price fluctuations in certain segments of the market, particularly those that analysts recognize as cyclical in nature. This is a principle employed by mutual and pension fund managers.

It would be unreasonable here to expect Mortimer to participate in high risk investments in anticipation of large capital gains.

In assessing damages, I must be fair to the plaintiffs and to the defendants. In determining what mix of investments is appropriate for calculating the gross-up, the aim should be to strike a reasonable balance between minimizing Mortimer's risk of prematurely depleting the future care fund and taking advantage of safe investments that yield tax advantages. Given the above considerations, it seems to me that a reasonable and prudent investor of a large sum of money would choose a diversified portfolio. In this way, the investor spreads the risk over several different types of securities and market sectors. He or she should do so with an awareness of the risks involved in each and the net gain after tax.

I conclude that, with some initial help, Mortimer can maintain a safe, diversified investment portfolio comprising one-third equities, which attract the dividend tax credit and two-thirds fixed-income securities. The gross-up has been calculated on that basis.

(4). AFFECT OF OTHER INCOME ON TAX RATE:

Because of the progressive nature of our income tax system, as a person moves from one tax bracket to the next higher one, the rate of tax increases. The first dollar earned in the higher bracket attracts tax at a higher rate. If one adds more income to what has already been earned, it will be taxed at the "marginal" rate that applies to that bracket.

If the gross-up is calculated on the basis that Mortimer lacks other income, it will understate his tax liability, because it will be computed using lower tax rates. This is inconsistent with the purpose of the award because the fund will be exhausted before the need for care ceases.

Consequently, I assume that he will first earn other income from the investment of the amounts awarded for non-pecuniary general damages and loss of future income. I also assume that this investment fund will be divided as follows: one-third in equities and two-thirds in long term fixed income securities. I also assume for the purpose of the calculation that Mortimer will purchase a van and home from these funds immediately. He may now wish to spend more than the $87,000 the Barrier Free Design Centre felt was appropriate to his income before his injury. He would have spent $16,000 to purchase a motor vehicle before the accident. Therefore, the calculation should be made on the basis that $150,000 will be spent immediately and will not be available for investment. I have also assumed that the initial future care costs will be incurred immediately, including those attributable to accommodation and transportation and Mortimer's vocational rehabilitation and communications needs, and will not be available for investment. Those initial future care costs total $120,996.

(5). RATE OF USE OF FUNDS:

I assume that Mortimer will start now to spend the future care award and the amounts awarded for non-pecuniary general damages and loss of future income in equal real amounts (in 1991 dollars) annually over his life expectancy. The sole exceptions are the capital items under the head of future care that have to be replaced periodically, as noted above.

(6). REMAINING ASSUMPTIONS:

The remaining assumptions upon which the calculations

were made are contained in Table A-of Patterson's supplementary report, dated January 29, 1992, which is filed as part of Exhibit 145.

In Watkins v. Olafson, supra, at p. 498, the Court notes:

> In calculating loss of future earning capacity in cases where an award for future care is made, a deduction is made from the award for lost earning capacity for living expenses to avoid duplication between the two heads of damage.

Here, there is no such duplication because the award for future care comprises only extraordinary expenses made necessary because of Mortimer's injury.

(7). ASSESSMENT:

Based on these assumptions, Patterson calculated the gross up for income tax to be $713,804, which I accept. Therefore, I assess the total future care award, including gross up, in the sum of $3,175,960.

I am mindful of the admonition of the Court of Appeal in McErlean v. Sarel, supra, at p. 435, to the effect that the assessment of a proper amount for the gross up is not an exercise in mathematics and that there is great scope for error. The recognition of this fact requires that I determine whether the amount awarded is inordinately high or inordinately low and make the necessary compensating adjustment.

The gross up of $713,804 represents about 29 per cent of the $2,462,156 assessed for future care costs. In my opinion, the assumptions used to calculate the gross up are reasonable and realistic. While I have no better ability than anyone else to see into the future, I considered Mortimer's circumstances, weighed the expert evidence and attempted to make an assessment based upon the best information available at the present time. In the circumstances, I see no need to make any further adjustment, either by way of increase or decrease.

18. CONTINGENCIES:

Where there is evidence that a plaintiff may require intermittent or permanent hospitalization, which would avoid the expense of home care, the Court should consider reducing a future care award to cover this contingency: McErlean v. Sarel et al., supra, at p. 427 (C.A.); Thornton et al. v. Board of School Trustees of School District No. 57 (Prince George), supra, at p. 282.

I have already allowed for an average of 3 weeks a year in hospital. The period may be shorter at first and longer as Mortimer approaches the end of his life expectancy. If Mortimer's lesion were any higher, he would need the assistance of a machine to breathe. As it is, many of his bodily functions are adversely affected. He is subject to a variety of potentially dangerous conditions, to which I have referred in the section dealing with his life expectancy.

For the purpose of considering the issue of a reduction in the future care award because of hospitalization, I assume that he will live out his life expectancy, which I have projected at 24 years. However, he has been hospitalized in the past for problems with his urinary tract and has experienced pulmonary emboli and severe episodes of autonomic dysreflexia. Respiratory infections also pose a serious problem for him as do bed sores or ulcers. While he understands his condition well and can direct his care givers and has to date avoided such complications as bed sores while in his home, I conclude it is most probable that over the next 24 years he will be required to spend much longer in hospital than a total of 72 weeks.

Accordingly, I reduce the award for future care costs by 20 per cent to cover that additional contingency. I assess the amount for ongoing future care, including the gross up for income tax, less the discount for contingencies, in the sum of $2,540,768. Also, I assess the initial future care costs in the sum of $120,996.00 as per Appendix B.

19. MANAGEMENT FEE:

In Mandzuk v. Vieira and Insurance Corp. of B.C., 53 D.L.R. (4th) 606, (S.C.C.), Sopinka J., speaking for the Court, says at p. 606:

> ... a management fee or an investment counselling fee should be awarded if the plaintiff's level of intelligence is such that he is either unable to manage his affairs or lacks the acumen to invest funds awarded for future care so as to produce the requisite rate of return.

He continues at p. 607:

> A plaintiff seeking to recover either a management fee or an investment counselling fee should provide a factual basis to the trier of fact, including:
>
> (i) evidence that management assistance is in fact necessary;
>
> (ii) evidence that investment advice is in fact necessary in the circumstances;
>
> (iii) evidence about the cost of such services.

Mr. Morse submits that Mortimer lacks experience in investing such a large fund and therefore should be provided with professional investment, management and counselling services. Otherwise, there is the danger that, acting alone, he will deplete the fund before his need for care ends. Ms. Kathy McPhail, a trust officer with National Trust, explained the difference between two types of investment management accounts and the fees charged for the assorted services provided. Mr. Morse submits that an annual fee equal to 1/2 of 1 per cent of the fund invested would be an appropriate allowance for this service.

As noted above in the section which deals with loss of future income, Mortimer finished the two year diploma course in Business Accounting and then enroled in the Business Finance course after his fall. He hopes to complete the course by May, 1992. He also took an investment course based upon the Canadian Securities Course. It dealt in part with different investment vehicles and the principles of portfolio investment. He has also taken a course in the Mathematics of Finance and a computer programming course. To date, he has managed only his own savings. He has invested in Canada Savings Bonds and Guaranteed Investment Certificates, but never in equities.

Also as noted, Mortimer is quite intelligent. He has formal education in business, accounting and investment principles and an interest in financial matters. He will have a powerful computer system available to him. He can use it to get and analyze financial information, to record financial transactions and to generate the information needed for income tax purposes. The software and on-line services he needs to facilitate these tasks are of a kind he probably would have purchased in any event as an accountant. As noted, he will be unable to obtain employment and therefore will have the time to devote to identifying appropriate investments, of the types noted above, and to executing them and recording them properly.

I conclude it is most probable that with a minimum of assistance Mortimer can invest the award as suggested to provide the future care he needs for the entire period anticipated. Still, because of the large sum to be invested, he will no doubt need some professional advice at first. In the circumstances, I allow the sum of $25,000 for investment advice.

20. FAMILY LAW CLAIMS:

Subsection 61(1) of the Family Law Act, S.O. 1986, c. 4, as amended, provides that parents, brothers and sisters, among others, of a person injured because of the fault or negligence of another, under circumstances where the injured person can recover damages, can themselves recover their pecuniary loss

resulting from the injury. Subsection 61(2) lists the categories of damages that are recoverable under s-s. 61(1). Because I have attributed no contributory negligence to Mortimer, there will be no deduction from the awards made under this head.

(1) THE PARENTS

(a). Actual Expenses:

Donald Mortimer installed a lift in his home at a cost of $4,500 to accommodate his son's visits. This qualifies as an expense "reasonably incurred for the benefit of the person injured". I have no doubt that such visits foster in Stephen feelings of independence that are beneficial to him. I allow $4,500.

(b). Travel expenses and the value of services:

Stephen Mortimer stayed in hospital from July 17, 1987, until January 5, 1990. For about the first 9 months after his injury, his parents visited him at Victoria Hospital and Parkwood Hospital almost daily, and sometimes twice daily. Finally, he realized that the visits were becoming "too much for all of us" and asked them to "cut back". They came less often, but still regularly, including the 3 months when he was at Lyndhurst Hospital in Toronto. While he was there, they visited him about 8 times and remained overnight in a hotel 4 of those times. Many of their visits throughout these years lasted several hours and they often brought and fed him his dinner.

Since Stephen's move to his present town house, they have visited him there two or three times a week. Though Stephanie now lives with him, she works during the day, so they still help him with many of his personal care needs. On the days he goes to school after lunch, they prepare and feed it to him. They also comb his hair, wash his face, put on his coat and ensure that he gets on the Paratransit van. If no one else is available, they are at his home when he returns from school. Donald Mortimer has helped Stephen with some physical tasks associated with the latter's school work.

Mr. and Mrs. Mortimer can be compensated only for the time they devoted to Stephen's benefit beyond what they would ordinarily have expended for this purpose before his injury. Because they were retired at the time of his injury, they lost no income due to helping him. However, their retirement years have not been what they anticipated. They have had to spend an enormous amount of extra time with Stephen because of his inability to do anything for himself. In fact, they have spent so much time with him that their relationships with their other children and grandchildren have suffered.

Also, the nature of their relationship with Stephen has changed. There has been an almost complete role reversal. Not only have they provided untold hours of needed support and encouragement, they have engaged in physical acts usually associated with caring for a very young child. With the provision to Stephen of attendant care because of this judgment, they will no longer need to provide physical care. No doubt they will continue to give him extraordinary moral and psychological support.

No evidentiary basis was proffered for measuring damages under this head and therefore my assessment is somewhat arbitrary and no doubt conservative. Whatever sum I allow can never measure adequately the value of the attention and encouragement provided by caring and loving parents in such circumstances of potential despondency and despair.

I fix the total travel expenses at $3,500, which I allow to Mr. Mortimer. I fix the value of their services to Stephen at $20,000 each.

(c). Loss of care, guidance and companionship:

Mr. and Mrs. Mortimer are 76 and 72 years old, respectively. Both are retired from their former gainful employment. At the time of his injury, Stephen was living at home with them while attending school. Accordingly, they enjoyed more time with him than if he had been living away from their home. Yet, there is no evidence that he spent time

attending to their needs or helping them about the house in the period immediately before his injury.

He was on very good terms with both his parents. His father feels he had and still has a "splendid" relationship with Stephen. Mary Mortimer had a "very good and very loving" relationship with him. Stephen feels that his injury has changed his relationship with his parents "drastically". His mother does not see much difference except that he depends upon her much more now than he did before his injury.

Understandably, there have been times when Stephen has experienced bouts of anger and frustration. Although his parents were blameless, they were at hand and sometimes became the object of his ire. He said his father endured his outbursts "in quiet resignation" and he respected him for that. He felt these eruptions put a strain on his relationship with both parents. These are examples of what Dr. Frankel referred to when he said that patients like Mortimer become "emotionally depleting of the resources of the people around them". Nevertheless, they remained supportive and maintained a positive facade in his presence. Away from him, Mrs. Mortimer stated that she and her husband are "short with each other".

Stephen's injury placed an enormous physical and emotional burden upon his parents, which they willingly and selflessly assumed. They suffered through times of great anxiety on occasion when he experienced severe medical crises. At a time in their lives when they might reasonably expect or need some additional care and attention from their children, they feel compelled instead to offer it to Stephen.

However, under this head of damage, Mr. and Mrs. Mortimer cannot claim compensation for the love and care they have given Stephen. Instead, their claim is for the loss of the care, guidance and companionship he would have given them, to the extent that it has been and will in the future be diminished because of his injury.

It is reasonable to expect that Stephen would have married. Then, he would have devoted more time to his wife and the children he wanted to have and less to his mother and father. This is the natural course of events. Even if he marries now, I expect they will continue to have the benefit of his companionship, but they will be unable to engage in the type of activities they enjoyed together before his injury.

He will still be available to give them guidance, perhaps in financial matters because of his special training. Yet, they will not receive any physical care from him because his condition renders him incapable of providing it. Given his nature, I find he would have been compassionate toward them and would have helped them in times of need.

Fortunately for them, this is not a case where they are totally dependent upon Stephen for care, guidance and companionship. They have one other son and 3 daughters, one of whom lives in London. Had they been totally reliant upon Stephen, their loss would have been correspondingly greater. I must consider as well the probable period during which they will be deprived of his care, guidance and companionship. They are now both over 70 years of age, and therefore that period is much shorter than if, for example, they had been 50 years old when he was injured. On the other hand, I recognize that they will likely require more care in their later years.

For their past, present and future loss under this head, I fix their damages in the sum of $15,000 each.

(2). THE BROTHER:

(a). Actual Expenses:

So that Stephen might visit with him and his family last summer, Richard expanded and modified a small bathroom on the main floor of his home to make it accessible by wheel chair for Stephen. He set up beds in the living area and built ramps. Richard took a week's vacation and spent it with Stephen "being tourists" in Ottawa. No evidence was offered about the cost of these items and therefore I am unable to assess damages under this head.

(b). Travel Expenses and Value of Services:

The day after Stephen's fall, Richard flew to London from Ottawa and stayed a week. From time to time, he visited Stephen at Victoria Hospital, Parkwood Hospital and University Hospital, all in London. Sometimes he flew to London, at a return fare of about $400, and sometimes he drove. He tries to return to see Stephen about once every two months. Without any better evidence, I fix his travel expenses in the sum of $5,000. There is no evidence that Richard provided any specific services for which he can be compensated.

(c). Loss of care, guidance and companionship:

Richard Mortimer is now 47 years old, 16 years older than Stephen. He moved from the family home when Stephen was seven years old but still lived in London and continued to see Stephen "regularly". Before Stephen's injury, they communicated with each other by telephone. Richard tried to go to London twice a year: once in the summer and once at Christmas. I infer that at least part of the reason for his trips to London, if it was not the major reason, was to visit his parents. He and Stephen also exchanged the occasional letter. They still enjoy each other's company.

It might be argued that the difference in age and the distance between them would have militated against very frequent visits, even without Stephen's injury and that this situation would likely have intensified once Stephen married and had children. On the other hand, whereas Richard used to travel to London twice a year, he now tries to do so five or six times a year. Certainly, Stephen's physical condition will make it more difficult for him to visit Richard in Richard's home, although Stephen should still be able to talk with Richard by telephone.

I am unable to conclude from the evidence that Stephen's injury has deprived Richard of any care or guidance he might otherwise have expected to receive from Stephen. I do conclude that there has probably been a loss of companionship and that it will continue into the future. I fix this loss in the sum of $5,000.

(3). THE SISTERS:

(a). Adrienne Dawson Selby:

(i). Travel Expenses and Value of Services:

Adrienne went to the hospital the day of Stephen's injury. Then, she visited him at Victoria Hospital at least twice a day when he was first there, leaving her 14 year old daughter or a hired baby sitter to care for her younger children. After he went to Parkwood Hospital, she visited him about three times a week. She is a registered nurse and when she was with her brother, she tended to his needs. She stated candidly that another sister, Jeannie, came from Calgary for six weeks to provide what in effect constituted "private nursing duty" to Stephen, because the hospital staff could not attend to all his needs. When Stephen went home for Christmas in 1987, she helped her sister to position, lift or catheterize Stephen. I fix the value of the services she provided to Stephen at $2,500. In addition, I award her the sum of $878.20 to reimburse her for parking expenses and mileage incurred in her visits, as per Exhibit 9.

(ii). Loss of care, guidance and companionship:

Adrienne is a 43 year old neo-natal intensive care nurse and the mother of three children. She is 12 years older than Stephen. As she went through secondary school, she was very protective of Stephen. During the three years she trained to be a nurse, she lived in residence but returned home on weekends and would see him then. She continued to see him regularly even after she married. After he returned from Calgary, he became quite close to her children.

Unfortunately, she began to have marital problems and separated about a month before Stephen's injury. She found it difficult to discuss her situation with her parents because it upset them. Instead, she confided in Stephen.

She believes Stephen is lonely and depressed and "keeps a lot inside" and is "much more closed than before". Their visits are not as spontaneous now because he has to arrange in

advance for transportation by Paratransit. I feel she will now be more reluctant to seek his advice for her personal problems because of the greater ones with which she perceives he has to cope. I conclude that because of Stephen's injury, she has suffered a loss of guidance and companionship that I fix in the sum of $7,500.

(b). EUGENIE DMYTAR:

As noted, at the time of Stephen's injury, she came from Calgary and provided nursing care to him in the hospital for six weeks. She provided further nursing care when the family assembled at holiday gatherings. I fix the value of these services at $5,000.

There is little evidence about her relationship with Stephen. While he was in Calgary, he lived with her and her family during the summer of 1982.

It will be more difficult for Stephen to travel to her home now and I conclude that she has and will suffer some loss of companionship, which I assess in the sum of $5,000.

(c). Carol Hiltermann:

Carol is 48 years old and lives in Calgary. There was almost no evidence about her relationship with Stephen. While he was going to school and working in Calgary, he lived with her and her husband and their family part of the time. He also lived in residence at the university part of the time. I allow her $2,500 for loss of companionship.

21. CLAIM FOR SERVICES RENDERED BY STEPHANIE BROCKLEHURST:

Because Stephanie is not Stephen's spouse, she is not a person entitled to claim under s. 61 of the Family Law Act for the value of the services she has rendered to him.

Stephanie has lived with Stephen since he left hospital on January 5, 1990. He is unable to do anything for himself and her presence is an essential element in his ability to live outside an institution. As noted above, she works full time as a physiotherapist, a physically demanding occupation. She has to awaken and turn him about 3:00 a.m. every morning. She also has to rise early on alternate mornings to initiate his bowel routine at about 5:00 a.m. In addition, she has been providing evening care to him on weekends.

Compensation ought not to be granted for services that a person in Stephanie's position might be expected to render in the ordinary course of such a relationship. However, the services she supplied, as described above, were necessary, extraordinary and directly related to Stephen's need for care arising from his injury. Though she may have volunteered them without thought or promise of compensation, the defendants ought not to benefit from her generosity of spirit in doing so. Although she is not a party to the action, a spouse or a family member, it is proper to award to Stephen the value of the services she provided.

There is no evidence that she has lost any income while providing these services. Therefore, the amount to be awarded is a reasonable allowance for the value of her services. Difficulty in calculating the amount is not a bar to such an award. In fixing the amount, I note that the time she devoted to turning Mortimer and rising early to initiate his bowel routine was spent during periods when she would normally be asleep. Because the award for future care includes the cost of an attendant 24 hours a day, she will no longer have to render this care. Considering all the circumstance, I fix the value of her services in the sum of $25,000.

Sometimes, the amount awarded to satisfy such a claim has been impressed with a trust in favour of the provider of the services. The purpose is to prevent double compensation to the plaintiff and to ensure that the person who has given service is, in fact, compensated for doing so. Counsel did not address this issue in argument and it may not be a matter for concern. If it is, I will consider imposing a trust upon these funds in favour of Ms. Brocklehurst.

22. CONCLUSION:

Because of the findings I made about liability, all the cross claims will be dismissed as will the third party claim.

The plaintiffs will have judgment against Stingray Holdings Limited and the Corporation of the City of London as follows:

1. Stephen Mortimer:

(1). Special damages:	$ 509,542.01
(2). Non-pecuniary general damages	$ 232,745.00
(3). OHIP claim for future care	$ 149,408.00
(4). Loss of future income	$ 986,717.00
(5). Loss of C.P.P. benefits	$ 3,498.00
(6). Future care costs (ongoing)	$2,540,768.00
(7). Future care costs (initial)	$ 120,996.00
(8). Management and Investment fee	$ 25,000.00
(9). Services rendered by Ms. Brocklehurst	$ 25,000.00
TOTAL	$4,593,674.00

2. Donald Mortimer: $ 43,000.00
3. Mary Mortimer: $ 35,000.00
4. Richard Mortimer: $ 10,000.00
5. Adrienne Dawson Selby: $ 10,878.20
6. Eugenie Dmytar: $ 10,000.00

7. Carol Hiltermann: $ 2,500.00

I thank counsel for suggesting that I submit my findings of fact confidentially to Patterson so that he might do the necessary actuarial calculations. They agreed that when I received his reply, I should send it to The Alexander Consulting Group, which was retained by the defendants, to check the accuracy of the results. I had completed my judgment, except to insert the amounts dependent upon actuarial calculation, in early January, 1992, and accordingly sent my findings of fact to Mr. Patterson in a confidential letter dated January 8, 1992. When I received his final report, I sent a copy to The Alexander Consulting Group on February 3, 1992. When I received their report dated March 18, 1992, they had calculated a different amount for future care costs. I had further correspondence with the two actuarial firms, which resulted in a resolution of the difference at the end of March. I have filed all the correspondence and the actuarial reports, in bulk, as Exhibit 145, to complete the trial record.

Counsel may speak to interest and costs at a time to be fixed by the trial co-ordinator.

McDERMID J.

APPENDIX "B"

FUTURE CARE COSTS:

	Initial	Annual
1) ATTENDANT CARE (annual cost)		
(i) Attendant care		$111,938.08
(ii) Housekeeping		2,500.00
(iii) Home maintenance and repair		2,000.00
(2) TRANSPORTATION		
(a) Extraordinary expense of purchasing van	8,000.00	
(b) Van alterations	18,950.00	
(c) Cellular telephone	500.00	
(d) Difference in annual operating cost of van	4,500.00	
(e) Portable ramps	498.00	49.80
	27,948.00	4,549.80
(3) ACCOMMODATION		
Conversion cost	55,000.00	
(4) EQUIPMENT, SUPPLIES AND MEDICATION:		

Items	Unit Cost	Use/Life	Initial Cost	Annual Cost
Electric Wheelchair (25%)	$ 2,750.00	5 years	2,750.00	$ 550.00
Manual Wheelchair	$ 1,300.00	5 years	$ 1,300.00	260.00
Wheelchair Maintenance			300.00	
Battery				
Replacement	120.00	1 year	120.00	120.00
Tubes, Tires and Bearing Replacement			300.00	
Seating Insert	225.00	5 years	225.00	45.00
Roho Cushion(2) (25%)	93.75	3 years	187.50	62.50
Shower Commode Chair	250.00	7 years	35.71	35.71
			4,738.75	4,618.21	1,673.21
Brought Forward			4,738.75	4,618.21	1,673.21
Air Mattress & Pump	380.00	5 years	76.00	76.00
Mediman Lift & Sling	2,250.00	10 years	225.00	225.00
Extra Sling	250.00	5 years	250.00	50.00
Bowel & Bladder Needs			2,000.00	
Directal Telephone	588.00	10 years	58.80	58.80
Medications			1,320.00	
Washbasin	38.00	10 years	38.00	3.80
K Basin	16.50	10 years	16.50	1.65
Shampoo Set	81.00	10 years	81.00	8.10
Overbed Table	325.00	10 years	325.00	32.50
Bedpan	6.65	5 years	6.65	1.33
Drawsheets Vinyl (2)	15.00	3 years	30.00	10.00
Drawsheets: Cotton (5)	10.00	3 years	50.00	16.67
Bed Sore Treatment			50.00	
Sheepskin:				
booties	10.64	5 years	10.64	2.13
pads(2)	30.90	5 years	61.80	12.36
Extraordinary clothing expense			1,200.00	
TOTAL			$8,340.44	$5,847.60	$6,741.55

(5) VOCATIONAL REHABILITATION AND COMMUNICATIONS:

Items	Unit	Use/Life	Initial	Annual Cost

	Cost		Cost	
DragonDictate System	$12,000.	4 years	$12,000.	3,000.
Computer Hardware	6,000.	4 years	6,000.	1,500.
Service Contract	1,000.	1 year	1,000.	1,000.
Microphone	200.	4 years	200.	50.
Trackball	300.	4 years	300.	75.
Tape backup System	900.	4 years	900.	225.
Ergonomic Work station	3,000.	10 years	3,000.	300.
Replacement of moving parts (every 2 years)			200.	
Reference Carousels	3,000.	4 years	3,000.	750.
Service			100.	
Environmental Control system	5,000.	5 years	5,000.	1,000.
Professional Assessment	800.		800.	800.
Training for DragonDictate	1,350.			1,350.
	$33,550.		$32,200.	$10,350.

Mortimer v. Cameron (Ont. C.A.)

Between
Stephen George Mortimer, Donald Mortimer, Mary Mortimer, Richard Mortimer, Carol Hilterman, Adrienne Dawson and Eugenie Dmytar, Plaintiffs/Respondents, and
John Cameron, Stingray Holdings Limited, Sandra Hunt and the Corporation of the City of London, Defendants/Appellants, and
Marijo Kale, Third Party

[1994] O.J. No. 1356
DRS 94-12018
Action No. C12036

Ontario Court of Appeal
Toronto, Ontario
Robins, Galligan and Doherty JJ.A.
June 24, 1994.

The following judgment was delivered by

[para1] THE COURT:-- Further to our reasons for judgment dated February 16, 1994, we have now considered the written submissions filed by counsel with respect to costs and make the following order:

1. The main appeal was brought by the City of London and Stingray Holdings Limited against Stephen George Mortimer. But for a small reduction in the amount awarded to Mortimer by the trial judge, the appeal was unsuccessful. As between these parties, Mortimer is entitled to the costs of the appeal.

2. Mortimer's cross-appeal against the City and Stingray seeking to increase the amount of damages was also unsuccessful. The City and Stingray should have the costs of the cross-appeal.

3. The City's appeal against the trial judge's order as to the apportionment of liability was substantially successful. The City is accordingly entitled to the costs of its appeal against Stingray.

4. John Cameron was joined as a defendant at trial but was held not to be liable for any of the damages suffered by Mortimer. The City and Stingray both unsuccessfully appealed this decision. Cameron is entitled to his costs of the appeal as against these parties.

5. Sandra Hunt was found by the trial judge not to have been liable to Mortimer. The City, but not Stingray, appealed this holding. The appeal was dismissed. Hunt's costs should be paid by the City.

6. Hunt contingently cross-appealed against the third party, Marijo Kale. If the City had been successful in its appeal with regard to Hunt's liability, Hunt would have cross-appealed against Kale on the issue of Kale's liability. As noted above, the City's appeal was dismissed. It was this appeal that made Hunt's contingent cross-appeal necessary. The City should therefore bear Kale's costs.

7. Mortimer contingently cross-appealed against Hunt and Cameron in the event that the appeals brought against Mortimer by the City and Stingray were successful. This contingency did not transpire. We would make no order as to the costs of this contingent cross-appeal.

8. Following the trial, Mortimer brought a motion before Mr. Justice Carthy for a partial lifting on the automatic stay of the judgment while the appeal was pending. Mortimer was substantially successful. His costs on this motion should be paid by the City and Stingray.

9. All costs awarded jointly against the City and Stingray shall be apportioned 60% against Stingray and 40% against the City.

10. The costs herein ordered shall be assessed on a party and party scale.

Toronto (City, Chief Official) v. Greymac .

IN THE MATTER OF The Building Code Act, R.S.O. 1980, c. 51;
AND IN THE MATTER OF an application thereunder by the chief official for the territorial region of Toronto;
AND IN THE MATTER OF the property known as 5 St. Joseph Street

Between
Michael L. Nixon, Chief Official, Toronto, Applicant, and
Greymac Mortgage Corporation, Catalex Realty Management Limited, Michael Gallow, carrying on business as The Voodoo Club

[1984] O.J. No. 533
Action No. 252/84

Ontario Supreme Court - High Court of Justice
Toronto Motions Court
Van Camp J.
Heard: October 16, 1984.
Oral judgment: October 16, 1984.

Released: November 7, 1984.

P. Gordon, for the Applicant.
L.A. Banack, for the Respondents.

[para1] VAN CAMP J. (Orally):-- This was an application under section 26 of The Building Code Act for an order that certain premises be vacated for non-compliance by the respondent, Michael Gallow, carrying on business as the Voodoo Club, the tenant of the second floor of the premises. The proceedings against the other two respondents, the owner and the property manager had been withdrawn.

[para2] The section provides for an application for an order directing compliance with any provision of the Act, the regulations or an order made under the Act. Upon such application, the judge may make such order or such other order as the judge thinks fit.

[para3] Certain interior alterations to the tenant's premises had been made without a building permit. Subsequently, on July 8, 1983, application for a permit was made by an architect who purported to act as the authorized agent of the owner, although the respondent deposes that the application was made on his behalf. No permit has yet been granted. In September, the owner was advised that the application did not comply with the Zoning requirements re parking. Application was made in September to the Committee of Adjustment for a variance which was refused by the decision dated October 27, 1983. On October 4, orders to comply under section 8(2) of the Act had been given to the owner listing the failure to obtain the permit and three specific contraventions in the construction, and setting two days to contact the examiner to expedite the issue of a permit for the illegal construction. On November 21, an order pursuant to section 10(3) of the Act was made that use or occupancy was prohibited. The order was served upon the owner.

[para4] The order under section 10(3) may be made when under section 10(2) an inspector has found the building unsafe, and has served upon the owner and each person in possession, an order setting out reasons why it was unsafe and the remedial steps required to render it safe and a reasonable time has elapsed. No such order under section 10(2) was made or served.

[para5] The tenant had no notice of the orders to comply dated October 4, 1983 until November 24, 1983. The time for appeal therefrom is 20 days but it may be extended. No appeal was taken as this application was made shortly thereafter, originally returnable in February, 1984. It was adjourned to May, 1984 when it was again adjourned to permit the permit application to be amended to specify the use and to provide "as is" plans. By August 22, 1984 fifty feet of new drywall and wood stud partitions had been added. Any order herein must be made without reference to the order prohibiting use or occupancy made under section 10(3) which was never served upon the tenant who had no opportunity to make representations thereto.

[para6] Although the three specific contraventions in

construction have been remedied, the application for the building permit has never been completed since May, 1984 as required for the issue of the permit, and alterations have continued notwithstanding the order to comply. The tenant has shown diligence in attempting to show compliance with the Zoning requirements but not otherwise, although he has been represented by an architect and a solicitor.

[para7] I was referred to the decision in the Hadley et al. and Santos 18 O.R. (2d) 221, but the circumstances herein show that an order under the Act has not been and is not being complied with.

[para8] Consequently an order will issue that he comply with the requirements for the application for the permit. An order will issue prohibiting use or occupancy of the premises by him or anyone claiming under him, if "as is" plans and a statement of the particular use of the premises are not filed with the chief official herein within 30 days. Such an order will also issue upon evidence of any further alterations without a building permit subject to any further order of this court.

[para9] Costs to the applicant herein if demanded.

VAN CAMP J.

Noddle v. City of Toronto et al.

(1982), 37 O.R. (2d) 421

ONTARIO
HIGH COURT OF JUSTICE
GRAY J.
JUNE 25, 1982

APPLICATION for a judicial review of a decision to issue a building permit.

R. G. Slaght, and D. R. Langer, for applicant.

M. J. Winer, and S. L. Ungar, for respondent, City of Toronto.

Stephen Diamond, for respondent, Greyhound Lines of Canada Limited.

GRAY J.:-- The applicant sought leave to have this application for judicial review heard by me as a judge of the High Court pursuant to the provisions of s. 6(2) of the Judicial Review Procedure Act, R.S.O. 1980, c. 224. Leave may be granted where it is made to appear that the case is one of urgency and that the delay required for an application to the Divisional Court is likely to involve a failure of justice.

In the application, the applicant sought judicial review of a decision of the chief building officer of the City of Toronto to issue building permit no. 161915. The applicant asked that orders be made:

(a) quashing building permit no. 161915; and

(b) declaring that the proposed rest areas are not an accessory use to the principal use proposed by the respondent, Greyhound.

This, in effect, would require me to declare that on 685 Lakeshore Boulevard East, Toronto, sleeping accommodation is not a permitted use or an accessory use to a private or public garage.

After hearing submissions from counsel and considering the decisions in Re Bennett and City of Belleville (1979), 24 O.R. (2d) 121 and Re Chapples Ltd. and City of Thunder Bay et al. (1979), 27 O.R. (2d) 444, 106 D.L.R. (3d) 707 [revd 29 O.R. (2d) 522, 114 D.L.R. (3d) 684] I dictated oral reasons for judgment in court on April 19, 1982, granting leave under s. 6(2) of the Judicial Review Procedure Act. I reserved judgment on the two remaining issues in the application; namely, the status of the applicant and the merits of the application.

With respect to the first issue -- does Mr. Noddle have an interest in the decision that has been made? His counsel brought to my attention that this is a certiorari application and that Mr. Noddle, who is a Greyhound employee, and is also president of Local 1415 of the Amalgamated Transit Workers Union, has taken an interest in this matter for quite some time. When the building permit application was pending, Mr. Noddle, through his solicitors, gave notice to Greyhound and the city that he opposed the issuance of a permit to Greyhound on the grounds that the proposed "rest areas" were not a permitted use within By-law 20623. He also gave notice that in court he would challenge any issuance of a permit by the city.

On September 29, 1981, he appealed the decision of the chief building official of the city to issue a permit. This was heard by a County Court judge pursuant to ss. 6 and 15 of the Building Code Act, R.S.O. 1980, c. 51 and, on December 3, 1981, His Honour Judge Matthews issued an order quashing Mr. Noddle's appeal, hence the application for judicial review.

Counsel for Mr. Noddle takes the position that a person aggrieved is a person with an interest in the decision attacked.

The following is a quotation from Strayer, Judicial Review of Legislation in Canada at p. 107:

(iii) Certiorari: There appears to be no requirement of "interest" on the part of an applicant for certiorari.

The general rule in England is that even a "stranger" may apply for certiorari though the court would have a discretion to refuse the application. A "person aggrieved" (who may be anyone affected, however slightly) is entitled to the issue of the writ, but even he may be barred by his own conduct from obtaining certiorari if the court so decides. This probably means that in each case the court has a discretion to permit anyone to seek certiorari.

Authority in the same vein is to be found in de Smith, Judicial Review of Administrative Action, 4th ed. (1980), pp. 419-20.

The Ontario decisions which are of assistance are: Re Doctors Hospital and Minister of Health et al. (1976), 12 O.R. (2d) 164 at 176, 68 D.L.R. (3d) 220, 1 C.P.C. 232, and Re Town of Durham et al. and A.-G. Ont. et al. (1978), 23 O.R. (2d) 279 at 289, 95 D.L.R. (3d) 327. In the first of these decisions, it was held by the Divisional Court that certain medical doctors had status to be heard in a separate application to that of their own hospital which had sought a declaratory order that the decision of the Lieutenant-Governor in Council to close the hospital was void.

In the second of these decisions, it was held by Van Camp J., on applications for judicial review involving the closing of the Registry Office in the Town of Durham, that some of the municipalities in the Registry Division and certain individuals who were property owners in the said division had standing. It had been argued that the applicants had no vested interests and no proprietary interests since their livelihood was not affected. Van Camp J. said at p. 289 O.R.:

> It seems to me that the applicants herein had an interest that was more special, more intense than that of the general public.

Counsel for Greyhound on this first issue, after informing me of Mr. Noddle's occupation with Greyhound and his position in the collective bargaining relationship, made a submission to the effect that the building permit gives Greyhound the right to build a building in accordance with the plans of the city on land which Greyhound owns. In other words, his submission was that the interest involved was between the property owner and the municipal corporation and that Mr. Noddle had no direct interest in legal rights between these last two mentioned corporate entities.

In summary form, it was said that Mr. Noddle must have a legal interest, that the responsibility in issues of this type must rest with the municipal corporation, that Mr. Noddle does not have the right to interfere with Greyhound's plans and that, in any event, if, as an employee, he wishes not to be lodged in the premises being built, his employee rights are governed by the existing collective bargaining agreement or by the Canada Labour Code, R.S.C. 1970, c. L-1.

It is said that the interest giving rise to status has been reserved by the courts to persons with a pecuniary or proprietary interest in the proceedings. The authorities for this proposition are said to be: Re Corp. of District of Surrey, Municipal By-law, 1954, No. 1291 (1956), 6 D.L.R. (2d) 768; R. v. Ontario Labour Relations Board; Ex p. Northern Electric Co. Ltd., [1971] 1 O.R. 121, 14 D.L.R. (3d) 537, and Rosenberg et al. v. Grand River Conservation Authority et al. (1976), 12 O.R. (2d) 496, 69 D.L.R. (3d) 384, 1 C.P.C. 1.

In the Rosenberg case, two dissenting members of the conservation authority brought a lawsuit to enjoin the authority from conveying certain lands for highway purposes to a municipality. Speaking for the court in dismissing the appeal from the trial judgment on the first finding, i.e., that dealing with the status of the plaintiffs, Arnup J.A. put it thus at p. 505 O.R.:

> It would be tempting to say that a member of a conservation authority has a "special interest ... or sufficient interest" to give him the necessary status, but a very long line of cases, binding on this Court, have held that the "interest" referred to must be pecuniary or proprietary in nature (including, of course, actual physical injury or the risk thereof).

That decision, it is to be noted, involved an action and it was held that only the Attorney-General has the status to commence

proceedings against the public body.

In my view, the present application under s. 2 of the Judicial Review Procedure Act involves Mr. Noddle's status to deal with an alleged employee right and I do not consider that the decision in the Rosenberg case affects the present question of status in this application. My decision in the light of the foregoing is that Mr. Noddle has status in this application and I now turn to the second issue. The second issue involves the so-called merits of the application. In reality, this issue is whether the chief building official of the City of Toronto erred in issuing building permit no. 161915?

To again mention the material facts, one should note that Greyhound proposed to develop its property at 685 Lakeshore Boulevard East, Toronto by building a bus maintenance and service depot with a rest area for drivers. A building permit was issued authorizing a two-storey bus maintenance and service depot with a rest area consisting of individual rooms with beds, lounge, lunch room and change room. Currently the Greyhound drivers are accommodated in hotels when on stopovers in Toronto. The plans were approved and the permit was issued on the basis that a rest area is an accessory use to that of a private commercial garage. I was told that approximately ten per cent of the floor space will be devoted to the rest area.

The material parts of the City of Toronto zoning By-law no. 20623 so far as the submissions made to me on this application are concerned are as follows:

SECTION 2 -- DEFINITIONS

In this by-law, unless a contrary intention appears:

(1) "accessory" when used to describe a use, building or structure, means a use, or a building or structure, "not exceeding 4 metres in height" that is naturally and normally incidental, subordinate and exclusively

devoted to a principal use, building or structure and located on the same lot therewith;

. . . . .

(57a) "hostel" means a building or part of a building that contains dwelling accommodation consisting of rooms without culinary facilities, but does not include a boarding or lodging house;

SECTION 15 -- C.4 DISTRICTS

(1) No person shall, within any C.4 district, use any lot or erect or use any building or structure for any purpose except for any C.1 use (other than Y.M.C.A., Y.W.C.A., Y.M.H.A. or Y.W.H.A., one or more dwelling units in the upper portion of a C.1 building a converted dwelling house, a boarding or lodging house, a converted dwelling and lodging house), any C.2 or C.3 use or one or more of the following C.4 uses, namely:

. . . . .

(e) any use that is not permitted in any other class of district but which may be lawfully established in the City of Toronto, except a hotel, an apartment-hotel, or one or more dwelling units in the upper portion of a C.1 building exceeding three storeys in height;

(f) any use which is accessory to any of the foregoing uses;

. . . . .

(2) None of the provisions of subsection (1) of this Section shall apply to prevent the erection or use of a dwelling unit as accommodation for a caretaker or watchman as an accessory use to uses permitted by this Section.

On the second issue, the submission by counsel for the applicant is that the use of these premises as a sleeping accommodation is not an accessory use of premises as a repair depot and storage area. It is said that one cannot do

indirectly what one cannot do directly and that the use itself (i.e., sleeping accommodation) is a defined use that is not permitted in the zone in question. The premises in question are in a C.4 zone and in the C.4 zone or district anything is permitted that is permitted in a C.1 to C.3 use plus the C.4 uses set forth, except one or more dwelling units.

I am reminded that it is "uses" that is dealt with and not the building itself. I am also reminded that the application, according to counsel for the applicant on this application, was for two uses independent of each other:

(a) a public or private garage; and

(b) sleeping accommodation.

It is argued that sleeping is a use permitted in another district so therefore, because of (e) aforesaid, it is not permitted in a C.4 district. It is further argued that when considering the language of (f) aforesaid and the definition of "accessory" found in s. 2(1), sleeping accommodation cannot be said to be naturally and normally incidental, subordinate and exclusively devoted to a bus repair garage.

The submission is further to the effect that Greyhound contemplates two uses of the structure; rest areas on the one hand and a bus repair depot on the other. The public garage use is permitted in a C.4 zone or district but a hostel is not permitted in a C.4 zone or district. It is a permitted use in a Q.R. district. The applicant's submissions conclude on the note that, if you cannot bring the situation in under a specific use, you cannot bring it in as an accessory use. Is a hostel naturally and normally devoted to a bus repair garage?

Counsel for Greyhound sought to convince me that this application could not succeed because of the applicant's delay in bringing these proceedings. I was provided with a litany of all the matters which were brought to the applicant's attention and the time factors involved with this case. My attention was particularly directed to R. v. Board of Broadcast Governors and the Minister of Transport; Ex p. Swift Current Telecasting Co. Ltd., [1962] O.R. 657, 33 D.L.R. (2d) 449 at 462, 463 which is authority for the proposition that certiorari is a discretionary remedy and delay is a relevant consideration in the exercise of the discretion of the court. I accept, of course, this principle but I cannot find that the applicant was guilty of undue delay in all the circumstances and in any event my task is really to decide whether or not the use in this case is or is not illegal. That task does not involve the exercise of judicial discretion. I therefore reject the submission with respect to delay.

I have come to the conclusion that the rest area does not fall within the definition of "hostel" and, although there may have been some looseness in the application originally as between a public garage and a private commercial garage for Greyhound buses, I have reached the conclusion that the chief building official did not err in issuing building permit no. 161915. Subsection (2) makes it clear there can be accessory uses to the uses permitted in the by-law and that there is no prohibition per se to persons living in the C.4 zone or district.

Where buses start and stop their routes, it is not unnatural or abnormal to have rest areas and, of course, mandatory rest requirements exist for the bus drivers themselves by law. The most cogent point is that the rest areas would not be in the location in question if it were not for the principal use of the premises as a garage.

In the result, therefore, this application is dismissed with costs payable by the applicant to the respondents.

Application dismissed.

Re **Olympia & York Developments Ltd. and City of Toronto**

29 O.R. (2d) 353
113 D.L.R. (3d) 695

ONTARIO
HIGH COURT OF JUSTICE
DIVISIONAL COURT
PENNELL, ROBINS AND STEELE, JJ.
19TH AUGUST 1980.

APPLICATION for judicial review of decisions of the respondent municipality requiring the fee simple owner to be added as a party to certain site plan agreements and for an order directing the surrender of a performance bond.

J.J. Carthy, Q.C., for applicant.

M.J. Winer, for respondent.

The judgment of the Court was delivered by

STEELE, J.:-- This application is for judicial review of the exercise, or purported exercise, of a statutory power by the respondent (hereinafter referred to as the "City") and seeks:

(a) a declaration that the word "owner" in Section 35a(6) of The Planning Act is not intended to include Roywood Investments Limited as a necessary party to the development agreements required by the Respondent relating to Phase II of the project known as First Canadian Place:

(b) a declaration that the Respondent may not in the exercise of its statutory powers under Section 35a of The Planning Act require that Roywood Investments Limited be a party to development agreements relating to Phase II of the project known as First Canadian Place;

(c) an order directing the surrender to the Applicant of a performance bond in the amount of $1,000,000.00 dated January 30, 1980;

The relevant provisions of the Planning Act, R.S.O. 1970, c. 349, as amended, are as follows:

35a(2) Where there is an official plan in effect in a municipality, the council of the municipality may, by by-law, designate the whole or any part of the area covered by the official plan as a site plan control area, but nothing herein authorizes the council to designate an area that is not within the limits of the municipality of which it is the council.

. . . . .

(4) No person shall undertake any development in an area designated under subsection 2 unless the council of the municipality or, where a referral has been made under subsection 10, the Municipal Board has approved one or both, as the council may determine, of the following:

1. Plans showing the location of all buildings and structures to be erected and showing the location of all facilities and works to be provided in conjunction therewith and of all facilities and works required under clause a of subsection 6.

2. Drawings showing plan, elevation and cross-section views for each industrial and commercial building to be erected and for each residential building containing twenty-five or more dwelling units to be erected which are sufficient to display,

(a) the massing and conceptual design of the proposed building;

(b) the relationship of the proposed building to adjacent buildings, streets, and exterior areas to which members of the public have access; and

(c) the provision of interior walkways, stairs and escalators to which members of the public have access from streets, open spaces and interior walkways in adjacent

buildings,

but which exclude the layout of interior areas, other than the interior walkways, stairs and escalators referred to in clause c, the colour, texture and type of materials, window detail, construction details, architectural detail and interior design.

. . . . .

(6) As a condition to the approval of the plans and drawings referred to in subsection 4, a municipality may require the owner of the land to,

(a) provide to the satisfaction of and at no expense to the municipality any or all of the following:

. . . . .

4. Walkways, including the surfacing thereof, and all other means of pedestrian access.

. . . . .

8. Easements conveyed to the municipality for the construction, maintenance or improvement of watercourses, ditches, land drainage works and sanitary sewerage facilities on the land.

. . . . .

(b) maintain to the satisfaction of the municipality and at the sole risk and expense of the owner any or all of the facilities or works mentioned in paragraphs 2, 3, 4, 5, 6, 7, 8 and 9 of clause a, including the removal of snow from access ramps and driveways, parking and loading areas and walkways;

(c) enter into one or more agreements with the municipality dealing with any or all of the facilities, works or matters mentioned in clause a or with the provision and approval of the plans and drawings referred to in subsection 4.

(7) Any agreement entered into under clause c of subsection 6 may be registered against the land to which it applies and the municipality is entitled to enforce the provisions thereof against the owner and, subject to the provisions of The Registry Act and The Land Titles Act, any and all subsequent owners of the land.

(8) Section 469 of The Municipal Act applies to any requirements made under clauses a and b of subsection 6 and to any requirements made under an agreement entered into under clause c of subsection 6.

(9) Where the municipality fails to approve the plans or drawings referred to in subsection 4 within thirty days after they are submitted to the municipality for approval or where the owner of the land is not satisfied with any of the requirements made by the municipality under subsection 6 or with any part thereof, including the terms of any agreement required, the owner of the land may require the plans or drawings or the unsatisfactory requirements or parts thereof or the agreement, as the case may be, to be referred to the Municipal Board by written notice to the secretary of the Board and to the clerk of the municipality, and the Board shall then hear and determine the matter in issue and settle and determine the details of the plans or drawings and approve the same and settle and determine the requirements, including the provisions of any agreement required, and the decision of the Board is final. [enacted 1973, c. 168, s. 10; rep. & sub. 1979, c. 59, s.1]

The applicant (hereinafter referred to as "Olympia") is the lessee of the lands in question under a lease from the registered owner, in fee simple, Roywood Investments Limited (hereinafter referred to as "Roywood"), which lease has approximately 966 years to run. It is also the owner in fee simple of other abutting lands. Olympia, together with other landowners, is engaged in the construction and development of First Canadian Place and this application relates to additional buildings on abutting lands.

The City has designated the area as a site plan control area

under s. 35a of the Planning Act and has required the owner of the land to enter into an agreement which provides in part for a walkway in perpetuity and other works to be provided and maintained. The details of the agreement were agreed upon between Olympia and the City but the City took the position that Roywood was a required party to the agreement and refused to enter into the agreement and permit the development to proceed. Olympia contended that the City was in error and that Roywood was not a necessary party. It proposed a compromise to the effect that the agreement be entered into by Olympia only but that it would post a bond with the City to ensure performance of the agreement. As a result, the City passed the following resolution, which was adopted by by-law:

> That at this time Roywood not be considered a necessary party to a development agreement within the interpretation of the word "owner" under the Planning Act and that subject to a Court ruling under the carriage of Olympia & York on such interpretation that Council allow and approve work to proceed on First Canadian Place provided that a performance bond satisfactory to the City Solicitor in the amount of $1,000,000. be deposited with the City by Olympia & York.

The agreement was executed, the permit has been issued and work is proceeding. Olympia has posted the bond in question. This application arises as a result of the resolution.

The first question is whether or not the application is properly brought by way of judicial review or whether the applicant should have proceeded in some other manner such as an action for a declaration or an application on an agreed statement of facts under Rule 612. Without determining whether or not the applicant has the right to proceed in any other manner, it is my opinion that the application is properly before this Court.

The applicable provisions of the Judicial Review Procedure Act, 1971 (Ont.), c. 48, as amended, are:

Section 1

1. In this Act,

. . . . .

(f) "statutory power of decision" means a power or right conferred by or under a statute to make a decision deciding or prescribing,

(i) the legal rights, powers, privileges, immunities, duties or liabilities of any person or party, or

(ii) the eligibility of any person or party to receive, or to the continuation of, a benefit or licence, whether he is legally entitled thereto or not, and includes the powers of an inferior court;

(g) "statutory power" means a power or right conferred by or under a statute,

(i) to make any regulation, rule, by-law or order, or to

give any other direction having force as subordinate legislation;

(ii) to exercise a statutory power of decision,

(iii) to require any person or party to do or to refrain from doing any act or thing that, but for such requirement, such person or party would not be required by law to do or to refrain from doing,

(iv) to do any act or thing that would, but for such power or right, be a breach of the legal rights of any person or party.

Section 2

2(1) On an application by way of originating notice, which may be styled "Notice of Application for Judicial Review", the court may, notwithstanding any right of appeal, by order grant any relief that the applicant would be entitled to in any one or more of the following:

1. Proceedings by way of application for an order in the nature of mandamus, prohibition or certiorari.

2. Proceedings by way of an action for a declaration or for an injunction, or both, in relation to the exercise, refusal to exercise or proposed or purported exercise of a statutory power.

The intent of the Judicial Review Procedure Act, 1971 is to provide an expeditious manner in which proceedings might be disposed of without differentiating between the old remedies of mandamus, prohibition, certiorari or declaration. I am of the opinion that the interpretation of the statute could have been disposed of in an application by way of mandamus and therefore the Court has jurisdiction to consider an application for a declaration. This is predicated upon the resolution of the City Council being the exercise of a statutory power of decision. The resolution was only part of the broader application for development approval by the City, and the City's position that it would not allow the development to proceed without Roywood entering into the agreement as the owner. In effect, the City was refusing to approve the development and enter into an agreement without Roywood. The issue as to who was the proper owner to sign the agreement was an integral part of that decision. I am of the opinion that the application was part of the exercise by the City of a statutory power of decision and is properly before this Court.

The real issue in dispute is what is the meaning of the word "owner" in s. 35a of the Act? Does it exclude the owner in fee simple of the lands where such owner is not the person undertaking the development? The term "owner" has been considered judicially in many different contexts and referred to by legal authors. In Wynne v. Dalby (1913), 30 O.L.R. 67, 6 D.L.R. 710, reference was made at p. 72 O.L.R., p. 714 D.L.R., as follows:

> The word "owner" is an elastic term, and the meaning which must be given to it in a statutory enactment depends very much upon the object the enactment is designed to serve.

As was said by Lord Herschell in Baumwoll Manufactur von Carl Scheibler v. Furness, [1893] A.C. 8, 17: "There may be two persons at the same time in different senses not improperly spoken of as the owner of a ship. The person who has the absolute right to the ship, who is the registered owner, the owner (to borrow an expression from real property law) in fee simple, may be properly spoken of, no doubt, as the owner; but at the same time he may have so dealt with the vessel as to have given all the rights of ownership for a limited time to some other person, who, during that time, may equally properly be spoken of as the owner."

In York et al v. Township of Osgoode et al. (1894), 21 O.A.R. 168 [affirmed 24 S.C.R. 282], reference was made at p. 173 as follows:

> The Act, as I have said, contains no definition of the word "owner"; the meaning must, therefore, depend upon the subject matter and the context. Here, I think, when it is considered that proceedings taken under the Act may result in what has been described as the grant of an easement over the land, the word is intended to mean, at the lowest, a person who has a real and substantial interest in the land, possibly something less than the fee simple, but certainly more than that of a mere occupier or tenant at will. The owner may be bound by notices served upon the occupant as the 19th section provides, but there is nothing in the 6th section which enables the latter to confer jurisdiction upon the engineer by the initiatory requisition and assent. In such cases as Lewis v. Arnold, L.R. 10 Q.B. 245; Woodward v. Billericay Highway Board, 11 Ch.D. 214, we have illustrations of the extension of the term to embrace smaller interests in property, where the context and subject matter require it, as where the proceedings to be effective at all must be of a prompt and summary character, and would be useless if not applied at once, and to the person in possession. Here the proceedings to be taken are intended to affect the freehold, and in a permanent manner, and may even result in its being officially sold for non-payment of charges. Where that is the case and where ample means are provided by the Act for notice to parties affected it would be strange if the interest of

the owner of the fee could be bound by the action of a person who may have no greater interest than that of a mere possessor or yearly tenant or tenant for a short term of years. So on the other hand it would be inequitable that such a person should be liable to have his name placed on the collector's roll and compelled to pay charges incurred for making what may be a permanent benefit to the property of his landlord.

In Harrison v. Toronto Motor Car Ltd. et al., [1945] O.R. 1 at pp. 11-2, [1945] 1 D.L.R. 286 at p. 292, reference was made with approval to Maxwell on the Interpretation of Statutes, 8th ed. (1936), pp. 73-4, as follows:

"It is not infrequently necessary, therefore, to limit the effect of the words contained in an enactment (especially general words), and sometimes to depart, not only from their primary and literal meaning, but also from the rules of grammatical construction in cases where it seems highly improbable that the words in their wide primary or grammatical meaning actually express the real intention of the Legislature ...

"It is in the last degree improbable that the Legislature would overthrow fundamental principles, infringe rights, or depart from the general system of law, without expressing its intention with irresistible clearness, and to give any such effect to general words, simply because they have a meaning that would lead thereto when used in either their widest, their usual, or their natural sense, would be to give them a meaning other than that which was actually intended. General words and phrases, therefore, however wide and comprehensive they may be in their literal sense, must, usually, be construed as being limited to the actual objects of the Act.

The general words of the Act are not to be so construed as to alter the previous policy of the law."

Black's Law Dictionary, 4th ed., defines owner, in part, as follows:

OWNER. The person in whom is vested the ownership, dominion, or title of property; proprietor.

. . . . .

The term is, however, a nomen generalissimum, and its meaning is to be gathered from the connection in which it is used, and from the subject-matter to which it is applied. ... The primary meaning of the word as applied to land is one who owns the fee and who has the right to dispose of the property, but the term also includes one having a possessory right to land or the person occupying or cultivating it.

It is obvious that the word must be interpreted in the context of the meaning of the Planning Act and, in particular, s. 35a, because it may include more than one owner or one person.

In Re AAF-LTD. and Committee of Adjustment of Borough of Etobicoke (1976), 13 O.R. (2d) 666, Estey, C.J.H.C., considered the word "owner" in relation to s. 42(3) of the Planning Act as follows, at p. 667:

Under the Planning Act, s. 42(3), provision is made for the Committee of Adjustment "upon the application of the owner of any land or any person authorized in writing by such owner," to make application for approval of a severance or a transaction leading to a severance.

and at p. 668:

The narrow question arising today in dealing with the application made by AAF-LTD. is whether the applicant has the status to make the application of August 13, 1976, which I have mentioned above. The section of the Planning Act which I have quoted in excerpt above, uses the undefined term, "owner". There is no contextual assistance in the Act as to what is meant by "owner" and the only case brought to the attention of the Court dealing with this issue is Re Edgely Farms Ltd. and Uniyork Investments Ltd., [1970] 3 O.R. 131, 12 D.L.R. (3d) 459, where Chief Justice Gale, at p. 133 stated:

"Assuming that at the time the application for approval of the sale was made to the committee of adjustment there was a valid and subsisting agreement of purchase and sale between Uniyork Investments Limited and Edgely Farms Limited, it is our opinion that the former had a sufficient interest in the property to come within the meaning of the word 'owner' in s. 32b(2a) ..."

The nature of the interest there in question was the equitable interest arising in a purchaser upon the execution of an agreement of purchase and sale. The equitable interest there arising was found by the Court of Appeal to be sufficient to qualify the holder thereof within the term "owner" as that word is employed in the Planning Act, s. 42(3). An optionee, or a person holding an interest in option, is in an analogous position in my view.

Every attempt should be made to give the same meaning to a word where it occurs in the same statute. However, if the context of individual sections does not permit this, then different interpretations must follow.

In line with the reasoning of the above decisions and in particular AAF-LTD. and the dictionary definition, the word "owner", in s. 35a(6), may well be broad enough to include more than one owner and more particularly broad enough to include the applicant in the circumstances of this case. However, the primary meaning of the word is "one who owns the fee in the land". There is nothing in the Act or in the AAF-LTD. decision that detracts from this primary meaning.

In the exercise of its statutory power, the City had the right under s. 35a(6) to require Roywood to enter in a development agreement. Whether it acted reasonably or not in so doing is not a matter for the Court to decide. Accordingly, the declaration on the narrow issues raised by the applicant should not be granted.

While the argument presented to us ranged to a consideration of a definition of all those who might be deemed owners within the meaning of the section and what results might flow if other than the owner of the fee were required to enter into the agreement, those issues are not raised in the application before the Court and I would decline to express opinions thereon.

For the above reasons the application should be dismissed. In view of the City having agreed to a Court ruling, there should be no costs.

Application dismissed.

Ottawa (City) v. Shore & Horwitz Construction Co.

IN THE MATTER OF a conviction under the City of Ottawa Building Bylaw No. 8752, Section 102.1

Between
The Corporation of the City of Ottawa, and
Shore & Horwitz Construction Company Limited

[1960] O.J. No. 32

Ontario Supreme Court - High Court of Justice
Donnelly J.
January 25, 1960.

Counsel:
M.M. Kertzer, for Shore & Horwitz Construction Company Limited.
D.S. Maxwell, for the Attorney General of Canada.
D.B. Hambling and John Cassells, for the City of Ottawa.
E.J. Houston, for the Attorney General for Ontario.

[para1] DONNELLY J.:-- This is an appeal by way of stated case from the decision of Joachim Sauve, Q.C., Police Magistrate for the City of Ottawa, whereby he convicted Shore & Horwitz Construction Company Limited on the 17th day of March, 1959 that they "at the City of Ottawa in the County of Carleton did unlawfully erect a three-storey barracks building at Rockcliffe Airport, in the City of Ottawa, without obtaining a building permit from the Corporation of the City of Ottawa, contrary to City of Ottawa Building Bylaw No. 8752, Section 102.1."

[para2] A preliminary objection was taken by counsel for the Attorney General for Ontario that the appellant had not at the time the application was made and before the case was stated, entered into a recognizance as required by Section 735(1) of the Criminal Code. No recognizance is included in the documents filed on the appeal. Counsel for the appellant informed the Court that judgment was delivered on March 17, 1959. A recognizance was filed with the Clerk of the Police Magistrate's Court on March 19th, 1959, and the application for the stated case made on the same day. Counsel for the appellant further informed the Court that although the Clerk of the Police Magistrate's Court had searched his office, he was unable to locate the recognizance which had been filed. Counsel for the Attorney General for Ontario also questioned the sufficiency of the recognizance. The appellant should not be penalized by the failure of the Clerk to produce the recognizance and permission is given to the appellant to substitute a new and sufficient recognizance, the same to be entered into before this Court within 15 days from the date hereof.

[para3] At the trial, City of Ottawa Building Bylaw No. 8752 and a contract dated the 17th day of December, 1956, between Defence Construction (1951) Limited and Shore & Horwitz Construction Company Limited were filed as Exhibits 1 and 3 respectively. The learned Magistrate incorporated the whole of these documents as part of the stated case.

[para4] The following admissions were made by the parties at the trial:

1. The whole of the City of Ottawa Building Bylaw No. 8752 which also includes the form set out to cover issuing of building permits.

2. That the three-storey barracks block built by Shore & Horwitz Construction Company Limited on the R.C.A.F Station at Rockcliffe Airport, in the City of Ottawa on or between January 10, 1957 and April 25, 1958 was in fact built by the construction company and in fact exists.

3. That the land on which the said barracks building was erected and the said barracks building itself are both owned by the Crown in the Right of Canada.

4. That the said Shore & Horwitz Construction Company Limited did not take out a building permit under

City of Ottawa Building Bylaw No. 8752 before commencing construction of the building or at any time thereafter.

The relevant parts of Exhibit 1 are as follows:

" Section 102.1(a) GENERAL

IT shall be unlawful for any person to commence or proceed with any operation included under or regulated by the provisions of this Bylaw, without first obtaining a permit from the Building Inspector; and paying the fee hereinafter prescribed for the same.

Section 102.2(a) APPLICATIONS

Applications shall be made by the owner of the building or structure involved, or his authorized agent, and applications shall indicate the total cost to the owner of the works contemplated.

Section 233

Owner shall mean any person, firm, corporation or agent controlling the property under consideration."

Section 34 of the Construction Conditions, forming part of Exhibit 3, provides as follows:

" The Contractor shall comply with, and the work shall be carried on subject to all regulations and orders made by any Municipal, Provincial, Dominion or other governmental authority and applicable to the said work, and shall, at his own expense, obtain all necessary permits (if any) therefore."

The learned Magistrate found that Defence Construction (1951) Limited was an agent of the Crown in the Right of Canada and that by Section 34 of the Contract (Exhibit 3) it had abandoned or released, in so far as the Bylaw in question was concerned, the immunities adherent to the Crown in the Right of Canada and that by virtue of the said section Defence Construction (1951) Limited required Shore & Horwitz Construction Co. Ltd. to comply with the provisions of the said Bylaw.

[para5] The accused questioned the proceedings on the grounds that the Magistrate erred in point of law in holding

(a) that the Defendant Company, for the purpose of application for a permit, was, by implication or in express terms of the Contract, an authorized agent of Defence Construction (1951) Limited, a Crown corporation acting in Right of Canada;

(b) that the Grown in the Right of Canada, although generally not subjected to the Provincial or the Municipal legislation, by the said Contract had released or abandoned its immunities for a particular purpose.

[para6] The question submitted to the Court is whether the Magistrate was correct in convicting the Defendant Company for failure to comply with the said Bylaw. On the appeal, counsel for the accused relied upon the above grounds.

[para7] Counsel for the Attorney General of Canada relied on section 91(a) of the B.N.A. Act and contended that the Crown in the Right of Canada cannot abandon its immunities.

[para8] Counsel for the City of Ottawa based his argument on four grounds:

(a) that Shore & Horwitz Construction Co. Ltd. controlled the property under consideration and was the "owner" within the meaning of Section 233 of the bylaw;

(b) that Section 34 of Exhibit 3 made Shore & Horwitz Construction Co. Ltd. an authorized agent of the Defence Construction (1951) Limited and required it to take out a permit as required by Section 102.1 of the Bylaw;

(c) that Shore & Horwitz Construction Co. Ltd. was an independent contractor and bound by the Bylaw;

(d) that the field covered by the Bylaw was not within the exclusive jurisdiction of the Government of Canada and the Province of Ontario had a right to authorize the City of Ottawa to compel the accused to comply with the Bylaw.

[para9] Counsel for the Attorney General for Ontario also, contended that the accused, in so far as the Bylaw is concerned, was the owner of the property under consideration. He further argued that as the Bylaw provided for the charging of fees that it was a matter of taxation and the principles laid down in G. Neal Philips v. The Corporation of Sault Ste. Marie, 1954, S.C.R. 404 and City of Vancouver v. The Attorney General of Canada et al, 1944, S.C.R. 23 should be applied.

[para10] The Bylaw was passed pursuant to Section 388(7) of The Municipal Act, R.S.O. 1950, Chapter 243, which in part is as follows:

"For regulating the size and strength of frame, wooden, brick, stone, cement and concrete walls, and of the foundations and foundation walls, beams, joists, rafters, roofs and their supports of all buildings to be erected, altered or repaired, and for requiring the production of the plans of all buildings, and for charging fees for the inspection and approval of such plans, and fixing the amount of the fees and for the issuing of a permit certifying to such approval without which permit no building or structure may be erected, altered or repaired."

[para11] The incorporation of Defence Construction (1951) Limited was authorized by Section 7(1) of The Defence Production Act, 1951, 15 Geo. VI, c. 4. By Section 7(4) the Corporation was constituted an agent of His Majesty and its powers could be exercised only as an agent of His Majesty.

[para12] Paragraph 11 of the Construction Conditions in Exhibit 3 provides that the work shall, in every particular be under and subject to the control and supervision of the Engineer; and all orders, directions or instructions at any time given by the engineer with respect thereto shall promptly and efficiently be obeyed, performed and complied with by the contractor to the satisfaction of the Engineer. By Clause 1 of the Contract it is provided that 'ENGINEER' shall mean any person designated or appointed as such by the Minister for the purpose of this Contract.

[para13] Paragraph 12 of the Construction Conditions is as follows:

"The work, shall, in every particular be subject to the supervision of the Minister and/or any other person thereunto authorized by him, each of whom shall have access at all times to any part of the work."

[para14] By Paragraph 16 of the Construction Conditions it is provided that all machinery, tools, plant, materials, equipment, articles and things whatsoever provided by the Contractor in connection with the work from the time of their being so provided until the final completion of the work, shall be the property of Her Majesty for the purpose of the said work and shall not be taken away or used except for the purpose of the work without the consent in writing of the Engineer. These sections clearly show that the Minister of Defence Production controlled the property under consideration and the accused was not the owner as defined by Section 233 of the Bylaw.

[para15] Section 34 required the Contractor to comply with all regulations and orders applicable to the said work and to obtain all necessary permits (if any). The barracks built by the accused firm and the land on which they were located were owned by the Crown in the Right of Canada and formed part of the Public Debt and Property over which Section 91(1) of the B.N.A. Act excludes the Province from any legislative authority and over which the Government of Canada has the exclusive right to legislate. The Bylaw requires not only that a permit be obtained and a fee paid, but also that all

applications for building permits be accompanied by two sets of specifications and plans drawn to scale together with certain other information. The Bylaw also lists many requirements in regard to the structure to be erected, with which the applicant must be prepared to comply. In addition Section 388(7) of The Municipal Act provides for the issuing of a permit certifying to the approval of the plans submitted. The building in question is a three-storey barracks block built on the R.C.A.F. Station at Rockcliffe Airport for Her Majesty in the Right of Canada, represented by the Minister of Defence Production, acting through Defence Construction (1951) Limited. Having in mind the purpose for which this building was constructed I find that the Crown in the Right of Canada did not agree to submit to a Bylaw which required that the Municipal authorities approve of the plans and specifications before issuing a permit authorizing the construction of the barracks and waive its immunity so that it would be bound by the requirements of the Bylaw in question. As the Province was excluded from legislating in regard to the Public Debt and Property of the Government of Canada the agent of the Crown would not be required to apply for a permit under the Bylaw.

[para16] Section 16 of The Interpretation Act, R.S.C. 1952, Chap. 158 provides:

> "No provision or enactment in any act affects, in any manner whatsoever, the rights of Her Majesty, her heirs or successors, unless it is expressly stated therein that Her Majesty is bound thereby."

[para17] The Municipal Act makes no provision for Her Majesty being bound by it.

[para18] If the Crown in the Right of Canada and its agent Defence Construction (1951) Limited were not required to apply for and obtain a permit neither would the accused be required to make application. C.B.C. v. Attorney-General for Ontario (1959) S.C.R. 188 at 199, Rand J.A. said:-

> "If the Sovereign is free to broadcast on Sunday, those who do the acts necessary to that service are immune from prosecution because the act they do is the lawful act of the Sovereign, attributable to him and untainted with criminal character."

[para19] In Campbell-Bennett Limited v. Comstock Midwestern Limited et al (1954) S.G.R. 207 at 216, Rand J.A. held:-

> "The mutilation by a province of a federal undertaking is obviously not to be tolerated in our scheme of federalism, and this from the beginning has been the view taken of provincial legislation of the nature of that before us."

[para20] In Rex v. Rhodes, (1934) O.R. 44, it was held that the whole field of legislation in relation to aerial navigation in Canada belonged to the Government of Canada and the Ontario Highway Traffic Act which provided that "no person other than one holding a chauffeur's license shall operate or drive a motor vehicle on a highway unless he holds an operator's license issued to him under this section", did not apply to a member of the R.C.A.F. while driving a motor vehicle, the property of His Majesty in the Right of Canada, while on military or public duty and in obedience to a superior officer.

[para21] It was contended that the accused was the authorized agent of Defence Construction (1951) Limited. In Tamlin v. Hannaford (1950) 1 K.B. 18, the Court of Appeal held that the British Transportation Commission, a statutory corporation created to own and operate the transport services in England, was not an agent of the Crown because the act setting it up did not expressly say so. Denning L.J. at p. 25 said:

> "When Parliament intends that a new corporation should act on behalf of the Crown, it as a rule says so expressly."

The Defence Protection Act, Sec. 8(2) provides:

> "The Minister may, with the approval of the Governor in Council, enter into a contract with a person authorizing

> that person to act, under the control and direction of the Minister, as an agent of His Majesty, for any of the purposes for which the Minister is authorized to act on behalf of His Majesty under this Act."

From this it is clear that the Minister has no right to authorize a person to act as an agent of His Majesty except with the approval of the Governor in Council. It follows that Defence Construction (1951) Limited could not appoint anyone to act as agent of the Crown and the Magistrate erred in finding that the accused for the purpose of application for a permit, was, by implication or in express terms of the Contract an authorized agent of Defence Construction (1951) Limited, a Crown Corporation acting in Right of Canada.

[para22] With respect to the contention that the money payable under the Bylaw was in the nature of a tax it is clear from Section 388 and the Bylaw itself that the purpose of the Bylaw is to regulate and control buildings to be erected, altered or repaired in the City of Ottawa and that the fees payable are for the inspection and approval of the plans of the proposed buildings and the principles laid down in the cases quoted do not apply.

[para23] The answer to the question submitted on the stated case is in the negative. The appeal is allowed, the conviction quashed, any money paid for fine or costs to be repaid and any security deposited returned.

[para24] There will be the usual order for the protection of the Magistrate.

Smith v. Paris (Town)

Between
William Jack Smith and Paul Knight Smith, applicant, and
The Corporation of the Town of Paris, respondent, and
The Corporation of the Town of Paris, applicant, and
William Jack Smith and Paul Knight Smith, respondent

[1995] O.J. No. 3176
DRS 96-02255
Court File Nos. 561/95 and 942/95

Ontario Court of Justice (General Division)
Kitchener, Ontario
Sills J.
September 29, 1995.

Counsel:
G. Miller, for the applicant.
D.K. Davis, for the respondent.

[para1] SILLS J.:-- In Court File No. 561/95, the applicants, Smith seek:

a. a declaration that a site plan agreement dated June 5, 1990 registered against the lands and premises known as 88 Dundas Street East, Paris Ontario, or alternatively that certain paragraphs in the said site plan agreement, are null and void and are of no force or effect;

b. a declaration that the said lands and premises permit:

i) the use of a service garage by the owner and/or his tenant;

ii) the use of the said lands for the maintenance, repair, storage and parking of motor vehicles including tractors and trailers,

iii) the offloading and onloading of equipment from trailers associated with the repair and

maintenance of trailers; and

c. a declaration that the use of the lands for repair, maintenance and storage of tractor trailers of the applicants or their lessee is not in contravention of By-law C-3.2 (highway commercial) and the said

site plan agreement dated June 5, 1990.

[para2] In Court File No. 942/95, the applicant municipality seeks:

a. an injunction prohibiting the use of the subject lands other than in accordance with a site plan agreement dated June 5, 1990; and

b. an injunction prohibiting truck traffic on lands zoned Rural Agricultural (A), the storing or parking of tractors or trailers.

BACKGROUND

[para3] Prior to September, 1987 the lands in question had been zoned rural agriculture (A). In or about September, 1987 the zoning for the front portion of the subject property was changed by By-law amendment to highway commercial (C3) under which the use was restricted to the following:

(a) a service garage;
(b) detached dwelling;

(c) accessory building.

[para4] That zoning amendment was incorporated into comprehensive zoning By-law no. 2974 for the Town of Paris on January 19, 1988 and that specific special C3 zone is found at section 14.3.2 of that comprehensive by-law.

[para5] The then owner wished to construct a service garage building and in August of 1989, applied to the Committee of Adjustment for the Town of Paris for relief from the required lot frontage of 30.5 metres (or 100 feet) which frontage applied to non-residential uses in the C3 zone. The property in question had a lot frontage of 73.22 feet. The Committee of Adjustment approved the variance sought, subject to the then owners entering into a site plan control agreement with the Town of Paris:

a. restricting vehicular ingress and egress to and from the site to an area described as a mutual right of way shown on a schedule to the agreement;

b. restricting the use of the lands to the repair and maintenance of tractors owned by the owner;

c. containing other provisions essentially not in question in these proceedings.

[para6] The said site plan agreement was entered into by the then owners and the town of Paris under date June 5, 1990 and registered against the title to the said lands.

[para7] On September 4, 1992 the applicants, Smith, herein, purchased the property in question from a mortgagee under its power of sale. They used the part of the property zoned C3 as a service garage for their vehicles and rented out the residential home situate on the property and permitted by the special C3 zoning applicable to the property.

[para8] In July 1994, the applicants, Smith leased part of the specially zoned C3-2 property to one Mike Hicks. Mr. Hicks operates a truck haulage business which includes hauling construction equipment for a Quebec manufacturer from the manufacturing plant for delivery to purchasers of the equipment, and a "load and go" business whereby his haulage units pick up and deliver directly without using the property which is the subject of this application. Hicks operates his business from his office in Burford, Ontario at which he receives orders, dispatches vehicles and transmits instructions for delivery orders to his drivers. He presently owns four truck tractors and four trailers, the trailers being designed to transport construction equipment. His primary use of the property at 88 Dundas Street, Paris Ontario is for service and maintenance of his tractors and trailers and for

parking and storage of them at that site. In addition, he uses the site for loading, unloading and storage of construction equipment (front end loaders) being delivered from the Quebec manufacturer to purchasers of that equipment. This use of the property in question accommodates the transfer of the front end loaders from a short haul unit bringing the equipment from Quebec, to long haul units for transport to the purchaser of that equipment. This usually involves two or three such front end loaders which may be kept at 88 Dundas Street for up to one week. The aforementioned uses of the property continued without incident until January 1995 when the applicant Smith applied for rezoning of a part of the agriculturally zoned lands to the rear of the subject property for use as a "towing compound". This application was refused by the Town of Paris and at the same time the planning committee and council advised the said applicants that their tenant, Hicks, was in contravention of the use specified in the site plan agreement applicable to the lands zoned C3-2, and required adherence to the site plan agreement and the cessation of parking of trailers or equipment by Hicks at 88 Dundas Street.

[para9] At issue, in this application are:

1. are the uses of the C3-2 part of the lands at 88 Dundas Street by the tenant of the applicants in compliance with the zoning by-law section C3-2 and the site plan agreement dated June 5, 1990; and

2. 15 paragraph 35 of the site plan agreement ultra vires and null and void?

ZONING BY-LAW PROVISIONS AFFECTING 88 DUNDAS STREET, PARIS
ONTARIO

[para10] The special C3 zone applicable to 88 Dundas Street East premises is as follows:

14.3.2 - "Notwithstanding the uses permitted by section

14.1 in this by-law the permitted uses in the C3-2 zone shall be limited to the following:

i. A service garage;
ii. a detached dwelling;
iii. an accessory building."

[para11] "Service garage" is defined in section 2.0 of by-law 2794 as 'garage, service' shall mean a building or structure which is used for the maintenance and repair of motor vehicles, or where motor vehicles are parked or stored for compensation, hire or sale, but does not include the installation of outside gasoline pumps for retail sale or an autobody repair shop."

[para12] "Accessory buildings and uses" are dealt with in section 6 of the by-law. In section 6.1.1 "accessory uses permitted in all zones" sets out "where this by-law provides that a lot may be used or a building or structure may be erected, altered or used for a purpose, that purpose shall include any building structure or use accessory to such purpose, ..."

[para13] Under section 2.0, of the By-law, "accessory" is defined as follows: "accessory when used to describe a use building or structure shall mean a use, building or structure that is normally incidental, subordinate and exclusively devoted to a main use, building or structure and located on the same lot as the main use, building or structure."

[para14] It is the position of the respondent municipality that the applicant's tenant, Hicks, is using the subject property for storage or parking of his tractors and trailers and for loading and unloading his trailers and for temporarily storing construction equipment pending further shipment thereof and for dispatching trucks or transports from the subject property. The respondent takes the position that the use being made of the subject premises by Hicks is not within the "service garage" use permitted by the by-law but rather the use is as a "cartage, express or truck terminal or yard" which is not permitted in the C3-2 zoning category. "Cartage, express or truck terminal or yard" is defined in the by-law as meaning "a building or place where trucks or transports are

rented, leased, loaded and unloaded, kept for hire or stored or parked for remuneration or from which trucks or transports are dispatched, or where goods are stored temporarily for

further shipment."

[para15] The applicants Smith take the position that the zoning category C3-2 permits:

a. the repair and maintenance of motor vehicles (including tractors and trailers);
b. the parking and storing of motor vehicles (including tractors and trailers);
c. unloading and reloading of construction equipment in the course of delivery or trans shipment, as a permitted accessory use.

DECISION

[para16] When the respondent municipality approved the rezoning of the subject property in 1987 and then incorporated that zoning amendment into the comprehensive zoning by-law on January 19, 1988, it was obviously intended that the permitted commercial uses be restricted to "a service garage" and "an accessory building" (2 of some 27 permitted non-residential uses in the C3 category), coupled with the residential use of a detached dwelling which would otherwise have been excluded from the C3 zone.

[para17] The definition of "garage, service" contemplates two uses namely:

a. a building or structure which is used for the maintenance and repair of motor vehicles, or
b. where motor vehicles are parked or stored for compensation, hire or sale.

The definition precludes the installation of outside gasoline pumps for retail sale or the use of an autobody repair shop. There is no restriction on the use of a "service garage" confining the use maintenance and repair of motor vehicles either for compensation, or without compensation, and consequently, the committee of adjustment exceeded its authority in imposing a term of a site plan control agreement restricting usage to servicing the owners own vehicles. Section 44 of the Planning Act permits the committee of adjustment to authorize such "minor variance from the provisions of the by-law in respect of the land, building or structure or the use thereof, as in its opinion is desirable for the appropriate development or use of the land, building or structure, provided that in the opinion of the committee, the general intent and purpose of the by-law and of the official plan, if any, are maintained." It is not a "minor variance" within the authority of the committee of adjustment to detract from a permitted use authorized by council of a municipality nor is it within the authority of the committee of adjustment to require such a restriction as a term of a site plan control agreement. Section 41 of the Planning Act (section 40 at the time that the impugned site plan agreement was entered into), does not contemplate or authorize a clause such as clause 35 of the site plan control agreement herein dated June 5, 1990 and it is therefore beyond the power of the committee or the municipality to require such a clause. In accordance with clause 30 of the said site plan control agreement it is severable from the said agreement. That finding makes it unnecessary for me to rule whether or not the tenant, Hicks, is an "owner" authorized to use the subject property for the maintenance and repair of tractors owned by him but, under the Planning Act definitions, "lessee" can be an "owner".

[para18] With respect to the parking or storage by Hicks of his trucks and trailers at the subject property, the definition of "service garage" refers to "a building or structure where motor vehicles are parked or stored for compensation, hire or sale". The definition of "cartage, express or truck terminal or yard" refers to "a building or place where trucks or transports are ... stored or parked for remuneration .....". The wording of both these definitions appears to be such that the storage or parking for purposes other than for remuneration are precluded. However, the definition of "accessory" is clearly available to both uses and it follows that for the "service garage" use, motor vehicles may be parked or stored in conjunction with their

maintenance and repair but not for a use which is accessory to "cartage, express or truck terminal or yard."

[para19] "Motor Vehicle" is not defined in the zoning By-law. "Vehicle" is defined as meaning, inter alia, "motor vehicle" and includes "trailer" which is not further defined. This definition is almost in the precise terms of the definition of "vehicle" in the Highway Traffic Act.

[para20] "Motor Vehicle" is defined in the Highway Traffic Act as including "an automobile, motorcycle, motor assisted bicycle, unless otherwise indicated in this Act, and any other vehicle propelled or driven otherwise than my muscular power, but does not include a street car, or other motor vehicles running only upon rails, or a motorized snow vehicle, traction engine, farm tractor, self-propelled implement of husbandry or road-building machine within the meaning of this Act."

[para21] "Trailer" is defined in the Highway Traffic Act to mean "a vehicle that is drawn upon a highway by a motor vehicle except an implement of husbandry, a mobile home, another motor vehicle or any device or apparatus not designed to transport persons or property, temporarily drawn, propelled or moved upon such highway, and except a side car attached to a motorcycle, and shall be considered a separate vehicle and not part of the motor vehicle by which it is drawn."

[para22] The standard dictionary definition of "motor vehicle" (Webster's New World Dictionary Third Edition) is "a vehicle on wheels, having its own motor and not running on rails or tracks, for use on streets or highways." The same dictionary reference refers to "trailer" as "a cart, wagon or large van, designed to be pulled by an automobile, truck or tractor."

[para23] I conclude from the foregoing that "trailers" used by Hicks, in respect of the applications before me, are not motor vehicles and my use of the words "motor vehicle" in this decision excludes "trailer" by definition.

[para24] The use of the subject premises for the purpose of loading, unloading and storage of construction equipment, however temporary, is not contemplated within the permitted use of "service garage". It is obvious that such use is contemplated by, and appropriate to, the uses permitted in "cartage, express or truck terminal or yard". Consequently, the use by Hicks of the premises at 88 Dundas Street East, Paris Ontario for loading, unloading and storage of construction equipment or front end loaders is not permitted under the C3-2 zoning applicable to that property.

[para25] Apparently, Mr. Hicks has deviated from the provisions of paragraph three of the site plan agreement dated June 5, 1990, by accessing the lands zoned C3-2 across the lands to the rear zoned Rural Agricultural A for purposes within the permitted uses of the lands zoned C3-2. In doing so he is in breach of paragraph three of the site plan agreement and schedule A thereto. The said schedule A properly shows means of vehicular ingress and egress to the lands zoned C3-2 and binds the applicants Smith and their tenant Hicks. In addition, it is not a lawful use of the lands zoned Rural Agricultural A by the applicant Smith or their tenant to access the lands zoned C3-2 over the lands zoned Rural Agricultural A and, in doing so, they will be in breach of the zoning by-law.

[para26] The said site plan agreement provides in paragraph four thereof, for vehicular parking and storage of vehicles on the lands zoned C3-2. Those provisions are binding on the applicant Smith and their tenant and the respondent municipality is entitled to enforce those provisions of the site plan agreement.

[para27] Accordingly, the applicants Smith shall have judgment for declarations that:

a. paragraph 35 of site plan agreement dated June 5, 1990, and registered against the subject lands as A-387359 is null and void and of no force or effect;

b. that the lands and premises at 88 Dundas Street East, in the Town of Paris zoned C3-2 permit:

i. the use of a service garage by the owner and/or the tenant of the said lands and premises;

ii. the use of the said lands and premises for the maintenance and repair of motor vehicles and the parking or storing thereof accessory to such maintenance and repair.

[para28] The Corporation of the Town of Paris shall have the permanent injunction prohibiting the owners and/or tenants of the premises at 88 Dundas Street East, in the Town of Paris, from:

a. using the subject lands for any purpose other than repair and maintenance of motor vehicles;

b. parking or storing of motor vehicles on the subject lands other than as accessory to the repair and maintenance thereof and other than in accordance with paragraph four and schedule A of the site plan agreement dated June 5, 1990 and registered as

instrument number A-387359 for the Land Registry division of Brant;

c. from accessing the lands zoned C3-2 across the adjacent land zoned Rural Agricultural A; and

d. from loading, unloading and/or storing goods in the course of trans shipment in or on the subject lands.

[para29] Success on these applications being divided, there will no costs of either application.

SILLS J.

Pedwell v. Pelham (Town)

Between
Robert Pedwell, Keith Pedwell, Mary Pedwell, Linda McLean and
LandPark Homes Inc., plaintiffs, and
The Corporation of the Town of Pelham and Robert Judge, defendants

[1998] O.J. No. 3461
DRS 99-00649
Court File No. 5650.5/95

Ontario Court of Justice (General Division)
Welland, Ontario
Fleury J.
Heard: October 14-17, 20-24, 27, 28, and November 7, 1997.
Judgment: August 25, 1998.

Counsel:
Ann Dinnert and Jonathan Wigley, for the plaintiffs.
Thomas Bielby, Michael Mollison and Peter Haney, for the defendants.

[para1] FLEURY J.:-- In this case, I have to determine, pursuant to section 15 of the Building Code Act, whether a building permit should have been issued to the plaintiffs. This case also raises the issue of the good faith of a municipal administration in passing a certain zoning by-law. It also addresses other issues which are secondary and pale in significance to the central issue as to whether or not the officials acted in good faith in passing the by-law in question.

[para2] The facts can be summarized as follows:

[para3] One Lulu Peacock, the widow of a man who had grown grapes on lands owned by him for over 50 years, sold these lands to one Tim Pedwell, a local solicitor. This transaction was completed on October 31, 1988. As part of the deal, it was understood that a one acre parcel of land would be severed and returned to her. An application was eventually granted by the Niagara Land Division Committee for this purpose. This process came to a successful conclusion on or about February 1, 1989 when the OMB denied an appeal from a neighbour. Because of the nature of the application, it was essential that the property be returned to Mrs. Peacock by way of deed and that she reconvey all but 1 acre back to Mr. Pedwell.

[para4] As he was about to arrange for these transfers, Mr. Pedwell became aware that Mrs. Peacock was not well and that she was suffering from terminal cancer. He then explained to her the concept of "testamentary devises" as a means of subdividing lands. After a short discussion with her and other members of her family, it was agreed that they would proceed in this fashion. In effect, Mr. Pedwell was renouncing the right to have reconveyed to him some 5 one acre parcels of land which by will Mrs. Peacock proposed to transfer to her own children. He prepared a deed reconveying the lands to Mrs. Peacock and delivered it to her. He also took instructions for a will which he arranged to have executed on March 8, 1989.

[para5] Mrs. Peacock, quite unexpectedly died on March 10, 1989, a mere two days after executing her will, and before the actual deed reconveying the lands to her had been registered. There is some uncontroverted evidence, however, that the deed had been returned to Mr. Pedwell for him to register it on behalf of Mrs. Peacock. This he did on March 13, 1989. As part of the transaction, Mrs. Peacock also devised some 19 other parcels to Mr. Pedwell's nominees in a typical "checker boarding" package.

[para6] In the summer of 1989, Mr. Breitkreuz, an officer of LandPark Homes became interested in the lots in question. He tendered an offer to purchase for 15 of the lots at a cost of $72,000 per lot. This offer was subject to a host of conditions, one of which was that building permits be obtainable for the lots in question. In November, he made an informal call on the Chief Building Official, Mr. Robert Judge, to enquire about the Town's requirements concerning building permits. Mr. Judge expressed surprise at the request, as he was not aware of any subdivision in that area of the Town and asked Mr. Breitkreuz to bring in his plans. Mr. Breitkreuz complied. Unbeknownst to Mr. Breitkreuz, Mr. Judge took the plans to Mr. Bernardi, the Town Planning

Administrator and to Mr. Barker, the Town Planner. The planning officials became alarmed at this type of development and contacted the city solicitor for advice. The waters become somewhat murkier at this point.

[para7] It is unclear when Mr. Judge advised Mr. Breitkreuz as to the requirement of a septic tank approval from the Health Department. In any event, what is clear is that when he approached the Health Unit, Mr. Breitkreuz was told unequivocally that he would not be getting an approval since the lots were considered illegal by the Town and he was referred back to the Town. Mr. Breitkreuz therefore did not consider taking additional steps towards securing the septic tank permits in light of the attitude taken by the Health Unit officials. In early December 1989, Mr. Pedwell contacted Mr. Judge, advising him of the creation of the lots by testamentary devise and seeking clarifications as to what would be required by way of pre-requisites for the granting of building permits. The next contact was with Mr. Brooks, Town solicitor. He called Mr. Pedwell and asked for details concerning the testamentary devises. On December 6, 1989, Mr. Pedwell wrote to Mr. Brooks, giving him all of the details and asking that he instruct the building officials to issue building permits. When he heard nothing for close to a month, Mr. Pedwell became concerned over the delays and instructed Mr. Breitkreuz to attend and formally apply for the building permits. On January 3, 1990, Mr. Breitkreuz presented formal applications to Mr. Judge for all of the lots in issue.

[para8] There apparently had already been a number of meetings between various officials in the Town planning department and a decision had been made to stop this development in any possible way. Mr. Judge was initially told by Mr. Bernardi and by the Town solicitor to delay or "hold off" the issuance of any building permits. I have no hesitation in concluding that, had these applications been treated normally, approval would have been granted well prior to the end of January subject to the issue of the Hazard Zoning by-law and subject also to the availability of septic tank permits.

[para9] There is no doubt that the planning staff determined in early January that their priority was to preclude the granting of building permits to this project. This is clear from the time records kept by Mr. Barker as well as from the viva voce evidence of a number of the witnesses called by the defense. I have no doubt that these Town officials saw their actions in this respect as being in the public interest. However, their own subjective assessment of the righteous character of their conduct does not resolve the problem of whether they acted in good faith in so doing. I will return to this issue later in this decision.

[para10] What transpired after that is a classic case of "stonewalling". No one came right out and told the applicant that his application would not be granted. Instead a letter was sent to him on January 24, 1990 under the signature of Mr. Judge, telling him that:

> "A decision with respect to your applications has been deferred pending an evaluation of the impact on Local Regional and Provincial Planning Policies and legislation by our Town Solicitors and Consulting Planners.
>
> Unless special circumstances arise of which we are presently not aware, you can expect a decision on or before February 9th next."

[para11] In the meantime, Town officials had been busy drafting an interim control by-law ("ICBL") whereby all development would be frozen with respect to agricultural lands except for lots created prior to November 11, 1974, or lots created by consent to sever. In effect, in light of the restrictions imposed, this particular legislation was targeting only testamentary devise lots and in particular, at the time in question, the municipality only knew of the Pedwell lands as having been subdivided by testamentary devise. It was contemplated that the "ICBL" would be discussed at a special council meeting on January 29, 1990 and would be considered for adoption on February 5, 1990. No notice whatsoever of either of these Council meetings nor of the proposed ICBL was delivered to the Pedwells directly or to Mr. Breitkreuz.

[para12] Then on February 6, 1990, Mr. Judge sent a letter

to all the plaintiffs telling them of the passage of the ICBL and that pursuant thereto no building permit could issue. The plaintiff immediately launched an appeal to the OMB of the interim control by-law and also commenced appeal proceedings pursuant to section 15 of the Building Code Act to compel the chief building official to issue the disputed building permits.

[para13] Unbeknownst to the plaintiffs, there appears to have been correspondence between the Town solicitor and the OMB dated June 27, 1990 recommending that the matter of the appeal be put in abeyance pending a decision in the matter already launched before the civil courts by the plaintiffs. The OMB was apparently content to allow such a procedure and did so, in this case, without even notifying the appellants. Further, in complete disregard of the rules of a fair hearing, the OMB notified the Town that it had concerns with respect to the appeal period as contained in the by-law under appeal and went further to recommend a course of action to remedy the situation which was to re-enact the by-law, thus raising a significant question as to the very validity of the by-law under appeal. All of this without in any way communicating with the plaintiffs. Even though the Town cannot be blamed for the lack of fairness of the process embarked upon by the OMB, there is no doubt that viewed objectively by an outsider, such action would have been sufficient to convince an observer that the OMB was in "cahoots" with the Town and that it was trying to help one of the parties appearing before it without even notifying the other party who was entitled to a full and fair defense of his interests as well. I surmise that the matter of the appeal was never rescheduled since I proceeded to hear the plaintiff's application for relief under section 15 some 7.5 years after it was launched. Needless to say that if this matter had been before me in a friendly atmosphere on a request for an adjournment to an indefinite date, I would have felt compelled to enquire as to the plaintiffs views on this. I am shocked that the OMB did not do this.

[para14] Subsequently, and while attending another hearing of the OMB concerning a matter not connected to this application, Mr. Keith Pedwell, the father of Tim Pedwell who had also been a solicitor in this area learned from Mr. Brooks that notwithstanding that the municipality was aware of the legitimacy of the severances created by testamentary devise, that they were determined to resist their applications for building permits, that "they would give (them) a real hard time" and that their development plans would be held up until the lots were not worth anything. Mr. Brooks denied saying those exact words. However he did not deny the conversation generally. Since he did not have any notes concerning this conversation, he was going by memory alone trying to recall events that took place some 5 or 6 years ago. Mr. Pedwell, on the other hand, had taken notes at the time and was adamant as to the attitude put forward by Mr. Brooks. I have no difficulty preferring the evidence of Mr. Pedwell over that of Mr. Brooks for the simple reason that the kind of attitude demonstrated throughout this application by the Town and its officials was quite illustrative of the mind set shown by Mr. Brooks at the time. Furthermore, and in deference to Mr. Brooks, he was trying to recall a conversation held many years before and had no independent means of checking what may have been said. We are all aware of the frailty of memories, especially when one has to reach back some years, to what may have been an uneventful exchange, not even worthy of being jotted down. I find as a fact that the conversation that took place was generally in the words testified to by Mr. Pedwell. The action for damages was commenced shortly thereafter.

[para15] The legislation calls for notice to be given to interested parties. Oddly enough, notwithstanding that the Town's entire planning staff were concentrating on defeating this particular development, nobody thought it necessary to serve the plaintiffs personally or directly with any of the notices required. Instead, the Town opted for the publication in newspapers having a general circulation in the area. Notwithstanding the fact that the Town knew of three separate legal interventions on behalf of the Pedwells they failed to give them any direct notice of any of their meetings. Thus, one year after the initial passing of the interim control by-law a further meeting was held during which Council passed a motion extending the interim control by-law for another year while waiting for the report. Again without notice to the plaintiffs.

[para16] Near the end of 1991, the report was finally tabled by Mr. Barker. Again the municipality did not forward

a copy of the report directly to the Pedwells or their solicitors of record. A public hearing was held on January 28, 1992, unattended by the Pedwells since they had not been made aware of this meeting.

[para17] On February 3, 1992, again without notice being given to either their counsel or the Pedwells themselves, Council during a regular session passed a by-law, increasing from one acre to one and a half acres, the size of the lots where building could be allowed on lands zoned for agricultural purposes. This would in effect defeat the various applications contemplated by the Pedwells.

[para18] A further application was then launched to quash this zoning by-law on account of the fact that it was passed in bad faith.

[para19] It is trite to say that city officials do not need to agree with every development that crosses their desk. However, they are duty bound to honour any request for services if it complies with the law in every respect. Their likes and dislikes must then be set aside. What we have here, is a request for building permits being submitted to the Chief Building Official. What we heard him say in evidence is that he would have granted building permits after examining the applications had it not been for the interventions of Mr. Bernardi and of the Town solicitor who had told him to "hold off" on processing the applications and had health unit permits been available. Section 6 of the Building Code Act is quite explicit as to the requirements to be met by an applicant for a building permit. It provides that:

> "(6) The chief official shall issue a permit except where,
>
> (a) the proposed building or the proposed construction or demolition will not comply with this Act or the building code or will contravene any other applicable law;
>
> (b) ...
>
> (c) the application therefore is incomplete or any fees due are unpaid."

[para20] Surely, it is imperative that other Town officials not interfere with the Chief Official in the performance of the duties imposed upon him pursuant to section 6 of the Act. Once he has been appointed he should be left alone to perform the functions entrusted to him. If the Chief Building Official is to deal fairly with each application, it is imperative that any such decision making be done impartially. The true measure of impartiality is the ability of the judge or other official to take some distance from his own preconceived notions and prejudices to arrive at a fair decision, looking only at the issues in question. Mr. Judge therefore should have reached his decision without consulting all other planners and officials and the decision should have been made on the basis of the requirements outlined in section 6 of the Act and not on the basis of extraneous concepts and policies.

[para21] And even though it might be argued that Mr. Brooks was only giving advice in response to a request for same, the kind of instructions given smack of interference rather than advice. Firstly, we have Mr. Judge admitting quite candidly that the January 24 letter bearing his name was not drafted by him but rather by Mr. Brooks. We have Mr. Judge indicating unequivocally that it is not his function as a building official to assess "the impact on Local, Regional and Provincial Planning Policies and legislation", exhibit No. 1, tab 18. It became very clear to me that Mr. Judge felt that the matter had been taken out of his hands and that that was the main reason why these building permit applications were not processed in due course. There was no evidence that Mr. Judge was swamped by work and that he could not access those applications. Nor was there any evidence that Mr. Breitkreuz had failed to dot any of the "i"s or cross any of the "t"s. I find as a fact that had Health Unit permits been issued, there would have been no reason whatsoever to refuse the requested building permits.

[para22] I bring the parties attention to the clear prohibition appearing in section 22(1) of the Act and to the penalty section appearing in section 24 of the Act. One would have thought that Mr. Brooks and Mr. Bernardi would have known better than to interfere in the performance of the Chief

Building Official's functions.

[para23] I take it that no building permit will be issued with respect to unserviced lands without a septic tank permit being first issued by the Niagara Regional Health Unit. It is, in effect, a condition precedent to the granting of a building permit. It was argued at trial that because the plaintiffs failed to secure a septic tank permit prior to February 5, 1990 that their action is doomed. Let us therefore examine the circumstances of this failure to comply with the condition precedent. The only evidence that we have concerning the failure to apply to the Health Unit for a permit is in Mr. Breitkreuz' own testimony. He states that some time in January of 1990, he contacted the Health Unit to find out their requirements. He was told, right off the bat, that since his lots were considered illegal by the Town, that there would be no permits issued and that he had better talk to the Town to remedy the situation. We all know what good talking to the Town did.

[para24] The question to be answered by me is whether or not the failure on the part of Mr. Breitkreuz to secure a septic tank permit beforehand should be fatal to his application for judicial review of the Chief Building Official's decision. It would be a travesty of justice if it proved to be fatal. Where, as here, the Town has taken steps to notify the Health Unit of their legal concerns with respect to the creation of the lots and where the Health Unit's response is contingent on what the Town might have to say concerning the legality of the uses, the Town should be estopped from raising the absence of septic tank permits as an obstacle in the process of this appeal. After all, even though the Health Unit is technically completely separate from the Town administration, there comes a point when as a result of the collusion of employees between themselves any such distinctions tend to disappear.

[para25] In the case at bar, there seems to be no question that all planning forces joined to attempt to thwart what they saw as a flagrant attempt to circumvent the Planning Act. Unfortunately for every one, at that time, the Legislature in its wisdom had chosen to exempt testamentary devises from Planning Act controls. So there was nothing wrong with an individual working around the Planning Act in this fashion. There simply was no obligation to comply with the Planning Act and the Town knew this. Yet, two of its officials instructed the Chief Building Official to delay the processing of the applications for building permits. There is no authority for such delaying tactics.

[para26] It is for that reason that I feel completely confident in ruling in favour of the applicants in their appeal of the decision of the Chief Building Official. There will therefore be an order that the Chief Building Official issue a building permit to each of the applicants in this case subject to the plans complying with the building code and also subject to the securing by the applicant of a septic tank permit providing as well that the lands on which construction is being sought to be completed do not fall inside the "Hazard Zone". I am satisfied based on H&D International Group v. Toronto (City) (1988), 24 M.P.L.R. 187 that the effective time for me to consider is the time when the building official should have made his decision. In this case a decision should have been available clearly by the end of January of 1990. At that time there was no other applicable law which might have prevented the granting of the building permits sought by the plaintiffs. Any changes in the applicable law since that time should not affect the issuance of the building permits.

The Septic Tank Permits

[para27] Much of the time spent by the experts during this trial had to do with the vexing issue as to what should be required by way of septic tank beds to accommodate the number of lots being developed in this case. Mr. Gray testified for the defendants and attempted to establish the need for larger parcels of land (that is larger than 1 acre or .4 hectares) to deal with nitrates. His evidence was not very impressive. He appeared confused at times and did not have the expertise to back up many of his conclusions. He was also relying on an unissued report that was only considered as a draft policy. On the other hand, Mr. McGlone, the expert retained by the defendants, was a very good witness who explained every thing in clear and unambiguous terms. He took issue with the conclusions reached by the Niagara Health Unit and by Mr. Gray. He explained in clear language why he took exception to

their conclusions and I agree with him. Wherever there is a discrepancy between the evidence of Mr. Gray and Mr. McGlone, I much prefer the evidence of Mr. McGlone. Mr. McGlone was quite convincing in his testimony to the effect that he could easily design a septic tank system that would deal with all of the requirements of the Niagara Regional Health Unit and that it could be positioned on these one acre lots without any difficulty. Based on Mr. McGlone's evidence which I accept in its entirety, there should be no difficulties for any of the applicants in obtaining septic tank permits.

[para28] Why this issue became such a heated issue is not well explained by anyone. What seems, indeed, very strange is the fact that a lady by the name of Delaney was able to obtain a septic tank approval from the Town, barely a month before Mr. Breitkreuz applied and was told about the illegality of his lots. What seems strange is that Mrs. Delaney was one of Lulu Peacock's daughters and one of the beneficiaries under her mother's will of lands which in every other respect were identical to the lands bequeathed to Mr. Breitkreuz and in fact were part of the same so-called scheme to defeat the Planning Act.

[para29] I am aware of the fact that the Chief Official in the Health Unit has a lot of discretion in approving or not a particular septic tank proposal. I would hope that this official would consider these applications as any other application and that he would not insist on treating them as part of a larger development. Based on my finding that these lots are exempt from planning control under the Planning Act, I have no hesitation in declaring that each lot should be considered as a single application and not as part of a whole series of lots in a plan of subdivision.

[para30] In light of the established facts and the evidence given by Mr. McGlone, I am satisfied that the following findings of fact can be made:

a) The establishment of septic systems of Class VI on the lots will not create a nuisance.

b) The establishment of septic systems of Class VI will not be or likely to be contrary to the public interest.

c) The establishment of septic systems of Class VI on the lots will not create or be likely to create a hazard to the health or safety of any person or result in the impairment of the quality of the natural environment for any use that can be made of them.

[para31] The next issue and the most important one for me to determine is whether or not the municipality acted in bad faith in enacting its amending zoning by-law 1455.

Bad Faith

[para32] How does one determine whether a body politic acted in bad faith? It surely does not call for a minute examination of all of the actions of the members of the body to see if one acted in malice. It calls rather for an examination of the general attitude of the body politic to the task being approached. Two of the most important indicia of good faith identified by the Supreme Court of Canada were "frankness and impartiality". (City of Ottawa v. Boyd Builders (1965), S.C.R. 408 at 415) Can it be said that the Town officials in this case were frank and impartial? It seems to me that from the first contact between Mr. Judge and Mr. Breitkreuz there was a conspiracy of sorts between the various Town planning officials to defeat the development project being put forward by The Pedwells.

[para33] Further, in my opinion, the Town acted unlawfully in directing its Chief Building Official to "hold off" in processing these applications. This was a clear interference by officials with an officer who was by statute bound to process all applications submitted to him. There is to be no tolerance for this kind of interference with a person who is given a clear mandate by statute.

[para34] There was simply no hearing during which each party could expose its plans and its objections. Furthermore, I have no doubt that the Town administration set out to frustrate the Pedwell proposal by any means at its disposal.

Where could anyone see frankness in the Town's attitude? Where did it show impartiality?

[para35] There is no doubt in my mind that the Town officials thought that they were acting in the best interests of the municipality in so doing. Unfortunately, that kind of motivation is not enough. In City of Ottawa v. Boyd Builders (supra) the Supreme Court of Canada adopted the wording of Mr. Justice Roach J.A. in describing what constituted bad faith in that case. It said:

> "In passing By-law 311/63 the Council was not acting in good faith. It passed that by-law for the express purpose of defeating appellant's prima facie right to the permit. It yielded to the protests of some of the other owners in the immediate neighbourhood for whom the Planning Board was "sympathetic". It passed that by-law without any opportunity having been given to the appellant, which was so vitally interested, to make any representations concerning it. Every thing that was done to defeat the appellant's prima facie right was done behind its back for the obvious purpose of avoiding embarrassment that the appellant's protestations on its own behalf might cause. It is difficult to think of any stronger evidence of bad faith."

It is difficult to find more appropriate language to describe what actually took place in the case at bar.

[para36] To recap: after Mr. Breitkreuz showed Mr. Judge the plans, a number of meetings took place between various Town officials all with a view to stopping the proposed development. These meetings were conducted in secret, in the sense that no notice was given to the applicants herein and no report of such meetings was ever made available to them. As a result of these meetings, a decision was made to pass an interim control by-law to freeze this development. The Chief Building Official was told to "hold off" granting the building permits. A letter, not incorporating the Chief Building Official's concerns was sent out to the applicants setting out phony concerns and non-applicable considerations. A special meeting of Council was called for January 29, 1990 at which time the proposed development was discussed in camera. The plaintiffs did not receive any notice whatsoever concerning this meeting. On February 5, the Town passed its special control by-law. Again without notice being given to the plaintiffs. On February 6, notice was received by the plaintiffs of the passage of the ICBL and they were then notified that no building permits would issue during such period. On February 23, notice of appeal of the Chief Building Official's decision concerning the building permits was served on the defendants. On February 28, notice of appeal to the OMB concerning the ICBL was served by the plaintiffs. On April 6, 1990 in a letter sent by Mr. Brooks to the plaintiffs' solicitor, he suggested that the appeal of the Chief Building Official's decision be stayed pending the OMB decision on the ICBL. And yet in a letter to the OMB dated June 27, 1990, the Town solicitor, without copying the other solicitor, suggested that the appeal proceedings be adjourned until after the appeal of the Chief Building Official's decision had been heard, thus creating a completely vicious circle of delays. Which suggestion was agreed upon by the OMB on July 10, 1990 without notice to appellant's solicitor (see letter at exhibit No. 1 tab No. 27). On August 1, 1990 a statement of claim asking for damages against the defendants was issued. Notwithstanding the multiplicity of proceedings commenced by these plaintiffs against the defendants, the defendants did not see fit to notify the plaintiffs of the request for an extension of the ICBL, nor of the receipt of the Barker report nor did they notify them directly or indirectly of the public hearing convened to discuss this report nor were they notified of the intended wording of by-law 1455 nor were they given notice of the Council meeting when it was scheduled to be passed.

[para37] Although Council did not technically offend any requirements contained in the legislation with respect to the giving of notice, it is clearly an indication of Council's lack of openness and candour with the plaintiffs. It is crystal clear and I find as a fact that the only purpose being pursued by the ICBL was the frustration of the Pedwell development project. I find it offensive that no special effort was made to notify the plaintiffs of the various steps taken by the municipality in order to thwart their building projects and I find that this lack of notification was a further example of the bad faith demonstrated by the Town in

passing the ICBL and by-law 1455.

[para38] The Town approach was a far cry from the approach taken by Municipality of Taché in the case of James Kuchma v. The Rural Municipality of Taché [1945] S.C.R. 234. In that case Mr. Justice Estey speaking for a unanimous court had this to say at page 243:

> "It is not contended that the council acted hastily or without giving all parties an opportunity to be heard. In fact all parties were heard upon many occasions; even upon the date of the passing of the by-law on August 11th, 1941, those opposing the closing of the road were heard. On September 6th, the Secretary-Treasurer of the municipality advised the applicant that further protests must be made to the Municipal Commissioner. Further the correspondence between the council and the Municipal Commissioner indicates good faith when, as late as March 14, 1942, the Secretary-Treasurer of the municipality wrote to the Deputy Municipal Commissioner in part as follows:
>
> > `There are two sides to this question, one favours the closing of the road, the other wants it to be left open. At nearly every council meeting one side or the other comes up and wants and wants that.'"

[para39] As can be seen from the excerpts quoted, what seems to be paramount to the Supreme Court of Canada in determining whether Council acted in good faith is the hearing they gave to the opponents of the by-law. In this case, it might be argued that by virtue of section 38(3) of the Planning Act, there is no need for notice to the persons affected before an Interim Control By-Law is passed. It might therefore be argued that these cases on bad faith quoted above have no bearing on the issues before me. I agree that I am dealing, in this case, with legislation that is different than the legislation in effect at the time of these decisions. However, it seems to me that the earmarks of fairness or good faith can still be applied. In the first instance, as I understand plaintiffs' argument, they are not attacking the ICBL since they have long passed into oblivion. What they are attacking is by-law 1455 which they allege was passed in bad faith. There is no question that there was no hearing to which the plaintiffs were summonsed wherein they could have voiced their objections. Publication in the Pelham Herald was, in my opinion, a sure way of avoiding the plaintiffs. By reason of the fact that the plaintiffs, to the knowledge of the defendants, did not live in the Town of Pelham, it was a foregone conclusion that they would not receive the paper in question. And by restricting their notices to the Pelham Herald, the Town was in effect only paying lip service to the obligations imposed upon it by the legislation. Since I have found as a fact that this entire effort was aimed at defeating this very proposal it should have been obvious to anyone wishing to ensure a proper hearing that a letter addressed to counsel of record would have communicated all of the essential ingredients necessary to ensure a proper hearing. In failing to do so, I find that the Town deliberately avoided the prospect of a public hearing where the Pedwells might have called them to task on some of the more dubious aspects of their proposed remedies.

[para40] By-law 1455 had as its main purpose the defeating of the Pedwell applications for building permits. In order to achieve this objective the Town enacted a by-law that goes against the Regional Official Plan which states quite explicitly that "maximum lot size in the case of a lot ... shall not exceed an area of 0.4 hectares (1 acre) except ...". The Town has an obligation under the Planning Act to make its by-laws conform to the Regional Official Plan. Section 24 of the Act specifically states:

> (24) (1) " ... where an official plan is in effect, ... no by-law shall be passed for any purpose that does not conform therewith."

[para41] It does not require much by way of scepticism to assume that the real purpose behind this by-law was to frustrate the Pedwell plan. This, in my opinion, also stands as a further indication of the bad faith of the Town in passing this by-law.

[para42] It is clear in law that "a by-law which has not been passed by a municipal corporation in good faith and in the public interest, when passed is a nullity, and cannot be

changed or made otherwise by lapse of time, approval, registration or promulgation" Kuchma v. Rural Municipality of Taché (supra at p. 239).

[para43] The test as enunciated by the Supreme Court of Canada appears to be a dual test. Are there circumstances where a corporation might have acted in bad faith but in the public interest? And would this suffice to save the by-law? In Kuchma (supra) it would appear, at least from the treatment of the case by Mr. Justice Estey that he was not satisfied that the simple fact that the matter was handled with due regard to the interest of the public was sufficient to dispose of the issue. His discussion of the principles of good faith follow a determination by him that the municipality had indeed acted in the public interest. I take it from this approach that he is satisfied that a municipality cannot cloak itself in the public interest veil and hope to escape scrutiny on the issue of the good faith brought to bear on the resolution of the issues. In these days of increasing accountability of governments to the citizens who have voted them into office, I have no doubt that it would be considered only normal to insist that a municipal corporation act in the public interest but as well that in doing so it demonstrate good faith to the parties affected by its decision.

[para44] Thus I see no other avenue open to me but to declare that by-law 1455 is a nullity since I am of the opinion that it was passed in bad faith.

Delivery

[para45] Some considerable effort was made by the defendant to attack the delivery of the deed, the argument being that if there was no valid delivery, there was no valid title on the part of Mrs. Peacock to devise by way of will. I am satisfied, however, on the authority of the case of Zwicker v. Zwicker (1899), 29 S.C.R. 527 that there is simply no basis in law to doubt the validity of this transaction on this argument. The evidence to the contrary is quite compelling. Mr. Pedwell testified as to his delivering the deed to Mrs. Peacock on March 3, 1990. From that point on, therefore there can be no challenge of the delivery. The fact that the deed was returned to him for registration in the registry office does not operate as a reconveyance to him, by any stretch of the imagination. It is one thing to challenge and it is entirely a different thing to establish on a preponderance of evidence. There is simply no evidence whatsoever to contradict the delivery of the title deeds in question. In the absence of any evidence to the contrary, therefore, I have no other choice but to find that the deed had been delivered to the deceased some 7 days before her death.

[para46] Some attempt was made during the trial to cast aspersions on the good faith and the competence of Mr. Tim Pedwell. Firstly, let me say that it should not come as a surprise to a solicitor that the opponents may attempt to defend themselves by clawing at their attacker. Secondly, let me add that although there is no question that Mr. Pedwell did not keep records as complete as I am sure he would have kept had he anticipated this litigation, I am satisfied that he did in fact act as he says he did. And that he need not worry about the innuendos and comments concerning his practice in so far as his credibility is concerned.

The Claim For Damages

[para47] Extensive damages were claimed in this case. It cannot be said that the claim for damages came as a surprise to Council since very early in these proceedings Council was advised that damages as high as 1.5 million dollars would be claimed by the plaintiffs. The damages allegedly stem from the losses suffered by the plaintiffs as a result of the wrongful conduct of the defendants in refusing to issue building permits as requested.

[para48] On the evidence before me, there is no doubt as to the fair market value on the date of January 30, 1990. That is the sum of $72,000 per building lot as agreed upon between the Pedwells and LandPark Homes. The first issue to be determined is the number of building lots available to each owner. It was argued by the defendants that Parts 20 to 25 are situated within the Hazard Zone and that therefore these could never become building lots. The plaintiffs are willing to concede that lots 21 to 25 are within the Hazard Zone but dispute this allegation concerning lot 20. It was up to the plaintiffs to establish the full measure of their damages. In

so far as lot 20 is concerned, I am left with a significant doubt as to its availability for development. If a further study is required by the Niagara Escarpment Commission to determine if any part of lot 20 can be built on, then surely no satisfactory proof has been put forward for me to make any finding on this issue. I will therefore agree with the defendants in this respect. Lots 20 to 25 will not be considered as part of the lots which the plaintiffs can claim damages about.

Keith Pedwell

[para49] That leaves Mr. Keith Pedwell with six building lots. He should have received the sum of $432,000 by December 31, 1990. He now has six lots which, at present market values, could be sold at $50,000 for a total of $300,000. I prefer the valuation prepared by Mr. Wyrcimaga over that of the defendant's expert because Mr. Penwarden did not take an active enough role in this process. He was content to let a junior in his office do all the legwork. I was not much impressed by this junior who struck me as somewhat naive. Mr. Wyrcimaga, on the other hand, while not harbouring as many distinguished certificates as Mr. Penwarden, has a lot of experience in this field and his thirty years or more of selling in the area in question give him a better handle on the situation than any certificate ever could. Long experience in this field is often preferable to diplomas and other academic qualifications.

[para50] As additional costs, there would be the taxes paid by them on the lots in question since the date on which closing should have taken place. These would represent a total of $779.87 as shown in exhibit No. 8. As I understand the situation, an appeal was launched concerning the assessment of these lands in 1995 and a favourable ruling was obtained. This would explain the substantially lower rates of taxes for 1996-1997. This would bring the total amount for taxes paid per lot to $779.87 by the end of 1997 or $4,739.22.

[para51] The plaintiffs also sought to claim the amount of $1,809 per lot as representing additional costs which they would not have faced had the transaction closed in 1990. As the agreement calls for the purchasers to "be responsible for all costs of every nature and kind in relation to the property including the obtaining of building permits and servicing of the lots", there is no reason to add these charges to the plaintiff's claim.

[para52] The plaintiff Keith Pedwell has therefore lost the sum of $136,739.22 as a result of the Town's failure to issue building permits.

Mary Pedwell

[para53] The plaintiff, Mary Pedwell, has 5 building lots plus an "access lot". Her gross loss, with respect to the five building lots, is therefore $360,000 less the present value of these lots or $250,000 for a net loss from the sale of $110,000 to which should be added the taxes paid in the interim which amount to $834.02 for lot 8, $779.87 for each of lots 11, 13 & 17 for a total of $2,339.61 and $2,171.33 for lot 19 for a grand total of $5,344.96. Mrs. Pedwell's total loss would therefore be in the sum of $115,344.76.

[para54] As to the "access lot", it is comprised of one acre of land but was bundled separately in order to provide access to the lot owned by Robert Pedwell comprising some 60 acres. Now that some of the lots are said to be non-building lots, it is conceivable that this lot might be resurrected as a building lot and Mrs. Pedwell might try to designate lot 23 as an access lot. Who knows? I am however limited in my findings to conclusions based on the evidence before me. As things stand presently, therefore, I must address the plaintiff's claim in terms of a lot designated as an access lot which had a limited value of $3,000 when it was sold to a third party in early 1990. As I understand the facts, prices have been further reduced and this lot might only be worth $1,235 as of this date. I accept these figures and find that her gross loss with respect to the access lot is limited to $1,765 plus the costs of taxes paid on the lands in question during the relevant period. A review of exhibit No. 8 reveals these sums to be $779.87. This would bring the total loss of Mrs. Mary Pedwell to the sum of $2,544.87 for the access lot and her grand total to be $117,889.63.

Linda McLean

[para55] The plaintiff, Linda McLean, has one building lot. Her net loss is therefore the difference between the sale price of $72,000 and the residual value of $50,000 plus taxes paid by her of $779.89 for a net loss of $22,779.89.

Robert Pedwell

[para56] The plaintiff, Robert Pedwell, through this testamentary devise, inherited some 60 acres of land being parts 27, 28 and 30. These he sold to a third party in early 1990 for the price of $167,000. This offer having been made conditional to the granting of a building permit, it is obvious that same was refused in light of the interim control by-law passed by the municipality. During argument, counsel for the defense suggested that if I ruled that the interim control by-law had been legitimate, then I should not award damages to Robert Pedwell in light of the fact that the officials had acted legitimately in refusing the building permit since they would have then simply been obeying the law. The defense also argued that I should not grant damages for losses occurring after the expiration of the interim control by-law, since the plaintiff should have been seeking to mitigate his damages. There is very little merit to this latter argument since I would doubt the success the plaintiff would have had in seeking a building permit on a piece of land that the Town insisted until the very end was not created legally.

[para57] As to the argument raised concerning the legitimacy or lack of same of the interim control by-law, I am satisfied that it was never legitimate for the reasons outlined above. If I had been asked for a ruling on it, I would not have hesitated to declare it void for the following reasons: there was not, at the time of the applicant's approach to the Town, any concern with respect to testamentary devises. Nor was there any thought being given to commencing a study of non-farm development in agricultural areas. This last idea was the result of a conspiracy by the planners in order to put an end to the Pedwell project. They took every avenue they could, both in sending misleading letters to the applicants and in arranging their affairs to ensure that the Pedwells would never have an opportunity of getting their views heard, all with a view to defeating their application for building permits. As such this by-law was not passed in good faith and should never have seen the day. Furthermore, the illegal acts of Mr. Bernardi and of the Town solicitor who both interfered with the Chief Building Official and, in effect, prevented him from performing his statutory duties, shed such an unflattering light on this entire issue, that I doubt very much that any interim control by-law passed in these circumstances would have survived judicial scrutiny. I hasten to add that there was no evidence before me that the bad faith extended to the elected representatives who voted on the project. They may have been kept in the dark as to the real motives behind the planners' actions.

[para58] Harking back to the issue of damages caused to Robert Pedwell, therefore, I find that these damages were directly related to the invalid interim control by-law. Had there never been an application by the Pedwells for a building permit, I am satisfied that no interim control by-law would have been passed. The direct result for the loss of the deal is attributable to the inability of the vendor to deliver on an undertaking that a building permit would be available. The price agreed upon was $167,000 and the present value of such lands is $75,000. Expenses include the taxes paid and the spraying of the grapes which I find were reasonable in the circumstances. My review of the tax bills included in exhibit No. 8 show total taxes paid of $4,730.29 and the cost of spraying at $749. His total loss would therefore be $97,479.29. I am satisfied that in the circumstances, there is nothing that he could have done to mitigate his damages. Because of the mind set of the Town, he had to await the outcome of these proceedings in order to lift the heavy cloud weighing over this entire development.

LandPark Homes Inc.

[para59] The last item for me to determine is the quantum of damages, if any to be paid to the construction company, LandPark Homes Inc. The defendants argue that since there was no privity of contract between the company and the Town that there should be no liability whatsoever. Further they argue that there was no duty of care owed to the builder. This argument does not take into account the whole line of cases

decided after Hedley-Byrne & Co. Ltd. v. Heller and Partners Ltd., [1964] A.C. 465. There is no question in this case that the Town owed a duty to the owners and to whomever they may have reasonably foreseen the damages could extend to. They were explicitly notified by Mr. Pedwell of the existence of a contract for purchase and sale of the lands in question. They were in fact approached by Mr. Breitkreuz, the principal agent for the construction company, and they ought to have known that his company would likewise suffer damages. As such, I find that the Town knew of the builder's involvement and that they could foresee the damages to be suffered by the builder were they to continue to frustrate the Pedwell plan.

[para60] As to the exact amount of their damages, however, there is no agreement whatsoever between experts. Mr. Dunstan gave evidence from Deloitte, Touche on behalf of the defendants. His evidence was most impressive. I was generally unimpressed by the evidence of the plaintiff's witness, Mr. Berard. I accept that it is unlikely that Mr. Breitkreuz would have been able to construct all 13 homes over a period of time of two years without drastically changing the operation of his company. I am satisfied that he would not have been able to carry on in a "Ma and Pa" style of operation but that he would have had to hire some additional employees and that his profit margin would have been seriously affected. I also accept that a more realistic profit margin would have been in the range of 15% as opposed to 23% and 17%. As well, notwithstanding Mr. Wyrcimaga's optimism, I am satisfied that commissions would have had to have been paid on most of these sales. I accept Mr. Dunstan's revised figures as reasonably representative of the net profit picture that the construction company could have envisaged had the development been allowed to proceed. However, because of my specific findings concerning lot 20 and its unavailability for building purposes, I am left with only 12 sales. This would amount to gross sales of $4,260,000 and net profits of $283,373.60. The lost net profits are therefore the measure of LandPark Homes Inc.'s damages.

Costs

[para61] The issue of costs should not be difficult to resolve. It seems quite clear to me that costs should follow the event. Unless there are offers to settle in existence which are more favourable than my judgment, I would trust that the parties are able to resolve this issue between themselves. I will make myself available, however, should either party wish to make submissions on costs.

[para62] All of the amounts of damages which I have ordered to be paid should be paid by the Town and not by Robert Judge personally, who I am satisfied was not responsible for the actions taken by him or his associates at the Town.

[para63] I have made a number of findings concerning specific amounts of money in this judgment and I must admit to some malaise in concluding these reasons. My malaise stems from the fact that my review of the facts as pleaded in evidence leads me to conclude that calculations by both counsel would have been off significantly, hence my fresh numbers. If I have made some errors in calculating these figures, I trust that counsel can agree between themselves and can consent to an amendment to this judgment should these errors prove to be material.

FLEURY J.

Pedwell v. Pelham (Town)

Between
Robert Pedwell, Keith Pedwell, Mary Pedwell, Linda McLean and
Landpark Homes Inc., plaintiffs, and
The Corporation of the Town of Pelham and Robert Judge, defendants

[1999] O.J. No. 585
Court File No. 5650.5/95

Ontario Court of Justice (General Division)
Welland, Ontario
Fleury J.
Heard: January 21, 1999.
Judgment: February 26, 1999.
(7 pp.)

Counsel:
Thomas Richardson and Ann Dinnert, for the plaintiffs.
Thomas Bielby and Peter Haney, for the defendants.

[para1] FLEURY J.:-- This, hopefully, is the final act in the saga of the Pedwells versus the Town of Pelham. The issues which I have to decide are those of costs and of fixing pre-judgment interest. I have had the opportunity of hearing excellent submissions from both parties regarding the various principles involved in considering how to go about fixing costs and awarding pre-judgment interest.

[para2] Firstly, however, I would like to put to rest an argument put forward by one of the plaintiffs and that was the right of the said plaintiff to claim a higher interest rate in light of the losses in income suffered by him consequent upon his inability to reinvest the moneys which should have been generated by this transaction. As I understand the argument, it would be the plaintiff"s contention that they are entitled to interest on the non-pecuniary loss suffered by the plaintiffs in being stuck with lands which have diminished in value and which they have not been able to bring to market. I agree with counsel for the Town of Pelham that such a claim should have been outlined in the statement of claim and should have been pursued through that route. It is too late to make such a claim after the trial. That aspect of the plaintiff's

argument is therefore of no assistance to this court.

[para3] In so far as the rate of interest is concerned, I was invited to abandon the fixed rate provided for in the Courts of Justice Act in favour of a blending of rates, more in keeping with economic reality. It was suggested that if I were to accede to the request by the plaintiffs I would then be giving them a windfall in that interests rates have dipped so significantly since then, that they would have difficulty investing similar sums of money at half the rate provided in the legislation.

[para4] Interestingly enough, the act does not provide a mechanism for blending the rates as recommended. Section 128 is quite explicit; it reads:

> "(1) A person who is entitled to an order for the payment of money is entitled to claim and have included in the order an award of interest thereon at the prejudgment interest rate, calculated from the date the cause of action arose to the date of the order".

Granted section 130 gives judges a wide discretion in awarding

interest and I am sure that some of my brother judges who have blended the interest rates as I was invited to do, have used their discretion pursuant to section 130 in doing so. However, as I consider section 130, I don't have an unfettered discretion to dispense with the wording of section 128. I am mandated by the statute to take into account certain factors, the first one of which is the fluctuations in market interest rates. Now had the legislature been principally preoccupied by the market interest rate fluctuations, it could have easily provided for a blending of interest rates. The fact that it did not and that it has allowed this section to remain in its present state notwithstanding the very significant fluctuations of the past fifteen years speaks volumes about

its intentions. It seems to me that before I can deprive the plaintiffs of what is rightfully theirs, there has to be more than a simple fluctuations in the rates. Unfortunately for the defendants, I can find nothing in the remaining factors that would trigger my discretion to award less than the full amount of interest owing in this case. It seems to me that there is a certain wisdom in the Act in that it contemplates that a claimant should be entitled to claim a certain amount of interest from the date the cause of action arose based on prevailing market conditions at that time. Obviously, in our

case, if the deal had been allowed to go through as I found that it should have, then the Pedwells, Ms. McLean and Landpark Homes would have had the opportunity of investing the moneys generated by the sales in whatever form they might have chosen. It would be pure guesswork on my part to try to say that they would have only invested for a short period of time.

[para5] I am satisfied, in all the circumstances that the applicable rate of interest is the one prevailing during the second quarter of 1990 or 13.5%. It was conceded that the cause of action arose around that time and if it were necessary for me to make a finding to that effect, then I so find.

[para6] The second aspect of this decision has to be a determination of the issue of costs. I was invited by counsel for the plaintiffs to allow them their solicitor-client costs throughout the proceedings whereas the solicitors for the defendants opposed this conceding only that based on a specific offer to settle made by Landpark Homes, the corporate defendant should have its solicitor- client costs from the date of the offer.

[para7] Because of the length of the trial and because of the number of counsel involved and the time spent preparing for this trial, costs will unquestionably be a significant portion of whatever judgment I may pronounce. The obvious displeasure that I manifested at the municipality's conduct in this case was used by the plaintiff as fuel for its argument that I should grant costs on a solicitor-client basis as a means of visiting on the municipality a measure of my indignation.

[para8] There is no doubt in my mind, and I so found, that the employees of the municipality discovered in due course the full validity of the testamentary devises effected in this case. Nevertheless, they stuck to their guns and continued to deny building permits on the spurious ground that they were not sure of the legal status of the lots in question. They then, surreptitiously, passed an interim control by-law to specifically prevent this development from going ahead. Further, after a two year freeze of the lands, they amended their zoning by-law to increase the land requirements for such developments. I found that by-law to be a nullity as having been passed in bad faith.

[para9] Why in the world should these plaintiffs have had to be put through the hoops as they were in this case? Why should they have to dig into their own pockets to pay a portion of what must be sizeable legal bills simply for insisting that a right of theirs be respected by town officials who had a duty to them as well as to other citizens to abide by the law of the land? I can't think of any reason why they should and on the basis of the manifested bad faith with which these town officials dealt with the plaintiffs, I see no choice but to order that the Town be responsible for all of the costs triggered by the illegal acts of its officials. The only reason for the action was the arrogance of the city officials. The Town should therefore have to pick up the entire tab for its employees' wrongful conduct.

[para10] My order will therefore be that all legal costs incurred by the plaintiffs be paid by the defendant the corporation of the Town of Pelham on a solicitor-client basis.

[para11] Much argument was heard during submissions concerning the so-called insufficiency of the plaintiff's offer to settle. I was invited to conclude that it was not an offer that could be accepted in light of the many

imponderables left in it. I am satisfied that notwithstanding the imponderables it was an offer that was not quite as favourable to the plaintiffs as my ultimate decision and therefore, I would have no difficulty in concluding that solicitor-client costs should go to the plaintiffs at least

from the date of the offer.

PENSION FUND REALTY LTD. v. CITY OF OTTAWA

122 D.L.R. (3d) 308
Affirmed 139 D.L.R. (3d) 576

Ontario High Court of Justice
Krever J.
April 23, 1981

ACTION to recover moneys paid under protest for a park levy imposed by the defendant municipality as a condition of issuing a building permit.

R.M. Nelson and G.N. Addy, for plaintiff.

F.C. Askwith and P.R. Lavigne, for defendant.

KREVER J.:-- This is an action for the return of a portion of money paid under protest by the plaintiff at the insistence of the defendant as the park levy demanded by the defendant as a condition of issuing a building permit for an addition to the Inn of the Provinces complex in Ottawa. The case turns on the correct interpretation of the defendant's park levy by-law. The issue is whether the park levy was payable on the lands comprising the entire complex, as enlarged by the addition, or only on the lands on which the addition was built. The defendant conceded that if the levy should have been imposed only on the lands on which the addition was constructed, it is not entitled to retain the money charged with respect to the balance of the lands.

On December 31, 1976, the plaintiff purchased two separate but adjacent parcels of land, the easterly and larger parcel from Urbanetics Ltd., and the westerly and smaller parcel from the trustees of the estate of Melvin Lawrence Brown. For convenience I shall refer to these parcels as the Urbanetics lands and the Brown lands. Together these two parcels formed a city block, the limits of which are Sparks St. on the north, Lyon St. on the east, Queen St. on the south and Bay St. on the west. The Urbanetics lands consist of 67,130 square feet and the Brown lands contain 10,750 square feet. In August, 1973, that is, prior to the effective date of the park levy by-law in question, the Urbanetics lands had been improved and developed by the construction of the Inn of the Provinces complex consisting of a 17-storey apartment-hotel tower and a 12-storey office tower, both resting on a common base. On the Brown lands there were located a number of older buildings housing a monument company, a restaurant and apartment buildings. In 1977, the plaintiff demolished the buildings on the Brown lands in contemplation of the erection on these lands of an addition to the apartment hotel on the Urbanetics lands. The addition was to be a 10-storey building resting entirely on the Brown lands and a one-storey elevator or service tower linking the addition to the existing hotel and which was to be built on the Urbanetics lands. To give a better idea of the dimensions of the proposed parts of the addition it may be pointed out that the parties agree that the gross floor area, calculated for floor space index purposes, of the [page310] addition is 59,286 square feet (on the Brown lands) and 2,449 square feet for the service tower for a total of 61,685 square feet.

In June, 1978, the plaintiff applied for a building permit to construct a 10-storey "addition" to the "17 sty off/hotel". The description of the proposed work in the application was "10-storey reinforced concrete and brick veneer; one underground level; 17-storey service tower to existing apartment hotel". It is common ground that the use of land under the relevant City of Ottawa zoning by-laws for the purpose of an apartment hotel is classified as residential and this classification made the park levy by-law applicable. It is important to bear in mind that, as I have already indicated, the original construction on the Urbanetics lands of the Inn of the Provinces complex occurred before the park levy by-law, and indeed the enabling amendment to the Planning Act, R.S.O. 1970, c. 349, had come into force. No park levy, then, was paid, or was payable, in respect of the original development.

When the plaintiff sought to pay the park levy at the time of the application for the building permit in June, 1978, it calculated the amount required on the basis only of the value of the Brown lands. The defendant refused to issue the permit until a park levy equivalent to 5% of the value of both the Brown

lands and the Urbanetics lands was paid. Rather than delay the commencement of the construction of the addition the plaintiff paid an additional amount reflecting the value of the Urbanetics lands. It did so, as I have said, under protest and the question for determination is its entitlement to be repaid this portion of the levy.

The resolution of this issue depends on the true interpretation to be given to certain provisions of the Planning Act, as amended, and the defendant's By-law 40-74, as amended by By-law 194-75. The relevant provisions of the Planning Act, as enacted by 1973, c. 168, s. 10, are the following:

> 35a(1) In this section and in section 35b, "redevelopment" means the removal of buildings or structures from land and the construction or erection of other buildings or structures thereon.
>
> . . . . .
>
> 35b(1) As a condition of development or redevelopment of land for residential purposes, the council of a municipality may, by by-law applicable to the whole municipality or to any defined area or areas thereof, require that land in an amount not exceeding 5 per cent of
>
> the land proposed for development or redevelopment be conveyed to the municipality for park purposes.
>
> . . . . .
>
> (6) The council of a municipality may accept money to the value of any land required to be conveyed under this section in lieu of such conveyance and the provisions of subsection 11 of section 33 apply mutatis mutandis to all moneys so accepted. [page311]

Pursuant to this enabling legislation the Council of the defendant passed By-law 40-74, the park levy by-law, which became effective on February 18, 1974. The following portions of this by-law are pertinent:

> 1. "Redevelopment" means the removal of buildings or structures from land and the construction or erection of other buildings or structures thereon.
>
> 2. Subject to Section 3, no person shall develop or redevelop land for residential purposes unless and until the owner of the land has:
>
> . . . . .
>
> (b) paid to the Corporation money to the value of five (5) per cent of the land proposed for development or redevelopment for park purposes or other purposes.
>
> . . . . .
>
> 5. The owner shall convey or agree to convey the land or pay the money referred to in Section 2 to the Corporation prior to the issuance of the building permit for the said development or redevelopment.

I have already pointed out that, because of the effective date of By-law 40-74, the defendant could not have required the payment of a park levy at the time of the construction, in 1973, of the original complex on the Urbanetics lands. The defendant's position was that the construction of the addition on the Brown lands and the linking service tower on the Urbanetics lands amounted to the developing of the combined lands and that, therefore, the park levy had to be paid against the entire site.

I have come to the conclusion that because the demolition of the older buildings on the Brown lands in 1977 was undertaken under the authority, not of the building permit in question, but rather of an earlier demolition permit and at the time of the application for the building permit the Brown lands had already been cleared, we are concerned, in this case, with "land proposed for development" and not "redevelopment". The question to be answered, then, is whether, when the building permit was applied for in June, 1978, what were proposed for development were the combined Brown lands and Urbanetics lands or only the

Brown lands. Does the fact that both parcels come under common ownership and, in effect, become one lot determine the matter? On the other hand, is the fact that the Urbanetics lands had already been developed by the construction, in 1973, of the original Inn of the Provinces complex, at a time, that is, when no park levy was payable significant? To put it another way, can vacant land be developed more than once for the purposes of the by-law? Does the fact that part of the addition, the connecting 17-storey service tower, was to be and was, in fact, constructed on the Urbanetics lands affect the matter, whatever the size of the land on which it was to be built [page312] as a proportion of the whole of the Urbanetics lands? These are some of the questions that arise on the facts of this case.

It is not in controversy that the Brown lands fall within the phrase "land proposed for development" and the plaintiff's liability to the park levy in respect of these lands is admitted. The building to be erected on the Brown lands took its character as an apartment hotel, a residential use, from its association or connection with the previously erected apartment hotel on the Urbanetics lands. But for this connection, it would have been a hotel and would have constituted a use that is commercial and, therefore, not subject to the park levy by-law at all. On the other hand, but for its association with the existing complex, it would have had to meet different set-back and parking requirements. If the plaintiff's total land holdings are to be considered as one lot it is arguable that the entirety is "land proposed for development".

The evidence is clear that the linking 17-storey service tower was to be built entirely on the Urbanetics lands. As part of the connecting operation, the plaintiff did work on the ground floor of the existing apartment hotel, at the janitor's closet and the service elevator. The rear portion of the existing building, for the width of the service tower, had to be removed. The meeting-room arcade on the ground floor became the main corridor to the addition. According to other evidence, a loading bar was converted to a storage area, meeting-rooms were rearranged to some extent, and some wash-rooms were enlarged. It was agreed that the plaintiff was entitled to carry out this alteration work under the terms of the building permit for the new wing and service tower.

There are other factors that support the defendant's position. The floor area of the new hotel wing was tied to the floor area of the existing apartment hotel. The Brown lands were zoned ROx(3.0) which permitted a floor space index of 3 for commercial use and 5 for residential use. As I have indicated, although the new wing, standing by itself, would have been characterized as a commercial use, it was permitted a floor space index of 5 because the existing hotel on the Urbanetics lands fell within the zoning by-law's definition of residential use by reason of its apartment-hotel nature. Moreover, the new hotel wing was credited with surplus gross floor area left over from the construction of the complex on the Urbanetics lands. Again, as previously pointed out, parking was not required in connection with the building constructed on the Brown lands. The plaintiff was permitted to provide parking on the Urbanetics lands and off-site at two locations. It is agreed that if anyone, other than the plaintiff, as [page313] owner of the existing Inn of the Provinces complex, had owned the Brown lands, on-site parking would have been required in connection with the new building. Finally, access from every part of the new wing to every part of the rest of the complex can be had without going outdoors.

The plaintiff's position that the Urbanetics lands should not be considered in determining the extent of the "land proposed for development" is supported by other aspects of the case. Some of them have already been mentioned. At the time of the application for the building permit the Urbanetics lands had already been developed by the construction of the existing Inn of the Provinces complex in August, 1973, prior, that is, to the passing of the park levy by-law. Both parcels of land, the Brown lands and the Urbanetics lands, were purchased separately from different vendors and had separate legal descriptions and, therefore, identities. The Urbanetics lands were purchased with the existing Inn of the Provinces on them. The Brown lands contained residential premises, a restaurant and a monument-maker's establishment, all of which had to be, and were, demolished. The plaintiff's application for the building permit in June, 1978, related only to the new hotel wing and service tower. The new service tower itself consisted of less than 1% of the gross floor area. Mr. Lawrence Paquette, the manager of the

zoning regulations division of the defendant, called on behalf of the defendant, expressed the opinion that the minor alterations to the existing complex, necessitated by the construction of the link, taken by themselves, would not constitute development or redevelopment. All of these factors support the argument that the two parcels of land retained their separate identities up to and including the time of the construction which made no significant change to the Urbanetics lands and the building on them. The Brown lands, by contrast, were converted from vacant lands to lands on which a new 10-storey hotel wing was erected. Given the separate identities of the two parcels, the insignificant change to the existing structure on the Urbanetics lands and the extensive transformation of the Brown lands, the construction on the latter did not amount to the development of the former with the result that the former ought not to be considered when determining what was the "land proposed for development".

The case-law is of limited assistance in the resolution of the problem. To decide whether land is being developed or redeveloped, the more relevant of the cases have looked to the magnitude of the project involved. Thus, for the purpose of determining [page314] whether the city could require an owner to enter into a development agreement under the provisions of the Planning Act, Steele J. for the Divisional Court, in Re Slau Ltd. and City of Ottawa et al. (1976), 14 O.R. (2d) 514, 74 D.L.R. (3d) 181, 1 M.P.L.R. 234, said at p. 519 O.R., p. 186 D.L.R.:

> I am of the opinion that the term "development" has a meaning analogous to "redevelopment" within s. 35a of the Planning Act and that neither relate to minor construction such as a small portion of a building or structure.

The magnitude of the proposed undertaking was again underlined by the Divisional Court in Re Thomas C. Assaly Corp. Ltd. in Trust and City of Ottawa (1977), 18 O.R. (2d) 198, 82 D.L.R. (3d) 124, 4 M.P.L.R. 213. At p. 201 O.R., p. 128 D.L.R., Craig J. had this to say:

> Having in mind the object and intent of ss. 35a and 35b is to place conditions on the development or redevelopment of land or buildings, it is my view that the emphasis is not whether such development or redevelopment
>
> constitutes one or more buildings but the emphasis is upon the magnitude of the project which may require the imposition of conditions in order to establish orderly development or redevelopment.

If, then, magnitude is the correct criterion by which to judge whether what is involved is the development of land, it can be said that the extent of the construction that was to take place and that did take place on the Urbanetics lands was so slight, when compared to the size of the existing structure, that this property was not "land proposed for development" and ought not to have been taken into consideration in the calculation of the park levy payable by the plaintiff. It is my opinion that this, indeed, is the fair and correct result, but not solely because of the magnitude criterion. It seems to me that, given the plain and ordinary meaning of the governing language of By-law 40-74, the lands on which the existing Inn of the Provinces stood on the date of the application for the building permit had been developed when that complex was constructed in 1973. In the light of the special definition of "redevelopment" in s. 1 of the by-law (and in s. 35a(1) of the Planning Act), it cannot be said that the Urbanetics lands were proposed for redevelopment when the permit was sought, since no removal of buildings or structures from these lands was involved. Moreover, having previously been developed, it cannot be said that, at the date of the application, they were proposed for development.

There is to my mind an even more cogent reason for reaching this result. If the defendant's argument is correct a development in respect of which a park levy was paid would be assessable again for park levy whenever it was sought to add an extension to it. [page315]

Thus, for example, if the original Inn of the Provinces had been constructed on the Urbanetics lands after the effective date of the park levy by-law, it would have been subject to the levy of 5% of the value of the Urbanetics lands. The later addition of the new wing on the Brown lands and the service tower, constituting, according to the defendant's submission, the

development of the entire city block, would have rendered the Urbanetics lands again subject to the levy of 5% of the value of these lands. That cannot be what was intended by the Legislature and by the Council. The park levy must relate only to the proposed development of the Brown lands.

For these reasons the plaintiff is entitled to the return of that portion of the levy paid by it that related to the Urbanetics lands. The parties agree that the property should be valued at $42 a square foot. The total amount paid by the plaintiff was $194,700, which was the defendant's estimate of 5% of the value of the entire city block. The lands which should have been used as the basis of the levy contain, it is agreed, only 10,750 square feet the value of which, for present purposes, must therefore be taken to be $451,500. Five per cent of this amount is $22,575, the amount properly payable by the plaintiff to the defendant as a condition of the issue of the building permit. The difference between the amount paid by the plaintiff and the amount which it should have paid was $172,125. The plaintiff will, therefore, have judgment for the sum of $172,125, together with the pre-judgment interest pursuant to the provisions of s. 38 of the Judicature Act, R.S.O. 1970, as amended by 1977, c. 51, s. 3(1), and the costs of this action. If the parties do not agree with my mathematical calculation, I may be spoken to.

Judgment for plaintiff.

June 25, 1996.

Counsel:
R.S. Sleightholm for the plaintiff.
H.R. Watson for the defendant.

ZELINSKI J.:--

The Issue

[para1] Life has been kind to Mr. and Mrs. Pettinato, who live at 2279 Shipwright Road, Oakville, Ontario, as well as to their neighbours. They are the applicants in this matter. I presume that their good fortune is as a result of their diligence, skill, training, attention to duty and whatever else is encompassed in the work ethic.

[para2] Being a resident of the Town of Oakville, I take notice that their good fortune includes living in one of the finest communities in this province. Oakville benefits from the preservation of mature trees, lush ravines, and many amenities. It also has easy access to Toronto. The applicants, moreover, live within one of the finest newer subdivisions in the "Town". Houses on Shipwright Road, and in the adjacent neighbourhood, are in the luxury category. Floor areas are commonly in excess of 3,000 square feet. When built in 1989, these homes were sold for prices in the range of $325,000.00 - $400,000.00. Shipwright Road is within, and services, a residential area, zoned R5.

[para3] Since construction and until recently, all of the homes on Shipwright Road have been used exclusively as single family residences. That was what was intended when the subdivision was built. However, the Town's zoning by-law authorizes certain "permitted uses" within residential areas provided that they conform to, and maintain, requirements intended to preserve the relevant lifestyle. This and includes adequate and appropriate parking.

[para4] A day nursery is such a permitted use in the R5 zone, despite the commercial objective of privately run nurseries.

[para5] Consistent with the planned use of the neighbourhood, 2275 Shipwright Road, the ("Kinder Site") which abuts the Pettinato home, has until recently, also been used as a residence. A certificate of occupancy has, however, now been granted to permit Enriched Kinder Kare Inc. ("Kinder Kare") to use that site as a day nursery operated by Mrs. Janice Lee, who does not, and does not intend to, reside on the premises. Up to 48 children and six staff will be accommodated. It operates from 7:00 a.m. to 7:00 p.m.

[para6] The building permit to permit the conversion of the residence to a day nursery was issued to Kinder Kare without notice to the Pettinatos, the other applicants, or any adjoining owners. The conversion is now complete and, as converted, the Kinder site premises are not suitable to be used as a residence. Despite the objections of the applicants, when they learned of the intended use, the conversion has proceeded to its present stage. This was on the basis of a determination by the Chief Building Official ("CBO") of the Town that the zoning was appropriate and that there was no other choice except to issue the permit. Clearly if the building permit had been denied, and Kinder Kare persisted, the CBO would face an application in this Court to enforce its entitlement to the building permit.

[para7] In my view the manner of use of the day nursery has exacerbated the applicants' concerns about its presence, this is as a result of the Town administration's interpretation of the parking requirements set out in its zoning by-law. Wishing to minimize "on-street" parking, within the Town, it is a requirement, of day nurseries, that there must be "1 off-street surfaced parking space for each required staff member, which may be in tandem ... ". Six parking spaces are required at the Kinder Kare day nursery.

[para8] The CBO is satisfied that this requirement has been met by Kinder Kare by the parking arrangement which it has implemented. Simply, the former lawn on the Kinder site has become the surfaced parking space for two vehicles. In the result, two parking spaces are obtained by use of the existing double garage. Two more parking spaces are provided by using the driveway to the garage. The paved lawn meets the remaining parking space requirement.

[para9] Although the houses on Shipwright Road achieve luxury status, the side yards between adjoining houses are modest. Mr. Pettinato estimates that vehicles parked on the former lawn of the Kinder site are located "slightly more than five feet from the lot line of [his] property".

[para10] I am of the view that fair minded persons, including persons unable to enjoy the luxurious life-style of the applicants, would agree that this is not desirable or consistent with neighbourhood parking standards intended to improve lifestyles within the community. The mandatory parking requirements have been satisfied in a fashion sure to be a daily source of aggravation.

[para11] Even recognizing the need for daycare which is readily accessible to the community, this should not be achieved by substantial diminution of a neighbourhood lifestyle. The daycare undoubtedly affects the enjoyment, and possibly the value, of the properties of the applicants.

[para12] This undesirable result has been recognized by the Town. It has now passed an interim control by-law which will only permit day nurseries in limited locations for one year, while a review of day nurseries throughout the Town is conducted. Counsel for the Town acknowledged that this interim control by-law was as a consequence of the concerns of the applicants.

The Positions of the Parties

[para13] The applicants' position is simply stated. They contend that the relevant provisions of the zoning by-law of the Town, related to parking, prohibit front yards of residential homes from becoming parking lots. These requirements, in their view, continue, and prohibit the mandatory parking spaces of a day nursery being located in front yards. In the result, in this instance, as the back yard of the Kinder site is now a playground, and as side and rear access to the rear yard for parking is not available in any event, the application must succeed. Their analysis of the by-law requirements may be summarized as follows: (references are to sections in the zoning by-law)

a) Six parking spaces are required for six staff members (s. 30(2)(k));

b) The location of parking spaces for residential uses" is determined by s. 30(1)(b);

c) Use of a "front yard" for parking is prohibited by s. 30(1)(b)(v);

d) A "front yard" is defined as "a yard extending across the full width of the lot between the front lot line and the nearest part of any building on the lot" (s. 2(63)(a))

[para14] The reply of the Town is equally simple. Upon conversion the Kinder site ceases to be the site of a "residential use". In the result, neither s. 30(1)(a) nor s. 30(1)(b) have application. Only s. 30(2)(k) applies. That section, as previously noted, deals with numbers of parking spaces and not the locations of those spaces.

Analysis

[para15] The applicants have not argued the effects of s. 30(1)(a) relying solely upon s. 30(1)(b). That section, as noted, refers to "residential uses". It is framed within the zoning by-law in the following manner:

> 30. Parking
>
> (1) Parking Regulations Applying to All Residential Zones
>
> (b) Where parking facilities are required or permitted for residential uses other than detached dwellings ...
>
> (v) ... no area may be constructed fix or
>
> used for parking or storage within a front yard.

[para16] Section 31 is the section of the by-law which permits the use of day nurseries in residential zones. It is framed, within the zoning by-law, as follows:

> 31. Provisions for detached dwellings - ... R5 ... Zones ...
>
> (1) Permitted Uses
>
> In the ... R5 ... Zones the following uses shall be permitted.
>
> (a) a detached dwelling,
>
> (g) churches and ... day nurseries.

[para17] The significance of the word "dwelling" is important. It is found in s. 30(1)(b) and is also incorporated in the heading and body of s. 31. The definitions of "dwelling" and "residential" in the by-law are, in part, as follows:

> 2.(19) "dwelling" means a place of residence ...
>
> (48) "residential" means designed, adapted or used as a home or residence for a family or household, ...

[para18] As a sub-class within the definition of "dwelling", there is also a definition of a "detached dwelling". It is found in s. 2(19)(f) and reads as follows:

> (f) "detached dwelling" means a separate building occupied or designed to be occupied by one or more persons as a single non-profit housekeeping dwelling unit, including domestic servants and non-paying guests;

[para19] Mr. Sleightholm, for the applicants, advances that, as the Kinder site was originally designed and was used as a residence, it remains residential by definition and continues to be governed by residential requirements for purposes of parking, regardless of its converted use. In essence, he suggests "once a residence, always a residence".

[para20] Mr. Watson, for the Town, suggests that by such standards, "permitted uses" could never take place. Indeed no development would ever be possible. Farms would always remain farms. It is, he advances, those requirements which apply to the converted use, and not the original use, that must govern. Specifically in this instance, the parking requirements are only those parking requirements which are applicable to the converted use. Once a building is designed for, altered to or used as a lawful "permitted use" in a residential zone, it ceases, he submits, to be designed or used as a home or residence, hence it is not "residential", nor is its use a "residential use".

[para21] The seminal determination is whether the requirement for parking at a day nursery is governed exclusively by s. 30(2)(k) or whether that section must be read in conjunction with s. 30(1)(b).

[para22] Clearly the prohibition against parking within a

front yard is only applicable where the subject property is a "residential use". The question then becomes whether a day nursery, which is a "permitted use" in a residential area continues to be governed by standards applicable to "residential use".

[para23] As noted, a "dwelling" is, by definition, a "place of residence". Any use of a "dwelling" is, thereby, the use of a "residence" with the result that, arguably, such use is a "residential use". The specific definition of a "detached dwelling", being one "designed to be occupied ... as a single non-profit housekeeping dwelling" supports that position, incorporating, as it does, the concept of the initial purpose or design and its intended/actual use as a "dwelling".

[para24] "Residential" is also, by definition, something which is "designed, adapted or used as a home or residence". The use, of something which was "designed, adapted or used", as a home or residence is again, arguably, a "residential use", regardless of what the building may be converted to.

[para25] Assuming (without determining the point at this stage), that such arguments are valid, the next question is whether the fact that a home used and/or designed for residential use is no longer subject to relevant and (until then) applicable parking location requirements simply because it is converted to a "permitted use" under s. 31. Does its redesign and/or adaptation and/or use as a day nursery put an end to the existing parking requirements?

[para26] Of course these arguments, if valid, apply only to conversions of "homes" to "permitted uses".

Interpretation of the By-law

[para27] With respect to the interpretation of the Zoning By-law, counsel for the applicants relies upon the broad principles stated in Re. Bruce and The City of Toronto, et al, [1971] 3 O.R. 62 (O.C.A.) wherein Kelly, J.A. states, at p. 67:

> The underlying purpose of the implementing by-law is, accordingly, to establish and maintain for each of the areas or zones into which the municipality is divided for the purposes of the plan, standards with respect to the use of land and the use and erection of buildings which will enhance and preserve the quality of life in the municipality and the amenities considered conducive to the health, safety, convenience and welfare of the inhabitants.
>
> * * *
>
> Such an approach is, I believe, compatible with the proven necessity for the employment of external controls for the preservation of a fair standard of housing and land use and the expressed will of the people for a universal application of orderly planning to that end.
>
> * * *
>
> Notwithstanding this, it is my belief that Ontario Courts now accept that the obligation imposed on the municipal council to plan for growth and development of the community demands recognition of the necessity or means to compel the observance of the rights of the community to determine and enforce the direction in which the community should be shaped, and that in this regard the rights of the community are paramount to the rights of the owner.

[para28] Consistent with this interpretation, I am of the view that, absent clear language to support the respondent's position, there is no basis for an interpretation of the Zoning By-law which does not, reasonably impose the additional parking requirements which have reference to "permitted uses" in "residential zones", on top of those already existing. There is no such clear language. On the other hand, there is, as stated, an arguable basis upon which the requisite "residential use" requirement of s. 30(1)(b) is consistent with a combination of parking requirements.

[para29] Further, when a residential zone permits uses which are commercial, and the homes in that area are strictly regulated to assure adequate off-street parking without the use of front yards for that purpose, there is no justification or reason to ignore those standards for converted uses, or to presume they no longer have application. This is, of course, absent a legislated requirement, in clear language, that requires another an interpretation. The quality of life of the relevant community (being that of the applicants) should be preserved as much as is reasonably possible, by the permitted non-residential uses, not diminished.

[para30] Support for this is also available in an analysis of the relevance and significance of the words "Provisions for detached dwellings" in the heading of s. 31 of the Zoning By-law.

[para31] In Driedger on the Construction of Statutes, Ruth Sullivan, 3rd ed., 1994, p. 268, the learned author states:

> General. In Parliamentary procedure headings are not considered an integral part of a bill as it goes through the legislative process. This peculiarity is reflected in the majority of Canadian Interpretation Acts, which state that headings do not form part of the enactment in which they are found. In the other Acts, headings are not mentioned. This treatment is unsatisfactory. To any person reading legislation, headings appear to be as much a part of the enactment as any other descriptive component. They form an obvious part of the context in which the provisions of an Act are read.
>
> * * *
>
> The view favoured in recent judgments from the Supreme Court of Canada is that for purposes of interpretation headings should be considered part of the legislation and should be read and relied on like any other contextual feature. In Law Society of Upper Canada v. Joel Skapinker, speaking of headings in the Charter, Estey J. wrote:
>
> > The Charter, from its first introduction into the constitutional process, included many headings including the heading now in question ... It is clear that these headings were systematically and deliberately included as an integral part of the Charter for whatever purpose. At the very minimum, the Court must take them into consideration when engaged in the process of discerning the meaning and application of the provisions of the Charter.
> >
> > This approach to headings in the Charter has been applied to ordinary federal legislation and, despite the Interpretation Acts, to provincial legislation as well. These cases make it clear that headings are a valid indicator of legislative meaning and should be taken into account in interpretation.

[para32] I am prepared to accept that, in the zoning by-law, the significance of the use of the word "dwelling" in the heading of s. 31 must be considered by me.

[para33] I am of the view that, consistent with the approach expressed in Re. Bruce, the municipal council of the Town, in enacting the zoning by-law, had in mind the "... recognition of the necessity ... to determine and enforce the direction in which the community should be shaped". That community was a residential community. Its rights are "... are paramount to the rights of the owner".

[para34] As stated previously, the foregoing is subject to clear language to the contrary. The by-law is not clear. In the result, "residential use" as contained in s. 30(1)(b) must be considered in conjunction with s. 31. Because "dwelling" means a "place of residence" by definition, s. 31 of the by-law can be reconstructed as follows:

> 31. Provisions for detached places of residence - ... R5 ... Zones
>
> 1. Permitted Uses in the R5 ... Zone ... the
>
> following uses shall be permitted:

a) a detached place of residence

g) churches ... and day nurseries ... [and other uses].

[para35] In the result, a building which is a home can become other things, including a day nursery. The permission to use such a "place of residence" as a "day nursery" does not detract from the fact it continues to be governed by parking concepts which are applicable to uses permitted in "places of residence".

[para36] In the result, s. 30(1)(b) which is dependent upon there being a "residential use", must be considered in conjunction with s. 31. "Permitted uses" under s. 31, invite their own parking requirements. In the case of day nurseries, the s. 30(2)(K) requirement specifies the numbers of spaces. In addition, with respect to day nurseries in converted homes, the location of those spaces must comply with s. 30(1)(b).

[para37] Succinctly the number of spaces required must be read as supplementary to, and not as replacing, existing parking requirements.

Conclusion

[para38] s. 8(2) of the Building Code Act R.S.O. 1990, c. B.13 requires that the CBO issue a building permit unless " ... the proposed building ... will contravene ... any other applicable law". Its issuance in this instance contravened the Zoning By-law. It should not have been issued.

[para39] The applicants are entitled to the Declaration that they seek. The Town will also take all necessary steps to enforce its Zoning By-law with respect to the Kinder site.

[para40] Interim relief sought by the applicants has become irrelevant.

[para41] Judgment accordingly.

[para42] I may be spoken to as costs if they cannot be agreed upon.

ZELINSKI J.

Petruzzi v. Coveny

Between
Caesar Petruzzi and Elizabeth Jane Petruzzi, Plaintiffs, and
Colin Paul Coveny and Cheryl Ann Coveny and the Township of Beckwith and Harold Betts, Defendants

Ontario Judgments: [1991] O.J. No. 1678
Action No. 280/87

Ontario Court of Justice - General Division
Ottawa, Ontario
Doyle J.
September 27, 1991

J. Patrick Watson, for the Plaintiffs.
Lee Ward, for the Defendants, Colin Paul Coveny and Cheryl Ann Coveny.
Susan E. Hodgson, for the Defendants, Township of Beckwith and Harold Betts.

DOYLE J.:--

ISSUES

In this action, the plaintiffs, purchasers of a residence from the defendants, Colin Paul Coveny (Coveny) and Cheryl Ann Coveny (Cheryl Ann), claim damages for defects in its construction. The residence is a three-bedroom bungalow built on a lot owned jointly by the Covenys and which is described as part of the south-west half of Lot 10, Concession 10, in the Township of Beckwith, in the County of Lanark and designated Part 2 on plan 27R1680. In addition, a claim is made for damages for emotional stress and trauma caused by the condition of the premises and the resulting problems. The plaintiffs further claim damages from the remaining defendants for failure to properly inspect the premises during its construction, thereby failing to enforce the Ontario Building Code, township by-laws and good construction practice.

FACTS

The Covenys sold the property to the plaintiffs on September 26, 1986. They had obtained a building permit from the Township of Beckwith, pursuant to an application for same dated July 9, 1984 (Exhibit 61). The application was accompanied by a set of plans but these could not be located. The application described a single family dwelling and garage with a crawl space instead of a basement and one bathroom in the bungalow.

Coveny, a brickmason, was building his first house and he purchased the plans for $200 from an architect who had placed an advertisement in a local newspaper. Coveny had poured the footings himself, his first experience in that kind of work, and he said he must have observed that operation at some time prior to the construction of this house. He also installed the drainage system although he had not done it before, and it was here that problems were serious. He had not read the Ontario Building Code before the commencement of work, and said he put up the building as if it contained only a crawl space instead of a full-size basement, as the permit issued to him was for that type of dwelling. He stated that he had connected a drainage pipe to the sump pit even though he had never done it before and had never seen it done. Despite raising the height of the basement ceiling to reach some 7' 2 1/2", he never made a change or alteration to the plans he had filed, relying on what he said was a statement made by the defendant Betts that he would look after the change on the plans.

Betts was hired in 1982, as Chief Building Officer and By-law Enforcement Officer for the Township of Beckwith, although he had no previous experience in inspections. He was 58 years of age at the time of the construction, and he had been a carpenter until 1970, at which time he became a general contractor.

There was no township engineer. Betts had no knowledge of the existence of a township building permit by-law until

litigation began. It came into effect in 1976. Betts had said at the examinations for discovery, he never made a note on his inspections, but at trial said he would have made notes on the back of a photocopy of the application for a building permit but was unable to find the copy for the subject property nor the plans submitted with the building permit. He could not specifically recall any of the minimum six inspections that should be made on the construction of any residence but felt he had fulfilled his obligations in this respect. His practice was to accept the word of the builder if he found a particular area of work had been covered up by the time he arrived for inspection. In the several years he worked as a building inspector, he had never issued a stop order nor asked that work be uncovered so he could do a proper inspection.

The Covenys had commenced the building of their residence in the fall of 1984, and had completed the basement and the ground floor as a cover by December of that year. The basement had been changed to a full height of 7' 2 1/2" by then and a bathroom had been installed in it. Both Covenys insisted that Betts was aware that they had moved in before the full first floor of the bungalow was built and that there was a bathroom in the basement. They alleged that Betts had used the facilities.

Construction then continued in the spring and the Covenys moved into the upper part in May 1985. They denied that water came into the basement at any time prior to the sale of the property to the plaintiffs. The electrical work, some of the plumbing and other special areas had been turned over to sub-trades. There was an interim approval of the rough electrical work but no final inspection and there were a number of dangerous conditions existing in that system when the Covenys sold.

An interim occupancy permit was issued by the Township but the time of its issue was disputed. Coveny said they received that approval in October 1984, when they moved into the basement. Betts said that it had to be in May 1985, as he could not and never would issue an interim occupancy permit if only the basement was constructed. No permit and no record of its issue were produced at trial.

No application was ever made for the final occupancy permit, and it is apparent it would never have been successful.

In October 1986, after the purchase, the plaintiffs said that approximately two inches of water had come into the basement through the joint formed by the footings and the walls. When Caesar Petruzzi (Petruzzi) saw this, he attempted to make holes in the basement floor to allow the water to escape but more water came in through the holes. Since then every spring and fall water has come into the basement. It would remain for a few days to a week.

Counsel for the Covenys argues that there was no evidence of water in the basement as the experts who viewed the premises for different parties saw only a dry basement and one in particular saw no water marks that would indicate consistent entry. This is the first issue to be decided. Gerald Coleman, the real estate agent who had negotiated the sale, had described a visit he had made to the premises in October 1986; to pick up his firm's sign and he and another agent had assisted in pumping the water out through a basement window. A neighbour, Joseph Doucett, had also testified that he saw water in the basement as well as a number of other deficiencies. He had noticed it coming through at the point of the footings on the south wall and most recently in the spring of 1990, just before he testified. I find that the plaintiffs' allegations on this point are to be accepted.

There were a number of other deficiencies complained of, some in the garage, at the front steps, at the cedar deck at the back, others with respect to kitchen cupboards, the kitchen flooring, the lack of a gas-proof wall separating the garage from the rest of the house, the fireplace hearth, roof trusses, and the inadequacy of support beams for the property.

THE LAW

At this point, it is necessary to determine whether any liability attaches to the Covenys as owner-builders, to Betts

and the Township as enforcers of the Ontario Building Code, the by-laws of the Township and good construction practice, to the plaintiffs with respect to contributory negligence and finally whether the principle of caveat emptor applies.

The plaintiffs have based their claims on a finding of negligence against all defendants and they say that the damages they have sustained by virtue of defects, of which they were unaware prior to their occupation of the home, are directly attributable to the poor workmanship on the part of the Covenys which in turn constitutes negligence on their part and they allege negligence on the part of the remaining defendants whom they say failed to ensure that the dwelling was constructed in compliance with building standards, thereby resulting in defects and causing the damages incurred by the plaintiffs.

In the case of a completed house, if a purchaser wishes to protect himself from a defect in quality when he buys a newly built home, he must do so by covenants in the conveyance (Redican v. Nesbitt 1924, 1 D.L.R. 536, 1924, S.C.R. 135). In Thomas v. Whitehouse 1979, 95 D.L.R. (3d) 762, 24 N.B.R. (2d) 485 (N.B.C.A.), it was said that caveat emptor will give way to a fraudulent representation. Based on negligence, however, a purchaser may recover if a new house is constructed in a negligent manner (Smith v. Melancon 1976, 4 W.W.R. 9).

In Anns v. London Borough of Merton 1977, 2 All E.R. 492, the Council of the municipality under its by-laws, was under a duty to inspect the foundations of buildings, particularly those parts which would be covered up as construction proceeded. Any weakness or defect in the foundations would be hidden and anyone who subsequently acquired the building would have no means of intermediate inspection. If the municipality was required to inspect, it must use reasonable care and that care must be related to the duty to ensure compliance with building by-laws and codes. Failure to do this would amount to negligence. In Anns, the inspections were inadequate and the Municipality, in addition, had approved defective plans. The duty of care extended to occupiers of the dwelling. Lord Wilberforce said at p. 504:

> To whom the duty is owed. There is, in my opinion, no difficulty about this. A reasonable man in the position of the inspector must realise that if the foundations are covered in without adequate depth or strength as required by the byelaws, injury to safety or health may be suffered by owners or occupiers of the house. The duty is owed to them, not of course to a negligent building owner, the source of his own loss.

Reference to Anns was made in Fraser-Reid v. Droumtsekas 1980, 1 S.C.R. 720 (S.C.C.), where the builder was found negligent in the construction of a dwelling and the court said at p. 726:

> The House of Lords has held that an action will lie, apart from any contractual warranty, against a builder for breach of statutory duty imposed by a building by-law, by any person for whose benefit or protection the by-law was passed. Anns v. London
>
> Borough of Merton (1977) 2 All E.R. 492. The English Court of Appeal has held that a duty of care is owed by a builder to prospective buyers, and the issue of whether or not there has been breach of the duty will depend on all relevant considerations going to the question: "Did the builder act as a competent and careful builder would have acted in what he did or did not do?" Barry v. Metropolitan Property Realizations Ltd. [1978] 2 All E.R. 445 (C.A.). See also button v. Bognor Regis United Building Co. Ltd. [1972] 1 All E.R. 462 (C.A.).

In City of Vernon and Phillips v. Manolakos et al. (indexed as Rothfield v. Manolakos) 1990, 1 W.W.R. 408; 63 D.L.R. (4th) 449 (S.C.C.), the court held that a municipal authority acting under statute owes a common law duty of care to neighbours and to subsequent owners in occupation of a subject property, who have not had an opportunity to inspect it, to ensure that the structure is safe and sound and that the applicable building regulations are complied with. The City of Vernon had issued a building permit despite the

manifest inadequacy of the plan which accompanied the application, relying on on-site inspections to ensure that the requisite standards were met. The court said that once the municipality had made a policy decision to inspect building plans, it owed a duty of care to all who might be injured by the negligent exercise of that power. It was required to show reasonable care in its powers of inspection and would incur liability only for these defects which it could reasonably be expected to detect and order remedied.

In Kamloops v. Nielsen 1984, 2 S.C.R. 2, 1984, 5 W.W.R. 1, 10 D.L.R. (4th) 641, the Supreme Court of Canada held the defendant municipality owed a duty of care to a subsequent owner-occupier of premises when it undertook inspections to enforce conformity with building by-laws and failed to see defects during construction which it should have been able to observe. It was held jointly liable with the owner-builder.

In Just v. British Columbia, 64 D.L.R. (4th) 689, the plaintiff was injured when a rock fell on his car on a highway maintained by the defendant. By s. 8 of the Highway Act, R.S.B.C. 1979, c. 167: "The Minister may . . . . maintain a highway". A crew established to deal with problems on cliff faces developed its own programme of inspection. The Supreme Court of Canada, in ordering a new trial after the plaintiff's claim was dismissed at trial and an appeal disallowed by the British Columbia Court of Appeal, held that the manner and frequency of inspections were not policy decisions but operational in nature and as such were subject to review by the court to determine whether the defendant has exercised due care. The court said at p. 691:

> In comparatively recent years the law of torts has evolved by imposing on public authorities a common law duty of care based on the neighbourhood or proximity principle, frequently called the Anns principle [infra]. This has resulted in substantially increasing their liability in negligence for activity which they are authorized to carry on by statute but in respect of which the statute imposes no duty of care. This change in the law was not brought about by legislation but through the evolution of the common law which has traditionally taken account of the changing views and needs of society.

and at p. 706:

> The decisions in Anns v. Merton London Borough Council and Kamloops v. Nielsen indicate that a government agency in reaching a decision pertaining to inspection must act in a reasonable manner which constitutes a bona fide exercise of discretion. To do so they must specifically consider whether to inspect and if so, the system of inspection must be a reasonable one in all the circumstances.

Caveat emptor must also be considered. A purchaser will not recover if he does not exercise reasonable diligence and fails to observe defects which he ought to see in the dwelling he purchases.

The following cases have been considered: Dutton v. Bognor Regis Building Co. [1972] 1 All E.R. 462; Gurdial Dha et al. v. Steven Ozdoba et al. dated April 2, 1990 S.C.B.C. (unreported); Batty et al. v. Metropolitan Property Realizations Ltd. et al., [1978] 2 All E.R. 445 Hansen v. Twin City Construction Company Ltd. and Stefanik [1982] 4 W.W.R. 261; Ordog v. District of Mission et al., 110 D.L.R. (3d) 718; 638733 Ontario Inc. et al. v. Ward 9 R.P.R. (2d) 278; McCallum v. Dean and Dean, [1990] O.W.N. 873; Brunswick Construction

Ltee v. Bernard E. Nowlan et al. [1975] 2 S.C.R. 523.

In Hansen and Ordog, recovery was allowed against the builders despite the absence of warranties as the plaintiffs had sued in negligence.

I conclude that the defendants owed a duty of care to see that subsequent occupiers of the property did not suffer damages through their negligence.

DAMAGES

An initial question to be answered is whether the area under the ground floor is a crawl space or a basement. The provisions of the Ontario Building Code contain different floor slab and drainage requirements for each type. In my view, there is no question that it is a basement. Coveny insisted it was only a crawl space but he also had relied on Betts to make the necessary changes on the plans filed with the Township when he "decided to go with a full basement after footings were poured". Coveny told Betts he would be increasing the height by adding rows of cement blocks to the foundation walls. He kept referring to it as a basement, and I find it incredible that he still insisted it was a crawl space. Even his expert witness, George T. McCaffrey, a professional engineer, described it as a basement, as clearance in the basement is more then 1.8 meters (5' 11").

The most important item of damages is that of the water coming into the basement. Petruzzi had dug two holes outside the foundation after water was found in the basement. In the first, he located weeping tile at the same elevation as the top of the footing, unheard of in construction. The second hole was dug in line with the sump pit, and he could not find a Y pipe or a T pipe attached to the 4" weeping tile which would be required to bring the water back into the house into the sump pit in order to pump it out. A requirement of the Ontario Building Code states that drainage tile must be installed completely underneath the footings (s. 9.14.3.3 of the Regulations), and it must have a depth of not less than 6" of crushed stone over it (S. 9.14.4.2).

Petruzzi could not locate crushed stone under the floor slab, and Coveny said he had placed mixed sand and gravel as a base for the basement floor and if there was crushed stone, it would have been part of that mixture. His brother said crushed stone was present. I conclude it was not. Bedrock was close to the surface of the earth and Coveny said he had run the drainage tile into the house under the footing and under the bedrock at a point where a cavity existed, and he insisted the water ran into the sump pit from under the sludge tank which formed the fourth wall of the pit, the other walls being poured concrete.

McCaffrey, the professional engineer retained by the Covenys, who had visited the site with John H. McCalla, a professional engineer retained by the plaintiffs, with a view to the preparation of a joint report on the steps to be taken to rectify the problem of water in the basement, had written a report on April 30, 1990 (Exhibit 34), in which he said:

> It would appear that the water infiltration results from the natural rise in the groundwater table above the level of slab-on-grade floor, there being no functioning mechanism in place to locally depress it. It was previously reported (Oliver Mangione McCalla, April 30, 1987) that the drainage tile is installed above the level of the floor at certain locations. The tile may or may not be adequately
>
> sloped, but regardless, it is not connected to an interior pumped sump pit.
>
> The installation of a properly installed perimeter drainage tile system should rectify the water infiltration problem. The tile should be set at all locations below the level of floor slab, with adequate positive slope to an interior sump pit.

McCalla's report dated April 30, 1987 (Exhibit 29) made it clear that there were three defects in the drainage system as follows:

1. The drainage pipe should be below the level of the basement floor as stipulated in paragraph 9.14.3.3 of the Ontario Building Code.

2. The top and sides of the drainage pipe should be covered with not less than 6" of crushed stone as stipulated in paragraph 9.14.3.5 of the Ontario Building Code.

3. The drainage pipe is not connected to the sump

   pit as stipulated in paragraph 9.14.5.2 of the Ontario Building Code.

In a later report (Exhibit 30) dated April 29, 1990, McCalla said the following:

> 3. By far the most important single factor is the lack of an effective perimeter drainage system. Because the floor is some 5 1/2" below the top of the footing under the south foundation wall, it may be difficult, if not impossible, to install the new perimeter drainage tile at a sufficient depth below the floor to effectively control high seasonal ground water levels.
>
> 6. Mr. McCaffrey and I agreed that an effective perimeter drainage system must be installed which would discharge into a new sump pit to be installed at a low point along the north foundation wall. A pump would discharge the collected water from the sump to the low ground to the west of Mr. Petruzzi's property.
>
> 7. We agreed that the critical factor was to ensure that the new perimeter drainage piping was placed along the south wall at a level several inches below the level of the basement floor in the periodic seasonal high ground water levels. If, when the ground was dug out along the south wall to install the new perimeter drainage system, it were to be found that the level of the bedrock was too close (say, 4" or less) to the level of the basement floor, it would be necessary to consider raising the level of the basement floor. The present headroom in the basement is 7' 2 1/2" so that raising the floor level by, say, the 8" necessary to cover the exposed footing along the south wall, would reduce the headroom in the basement to 6' 6".
>
> 8. In summary, the two principal factor causing the periodic water entry are the lack of an adequate perimeter drainage and disposal system together with the fact that the elevation of the basement floor is some 6" to 8" too low
>
> considering the lay of the land and other relative factors. It may well be possible to control and thereby prevent the periodic water entry by the installation of an effective perimeter drainage and disposal system alone but one should be prepared to consider raising the level of the basement floor if that is found to be impracticable.

McCalla's evidence confirmed his findings in the two written reports and he particularly found that the top of the drainage tile was 10 1/2" above the level of the floor in the basement on the south side of the house. The ground water was entering the basement area via the south foundation wall at the joint between the footing and the basement floor.

Both engineers confirmed there was no connection to the sump pit. McCaffrey noted in his April 30, 1990, report (Exhibit 34): "There was no evidence of any inlet into the sump from the exterior drainage tiles", and McCalla said by direct observation, he was satisfied that the drainage pipe was not connected to the sump pit.

McCaffrey's solution to the water infiltration problem was the installation of a proper perimeter drainage tile system, to be set at all locations below the level of the floor slab with adequate positive slope to an interior sump pit. He estimated the cost at between $5,000 and $6,000 including the cost of some tunnelling under the front steps to allow the drainage system to pass through. This sum also included the enlargement of the sump pit if necessary.

McCalla also felt the drainage system was essential and it would have to be sloped from the south side to the lower north side of the house. It would then enter the house on the north side to be collected in a new sump pit to be then pumped outside. McCalla felt there would be problems with the bedrock. If it was close to the surface, a trench would have to be dug through it to allow a proper slope throughout, and

this was an unknown quantity. If it became too expensive to cut through the bedrock to allow the tiles to run completely below the basement floor slab, consideration would then have to be given to raising the basement floor some 6" to 8" to save on the rock excavation. The new slab would in itself cost $7,000 to $12,000, particularly if the present slab had to be demolished. McCalla had estimated, as well, a cost of $6,000 for the drainage system, $1,500 to $2,000 to raise the cedar deck at the back or hand excavate under it after removing some of the boards of the deck in order to allow the tile system to be installed under the deck, and another similar sum to raise the front steps, first, to allow tunnelling through and secondly, to correct the problem of the settlement of those steps since the plaintiffs moved in. McCaffrey would have left the steps in their present position. Evidence had been given that settlement of some two to three inches had taken place and further foundation work was required to bring it back up to its proper position and prevent further settling. It should be raised to prevent the last step from being too high. McCalla would allow a further figure of $1,500 to $2,000 for the trench in the bedrock. The total for the drainage system and the repair of the front steps would run from $10,500 to $12,000 in his estimation.

There were two written submissions made which were supported by the viva voce evidence of their authors. The first, from Donald Laporte of CR Associates, showed an estimated cost of $12,400 for the correction of the drainage system and it included $2,500 for the replacement of the cedar deck which Laporte said would be damaged during its removal to allow excavation for the drainage tile system. Laporte had also estimated $10,601 as the cost of a new slab in the basement. The evidence of both McCaffrey and McCalla supported the view that this would be unnecessary if the drainage tile system was installed below the level of the floor slab in a proper slope. It is all the more important to dig through the bedrock to achieve a proper system, as it would not only save the expense of a new slab but would allow the additional 6" to 8" of headroom in the basement if the floor level did not need to be raised.

A second submission, by L.B.L. Construction; for $3,590 was too low and contained too many exclusions of responsibility to be taken seriously. It was severely criticized by McCalla during his evidence.

Generally, the evidence called for annual increases of about 5% in the cost of construction. Laporte's estimate was made four years ago, and I would assess the cost of repairing the drainage system and the front steps at $14,000. I find that the raising of the basement slab is unnecessary, or speculative at best.

There was a suggestion that the plaintiffs, who saw exposed footings in the basement should have been suspicious but Petruzzi said he was told by Coveny it was to sit on to enjoy the fireplace in the basement. That statement would have allayed any suspicions.

The area was very swampy and the Covenys suggested that excessive water was directed towards the plaintiffs' house by the fact that the neighbour to the east had raised the height of his land to a level several feet higher and water was not being directed to the front ditch. That construction took place after the plaintiffs' house was built. Theodore Smith, a second expert used by the plaintiffs and one who has considerable experience as a general contractor and as an expert frequently called into court and whom Betts recognized as a very knowledgeable person in his field, testified that any excess water would not have caused the basement to flood as it is directed to the dividing line between the two properties and then to the ditch.

The plaintiffs' were not restricted in their examination of the premises on two occasions prior to signing an agreement of purchase and sale and it is argued that they had an opportunity to bring an expert to the premises to look for defects. In my view, this is not the normal practice and purchasers have the right to expect that there exists compliance with township bylaws, building codes and construction practice.

With respect to this item of damages, I find the Covenys negligent in the installation of a weeping tile system higher

than the basement floor slab at least in the south side and I find Betts negligent in his inspection of the system. If he did inspect after backfilling took place, he failed to order the area uncovered and if his inspection took place before the tile system disappeared from sight, he failed to see that its height would have allowed water to get into the basement. The responsibility of each will be determined later.

Counsel for the defendants strongly urged a discount as no estimates had been obtained from local contractors. Word, however, that the Township of Beckwith was a party to this action had already spread. Evidence was given that requests had been made to obtain prices from local contractors and none were provided.

Electrical repairs had been carried out at a cost of $1,253.93, pursuant to directives received from Ontario Hydro, and this will be added to the plaintiffs' recovery, to be paid solely by the Covenys. Betts had nothing to do with the electrical inspections. If this has already been paid by the covenys, it can be deducted from the final summary.

The plaintiffs also claim $3,500 for the installation of vents for the shower, basin, laundry tub and toilet as required by the Ontario Building code. Coveny said that the interior plumbing inspection which passed the rough plumbing would have included vents for these fixtures but it is clear that there are no vents. Petruzzi has been a plumber since 1963 and he should have raised questions in this regard. Part of the piping, however, was hidden behind drywall and the lack of venting in this area was not evident to Petruzzi prior to purchase. No witness was called to substantiate an estimate of $3,500 from Glebe Mechanical Inc. and Petruzzi felt the remedies would cost $5,000 although he was not familiar with the cost of residential plumbing. I must allow only a minimum amount and I set the cost at $2,000 of which Petruzzi will be responsible for one-half to cover the portion which was not hidden. Caveat emptor will apply to this extent. The remainder will be assessed against all defendants.

The garage has a number of deficiencies. The evidence leads me to the conclusion that the concrete floor slopes inward despite Covenys' allegation that it was level when he left the premises and water accumulates at the back of the garage and gets into the basement at the stairs which are located at that point. Three solutions were suggested. The first was to place a thin layer of concrete over the entire floor slab, and having it slope to the front to allow water to run out but this has to be discarded as that layer would be too thin and brittle and it is doubtful that there would be an effective bonding. The second solution would be to take up the entire slab and replace it with a properly sloped new one. A third alternative would be to cut out a section extending 12" or 18" into the garage along its entire width and replace it with a new section which would reverse the slope. This latter solution appears to be reasonable. The only estimated cost thereof was suggested by Coveny at $800 and by Smith at $1,000. Although the garage floor was in plain view, the purchasers said they were not aware of its inward slope and it is a defect which McCalla felt would have been apparent even to a lay person. Caveat emptor applies and this item is disallowed.

The plaintiffs claim $132.20 being the cost of installing angle irons to support the tracks for the garage overhead doors. The tracks had been supported by twine. This was a condition which was clearly visible even though the open garage doors might have temporarily hidden it. This item will be disallowed.

The plaintiffs claim that the wall between the garage and dwelling is not continuous and does not provide the gas and fire separation they say was required by the Ontario Building Code. The garage is large enough for a storage area and the Code requires only a gas-proof separation and not protection against fire although it would be most reasonable to have that added protection.

Smith had estimated a cost of $1,500 to install fire-code gyproc in the complete wall in question but acknowledged that the code was silent in this regard. He estimated a reduced cost of $500 for making the wall gas-proof. This was an important defect and in my view, was not discoverable by the plaintiffs. They will recover against all defendants. The

defect should have been seen by Betts even though the garage wasn't built until September, 1985, as Smith was able to see through the dividing wall when he looked from the attic inside the dwelling portion of the building. Betts knew there was to be a garage and hence a gas-proof wall on the east of the dwelling portion of the building was required. That wall was up when the Covenys moved in May 1986 to live in the upper part. For the same reasons two self-closing doors are required and the cost of their installation of $100 will be added to the amount recoverable.

Smith had also found what he said was a serious def lection in the roof trusses installed to support the roof and he said it would increase with time. The garage was 30 feet wide. He warned of the possibility of collapse of the roof under a heavy load of snow and said the deflection "can be minimized and left structurally sound by installing a secondary steel beam extending from the post between the overhead doors to the opposite location on the wall of the main dwelling". (Exhibit 43, p. 6) There was no evidence of an engineer's approval on the roof trusses although they appear to be within the code requirements with respect to their lengths. However, the deflection has already appeared and some danger is associated with it. The installation itself may be at fault rather than the make-up of the trusses. The Covenys will be solely responsible. There was no evidence that Betts had anything to do with the inspection of the garage premises and in any event, there was no indication of problems with the trusses during the course of construction at that tinge. Smith's estimate of $1,200 is accepted as reasonable.

A similar problem dealing with support of the main floor in the dwelling has arisen. A deflection exists under the dining room and living room floors and at the main entrance. There is no danger of the collapse of the floor even though the deflection is present. A bulge has appeared in the kitchen. It is apparent from Smith's evidence that the requirements are barely met with 2" x 4" joists and a centre beam of laminated wood supported on teleposts. The minimum standard is stretched to the limit. Smith agreed that Betts could not have issued a stop order as conformity to the code is present, but he does say that there is a considerable amount of instability, excessive movement and vibration in those areas. The dishes in the dining room rattle, the television antenna in the living room waves, and the floor sags when someone walks by. The floor has what was called a rubber effect. Smith says that the floor is made of plasterboard or chipboard but there were imperfections and it was not possible to patch. An underlay is required. Damage is certainly present and it may have been caused during the several months the floor was exposed to the winter elements. McCaffrey, for the defendants, blamed the waves in the floor on the use of aspenite despite the Code allowing it and on moisture during construction. Compliance with the Code does not always absolve a builder's responsibility. The floor needs stability and I conclude that it is defective and that it is the responsibility of the defendants, the Covenys as builders and the remaining defendants for failing to see that the floor was on a firm basis particularly after exposure. Smith has suggested additional steel beams on teleposts and estimates the cost at $2,000. The figure is reasonable.

The same kind of flooring supported vinyl overlay in the kitchen, the breakfast room and the dining area and the joints began to raise two or three months after the plaintiffs moved in. The photographic evidence amply supports the problems in the vinyl and Smith said debris could be found under it. He laid the blame on the installers and said that a minimum of 10 years of use should have been anticipated before any problem arose. An underlay was now required. This is another defect for which only the covenys would be responsible. The installation was done negligently. Evidence was given that the floor looked in good condition at the time of sale and Betts said he would not have been required to inspect vinyl as it is not a concern under the Code and not part of his function. The cost is allowed at $1,000.

The evidence disclosed that kitchen cupboards, counter tops including a splashback were not securely fastened to the floor or walls and this is a defect created by the negligence of the Covenys in failing to do it properly. Smith estimates the cost at $200 and again the sum is reasonable. Betts was

responsible to see that it was done correctly before the final permit could be issued and he will share in the responsibility.

Marble was installed at the front of the back to back fireplaces in the living room and the dining room but they were not wide enough at 12" to provide the necessary fire protection. The code requires 16" from the outer surface of the brickwork. Again the covenys are responsible for failing to adhere to the code requirements. Betts and the Township are also responsible for Betts' deficient inspection. He should have found a breach of the Code.

A claim was made for the estimated cost of repairs to the deck at the rear for a sum of $500. The agreement of purchase and sale (Exhibit 2) required the Covenys as vendors to complete the deck railing and to paint it. The deck was made of cedar but the railing was built in spruce, a less valuable type of lumber. A 9-year old boy was sent to paint it and the painting was incomplete. Petruzzi said there were no representations made that cedar would be used for the railing and there is no evidence of a complaint raised at the time of closing. This item will be disallowed.

A final claim centres around "the inconvenience, the mental distress and the trauma" caused by the defects. Mrs. Petruzzi said that the condition of the basement was a nightmare and it could only be used for storage and for laundry. A damp and musty smell was present continually but the use of a dehumidifier would have eliminated that. Mrs. Petruzzi described the work she had to do each time water came into the basement. She had trouble keeping up with the flow of water. The plaintiffs had expected to use the basement as a recreation room but didn't. Other defects such as the condition of the floor, the electric wiring, exposed switches, kitchen cupboards coming off the walls, etc., contributed to the plaintiffs' distress. The plaintiffs have claimed $5,000 and I assess damages for the emotional upheaval they must have gone through at $4,000. All defendants will share in this responsibility.

GENERAL COMMENTS

When credibility was in issue, it was resolved in favour of the plaintiffs and that of the expert witnesses. Coveny said too many things which were contradicted by other evidence. He and his brother differed on the use of crushed stone under the basement floor slab. He maintained the garage slab was level when it was not. Coveny said the trusses were stamped by an engineer and then later said he didn't know. He said the existence of plumbing vents would have been established by the interim plumbing inspection when clearly there were none. There was too much insistence on the weeping tile system being laid lower than the footings when clearly it was higher on the south side as well as on parts of the east and west sides of the building.

With respect to Betts, it is hard to imagine the existence of a system of inspections, literally hundreds, which kept so few records of what the inspections revealed. Probably the greatest omission on his part was his failure to recognize coveny for what he was, an inexperienced builder. What would have been required was a great deal more surveillance on this project. The tile problem occurred at the beginning of the work and it failed to alert Betts to what was ahead. I find both sets of defendants equally at fault in these areas where both were found to be involved.

SUMMARY

The following repairs and damages apply to all defendants:

Tile system	$13,000.
Plumbing vents	1,000.
Gas-proof wall	500.
Self-closing doors	100.
Additional support	2,000.
Mental distress	4.000.
TOTAL	$20,600.

Smith has said that 20% should be added for supervision

of the work by a general contractor or someone with similar ability. This will add $3,320 with the mental distress figure of $4,000 excluded for a total of $23,920. The Covenys and the Township will be jointly responsible to the plaintiffs for this amount but as between themselves each will be liable for one-half. I have deleted $1,000 on the repair of the tile system, for the raising of the front steps, a defect which Betts said he was not required to inspect. It is added to the following summary.

The following are amounts for which only the Covenys will be liable:

Front steps	$1,000.00
Electrical	1,253.93
Roof trusses	1,200.00
Vinyl floor	1,000.00
Hearth	300.00
Supervision (all items except electrical)	700.00
TOTAL	$5,453.93

The Goods and Services Tax must finally be considered but the repairs could have been carried out before that tax came into being on January 1, 1991. It will not be allowed as part of the claim.

Issues of interest and costs remain to be determined and the trial co-ordinator will be in touch with you to arrange a date. At that time counsel may bring up any matter which may have been omitted.

DOYLE J.

Phi Delta Beta of London Inc. v. London (City) Chief Building Official

Between
Phi Delta Beta of London Inc., applicant, and
Rocco Cerminara, Chief Building Official for the Corporation of the City of London and the Corporation of the City of London, respondents

[1995] O.J. No. 477
DRS 95-10854
Court File No. 14218/94

Ontario Court of Justice (General Division)
Leitch J.
Heard: November 9, 1994.
Judgment: January 24, 1995.

Counsel:
A.R. Patton, for the applicant.
J.P. Barber, for the respondents.

[para1] LEITCH J.:-- The applicant applies pursuant to s. 25(3) of the Building Code Act, S.O. 1992, c. 23 (the "Act") for an order rescinding the decision of the respondent Rocco Cerminara not to process the applicant's application for a building permit and for an order directing the respondent Rocco Cerminara in his capacity as chief building official for the City of London to process and then to issue a building permit to the applicant.

Background Facts

[para2] The applicant owns a building municipally known as 719 Waterloo Street, London, Ontario (the "Property"). The Property is zoned residential R2-2 under the City of London Zoning By-law No. Z-1 (the "Zoning By-law") which permits, amongst other things, a single detached dwelling.

[para3] The proposed renovations to the Property would modernize the existing five bedrooms, add a new dormer section on the third floor to increase head room and to create five new bedrooms, provide new plumbing and fixtures in three existing washrooms and enlarge one washroom, install a new bathroom in the finished basement, install new kitchen cabinets and appliances, redesign the layout to include an eating area in the kitchen and add an exterior and interior stairway and a fire alarm system.

[para4] The defendant Rocco Cerminara reviewed the plans and drawings furnished in conjunction with the building permit application and noted 11 bedrooms, four washrooms with multiple showers and multiple water closets, a substantial kitchen and food preparation and serving area, additional exterior stairs from the second to the third storey, and a fire alarm system. Based on his knowledge of the identity of the owner and his review of the plans and drawings filed, he believed that the intended use of the property is as a fraternity residence which is defined in the Zoning By-law as a Lodging House.

[para5] Mr. Cerminara concluded that a residential building with 11 bedrooms, four washrooms, multiple exit stairs, and a fire alarm system is uncharacteristic of a single detached dwelling and is characteristic of a lodging house. It was his belief that the renovations proposed were inconsistent with the use of the building as a single and independent housing establishment when operated by a fraternity.

[para6] Accordingly, the respondent Rocco Cerminara refused to process the applicant's application for a building permit.

Relevant Provisions of the City of London Zoning By-law Z-1

[para7] Section 6.2 of the Zoning By-law sets forth the permitted uses of buildings in a residential R2 zone. Specifically, s. 6.2 provides as follows:

> No person shall erect or use any building or structure or use any land or cause or permit any building or structure

to be erected or used or cause or permit any land to be in any Residential R2 Zone for any use other than the following uses:

a) Single detached dwellings;

b) Semi-detached dwellings;

c) Duplex dwellings;

d) Converted dwellings (maximum 2).

[para8] Section 2(121) of the Zoning By-law provides the following definitions:

(e) "CONVERTED DWELLING" means an existing dwelling constructed as a single or semi-detached unit on an existing lot in which the number of dwelling units has been increased without significant alteration to the exterior of the building except for the required fire escapes, extra windows and entrances to a maximum of 10 percent (10%) of the dwelling or 30.0 square metres, whichever is the lesser, and provided that the building, when converted, complies with the provisions of the building by-law and the parking provisions of this By-Law.

(f) "DUPLEX DWELLING" means the whole of a dwelling other than a converted dwelling that is divided horizontally into two separate dwelling units each of which has an independent entrance either directly from the outside or through a common vestibule.

(k) "SEMI-DETACHED DWELLING" means one of a pair of two

attached single dwellings with a common wall, dividing the pair of single dwellings vertically, each of which has an independent entrance either directly from the outside or through a common vestibule.

(l) "SINGLE DETACHED DWELLING" means a single dwelling which is freestanding, separate and detached from other main buildings or main structures, including a split level dwelling, but does not include a mobile home.

(m) "SINGLE DWELLING" means a dwelling containing not more than one dwelling unit as the sole main use thereof, with or without uses accessory thereto.

[para9] Section 2(122) provides the following definition of dwelling unit:

"DWELLING UNIT" means a single room or a series of rooms of complementary use which is located in a building, in which food preparation, eating, living, sleeping and sanitary facilities are provided for the exclusive use of the occupants thereof, which has a private entrance directly from outside the building or from a common hallway inside the building, in which all occupants have access to all of the habitable areas and facilities of the unit, and which is occupied and used or capable of being occupied and used as a single and independent housekeeping establishment.

[para10] Section 2(140) provides the following definition of fraternity house:

"FRATERNITY HOUSE" - see "LODGING HOUSE".

[para111] Sections 2(186) and (187) provide the following definitions of lodging houses:

"LODGING HOUSE, CLASS 1" means a residential building which is used to provide lodging units for hire or gain directly or indirectly to three or fewer persons with or without meals. A lodging house, class 1, shall not include a nursing home, hotel, motel, hostel, group home, bed and breakfast establishment, emergency care establishment, or a residence of an educational institution.

> "LODGING HOUSE, CLASS 2" means a residential building which is used to provide lodging units for hire or gain directly or indirectly to more than three persons, with or without meals. A lodging house, class 2, shall not include a nursing home, hotel, motel, hostel, group home, bed and breakfast establishment, emergency care establishment, or a residence of an educational institution.

[para12] Section 2(188) provides the following definition of lodging unit:

> "LODGING UNIT" means a room with sleeping facilities, either alone or in conjunction with another room or rooms.

[para13] Pursuant to s. 4.22, Class 1 Lodging Houses with a maximum of three lodging units are permitted in any dwelling unit in a detached or semi-detached dwelling, duplex, triplex, fourplex, townhouse or apartment dwelling.

[para14] Pursuant to ss. 12.2, 13.2, 14.2, 15.2, and 16.2 of the Zoning By-law, Class 2 Lodging Houses are a permitted use within the residential zones R8, R9, R10 and R11 and within office residential zones.

Relevant Provisions of the Building Code Act

[para15] Section 8(1) of the Act prohibits the construction or demolition of any building unless a permit has been issued by the chief building official. Section 8(2) of the Act provides that the chief building official shall issue a permit under ss. (1) unless, amongst other things, the proposed building, construction or demolition will contravene the Act or the building code or any other applicable law.

[para16] There is no issue on this application that the Zoning By-law is any other applicable law within the meaning of Section 8(2) of the Act. This was established in Axelrod et al. v. Corporation of the City of Toronto et al. (1981), 15 M.P.L.R. 143 (Div. Ct.) p. 148.

[para17] Section 25 of the Act permits an appeal of the decision of the chief building official under the Act to this court.

Relevant Provisions of the Planning Act

[para18] Section 35(2) and (3) of the Planning Act, R.S.O. 1990, c. P.13 (the "Planning Act") provides as follows:

> (2) The authority to pass a by-law under section 34, subsection 38(1) or section 41 does not include the authority to pass a by-law that has the effect of distinguishing between persons who are related and persons who are unrelated in respect of the occupancy or use of a building or structure or a part of a building or structure, including the occupancy or use as a single housekeeping unit.
>
> (3) A provision in a by-law passed under section 34, subsection 38(1) or section 41 or in an order made under subsection 47(1) is of no effect to the extent that it contravenes the restrictions described in clause (1)(a) or subsection (2).

History of Section 35(2) of the Planning Act

[para19] The Supreme Court of Canada in R. v. Bell, [1979] 2 S.C.R. 212; 98 D.L.R. (3d) 255 held that a by-law which provided that an individual or one "family" were the only permitted occupants of a self-contained dwelling unit was ultra vires of the municipality under the provisions of the Planning Act. Specifically, at p. 263, Spence J. held that,

> The device of zoning by reference to the relationship of occupants rather than the use of the building is one which is ultra vires of the municipality under the provisions of the Planning Act.

[para20] In Smith et al. v. Township of Tiny (1980), 27 O.R. 690 (Div. Ct.); affd. 29 O.R. (2d) 661 (C.A.); leave to Supreme Court of Canada refused 29 O.R. (2d) 661, a zoning bylaw in which a permitted use was a single family seasonal

dwelling unit and family was defined to include a male and female living together as a family without the sanctity of marriage was considered. In that case, the wording of that by-law was distinguished from the wording of the by-law under consideration in Bell. Robins J. noted in Smith et al v. Township of Tiny at p. 695, (1980) 27 O.R.:

> Land use restricted to a particular type or group of persons may be unreasonable or discriminatory and hence ultra vires. However, in my view, a restriction based upon a definition of "family" which incorporates most types of arrangement usual for people living together as a simple housekeeping unit in premises commonly described as "single family" dwellings cannot be said to be either unreasonable or discriminatory or to constitute zoning based on the relationship of the occupants. In invoking the definition of "family" used in the by law, it appears to me the township employed a valid zoning device to regulate the "use" and "character" of residential premises.

[para21] The effect of s. 35 of the Planning Act is to codify the law set forth in the decision in Smith v. Township of Tiny.

Applicant's Position

[para22] Mr. Chuck Frosst in an affidavit filed on behalf of the applicant deposes that the Property is intended and is capable of being used and occupied as a single and independent housekeeping establishment. The tenants of the applicant will rent the entire Property and have the right to use the entire Property. This leasing arrangement will be distinct from an arrangement where one resident rents one room exclusively and shares other defined areas of the Property.

[para23] The first position of the applicant is that there is no evidence available to the respondent Rocco Cerminara which entitles him to conclude that the intended use of the Property by the applicant is different than what the applicant states its use will be. The applicant points out that the applicant's use of the Property had not commenced when the respondent Rocco Cerminara refused to process the applicant's application for a building permit. The applicant submits that the Act was not intended as a tool for the exercise of land use control measures such as zoning by-laws prior to the commencement of use.

[para24] The applicant's second position is that if the chief building official is entitled to make a determination as to conformity of use with the Zoning By-law prior to the commencement of that use, the applicant's intended use is a permitted use under the Zoning By-law, and specifically the residents of the Property are operating as a single and independent housekeeping unit inasmuch as the entire dwelling is available to all residents, the residents are responsible for the care and maintenance of the Property inside and outside, the residents are responsible for all housekeeping functions and the activities of the residents are established through the norms of the residents.

[para25] The applicant submits that the Property is not a lodging house because the rooms are not available to the public for rent, only members of the applicant may reside in the Property, the residents may use the entire Property and the rent will be based on the expenses to maintain and operate the Property.

Respondents' Position

[para26] The respondents' position is that the respondent Rocco Cerminara as the chief building official can consider the intended use of the Property in making a determination pursuant to s. 8 of the Act. The respondents further note that pursuant to s. 25(4) of the Act this court may also consider the intended use of the Property and the submissions made on this application to determine whether or not a building permit should issue.

[para27] Secondly, the respondents' position is that the proposed use of the Property is consistent with the definition of "lodging house, class 2" in the Zoning By-law and is inconsistent with the use of the Property as a single and independent housekeeping establishment when operated by a

fraternity. The respondents submit that a dwelling occupied by members of a fraternity does not constitute an independent household, and the housekeeping establishment proposed by the applicant is not independent of the fraternity corporation and fraternity membership.

Disposition

Issue #1 - Can the chief building official exercising his statutory duty pursuant to the Building Code Act determine non-conformity of use with a zoning by-law prior to commencement of that use?

[para28] In my view, the respondent Rocco Cerminara, the chief building official, was entitled to consider the intended use of the property in exercising his statutory authority under s. 8(2) of the Act.

[para29] Saunders J. in Axelrod v. City of Toronto supra came to the same conclusion when he noted on page 149:

> It would be irrational to hold that [the chief building official is precluded from considering zoning by-law compliance on a building permit application]. Such a holding would mean that he could not refuse to issue a permit for a factory in a residential zone if the Building Code and all other applicable laws were complied with.

In Axelrod, as on this application, there is no issue as to how the applicant intends to use the property. The contentious issue is whether the intended use is in compliance with the zoning by-law.

[para30] Similarly, in Kochendorfer v. Brantford (Twp.) (1986), 38 M.P.L.R. 138 (Dist. Ct.), the issue was whether the chief building official's rejection of an application for a building permit on the grounds that the proposed use was not that of a group home was valid. The contentious issue on the appeal before Leach J. in that case was whether or not the proposed use by the applicant was as a group home within the definition of the relevant by-law.

[para31] In my view, the identical process is being undertaken on this application with exactly the same type of contentious issue as was before the court in Axelrod and Kochendorfer.

[para32] It is necessary, therefore, to consider the second issue raised by the applicant.

Issue #2 - Is the Applicant's intended use of the Property a permitted use under the Zoning By-law?

[para33] The issue on this application is whether the Property is a dwelling unit within the definition set forth in the Zoning By-law -- that is, is the Property intended to be used and capable of being used as a single and independent housing establishment. There is no definition of those terms in the Zoning By-law and they must be given their ordinary, grammatical meaning.

[para34] According to the evidence from Mr. Frosst's cross-examination on September 8, 1994, the housekeeping establishment which would use and occupy the Property has the following characteristics:

- Members of the fraternity first determine who may be admitted to membership in the fraternity.

- Certain people admitted to membership will reside in the Property -- normally it is just a matter of saying who needs and who wants to join in this group ... it is usually a situation of who needs accommodation and residence.

- No one other than members of the fraternity will reside in the Property.

- The Property will be rented to a group of up to 11 members of the fraternity.

- The break-even point to cover the operating costs is

nine residents based on each resident paying $350 per month.

- If one person discontinues his residence in the Property before the lease expires, he remains responsible for paying $350 per month for the balance of the term of the lease.

- The residents are responsible for maintaining the Property.

- The applicant as the lessor of the Property does not have any rules that apply to the conduct of the occupants of the Property other than the terms of the lease.

- There are no activities that the members of the fraternity engage in jointly that characterizes them as a fraternity.

- An occupant may choose not to associate with other members of the fraternity and still reside in the Property -- they need not conform to certain

  standards or certain behaviours in order to reside in the Property.

[para35] The Court of Appeal in R. v. Brown Camps Ltd., [1969] 2 O.R. 461 (C.A.) considered a by-law in which "family" was defined to include persons who do not have any consanguineous or marital or other relationship save that they reside "as a housekeeping unit". The specific definition under consideration was as follows:

> "family" shall mean one or more persons living as a single housekeeping unit in a dwelling, and they include domestic servants and not more than two roomers or boarders.

[para36] In my view, a by-law with this definition would not offend s. 35 of the Planning Act. Therefore, the conclusions of the court in the Brown Camps decision are helpful to the interpretation of this Zoning By-law. The court held in Brown Camps at p. 467 that:

> ... in order to create a housekeeping unit, otherwise than from persons related by consanguinity or marriage,
>
> the element of personal election to enter into the unit is obviously an essential.

[para37] In Brown Camps four children or adolescents were residing in the premises and would be cared for by staff members of the respondent. The court concluded that the occupancy of the children of the premises only by the will and at the whim of the respondent corporation lacked the necessary element of active personal election to form a housekeeping unit and was therefore not a permissible use of property pursuant to the by-law in issue.

[para38] Under the Zoning By-law, in this case the requirement of personal election or independence is clearer than in the by-law considered in Brown Camps. In my view, the intended use of the Property by the applicant will not constitute an independent household. To be a tenant of the Property a person must be admitted to membership in the fraternity. Therefore, the housekeeping establishment created by the lease to a group of individuals is not independent from the fraternity. Members of the fraternity make the decision as to whether someone may join the fraternity. The fraternity then decides those individuals who may reside in the Property. Even though those individuals who reside in the Property are responsible for maintaining the Property, the housekeeping arrangements are not independent from the fraternity. The most fundamental aspect of the dependence is the fact that the fraternity has determined what the operating expenses for the housekeeping establishment will be, what each occupant's share of those expenses will be, regardless of the number of occupants, and if the contributions from the occupants are not sufficient to meet the operating expenses, then the occupants will not necessarily assume the responsibility of making up the deficiency. The applicant would look for ways of trying to make up the deficiency.

[para39] In addition, the use of the Property by the applicant does not involve the element of singleness. Mr. Frosst indicated in his cross-examination on his affidavit that the members of the fraternity family would do certain activities in common. However, the occupants of the Property do not have to conform to certain standards or certain behaviours or associate with members of the fraternity in order to continue to reside in the Property. With these arrangements there will not be a single housekeeping establishment.

[para40] Because the living arrangements of the occupants of the Property will be neither a single housekeeping establishment nor an independent housekeeping establishment for the reasons noted, the living arrangements will not have the characteristics of a housekeeping unit permitted within the definition of dwelling unit set out in the Zoning By-law.

[para41] This interpretation of the Zoning By-law is clearly not based on whether the residents of the property are related. Therefore the By-law is clearly not ultra vires and contrary to s. 35 of the Planning Act.

Order Granted

[para42] The decision of the respondent Rocco Cerminara not to process the applicant's application for a building permit is affirmed. The application is therefore dismissed with costs to the respondents in an amount to be assessed on a party and party basis.

Phi Delta Beta of London Inc. v. London (City) Chief Building Official

Between
Phi Delta Beta of London Incorporated, appellant/applicant,
and
Rocco Cerminara as Chief Building Official for the City of London and the Corporation of the City of London, respondents/respondents

[1996] O.J. No. 5119
Doc. London 523/95

Ontario Court of Justice (General Division)
Divisional Court
Smith A.C.J.O.C., Haines and Rosenberg JJ.
April 17, 1996.

Counsel:
Alan R. Patton, for the applicant.
No counsel mentioned for the respondents.

The judgment of the court was delivered by

[para1] SMITH A.C.J.O.C.:-- The appellant argued that the whole house is occupied as a "single and independent housekeeping establishment." The appellant's evidence establishes that "each occupant - will be a tenant to Phi Delta." As a tenant if he fails to pay his rent he will be subject to eviction by the landlord. Accordingly, the whole house is not occupied or used as a "single and independent housekeeping establishment". The appeal is dismissed. Costs to the Respondent (Respondents in appeal) fixed at $2,000.

R.E. Shibley, Q.C. and P.P. Healey, for the respondent.

Reasons for judgment were delivered by Southey J., concurred in by Gray J. Separate reasons were delivered by

Saunders J.

[para1] SOUTHEY J.:-- The by-law was passed by a newly-elected council. The proper development of the lands to which it applies is of great public importance because it affects the public enjoyment of Toronto's waterfront.

[para2] I am not satisfied that Council acted in bad faith or for an improper purpose in enacting the by-law, or that it was discriminatory or unreasonable such that it ought to be quashed by this Court. Nor can I see any merit in the 3rd or 4th issues raised by Mr. McQuaid in his factum. Issue 3 is:

> "Whether the Planning Act, 1983 permits more than one interim control by-law to be enacted at the same time governing the same land but for different purposes?"

[para3] Issue 4 is:

> "Whether the Planning Act, 1983 permits the area governed by an interim control by-law to be increased?"

[para4] The effective period for an interim control by-law cannot be extended beyond 2 years from the date of its original enactment, but I am unable to interpret s. 37 as restricting in other respects the extent to which an interim control by-law may be amended.

[para5] The final issue is whether this Court should order mandamus requiring issuance of a building permit. An application for such permit was made on August 4, 1988. The permit was refused in a letter dated January 30, 1989. We were informed that, by application dated February 9, 1989, the developer appealed to the District Court under s. 15 of the Building Code Act, R.S.O. 1980, c. 51 and asked for an order directing the issuance of a building permit. The same relief is now sought in this Court. Originally that relief was sought here only in the event that the interim control by-law was quashed. By an amendment to the notice of application made on April 12, 1989, the relief was requested, even if the by-law was not quashed.

[para6] In my judgment, we should not now direct the issuance of a building permit, because the developer's proposed condominium project is not a use permitted under the interim control by-law.

[para7] Mr. McQuaid argued that the developer's right to a permit crystallized on the date of his application for a permit. If the permit should have been issued in August 1988, the subsequent passage of the interim control by-law, he argued, is not a valid ground for now refusing the permit. He relied on s. 37(8) of the Planning Act, S.O. 1983, c. 1 which makes s. 34(9) applicable to an interim control by-law with necessary modifications. The relevant portion of s. 34(9) provides as follows:

> "(9) No by-law passed under this section applies,
>
> ...

(b) to prevent the erection or use for a purpose prohibited by the by-law of any building or structure for which a permit has been issued under section 5 of the Building Code Act, prior to the day of the passing of the by-law, so long as the building or structure when erected is used and continues to be used for the purpose for which it was erected and provided the permit has not been revoked under section 6 of the Building Code Act."

[para8] The subsection does not exempt the erection of buildings for which a permit ought to have been issued before the effective date of the zoning by-law, but only buildings for which a permit has in fact been issued. I do not consider the addition of the words "or ought to have been issued" to be a modification necessary in applying s. 34(9) to an interim control by-law.

[para9] In any event, I am not satisfied that the chief official was under a duty to issue the permit as matters stood in August 1988, because there had been no site plan approval at that time. As a general rule, a building permit should not be issued for a development in a site plan control area to which s. 40 of the Planning Act applies until site plan approval for the development has been obtained from council or the Municipal Board. Without such approval, the proposed building would contravene s. 40(4) of the Planning Act, and the permit should not be issued because of s. 6(1)(a) of the Building Code Act. This was the view of the District Court Judge referred to by Henry J. in 715113 Ontario Inc. v. Ottawa (City) (1987), 63 O.R. (2d) 102.

[para10] There are two decisions in which it was held that a building permit should have been issued, despite the lack of site plan approval: Re Dominion Stores Ltd. and Etobicoke (1982), 37 O.R. (2d) 661 and Re Revenue Properties Co. and Toronto (City) (1984), 26 M.P.L.R. 165. Both arose from extraordinary circumstances in which the municipality was not acting in good faith or was refusing developmental approval for an obviously unlawful reason. Having refused to quash the interim control by-law in this case as one improperly enacted, I am not prepared to hold that this is one of those extraordinary cases in which the building permit should have been issued despite the absence of site plan approval.

[para11] As announced at the conclusion of argument, the application by Quay West is dismissed. As success has been divided in the matters heard together by this Court, there will be no order as to costs.

SOUTHEY J.
GRAY J. -- I agree.

[para12] SAUNDERS J. (concurring):-- I agree with the result. I also agree with the reasons given except on the issue of whether there should be a mandamus order requiring the issuance of a building permit. In my opinion, such an order ought not to issue because of the existence of the interim control by-law and the provisions of s. 34(9)(b) of the Planning Act. I do not consider it necessary to decide whether the chief official was under a duty in August, 1988 to issue the permit despite the absence of a site plan agreement. It may be that such duty did exist on the basis of the reasoning in the Dominion Stores case.

SAUNDERS J.

R. v. King Insulation Services Ltd.

Between
Her Majesty the Queen, on the Information of Howard MacMillan, respondent, and
King Insulation Services Ltd., appellant

[1981] O.J. No. 401

Ontario Supreme Court - High Court of Justice
Divisional Court
O'Leary, Montgomery, Eberle JJ.
Oral judgment: January 14, 1981.
Reasons: February 5, 1981.
(3 pp.)

Counsel:
J.L. McDougall, for the appellant.
D.R. Vickers, for the respondent.

The judgment of the Court was delivered by

[para1] O'LEARY J. (orally):-- This is an application for leave to appeal and, if leave be granted, an appeal from the decision of His Honour Judge Warrender of the County Court of the County of Wentworth made on April 22, 1980 wherein he allowed an appeal from the decision of Justice of the Peace Patterson acquitting the appellant, and entered a conviction against the appellant on a charge against it that "being the constructor at premises municipally known as 372 Charlton Avenue West in the City of Hamilton, did unlawfully carry out the work of construction without a permit therefore having been issued by the Chief Official contrary to s. 5(1) of the Ontario Building Code Act, 1974, as amended.

[para2] While an argument has been presented to us that the proper course that Judge Warrender should have adopted was to send the matter back to the learned Justice of the Peace or to another Justice of the Peace for a new trial because the appellant had not adduced evidence before the Justice of the Peace because the matter before the Justice of the Peace had in effect been disposed of by a dismissal at the end of the Crown's case,we feel that we do not have to send the matter back for a new trial. We are prepared to deal with the appeal on the basis that the evidence would disclose that the installation of insulation by the appellant would not have caused any material structural alteration to the building, in this case, the home, that was involved. If we proceed on that basis we do not see how the appellant can be prejudiced by having failed to adduce evidence. By adopting that course we will at least have assisted the parties by determining the main issue that is before us and that is whether or not the installation of insulation into the four walls of a home constitutes construction within the meaning of that word as it is defined in the Ontario Building Code Act, 1974. Section 1(e) of the Ontario Building Code Act, 1974 defines "construction" as including a "material alteration of a building". In our view, the installation of insulation to the extent involved in the case before us constitutes a material alteration to a building. While we proceed on the basis that it would not have constituted any structural change to the building, any more than would have the installation of electric wiring into a building previously without electric wiring, yet like the installation of electric wiring, we believe that the installation of insulation creates a material alteration in a building. It is our view that a building that has been insulated, has material advantages over one that has not had such insulation installed just as a building that has been wired for electricity has material advantages over one that has not been wired.

[para3] We therefore agree with the decision of Judge Warrender that the installation of insulation into the four walls of a home does constitute a material alteration to that building and falls therefore within the meaning of "construction" as defined in s. 1(3) of The Ontario Building Code Act, 1974 and accordingly, that the failure to have obtained the permit required by s. 5 of the Act is a violation of that section and that it was proper for him to have registered a conviction. So far as leave to appeal is concerned, we think it proper that leave be granted and it is granted but for the reasons given the appeal is dismissed.

EBERLE J.

R. v. Springman

Philip Springman, Appellant; and
Her Majesty the Queen, Respondent.

[1964] S.C.R. 267

Supreme Court of Canada
1964: January 31 / 1964: March 23.
Present: Taschereau C.J. and Fauteux, Ritchie, Hall and Spence JJ.
ON APPEAL FROM THE COURT OF APPEAL FOR SASKATCHEWAN

APPEAL from a judgment of the Court of Appeal for Saskatchewan [(1963-64), 45 W.W.R. 501.], affirming the conviction of the appellant for arson. Appeal allowed.

George J.D. Taylor, Q.C., and Calvin F. Tallis, for the appellant.
S. Kujawa, for the respondent.

Solicitors for the appellant: Goldenberg, Taylor, Tallis & Goldenberg, Saskatoon.
Solicitor for the respondent: S. Kujawa, Regina.

THE CHIEF JUSTICE:-- The appellant Philip Springman, formerly of Nipawin, Saskatchewan, now of Vancouver, B.C., was on April 2, 1963, convicted by His Honour Judge Forbes at Regina on the following charge:

> That he, the said Philip Springman, did on or about the 16th day of September, 1961, in the Davin District, Saskatchewan, without legal justification or excuse and without colour of right, unlawfully and willfully set fire to the Nipawin Construction Company Limited camp, and did thereby commit arson, contrary to section 374(1)(a) of the Criminal Code.

The appellant was sentenced to imprisonment for a term of two years. The appellant appealed to the Court of Appeal against both the conviction and the sentence. Both appeals were dismissed.

The charge was laid under s. 374(1)(a) of the Criminal Code which says that every one who wilfully sets fire to a building or structure, whether completed or not, is guilty of an indictable offence and is liable to imprisonment for 14 years.

The evidence reveals that the Nipawin Construction Company Limited, owned by the appellant and his wife, had a substantial amount of equipment and that, during the summer of 1961, this equipment was situated near Davin. The company was engaged in supplying sand, gravel and crushed rock, and the equipment that was burnt was being made use of in this operation. It consisted of a crusher, loaders, trucks, bunkhouses and work-shops. It is the contention of the respondent that all this equipment was within the meaning of s. 374(1)(a) a by power units. It is therefore contended on behalf of the appellant that if he did set fire to this equipment, he should have been prosecuted under s. 374(2) of the Criminal Code which is in the following terms:

> (2) Every one who wilfully and for a fraudulent purpose sets fire to personal property not mentioned in subsection (1) is guilty of an indictable offence and is liable to imprisonment for five years.

The maximum punishment if the appellant is found guilty under s. 374(1)(a) is 14 years, and 5 years if convicted under s. 374(2).

Parliament has carefully divided s. 374 in two groups, and I am satisfied that subs. (a) of s. 374 "a building or structure" covers immovable property and that the balance of subs. (1) also covers property which has a more considerable value than all that is contained in the residuary clause s. 374(2) (the whole subject to s. 375).

In the present case, as previously stated, the equipment to which the fire was set could be easily moved from one place

to another. I think that fundamentally this equipment was

movable property.

This I believe is the law in the common law provinces and in the province of Quebec. In the province of Quebec it has been decided by this Court in Dulac v. Nadeau [[1953] 1 S.C.R. 164 at 204.]:

> Mais il y a plus. En effet, et quant au bâtiment de Nadeau,--et on pourrait ajouter, celui de Morin,--il s'agit clairement d'immeubles par nature suivant les dispositions de l'article 376 C.C. Sans doute, on peut bien, ainsi qu'on le fait remarquer dans Colin et Capitant, Cours Élémentaire de Droit Civil français, XIè Édition, tome 1, No 922, ou dans les termes de Planiol et Ripert, Traité Pratique de Droit Civil Français (1926) tome 3, 75, rappeler que "les constructions volantes établies à la surface du sol pour quelques jours et réédifiées ailleurs, de place en place, telles que les baraques de foire, ne sont pas des immeubles parce que ces édifices légers n'ont pas de place fixe." Mais les deux auteurs reconnaissent, aux mêmes pages, le principe que "pour qu'une construction soit immeuble, il n'est pas nécessaire qu'elle soit élevée à perpétuité, que les bâtiments construits pour une exposition sont immeubles quoiqu'ils soient destinés à être démolis."

It will be easily realized by the reading of the opinions of these authors that the French law is quite similar to the English law, and that an immovable is something that is not to be forced from its place. It has the characteristics of things real or land, although constructions built on the surface of the soil for some length of time, and later rebuilt somewhere else, from place to place, are not immovables because these buildings have no fixed or permanent foundations.

I therefore agree with the reasons of my colleague Mr. Justice Hall, and I would allow the appeal and quash the conviction.

The judgment of Fauteux, Ritchie, Hall and Spence JJ. was delivered by

HALL J.:-- The facts in connection with this appeal are set out fully in the judgment of Culliton C.J.S. and shortly are as follows: The accused was charged that he, the said Philip Springman, did on or about the 16th day of September, 1961, in the Davin District, Saskatchewan, without legal justification or excuse, and without colour of right, unlawfully and wilfully set fire to the Nipawin Construction Company Limited camp and did thereby commit arson contrary to s. 374(1)(a) of the Criminal Code. The accused was first tried by a judge and jury at which trial the jury were unable to agree upon a verdict. He then elected to be tried by a judge without a jury and was tried by His Honour Judge Forbes who found him guilty and sentenced him to a term of two years in a penitentiary.

The Nipawin Construction Company was a limited company, all of the shares of which had been held by the appellant Springman and his wife. The company owned a large amount of equipment, and, immediately prior to the fire on September 16, 1961, had been engaged in the production of crushed rock under a contract with Concrete Rock Products Limited of Regina. The operation was being carried out near Davin, Saskatchewan, and as production was too slow at that point, the appellant had given instructions to his foreman, Charles Wingert, to line up the camp for a move. The camp was lined up for movement so that everything could be moved quickly, and, while stationary, could be served by the central propane unit which supplied heat to the bunkhouses and electricity from the portable light plant. The machinery and equipment consisted of a propane truck, welding truck, a number of other trucks and power units, a house trailer with a half-ton truck, a rock crusher, a front end loader, a light plant, a cook car, two bunkhouses and a combined bunkhouse and office. It was admitted that the bunkhouses, cook car and house trailer were all mounted on wheels for the purpose of ready movement from place to place wherever rock crushing operations were to be carried on.

The fire which destroyed this machinery and equipment was set by Charles Wingert, the foreman, and Peter Mihailuk, an

employee. The case for the Crown was that the appellant counselled Mihailuk to set the fire. Mihailuk gave evidence that he had been induced by the appellant to set the fire and he was to receive a new truck or car and $4,000 or $5,000 for so doing.

Following his conviction by His Honour Judge Forbes, the appellant appealed to the Court of Appeal [(1963-64), 45 W.W.R. 501.)] for Saskatchewan from both conviction and sentence. The grounds of appeal were as follows:

> (1) That on the facts, including the facts as to source and credibility of the evidence of the commission of the crime and the connection of the accused therewith, the verdict is unreasonable, or cannot be supported, and therefore ought to be quashed;
>
> (2) That as a matter of law there is no evidence of any offence against Section 374(1)(a) of the Criminal Code, since the "camp" referred to in the charge (being mobile or portable equipment consisting of a gravel crusher, trucks, trailers, bunkhouses, etc. . . . is not within the meaning of the words "a building or structure" appearing in the said Section 374(1)(a).

The Court of Appeal for Saskatchewan unanimously rejected the appeal under ground 1, holding that the learned trial judge's findings on the evidence should not be disturbed.

The Court, however, (Maguire J.A. dissenting) while accepting the argument that the trucks and power units, the rock crusher, the front end loader and the light plant were not buildings or structures within the meaning of s. 374(1)(a) of the Criminal Code, held that the two bunkhouses and the combined bunkhouse and office were buildings or structures within the meaning of the said section.

Maguire J.A. in his dissenting judgment held that, in addition to the items which the majority found were not "buildings or structures whether completed or not", the two bunkhouses and the combined bunkhouse and office were also not "buildings or structures whether completed or not" within the meaning of the said section on the grounds that:

> . . . being designed and constructed upon a wheeled chassis, for the purpose of ready movement from place to place, and the temporary use in each side place, do not fall within "a building or structure".

The appeal to this Court is limited to the question as to whether the two bunkhouses and the combined bunkhouse and office were "buildings or structures" within the meaning of s. 374(1)(a) of the Criminal Code.

With respect, I think that Maguire J.A. was right in holding that the two bunkhouses and the combined bunkhouse and office were not buildings or structures within the meaning of the section in question.

I accept that the term "structure" is not be construed ejusdem generis with the term "building": London County Council v. Tann [[1954] 1 All E.R. 389 at 390.]. However, both "buildings" and "structures" do possess certain essential characteristics, some of which are common to both.

The case of London County Council v. Pearce [[1892] 2 Q.B. 109.] appears to be in point. There the question whether a builders' office constructed of wood and roofed with zinc, and placed upon iron wheels for the purpose of enabling it to be wheeled about to any place where building operations were being carried on, was, when not required at any such place, kept in the builder's own yard and used as a pay-office for his men was a "wooden structure or erection of a moveable or temporary character" within the meaning of s. 13 of the Metropolis Management and Building Acts Amendment Act, 1882. Pollock B. said at p. 111:

> No special meaning can be given to the word
>
> "structure" or the word "erection" as something distinct from a building; and it cannot be supposed that the legislature intended that everything which could in any sense be called a wooden building of a tem

erections, but could not possibly be held to come within the section, such as a dog-kennel or a van for removing furniture, which would be a much larger and heavier thing than such a pay-office as that in question. There are, therefore, many considerations which ought legitimately to influence the magistrate in coming to his decision. I think that in the present case the learned magistrate was perfectly right in holding that this pay-office was a part of a builder's plant; it is a thing which is moved from one set of buildings to another as occasion requires, and when not in use in the ordinary way it is at rest upon the builder's premises, and is used for the convenience of paying his men, which seems a very reasonable proceeding.

and Vaughn Williams J. said at pp. 112-3:

The magistrate was of opinion that prim+a facie a carriage on wheels was not a wooden structure or erection within the meaning of the section. I do not mean to say that a man is to be allowed to evade the Act of Parliament by building on wheels what he intends to be a wooden structure, and then saying that it is not within the Act because it is on wheels. In all cases we must be guided by what I may call the intentions of the structure, and must inquire with what intention it was made. This seems clear from the case of Hall v. Smallpiece, 59 L.J. (M.C.) 97, where it was held that a steam roundabout was not a wooden structure or erection within the meaning of the Act. Why was that held? Not because a thing on wheels cannot be within the section, but because when one looks into the intention with which the thing was made, it becomes plain that it was made for the purpose of locomotion and for erection in any place where it might be required.

In Cardiff Rating Authority v. Guest Keen, Limited [[1949] 1 All E.R. 27 at 31, 1 K.B. 385.], Denning L.J. (as he then was), in discussing what is a "building or structure or in the nature of a structure" said at p. 31:

A structure is something which is constructed, but not everything which is constructed is a structure. A ship, for instance, is constructed, but it is not a structure. A structure is something of substantial size which is built up from component parts and intended to remain permanently on a permanent foundation, but it is still a structure even though some of its parts may be moveable, as, for instance, about a pivot. Thus, a windmill or a turntable is a structure. A thing which is not permanently in one place is not a structure, but it may be "in the nature of a structure" if it has a permanent site and has all the qualities of a structure, save that it is on occasion moved on or from its site.

We are not concerned here with anything "that is in the nature of a structure". We have to deal with items that are either "buildings" or "structures".

My view that the items in question in this appeal are neither "buildings" nor "structures" is strengthened by the judgment of the Manitoba Court of Appeal in Rex v. Arpin [[1939] 1 W.W.R. 564, 47 Man. R. 40, 72 C.C.C. 49, 50 C.R.T.C. 116, 2 D.L.R. 584.], in which it was held that a railway freight car was not a "building" within the meaning of s. 461 of the Criminal Code of Canada, and by the judgment of the Supreme Court of Nova Scotia en banc in The King v. Levy and Gray [(1919), 53 N.S.R. 229 at 232, 31 C.C.C. 19.], in which it was held that the buffet of a parlour car on a railway was not a "building" within s. 461 of the Code. In this latter case Chisholm J. (as he then was) said at p. 232:

I have come to the conclusion that the buffet of a parlour car is not a building within the meaning of section 461 of the Criminal Code. A building is defined by Bouvier (p. 400) as "an edifice", erected by art and fixed upon or over the soil, composed of brick, marble, wood or other proper substance, connected together, and designed for use in the position in which it is so fixed.

The appeal should, therefore, be allowed and the conviction quashed.

Appeal allowed and conviction quashed.

Revenue Properties Co. v. Toronto (City)

Between
Revenue Properties Co. Ltd., applicant, and
Corporation of the City of Toronto and Michael Nixon, Chief Building Official, respondent

[1984] O.J. No. 2378
Suit No. M91946/84

Ontario County Court - Judicial District of York
Matlow Co. Ct. J.
March 5, 1984

Counsel:
J. Keefe, for the applicant.
A. Weretelnyk, for the respondents.

[para1] MATLOW CO. CT. J.:-- This case arises because of the conflict between the asserted right of the applicant to proceed with its proposed conversion of part of The Colonnade, a commercial and residential property located on Bloor Street in Toronto, to a hotel and the perception, at the municipal political level, that the proposed conversion is undesirable because it will result in the elimination of desirable residential rental units.

[para2] It comes before me as a "hearing and appeal" pursuant to s. 15 of the Building Code Act, R.S.O. 1980, c. 51 by which the applicant seeks an order for the issuance of a building permit for the proposed conversion which the "chief official" of the municipality has effectively, if not literally, refused to issue.

[para3] The authority that I have to grant relief is found in s. 15(3) of the Building Code Act which reads as follows:

> "15.(3) Where an application is made to a judge for a hearing under subsection (1), the judge shall appoint a time for and hold the hearing and may rescind or affirm the order or decision of the inspector or chief official or take such action as the judge considers the inspector or chief official ought to take in accordance with this Act and the regulations, and for such purposes the judge may substitute his opinion for that of the inspector or chief official."

[para4] In my view, the evidence establishes that the municipality, notwithstanding its motivation, has treated the applicant unfairly and with total disregard for its legal rights. It is obvious that the municipality has recognized that it is powerless, in law, to block the proposed conversion. As a result, it has engaged the applicant in a war of attrition and has placed one obstacle after another in its way. Because many of the tenants in the Colonnade have already vacated their apartments, the applicant's rental income must have diminished in recent months and it may be that the municipality feels that the applicant is vulnerable to the tactics it has engaged in.

[para5] For example, the municipality has refused to consider the applicant's application for site plan approval; it has refused even to examine the applicant's application for a building permit to determine whether it complies with the Building Code Act; it has enacted, after the applicant applied for a building permit, a zoning by-law amendment purporting to prohibit the proposed conversion. That by-law amendment has been quashed by an order made in the Supreme Court of Ontario and an appeal by the municipality from that order is now pending. The municipality now takes the position that the applicant is not entitled to a building permit until site plan approval has been given. Yet the municipality refused even to consider the application for site plan approval until the appeal from the order quashing the zoning by-law amendment is finally determined.

[para6] In the submission of counsel for the municipality, if the applicant wishes to contest the decision of the municipality to defer consideration of the application for site plan approval, it should apply for relief to the Ontario Municipal Board pursuant to the provisions of the Planning Act, R.S.O. 1980, c. 379.

[para7] I am satisfied that there are prima facie grounds

for granting relief to the applicant and that the delay in making this application is reasonably explained by the conduct of the municipality.

[para8] I am satisfied that this application was commenced within only a few days after the municipality, on December 7, 1983, instituted an appeal from the order quashing the zoning by-law amendment, thereby making it clear that it did not intend to deal fairly and in good faith with the applicant. Accordingly, the time for making this application is extended to and including the time when it was commenced.

[para9] In my view, By-law 627-83, the by-law amendment referred to above, should not bar the applicant's entitlement to relief. Although I cannot predict with certainty the outcome of the municipality's appeal from the order quashing the by-law, I consider the reasons for judgment of Callaghan J. for quashing the by-law so convincingly correct that I must compare the slim likelihood of success on the appeal and the consequences of success against the damage that the applicant would undoubtedly suffer if it is delayed now in taking one more step towards the achievement of the proposed conversion in determining the equities in this case: see R. v. Barrie; Ex parte Bernick, [1970] 1 O.R. 200 especially at p. 206 and Re Woodglen & Co. and North York, (1983), 43 O.R. (2d) 289.

[para10] As well, I cannot imagine that the by-law, even if the appeal is allowed, would ever be approved by the Ontario Municipal Board: see Ottawa v. Boyd Bldrs. Ltd., [1965] S.C.R. 408.

[para11] I recognize that, if a building permit is issued and if the applicant obtains site plan approval and proceeds with the proposed conversion and then the by-law is ultimately resurrected and approved, the applicant will still be prohibited from using the subject property as a hotel by virtue of the prohibition contained in the Planning Act. However, that is a risk that the applicant must assume if it chooses to proceed with the proposed conversion. For the reasons expressed above, I consider this risk to be minute.

[para12] As well, I am aware of the amendment to the Planning Act now found in s. 34(9)(b), enacted by S.O. 1983, c. 1, requiring the actual issuance of a building permit as opposed to only the approval of plans to preserve the right to construct a building for a non-conforming use. However, because of my view about the legality of By-law 627-83, I choose, nevertheless, to grant the relief described below.

[para13] I also refuse to adjourn this proceeding pending the final determination of the legality of By-law 627-83, because the municipality has failed to meet the test set out in the Boyd Builders case. At the time when the applicant made its application for a building permit, the municipality clearly had not yet created a clear plan for the rezoning of the subject property.

[para14] I have also come to the conclusion that site plan approval by the municipal council is not an absolute precondition for the issuance of a building permit. Neither counsel was able to refer me to any decided case in which this issue was determined. This interpretation of the legislation is in accordance with the plain meaning of the words used in the statutes and there is nothing in the legislation that leads me to a contrary view regardless of what the prevailing practice may be.

[para15] Nor, in my opinion, would the issuance of a building permit prior to the granting of site plan approval result in any contravention of the Building Code Act. In particular, I do not consider that the "proposed construction", in the circumstances of this case, would "contravene any other applicable law" as those words are used in s. 6(1)(a) of the Building Code Act merely because site plan approval has not yet been given. The actual construction, however, if it were to proceed without prior site plan approval would be in violation of the Planning Act. Accordingly, the issuance of a building permit would not be contrary to s. 6(1)(a) of the Building Code Act.

[para16] I find support for my interpretation of the legislation in the repeal of the original predecessor of the present s. 40 of the Planning Act, which was originally s. 35a of the Planning Act, enacted by S.O. 1973, c. 168. That

provision, in s. 35a(4)(c) authorized the inclusion, in a development review by-law, of a provision prohibiting the issuance of a building permit until site plan approval is given.

[para17] In subsequent revisions to the legislation, this provision was repealed and replaced by a new provision merely prohibiting the undertaking of any development in a designated area without prior site plan approval: see S.O. 1979, c. 59, s. 1; R.S.O. 1980, c. 379, s. 40(4); and S.O. 1983, c. 1, s. 40(4). It would appear, therefore, that the Legislature expressly eliminated the authority for prohibiting the issuance of a building permit without prior site plan approval.

[para18] As well, because of s. 34(9)(b) of the Planning Act referred to above, certain rights now crystallize only when a building permit is actually issued. This increased significance of the actual issuance of a building permit lends weight to my interpretation of the legislation. In other words, the words of the legislation should not be strained to lead to an interpretation resulting in unauthorized delays in the issuance of building permits.

[para19] Although it may be desirable and more expeditious that site plan approval be obtained before the issuance of a building permit in order to eliminate the need for further amendments to the building permit that might become necessary to satisfy the conditions of the granting of site plan approval, this potential difficulty does not persuade me that the legislation requires site plan approval as a pre-condition for the issuance of a building permit.

[para20] In Dominion Stores Ltd. v. Etobicoke (1982), 37 O.R. (2d) 661, this same issue was raised but expressly not decided by the Divisional Court. Yet, in the result reached, an order was made requiring the issuance of a building permit before site plan approval was granted because of the circumstances of that case. There is no reason why the same type of discretion used in that case should not be used in this one.

[para21] For all of these reasons, an order is to go as follows:

(1) extending the time for the bringing of this application as specified above;

(2) requiring the respondent, Nixon, upon the presentation by the applicant of a complete and proper application for a building permit for the proposed conversion, to accept and review the application and, within thirty (30) days thereafter, to issue a building permit unless the refusal can be justified under s. 6 of the Building Code Act and in accordance with these reasons. If this thirty (30) day limit is too short, an application may be made before me for an order extending the time;

(3) awarding the cost of this application to the applicant.

[para22] If the respondent, Nixon, refuses to issue a building permit within the time allowed and if the grounds for the refusal are disputed by the applicant, the applicant may renew this application for the specific relief claimed in the notice of motion upon notice to the respondents and upon further material. For that purpose this application is adjourned before me sine die.

Roman Catholic Episcopal Corporation for the Diocese of Peterborough, in Ontario, Canada v. Corporation of the Town of Cobourg et al.

[Indexed as: Roman Catholic Episcopal Corp. for the Diocese of Peterborough v. Cobourg (Town)]

40 O.R. (3d) 187
[1998] O.J. No. 1883
Court File No. 000401/98

Ontario Court (General Division)
Swinton J.
May 7, 1998

APPEAL pursuant to s. 25(1) of the Building Code Act, S.O. 1992, c. 23.

William G. MacDonald, for appellant.
David W. DeMille, for respondents.

SWINTON J.: -- The Roman Catholic Episcopal Corporation for the Diocese of Peterborough appeals pursuant to s. 25(1) of the Building Code Act, 1992, S.O. 1992, c. 23 from a decision of the Chief Building Official for the Town of Cobourg, Frank Lukes, dated March 25, 1998. On that day, Mr. Lukes revoked a demolition permit issued to the appellant on December 29, 1997 for the demolition of the Rectory of St. Michael's Church in Cobourg. Mr. Lukes stated in a letter that the permit had been issued in error because he had subsequently learned that the demolition was contrary to a Heritage Easement Agreement registered on the property, which had recently been brought to his attention. The Diocese claims that the Chief Building Official had no authority to revoke the permit for a number of reasons, including the form of the notice of revocation, the inapplicability of the Heritage Easement Agreement, and estoppel.

The Legal Context

Section 8(1) of the Building Code Act prohibits a person from constructing or demolishing a building in a municipality unless a permit has been issued therefor by the chief building official. Section 8(2) provides:

> 8(2) The chief building official shall issue a permit under subsection (1) unless,
>
> (a) the proposed building, construction or demolition will contravene this Act or the building code or any other applicable law . . .

"Applicable law" has been defined by O. Reg. 403/97 as follows:

> Applicable law means, for the purposes of Section 8 of the Act, any general or special Act, and all regulations and by-laws enacted thereunder, which prohibit the proposed construction or demolition of the building unless the Act, regulation or by-law is complied with.

A permit may be revoked by the chief building official, pursuant to s. 8(10) of the Act:

> (a) if it was issued on mistaken, false or incorrect information;
>
> . . . . .
>
> (d) if it was issued in error . . .

The Chief Building Official here initially relied on s. 8(10)(d) and later added s. 8(10)(a).

To understand the issues here, it is necessary to begin with the Ontario Heritage Act, R.S.O. 1990, c. O. 18. The purpose of that Act was described by the Supreme Court of Canada in St. Peter's Evangelical Lutheran Church (Trustees of) v. Ottawa (City), [1982] 2 S.C.R. 616 at pp. 623-24, 140 D.L.R.(3d) 577 at p. 591:

> The Ontario Heritage Act was enacted to provide for the conservation, protection and preservation of the heritage of

> Ontario. There is no doubt that the Act provides for and the Legislature intended that municipalities, acting under the provisions of the Act, should have wide powers to interfere with individual property rights. It is equally evident, however, that the Legislature recognized that the preservation of Ontario's heritage should be accomplished at the cost of the community at large, not at the cost of the individual property owner, and certainly not in total disregard of the property owner's rights. It provided a procedure to govern the exercise of the municipal powers, but at the same time to protect the property owner within the scope of the Act and in accordance with its terms.

As noted, as well, by the Ontario Court of Appeal in Toronto College Street Centre Ltd. v. Toronto (City) (1986), 56 O.R. (2d) 522, 31 D.L.R. (4th) 402, the Act contains numerous procedural safeguards to protect the property owner (at p. 532).

Part IV deals with "conservation of buildings of historic or architectural value". Section 29 sets out a process for a municipality to follow when it wishes to designate a property as having historic or architectural value or interest. If objection is made to the designation, a hearing must be held by the Conservation Review Board, followed by a report, with recommendations. The municipal council may then choose to pass a by-law designating the property.

Once designation occurs, ss. 33 and 34 of the Act constrain the owner's rights to alter and demolish buildings on the property. Only s. 34 is of importance for purposes of this appeal. It provides that the owner of a designated property cannot demolish any building thereon without the consent of the municipality. The municipality has 90 days to come to a decision whether to give consent, and if it does not do so within that period, it is deemed to have consented to the demolition (s. 34(3)). If the municipality refuses consent, the demolition can be prohibited for up to 180 days (s. 34(2)(b)), and that period can be extended on consent (s. 34(3)). Once these time periods have elapsed, the owner can proceed with demolition in accordance with applicable laws, as set out in s. 34(4):

> 34(4) Despite subsection (1), where the period of 180 days prohibiting any work to demolish or remove any building or structure on a property under clause (2)(b) has expired and the owner has not agreed to an extension of such period, or where the extension of time agreed upon by the owner and the council under subsection (3) has expired, the owner may proceed to demolish or remove the building or structure on the property subject to any other Act or regulation thereunder.

Aside from the designation process in s. 29, s. 37 of the Act also provides for historical easement and covenant agreements. Because of its importance in this case, the terms of s. 37 are set out in full below.

> 37(1) Despite subsection 36(1), the council of a municipality after consultation with its local advisory committee, where one is established, may pass by-laws providing for the entering into of easements or covenants with owners of real property, or interests therein, for the conservation of buildings of historic or architectural value or interest.
>
> (2) Any easement or covenant entered into by a council of a municipality may be registered, against the real property affected, in the proper land registry office.
>
> (3) Where an easement or covenant is registered against real property under subsection (2), such easement or covenant shall run with the real property and the council of the municipality may enforce such easement or covenant, whether positive or negative in nature, against the owner or any subsequent owners of the real property, and the council of the municipality may enforce such easement or covenant even where it owns no other land which would be accommodated or benefited by such easement or covenant.
>
> (4) Any easement or covenant entered into by the council of the municipality under subsection (2) may be assigned to any person and such easement or covenant shall continue to run with the real property and the assignee may enforce the

easement or covenant as if it were the council of the municipality and it owned no other land which would be accommodated or benefited by such easement or covenant.

(5) Where there is a conflict between an easement or covenant entered into by a council of a municipality under subsection (1) and section 33 or 34, the easement or covenant shall prevail.

The Factual Background

The Rectory of St. Michael's Church is located on the appellant's property at 379 Division Street in Cobourg. Also found on the same property is the Church building. By-law 144-90 of the Corporation of the Town of Cobourg, passed December 10, 1990, designated the Church building as heritage property pursuant to s. 29 of the Ontario Heritage Act. The designation process requires that the by-law contain a statement of reasons for the proposed designation. Those set out in this by-law make reference only to the significance of the Church building.

Subsequent to that by-law, the Corporation of the Town of Cobourg and St. Michael's Roman Catholic Church entered into a Heritage Easement Agreement, as contemplated by s. 37 of the Ontario Heritage Act. The agreement, dated June 5, 1992, is an eight-page document, plus attachments. It is registered against the property and specifies a number of restrictions on the owner with respect to the repair, insurance, and demolition of the Church building. A careful reading of both the recitals of the agreement and its terms makes it clear that the main concern of the parties was the protection and preservation of the Church building. However, in Articles 1.7 and 1.8, the agreement also imposes restrictions on the owner with respect to the broader use of the property on which the Church building is located. Article 1.7, for example, prevents erection of signs, aerials and certain other items on the Church building or property without the approval of the municipality, while Article 1.8 forbids the owner to commit any act of waste. That article also forbids the owner to do a number of things, including granting easements or changing the topography or landscaping in certain ways, without the prior written approval of the municipality. Most importantly, for purposes of this appeal, Article 1.8(b) states that the owner must not "erect or remove or permit the erection or removal of any building, sign, fence or other structure of any type whatsoever" without prior written approval. According to Article 2.1, the municipality's approval, unless otherwise stated, shall not be unreasonably withheld:

Where any request for approval required under this Agreement is made, the determination of the Municipality may be based upon choice of materials, architectural design, historical authenticity, or any other grounds, not limited to purely aesthetic or historical grounds, but the Municipality's approval shall not be unreasonably withheld, unless otherwise stated.

In the years following the signing of this agreement, the Diocese purchased and renovated the Convent of the Sisters of St. Joseph for various uses. A debate then ensued about the future of the Rectory building -- specifically whether it should be moved, demolished or converted to other uses. In April 1996, the Town advised that it had received a recommendation from its Local Architectural Conservation Advisory Committee (LACAC) that St. Michael's Rectory should be designated as property of historical and architectural significance under the Ontario Heritage Act. The Diocese immediately expressed its opposition, but the Town Council proceeded to pass a motion directing that the property be designated. This led to a hearing by the Conservation and Review Board, which issued a decision dated September 19, 1996, recommending that the Rectory be designated.

On December 2, 1996, the Town Council passed By-law 58-96, which designated the Rectory under the Ontario Heritage Act. The Diocese then applied for a demolition permit on December 16, 1996, which the Town Council referred to the Local Architectural Conservation Advisory Committee for comment. Subsequently, on March 10, 1997, the Council denied its consent to the demolition, in accordance with s. 34(2) of the Act. This delayed demolition for 180 days, and during the following months, discussions were held about alternative uses for the Rectory building. On September 11, 1997, the Diocese agreed to

extend the time for obtaining a demolition permit for an additional 90 days to allow the Town further time to try to arrange for the preservation of the building.

The Diocese attempted to obtain a demolition permit on December 17, 1997, but was able to do so only after furnishing a legal opinion to the Town on the Bishop's authority to apply for the permit, and confirmation of the authority of the person seeking to pick up the permit. The permit was issued December 29, 1997. Mr. Lukes, the Chief Building Official, stated in an affidavit that he was not aware of the Heritage Easement Agreement at the time that the permit was granted. It was not until March 1998 that he became aware of the agreement and the requirement for municipal approval of the demolition.

After obtaining the permit, the Diocese entered into contracts for the demolition of the Rectory and work began. Interior fixtures, plaster walls, and asbestos had been removed, as well as mantelpieces, floor boards and base boards, before the demolition permit was revoked on March 25, 1998. This appeal then resulted.

Conclusions

The nature of the appeal

Section 25 of the Building Code Act grants a right of appeal to the Ontario Court (General Division) to a person aggrieved by a decision to revoke a building or demolition permit. The powers of the judge on an appeal are set out in s. 25(4) of the Act:

> 25(4) If an appeal is made under this section, the judge shall hold a hearing and may rescind or affirm the order or decision of the inspector or chief building official or take such action as the judge considers the inspector or chief building official ought to take in accordance with this Act and the regulations and, for such purpose, may substitute his or her opinion for that of the inspector or chief building official.

Southey J., speaking for the Divisional Court in Woodglen & Co. v. North York (City) (1984), 47 O.R. (2d) 614, 12 D.L.R. (4th) 146 (Div. Ct.), held that the judge's role in an appeal of this type is to determine whether the building official acted correctly (at p. 619):

> The duty of the judge under this subsection is to do what the judge considers the inspector or chief official ought to have done. The judge has no powers other than those which were possessed by the inspector or chief official, and has no discretion to act or defer action, if that discretion was not enjoyed by the inspector or chief official.

Whether the notice of revocation was a nullity

The appellant argued that the notice of the Chief Building Official revoking the demolition permit was a nullity because it failed to cite proper reasons for the revocation. Mr. Lukes' letter of March 25, 1998 stated that in light of the Heritage Easement Agreement of which he had become aware, the permit was revoked under "Sec. 10.(d) of the Building Code Act." In a letter dated March 30, 1998, he corrected that reference to s. 8(10)(d) of the Act, the provision allowing for revocation in the case of a permit issued in error. In a further letter of April 3, 1998, he invokes para. 1.8(b) of the Heritage Easement Agreement, the provision requiring the approval of the municipality for the removal of any building on the property. He also noted that there had not been any such written approval.

The Building Code Act does not set out a precise form for the revocation of a permit. In the interests of fairness, it is important that the affected party know the reason for the revocation, so that a response or challenge can be made to the decision. While the Chief Building Official made an error in the reference in his first letter, he quickly clarified the reasons for the revocation, and the appellant was well aware of the reasons for his decision, through his subsequent letters and verbal communications, within a short time after the decision was taken. In the circumstances, there is no unfairness or prejudice arising from the initial error, and the decision to revoke is not a nullity.

The significance of the Heritage Easement Agreement

The appellant complied with s. 34 of the Ontario Heritage Act and, absent the Heritage Easement Agreement, would have been entitled to proceed to seek a demolition permit when it did pursuant to s. 34(4) -- that is, by complying with any applicable law or any regulation thereunder. Pursuant to s. 8(2) of the Building Code Act, the Chief Building Official was required to issue a demolition permit, unless the demolition would contravene that Act, the building code, or "any other applicable law". Therefore, the central issue in this appeal is whether the Heritage Easement Agreement was applicable in these circumstances, so as to permit the Chief Building Official to revoke the permit on the grounds that he had erred in issuing it. In other words, was the Heritage Easement Agreement an "applicable law" under s. 8(2) of the Building Code Act?

Counsel for the appellant argued that the Heritage Easement Agreement does not apply to the Rectory at all, given that only the Church building had been designated at the time of the agreement and the emphasis on the Church building and its facade in the document. However, a close reading of the agreement leads me to a different conclusion. While there can be no doubt that the dominant purpose of the agreement was the protection and preservation of the Church building, the parties also agreed to terms that dealt with the property on which the Church is located. For example, one of the recitals to the agreement states that the parties wish "to conserve the aesthetic and scenic character and condition of the Property and the present historical, architectural, aesthetic and scenic character and condition of the exterior of the building on the Property . . ." (emphasis added). Most importantly for purposes of this appeal, Article 1.8(b) requires the written approval of the municipality for the erect ion, alteration and demolition of other buildings and structures on the property. The inclusion of such a provision is readily understandable, for the condition of surrounding grounds and adjacent structures may well affect the aesthetic, historic or architectural significance of the building which is the main concern of an agreement such as this.

The appellant argued that the Heritage Easement Agreement could not apply to the Rectory, because s. 37(1) limits such agreements to buildings designated as having historical or architectural significance -- that is, those dealt with under s. 29 of the Act. On its face, s. 37(1) is not so restricted, as it states that agreements can be made "for the conservation of buildings of historic or architectural interest". Moreover, even if an agreement were made with respect to a designated building, s. 37 does not preclude the inclusion of terms in such an agreement related to the grounds on which the building stands or adjacent buildings on the property. As noted above, both may be integrally related to the preservation of the historic and architectural character of the designated building.

Therefore, the agreement can and does apply to the Rectory. Pursuant to its terms, the municipality's written approval for the demolition of the Rectory should have been sought. While the Diocese had sought permission under the process set out in s. 34 of the Ontario Heritage Act, municipal permission for demolition was never granted. Therefore, the demolition seems to contravene the agreement. The important question, then, is whether the agreement comes within the term "applicable law", given that the Chief Building Official has the authority to refuse a demolition permit under the Building Code Act if the demolition would contravene an applicable law.

Easements are often the result of an exercise in private ordering, since they are granted by one landowner to another person, either to give that person a right to do something on the grantor's land or to restrict the uses the owner can make of the land. In this case, the easement was created as part of a statutory scheme to protect heritage buildings in Ontario. Under s. 37(1) of the Act, the municipality must have the authority of a by-law to enter into such an agreement. It can then enforce the easement agreement, whether or not it is the owner of land which could be benefited or accommodated by the agreement. Most importantly, pursuant to s. 37(5), the agreement prevails when there is a conflict with the provisions of the Act relating to alteration and demolition found in ss. 33 and 34. That subsection is, in effect, a statutory incorporation, by reference, of the easement agreement. It gives priority to the easement agreement in the event of a

conflict with other parts of the legislation, and thus it a llows landowners and municipalities to expand the protection for historic buildings beyond that provided elsewhere in the statute. Given the terms of s. 37(5) of the Act, I conclude that the Heritage Easement Agreement is applicable law here.

Estoppel

The appellant argued that the Town should nevertheless be estopped from relying on the agreement, for a number of reasons. First, it was argued that the Chief Building Official is estopped from revoking the permit, as he should be deemed to have known of the agreement through its registration, and he ignored its force when he granted the permit. Alternatively, his grant of the permit should constitute municipal consent to the demolition, in accordance with the agreement. Thirdly, the Town's failure to invoke the agreement at an earlier stage of the proceeding should now estop it from invoking the agreement.

Alternatively, the Chief Building Official was said to have been correct in granting the permit, and therefore without grounds to revoke it, because there is no reasonable basis for the Town to withhold consent under the agreement, and it was acting in bad faith.

Registration of the Heritage Easement Agreement did not constitute notice to the Chief Building Official. Section 74(1) of the Registry Act, R.S.O. 1990, c. R.20, provides that registration of an instrument constitutes notice thereof to any person claiming an interest in land subsequent to the registration. We are not dealing with competing claims to an interest in land here, so s. 74 does not apply.

But even if the Chief Building Official were deemed to have notice by that section, this would not determine whether he should have granted the permit or could revoke it. Under the Heritage Easement Agreement, only the municipality could grant the necessary approval, and the issuance of the permit by the Chief Building Official could not constitute that approval. Pursuant to s. 9 of the Municipal Act, R.S.O. 1990, c. M.45, the powers of a municipal corporation shall be exercised by its council, and no consent to the demolition has been given by council.

Nor could the Chief Building Official be estopped from revoking a permit issued in error and contrary to an applicable law. Numerous cases have acknowledged the authority of municipal officials to revoke or refuse building and demolition permits for projects that are contrary to zoning laws, even when the official could have determined the content of the law before issuing the permit (for example, Colchester (County) v. Mr. C. Restaurants Inc., [1994] N.S.J. No. 527, 24 M.P.L.R. (2d) 82 (S.C.); Markham (Town) v. Eastown Plaza Ltd. (1992), 11 M.P.L.R. (2d) 134 (Ont. Gen. Div.); Heifer Group Ltd. v. Listowel (Town) Chief Building Official (1996), 38 M.P.L.R. (2d) 76 (Ont. Gen. Div.). Therefore, the Chief Building Official correctly determined that he had erred in issuing the demolition permit because there had been a failure to comply with the agreement, and he had the authority, pursuant to s. 8(10)(d) of the Building Code Act, to revoke the permit in these c ircumstances.

The appellant also argued that estoppel should operate to prevent municipal reliance on the Heritage Easement Agreement, given that the municipality had had a period of many months in which to invoke the agreement, and it did not do so. Instead, it allowed the Diocese to obtain a building permit, enter into a demolition contract, and proceed some way with the demolition.

Whether the Town's conduct can indeed give rise to a claim for estoppel or waiver because of its treatment of the agreement is not for me to determine in this case, as this is an appeal from a decision of the Chief Building Official under s. 25(4) of the Building Code Act. My task is to determine whether he erred. In accordance with s. 8(2) of that Act, it was his responsibility to determine whether or not applicable law, including the Heritage Easement Agreement, had been observed. In determining whether there had been compliance with the agreement, he had to determine whether municipal consent to the demolition had been given. Beyond that determination, the Chief Building Official had neither the authority, nor the legal competence, to determine whether the municipality's

refusal of permission would be unreasonable within Article 2.01 of the Agreement, or whether the doctrine of estoppel or waiver should apply in the circumstances. Sitting on an appeal from his decision, it would be equally impr oper for me to make such determinations. Whether the municipality should be ordered to give its permission, or prevented from asserting the need for approval, must be determined in another proceeding, seeking a different form of relief. Similarly, arguments with respect to bad faith by the municipality are not within the competence of the Chief Building Official, and I have no jurisdiction to deal with them here.

The Chief Building Official determined that the demolition permit had been granted in error, once he realized that the Heritage Easement Agreement applied and had not been complied with. Counsel for the appellant urged me to give due consideration to the rights of property owners in a case such as this, and to construe the Ontario Heritage Act narrowly because of its constraints on property rights. I am not here, however, construing only the Act. I must also give effect to the Heritage Easement Agreement entered into voluntarily between the appellant and the town, for whatever reasons they may have had. Section 37(5) gives priority to the terms of Heritage Easement Agreements which a property owner and a municipality enter, when those terms conflict with other provisions of the Act. In other words, that section gives priority to agreements made by property owners voluntarily to restrict their own property rights. In the circumstances, given the priority given to Heritage Easement Agreements by s. 37(5), the Chief Building Official of Cobourg did err in issuing the demolition permit for the Rectory, and thus he had the authority to revoke the permit pursuant to s. 8(10)(d) of the Building Code Act. Therefore, the appeal from his decision is dismissed.

If the parties are unable to agree with respect to costs, they may make written submissions within 30 days of the release of this decision.

Order accordingly.

ON APPEAL FROM THE COURT OF APPEAL FOR BRITISH COLUMBIA

APPEAL from judgments of the British Columbia Court of Appeal, Rothfield v. Manolakos (1987), 20 B.C.L.R. (2d) 85, dismissing appeals from judgments of Arkell Co. Ct. J., [1986] B.C.W.L.D. 425. Appeal allowed, Lamer and Cory JJ. dissenting in part; Wilson and L'Heureux-Dubé JJ. dissenting in part.

R.B.T. Goepel, for the appellants.
Greg Reif, for the respondents.

Solicitors for the appellants: Watson Goepel Maledy, Vancouver.
Solicitor for the respondents: DuMont & Company, Armstrong.

The judgment of Dickson C.J. and La Forest and Gonthier JJ. was delivered by

[para1] LA FOREST J.:-- I have had the advantage of reading the judgment of my colleague, Justice Cory, but I am respectfully unable to agree with his proposed disposition of this case for the reasons that follow.

Factual Background

[para2] The facts of this appeal are generally sufficiently set out in the reasons of Cory J., and I need not repeat them. I think it important, however, to stress some matters concerning the specifications and the rudimentary sketch submitted by the subcontractors when they attended at the municipal offices to obtain a permit for the retaining wall they had been hired to construct for the respondent owners. The trial judge found as a fact that [page1266] Phillips, the chief building inspector, had seen the specifications and the sketch, but it seems fair to assume in the light of Phillips' testimony that he had not examined them with the care necessary to permit him to ascertain whether they could reasonably serve in the construction of the project. It is undisputed that the sketch was only a rough and ready drawing, and that the project, if built in accordance with the specifications, would be seriously deficient. The building inspector himself testified that the proposed steel reinforcement was wholly inadequate to support the structure, and that if he had seen the sketch, he would

not have issued the permit. The footings described on the sketch were also inadequate. Despite the manifest inadequacy of the plan, however, the city issued a permit for the construction of the retaining wall. This was in accord with its usual practice. In construction projects of this kind, the city relied on on-site inspections to ensure that the requisite standards had been met.

[para3] The city by-law placed responsibility on the owner to summon the building inspector for this on-site inspection. Here, of course, the owner failed to give notice in good time, and it is the significance to be accorded to this failure that is at the heart of this appeal.

The Scope of the Duty Owed by the City

[para4] The city adopted the relevant building by-law "for the health, safety and protection of persons and property" pursuant to s. 734 of the Municipal Act, R.S.B.C., c. 290, as amended. By application of the test formulated by Lord Wilberforce in Anns v. Merton London Borough Council, [1978] A.C. 728, and adopted by this Court in City of Kamloops v. Nielsen, [1984] 2 S.C.R. 2, the city, once it made the policy decision to inspect building plans and construction, owed a duty of care to all who it is reasonable to conclude might be injured by the negligent exercise of those powers. This duty is, of course, subject to such [page1267] limitations as may arise from statutes bearing on the powers of the building inspector.

[para5] In City of Kamloops v. Nielsen, this Court did not deal with an owner builder, but I see no reason why such a person would not fall within the scope of the duty of care owed by a municipality. There is, admittedly, an important distinction between the reliance of third parties on a municipal building inspector and the reliance of an owner builder. Third parties, such as neighbours and subsequent purchasers or occupiers of a building, obviously have no say in the actual construction of a building that proves defective. It is therefore reasonable that they should be entitled to rely on the municipality to show reasonable care in inspecting the progress of the construction. Owner builders, by contrast, are in a position to ensure that the building is built in accordance with the relevant building regulations, and from this it may be argued that they are not entitled to rely on the municipality. This would appear to be the view of Cory J. who states that it is the owner who should ensure through his contractors that the building is safe and structurally sound, and complies with the municipal by-law.

[para6] I am unable to accept this position. As a preliminary matter, it is not clear to me how owner builders, unless possessed of a high degree of technical knowledge, are supposed to see to it that their contractors comply with the technical aspects of building by-laws. Doubtless owner builders can choose their contractors, and it is incumbent on them to hire reputable tradesmen. But I fail to see how, having done that, they are in a position to ensure that construction actually proceeds according to standard. Owner builders can hardly be expected to serve as their own inspectors. It can, I think, safely be assumed that the great majority of those who engage building contractors to undertake a project must rely on the disinterested expertise of a building inspector to ensure that it is [page1268] properly done. In that respect, owner builders are in a position similar to third parties who may be affected by the construction. Like them, they are, in my respectful opinion, entitled to rely on the municipality to properly inspect construction to see that it conforms to the standards set out in the municipality's building by-laws.

[para7] Moreover, in my view, the distinction sought to be made between owner builders and third parties overlooks the fact that both are ratepayers for whose safety the by-law was passed. The inspection of plans and the supervision of construction increases the costs of construction for everyone. But I think that most ratepayers, were they to give the matter any thought, would justify the increased expense as an investment in peace of mind: faulty construction, after all, is a danger to life and limb and may result in future expense and liability. This applies equally to owner builders and third parties. Both are justified in saying: "I pay for the provision of an inspection service, and so long as I act in good faith, I should be entitled to rely on the city to

exercise reasonable care to ensure that all construction is built according to the standards set out in the by-laws."

[para8] Finally, I do not share the view that applying the law to owner builders in this way would make the municipality an insurer in respect of compliance by the owner with applicable building standards. It must be borne in mind that a municipality, once it has made the policy decision to inspect construction, is not bound to discover every latent defect in a given project, nor every derogation from applicable standards. That would be to hold the municipality to an impossible standard. Rather a municipality is only called upon to show reasonable care in the exercise of its powers of inspection. Accordingly, a municipality, whether the duty of care is owed to an owner builder or a third party, [page1269] will only incur liability for such defects as it could reasonably be expected to have detected and to have ordered remedied. This is implicit in the decision of this Court in City of Kamloops v. Nielsen.

[para9] In summary, I cannot subscribe to the view that considerations of policy militate against viewing both owner builders and third parties as entitled to place reasonable reliance on the city to ensure that construction does not pose a threat to their health or safety.

The City's Duty Respecting the Specifications

[para10] As Cory J. has noted, the building inspector exercised his discretion in this case not to require plans by a professional engineer, and in such cases it was the practice to rely on on-site inspections to ensure compliance with the standards of the by-law. I am prepared to accept that as a general proposition this is not an unreasonable thing to do. The many small projects that come to the city must be processed with a reasonable measure of flexibility and efficiency, and undoubtedly many of the rudimentary specifications and sketches that are submitted to the inspector do not contain all the information necessary to enable the city to fully assess whether a project is up to standard. It would be unrealistic for the city to insist that owners submit fully adequate plans for such projects. By the same token, however, it would be unreasonable to impose on the city the burden of perfecting all such plans.

[para11] It seems to me, however, that it is incumbent on the city to at least examine the specifications and sketches. If an examination of these reveals that they may reasonably serve in the construction of a project, it would appear sensible to issue a permit. The inspector is functioning within the parameters of a legislative scheme in which it is normal to ensure that a project fully meets the standards of the by-law at the on-site inspection stage. It would [page1270] tend to defeat the discretion not to require professional plans if a more exacting standard were imposed on the city inspector. The city's duty, after all, is only to exercise reasonable care.

[para12] Inadequacy in the sense of insufficiency is one thing, however; inadequacy in the sense of an obvious departure from the standards required by the by-law is another. In the present case, it was clear from the specifications that the project was inadequately designed. The building inspector's testimony itself draws attention to the fact that the retaining wall would not hold if built with the amount of steel reinforcement described in the specifications.

[para13] Under these circumstances, I have no difficulty in holding that the appellants were negligent in this case, and barring other considerations, that they are liable for the loss resulting from that negligence. The appellants' negligence must, however, be assessed in the context described above and, in particular, of the legislative scheme in which they were operating. That scheme provides for on-site inspections at which time inadequacies can be corrected during the course of construction. These inspections are under the scheme triggered by notification from the owner. The by-law squarely imposes this duty on the owner at particular stages of construction. I should perhaps advert to the fact that the by-law includes a contractor in the definition of owner, but I emphasize that it is an inclusive provision; it can scarcely be read as excluding the owner upon whom the duty is originally imposed. Relying on these provisions, the

appellants argued that the failure of the owners in the present case to give timely notice to permit the appellants to conduct an on-site inspection absolved the latter from liability.

The Negligent Owner Builder

[para14] I turn then to a consideration of the consequences to be ascribed to the failure of the owners and their contractors to give timely notice for the [page1271] on-site building inspection. I agree with Cory J. that this failure constituted negligence, but I do not share his view that this failure must completely absolve the municipality from liability. In my respectful view, Lord Wilberforce's dictum that no duty is owed "to a negligent building owner, the source of his own loss" does not apply to the facts of this case.

[para15] I do not think Lord Wilberforce's pronouncement was meant to extend to every failure by an owner builder, or his contractors, to comply with the applicable building regulations. It is to be expected that contractors, in the normal course of events, will fail to observe certain aspects of the building by-laws. That is why municipalities employ building inspectors. Their role is to detect such negligent omissions before they translate into dangers to health and safety. If, as I believe, owner builders are within the ambit of the duty of care owed by the building inspector, it would simply make no sense to proceed on the assumption that every negligent act of an owner builder relieved the municipality of its duty to show reasonable care in approving building plans and inspecting construction.

[para16] These considerations suggest that it is only in the narrowest of circumstances that Lord Wilberforce's dictum will find application. By way of example, I think that the negligent owner would be viewed as the sole source of his own loss where he knowingly flouted the applicable building regulations or the directives of the building inspector; see the observations of Stephenson L.J., Donaldson L.J., and Sir David Cairns in Acrecrest Ltd. v. W. S. Hattrell & Partners (a firm), [1983] 1 All E.R. 17 (C.A.), at pp. 25, 30 and 33, respectively. Again owner builders may totally fail to acquit themselves of responsibilities that properly rest on them; see the decision of the British Columbia Court of Appeal in McCrea v. White Rock, [1975] 2 W.W.R. 593, where a builder unreasonably [page1272] relied on the city to take the initiative in inspecting the progress of construction.

[para17] The common thread in the examples cited above is that they involve circumstances in which it is reasonable to conclude that an owner builder had, by his actions, excluded himself from the scope of the municipality's duty of care. Sir David Cairns puts the matter well when he observes in Acrecrest Ltd. v. W. S. Hattrell & Partners (a firm), supra, at p. 33, that the "local authority's function ... is not that of restraining a wrongdoer from persisting in his wrongdoing". In my view, however, on the facts of this case it is not open to the city to advance a similar argument and say that the action of the owners was such that they were no longer owed a duty of care. And I say this, even apart from the initial negligence of the appellants to which I shall refer later.

[para18] As I noted above, the city issued the building permit on the assumption that an on-site pre-pour inspection would enable it to determine whether the design met applicable standards. The pre-pour inspection is a key part of the inspection process because it permits the inspector to determine if the foundations of a project are up to standard. Lord Wilberforce touches upon this very point in Anns v. Merton London Borough Council, supra, at p. 753:

> One of the particular matters within the area of local authority supervision is the foundations of buildings -- clearly a matter of vital importance, particularly because this part of the building comes to be covered up as building proceeds. Thus any weakness or inadequacy will create a hidden defect which whoever acquires the building has no means of discovering: in legal parlance there is no opportunity for intermediate inspection.

[para19] Inasmuch as inadequately inspected foundations will always pose a threat to the health and safety of the public, building by-laws contain measures aimed at preventing

the occurrence of such "hidden defects". Thus, the City of Vernon building [page1273] by-law sets out definite standards for foundation work and, as my colleague Cory J. points out, Division 700 of the by-law confers on the building inspector a broad spectrum of powers designed to enable him to ensure that these standards are respected. The building inspector is empowered to order the correction of any work which has been improperly done, and similarly may order the cessation of any work that is proceeding in contravention of the by-law. As I will go on to explain, these powers of the inspector to insist on any correction necessary to bring the work up to standard take on a particular importance in this case.

[para20] It cannot be disputed that the owners were negligent in failing to give timely notice for the pre-pour inspection. The by-law places this obligation squarely on every property owner. But the fact remains that when the inspector did attend at the site he was confronted with a situation in which it must have been at once clear to him that the retaining wall was potentially substandard. As I have just pointed out, there is no mystery to the fact that uninspected foundations may give rise to hidden defects. This will always be the case, and here two additional facts heightened this possibility. First, it must be remembered that the city had issued the permit on the basis of inadequate plans which themselves afforded no basis for a preliminary evaluation of the soundness of the foundations. In this case, moreover, an assessment of the plans would have revealed that the steel reinforcements and the footings were inadequate. Secondly, there was the telling fact that a crack had already appeared in the wall.

[para21] My colleague takes the view that the failure of the owners to give timely notice made it "impossible for the city to fulfill its duty to inspect". In my respectful view, however, it is necessary to take a broader view of the question and not simply focus on the fact that the negligence of the owners made it difficult to conduct one particular inspection. The key question, it seems to me, is whether it is reasonable to conclude that despite the negligence [page1274] of the owners, the inspector was still in a position to acquit himself of the responsibility that the by-law placed on him, i.e., to take reasonable care to ensure that all building was done in accordance with the applicable standards of the by-law. In other words, is it reasonable, in the circumstances to conclude that a due exercise by the inspector of his powers, even though he was summoned late, could have avoided the danger? See the formulation of Lord Bridge of Harwich in Curran v. Northern Ireland Co-Ownership Housing Association Ltd., [1987] A.C. 718, at pp. 727-28.

[para22] When the question is framed in this way, I think that the answer must be in the affirmative. The inspector could not and did not rely on the plan submitted to him; it was inadequate. He chose instead to rely solely on the on-site inspection. And when he attended at the site, he was confronted with a situation which, if left unremedied, manifestly stood to pose a threat to the health and safety of the public, including the neighbours and the owner builder. Of course, the cause of the problem would have been evident if the inspector had been asked to come at the proper time. But this does not absolve the inspector of his duties. It must be remembered that the inspector was, at the time, armed with all the powers necessary to remedy the situation. As I see the matter, it was incumbent on the building inspector, in view of the responsibility that rested on him, to order the cessation of the work, and the taking of whatever corrective measures were necessary to enable him to ensure that the structure was up to standard.

[para23] Instead, the inspector stipulated that the situation be monitored for a certain time and that construction proceed if no further damage occurred. In my view, this was negligence. When a building inspector authorizes a given project to proceed this must be taken as an indication that the inspector has satisfied himself that the project conforms to applicable standards. On what other basis could the building inspector, acting prudently, authorize construction to proceed? Here, on the [page1275] facts, I do not see how the building inspector, using reasonable care, could have satisfied himself that this was the case. Even leaving aside the fact that the project was already showing signs of damage, the inspector, never having inspected the structure, simply did not have at his disposal any information

on which to base a conclusion that the project was up to standard. Indeed, had the inspector simply turned to the city's records or enquired about the manner in which the structure was built or about the materials used in the construction, he would have discovered from the specifications what he ought to be taken to know in any event, that the structure was deficient in a number of important aspects.

[para24] To return, then, to my initial proposition that it would be unreasonable to hold the owners to be the "sole authors of their loss", I see a vital distinction between this case and instances where an owner builder determines to flout the building by-law, or is completely indifferent to the responsibilities that the by-law places on him. In such circumstances, owner builders cannot reasonably allege that any damage they suffer is a result of the failure of the building inspector to take reasonable care to ensure that a given construction project is built in conformity with the by-laws. They have, by their actions, placed themselves outside the scope of the duty owed by the public authority. In effect, their breach of the regulations is such as to justify the conclusion that they can have no reasonable expectation that they are entitled to rely on the due exercise of the inspection power to forestall dangers to their health and safety. In summary, the duty of building inspectors should not be taken to extend to requiring them to ferret out those who are aware or indifferent as to whether work is being done illegally, and who persist in that course of action.

[para25] Here, the situation is entirely different. Admittedly, the owners had breached the applicable [page1276] by-laws. One could indeed characterize the breach as serious, even though they had instructed the contractors to obtain the requisite permits. But the key point, as I view the matter, is that nothing in the nature of the breach would support the view that the owners should not be entitled to rely on the building inspector to acquit themselves of their responsibility to ensure that the project was up to standard. The very by-law contemplated that breaches of the sort committed here would occur. That is the reason the powers of the building inspector extend to allowing him to halt construction, and to order the correction of work improperly done when such breaches come to his attention.

[para26] In short, I am unable to share the view of Cory J. that the negligent breach of the by-laws by the owners was such as make them the sole authors of their own loss. To return to the formulation of Lord Bridge, supra, I remain of the view that in the circumstances of this case the due exercise by the building inspector of the powers at his disposal would have avoided the danger caused by the negligent behaviour of the owners. In failing to exercise these powers the building inspector was again in breach of his duty to take reasonable care to see that the by-laws were complied with.

[para27] But if I cannot agree with my colleague that the responsibility of the building inspector to discover and correct breaches of the building by-law was completely negated by the respondents' oversight, I am of the view that they should bear some responsibility for any loss they incurred because of their failure to summon the inspector in good time. The damage could have been avoided if notice had been given at the proper time. The by-law, I repeat, places responsibility for giving notice to the inspector squarely on the owner. It could not really function without this requirement and, in the case of small projects, we saw, there are additional reasons making on-site inspection critical if the by-law is to function with reasonable flexibility [page1277] and efficiency. These are not technical matters for which the average person must rely on an experienced contractor. People generally should know that a building permit is required and that inspections cannot be done when the work is covered up. Of course, owners generally rely on a contractor to give notice at the appropriate time, but the responsibility is ultimately the owner's, not the city's. Failure to give timely notice places an unenviable burden on the inspector to decide whether the expensive task of digging up the area should be undertaken. All concrete cracks, and his failure to act, though negligent, may in some measure reasonably be attributed to the negligence of the owner in placing him in that position.

[para28] Nonetheless, it is clear that the lion's share of

responsibility in the present case lies upon the appellants. I would, therefore, find the appellants (the city and its inspectors) and the respondent owners contributorily negligent and would accordingly apportion liability between them. In my view, a just apportionment would be in the order of 70% for the appellants and 30% for the owners, for which, pursuant to the trial judge's orders, the appellants are jointly and severally liable. As between the owners and the contractors, it must be remembered that the latter had contracted to construct the project and were thus under an obligation to do so with reasonable care and skill. Indeed, not only did they construct the work in an improper manner, it was really their fault, rather than the owners', that the building inspector was not notified at the appropriate time. Accordingly, the owners, pursuant to the trial judge's orders, are entitled to recover jointly and severally against the contractors for all the loss sustained by them. The trial judge also ordered (and the appellants did not dispute this) an apportionment of liability as between the contractors and the appellants of 60% [page1278] and 40% respectively. These orders were not contested and I have not disturbed them.

Disposition

[para29] Accordingly, I would allow the appeal and set aside the judgment of the Court of Appeal. The judgments of the trial judge should be varied as follows. In Action 241/81 Vernon, the plaintiffs are held to be contributorily negligent to the extent of 30% and judgment against the appellants is reduced accordingly. In Action 228/82 Kelowna, the defendants, Peter and Voula Manolakos, are held contributorily negligent to the extent of 30% and damages against the appellants are reduced accordingly. In all other respects, the judgments of the trial judge are confirmed.

[para30] I would apportion costs between the appellants and respondent owners in this Court and in the Court of Appeal on the basis of 30% to the appellants and 70% to the respondent owners. The owners and the appellants are entitled to recover these costs against the contractors, the former fully, the latter on the basis of the contribution to the liability apportioned between the contractors and the appellants by the trial judge.

The reasons of Lamer and Cory JJ. were delivered by

[para31] CORY J. (dissenting in part):-- The issue to be resolved on this appeal is what if any duty was owed by the municipal authorities of the City of Vernon to the respondents who were having a retaining wall built on their land.

Factual Background

[para32] The respondents, Peter and Voula Manolakos owned a house situated on a steeply sloping lot in the municipality of Vernon. Before they could have and enjoy a backyard, a retaining wall had to be built. They entered into a contract with Ralph Gohmann to build one, to erect a fence on top of it and to do some landscaping. Mr. Gohmann in turn [page1279] subcontracted with Barry Barber for the construction of the retaining wall. Mr. Barber prepared a brief written proposal together with a rough sketch of the wall which was to be 74 feet long, 8 feet high and 8 inches wide. Although neither Mr. Gohmann nor Mr. Barber were engineers they professed to having considerable experience in construction work of this type.

[para33] The respondents, in their desire to avoid any problems with the wall, telephoned the City of Vernon to make enquiries about a building permit. In response to the call, William Morris-Reade, a city building inspector, visited the site on May 26, 1980. By that time the excavation had been completed and the footing forms were already in place. Mr. Morris-Reade did not conduct an inspection but he advised the respondents that a building permit was required. Later that afternoon Messrs. Gohmann and Barber attended the building department offices to apply for the permit. They met with William Phillips, a professional engineer and the city's chief building inspector.

[para34] Mr. Phillips was presented with the rough sketch of the wall and the proposal Mr. Barber had drafted. Mr. Phillips carefully enquired of the contractor and subcontractor about their experience with building retaining

walls and he was assured by them that they had been involved in a number of similar projects. Based upon their experience and the relatively low cost ($5,000) of the wall, Mr. Phillips exercised the discretion which he possessed under the city by-law and decided that he would not insist upon a professional engineer's plan for the wall. He concluded that detailed specifications would be unnecessary because the adequacy of the wall's foundation, siting, reinforcing and drainage could be evaluated during the on-site inspections which were specifically required by the city's by-law. He therefore [page1280] gave instructions to issue the building permit for the retaining wall.

[para35] The City of Vernon's building by-law (like most such by-laws) places an obligation upon the owner to inform the city when a building has reached certain stages of completion in order that inspections can be carried out by the city's building inspectors. The concrete had been poured and backfilling had been commenced without any notification to the city. As a result, it was impossible for the city inspector to carry out the requisite inspection which, if reasonably performed, would have revealed the flaws in design and construction.

[para36] On June 12, 1980, Mr. Manolakos called Mr. Morris-Reade, the city building inspector, to advise him that a crack had appeared in the wall. The inspector went to check the wall but found that a large part of the backfilling had already been done. He was able to see a crack but was unable to evaluate the wall's foundations, siting, reinforcing or drainage, for the obvious reason that everything had been covered over.

[para37] Mr. Morris-Reade in turn told Mr. Phillips about the crack and he visited the site himself on June 16 and 19. He suggested to Messrs Gohmann and Barber that they monitor the situation carefully to see if there was any movement of the wall and that they check the drainage from the house. The contractor found no further movement during the next 20 days. He then finished the backfilling, landscaping and sodding and put up a fence on the wall.

[para38] On February 19 the respondents found that the retaining wall was moving. Mr. Manolakos called the general contractor to have the wall stabilized and, as well, notified the city of the problem. The police arrived and took immediate steps to protect the lives and property of others by barricading and securing the area. The respondents were ordered to remove the wall. Fortunately, any physical danger to the neighbours living below the wall was averted, although they did sustain some damage to their property. Mr. Manolakos retained a professional engineer who found that the reinforcing for the [page1281] wall had been inadequate. Mr. Phillips inspected the site and came to a similar conclusion. He testified that if an on-site inspection had been conducted when it should have been, before the concrete was poured, the project would not have been allowed to continue.

[para39] The respondents brought an action against the contractor, the subcontractor, the city inspectors and the city. The neighbouring owners, Mr. Rothfield and Mr. Burtch, brought an action against the respondents who in turn took third party proceedings against the parties they had sued.

Decisions of the Courts Below

[para40] The trial judge found that the subcontractor's original proposal and rudimentary sketch was an inadequate basis for issuing a building permit and that the city, through its building inspectors, was negligent in issuing one. In both the actions (one brought by the Manolakoses and one by their neighbours) he attributed 60% of the fault to the contractor and subcontractor, and 40% to the city and its inspectors. He ordered the defendants to pay $12,416.68 in damages to the Manolakoses and $2,600 to the neighbouring owners.

[para41] Although divided on other issues, the Court of Appeal was unanimous in deciding that the inspector Mr. Morris-Reade could not be held liable. That finding was not challenged before this Court. The majority of the Court of Appeal agreed with the trial judge that chief building inspector Phillips and the city were liable. This conclusion

was based upon findings that Mr. Phillips had been negligent in two respects: firstly, in failing to warn the respondents that the original proposal was inadequate; and secondly, in failing to conduct an on-site inspection. The majority went so far as to conclude that the city had assumed the burden of conducting a pre-pour on-site inspection and thereby relieved the respondents of their obligation of [page1282] notification as to when such an inspection could be conducted.

[para42] Lambert J.A., in dissent, found that while the chief building inspector may have been careless in granting the building permit, it was not reasonable for the respondent owners to rely upon the municipality to guarantee the adequacy of their own proposed design for the wall. He determined that the owners had not discharged their obligation to inform the city as to when inspections could be carried out. He thought this obligation was of fundamental importance as it would be impossible for the city to keep track of all the projects carried out within its limits in order to know when to inspect. He found that there was a significant difference in the owners' attempt to rely on the city to ensure the adequacy of their wall and that of the neighbouring land owners. The neighbours who, unlike the owners, had no control over the design or construction of the wall could reasonably assume the city's by-law would be complied with and that the city would ensure that there was such compliance. In his view, it was reasonable and appropriate for the neighbouring owners to rely upon the chief building inspector to ensure that the designs submitted were adequate.

The Applicable Legislation and By-law

[para43] Division (5) of the Municipal Act, R.S.B.C. 1979, c. 290, as amended, provided for the promulgation and implementation of building regulations by City Councils in British Columbia. In particular, s. 734 reads:

> 734. The council may, for the health, safety and protection of persons and property, and subject to this Act, the Health Act and the Fire Services Act and their regulations, by bylaw
>
> . . .
>
> (f) prescribe conditions generally governing the issue and validity of permits, inspection of works, buildings and structures, and provide for the levying and collecting of fees and inspection charges;

[para44] Section 740 of Division (5) and the regulations thereunder provide that the British Columbia Plumbing Code and certain parts of the National Building Code of Canada apply to cities in British Columbia, including the City of Vernon. In order to fulfill its responsibilities under the Plumbing Code and Building Code, and pursuant to s. 734 of the Municipal Act, the city passed By-law Number 2450 in 1976. The by-law states its purpose in these words:

> 101. Purpose:
>
> To provide for the administration and enforcement of the Plumbing and Building Code and to provide regulations for the erection, construction, maintenance, moving and safety of buildings with the corporate limits of The City of Vernon, but are not related to land quality.

[para45] Division 300 specifies the scope of the by-law's application:

> This Bylaw shall apply:
>
> 300. To the erection, construction, maintenance, moving, demolition and safety of all buildings subject to the limitations set out in the
>
> Building Code.

[para46] The by-law applied to the Manolakoses' retaining wall because of the definition of the term "building":

> "Building":

Shall mean a structure located on the ground which is designed, erected or intended for the support, enclosure or protection of persons or property.

[para47] Division 600 sets out the duties of the building inspector:

600. The Building Inspector, under the supervision and direction of the Director of Community Development shall:

(i) Administer this Bylaw;

(ii) Keep records of all applications received, permits and orders issued, inspections and tests made, and shall

retain copies of all papers and documents connected with the administration of his duties;

(iii) Establish whether any method or type of construction or materials used in the construction of any building conforms with the requirements and provisions of this Bylaw.

[para48] Division 700 specifies the powers that are granted to inspectors in order to fulfill these duties, including the powers to enter premises at any reasonable time, to revoke or refuse to issue a permit in situations where the construction method is not satisfactory in the opinion of the inspector, to order the correction of work improperly done and to order the cessation of work proceeding in contravention of the by-law.

[para49] Two other divisions of the by-law are of particular relevance to this appeal: Division 800 which deals

with building permits and Division 1000 which deals with the duties of the owner.

[para50] Subsection 800(4) indicates that there is discretion which rests with the chief building inspector to decide whether a proposed project requires that engineering plans should be submitted as a condition to the granting of a building permit:

800. ...

(4) Notwithstanding any other provision of this bylaw, whenever, in the opinion of the authority having jurisdiction, the proposed work requires specialized technical knowledge, it may be required as a condition of the issuance of any permit, that all drawings, specifications and plot plans, or any part thereof, be prepared and signed by, and the construction carried out under the supervision of, an architect or professional engineer.

[para51] Section 1001 makes it clear that the owner, (which by definition includes the contractor and subcontractor) is responsible for giving at least 24 hours notice and having pre-pour and pre-backfill inspections carried out:

1001. Every owner of property shall:

. . .

(e) Give at least twenty-four (24) hours notice to the authority having jurisdiction and obtain his inspection and approval of the work:

(i) after the forms for footings and foundations are complete, but prior to placing any concrete therein;

(ii) after removal of formwork from a concrete foundation and installation of perimeter drain tiles and damp-roofing but prior to backfilling against foundation;

[para52] Under the terms of subs. 1000(1), the granting of a permit does not relieve the owner "from full responsibility for carrying out the work or having the work carried out in accordance with the requirements of this bylaw or the Building Code."

Was a Duty of Care Owed by the Municipality to the Respondents?

[para53] The duty of care which may be owed by a municipality to its residents was reviewed by this Court in the City of Kamloops v. Nielsen, [1984] 2 S.C.R. 2. In that case Wilson J., writing on behalf of the majority, adopted the criteria for determining this question which was set forth by Lord Wilberforce in Anns v. Merton London Borough Council, [1978] A.C. 728. She restated in the following way the two questions which must be asked in order to determine whether a private law duty of care exists (at pp. 10-11):

> (1) is there a sufficiently close relationship between the parties (the local authority and the person who has suffered the damage) so that, in the reasonable contemplation of the authority, carelessness on its
>
> part might cause damage to that person? If so,
>
> (2) are there any considerations which ought to negative or limit (a) the scope of the duty and (b) the class of persons to whom it is owed or (c) the damages to which a breach of it may give rise?

[para54] I recognize that some critical comments have been made with regards to the Anns case. See, for instance, Governors of the Peabody Donation Fund v. Sir Lindsay Parkinson & Co., [1985] A.C. 210 (H.L.); Sutherland Shire Council v. Heyman (1985), 60 A.L.R. 5 (H.C.A.); and Yuen Kun Yeu v. Attorney-General of Hong Kong, [1988] A.C. 175 (P.C.). Nevertheless, the approach set forward in the Anns case which has been confirmed and approved by this Court in the City of Kamloops v. Nielsen, supra, is sound. It can be applied effectively and should be applied in [page1286] any case where negligence or misconduct has been alleged against a government agency. According to the criteria set forth in the Kamloops case, the proximity or neighbourhood test familiar to all since Donoghue v. Stevenson, [1932] A.C. 562, may well establish a prima facie duty of care on the part of a public authority. Nevertheless, the statutory provisions pursuant to which the public authority must act may well restrict the scope of that duty or enact specific conditions for its exercise. I would note that to say a statute restricts the scope of the duty of a government agency may mean that the standard of care owed by a government agency is reduced by the provisions of the statute which authorizes that agency to act.

[para55] The two criteria as set forward in City of Kamloops v. Nielsen, supra, separate the two sets of conditions for imposing liability on a public authority; first, the finding of a close relationship between the authority and the claimant and second, defining the scope of the duty or standard of care owed by the authority to the claimant and defining the class of persons to whom that duty is owed. In that case, it was recognized and emphasized that the extent to which any duty is owed by a public authority is dependent upon the statute under which it operates. There a municipal by-law similar to the one enacted by the City of Vernon was reviewed. It was noted that there existed a duty on the building inspector to enforce the provisions of the by-law. At the same time, it was expressly observed that there was a duty imposed upon the owner to advise the building inspector when various stages of construction had been reached in order that appropriate inspections could be carried out by the municipality. Thus it was recognized that the extent of the duty owed by a public authority will be dependent upon and may be limited by the statute under which the public authority acts.

[para56] Let us turn now to the application of the Anns test as set forth by Wilson J. in the Kamloops case. It will be recalled that the first criterion is as follows:

> (1) is there a sufficiently close relationship between the parties (the local authority and the person who has suffered the damage) so that, in the reasonable contemplation of the authority, carelessness on its

part might cause damage to that person?

[para57] It was held by this Court in B.D.C. Ltd. v. Hofstrand Farms Ltd., [1986] 1 S.C.R. 228, at p. 238, that "proximity" requires a "special relationship" which "would arise in circumstances where the defendant, being so placed that others would reasonably rely on his judgment or skill, knows that the plaintiff will rely on his statements." (See also Sutherland Shire Council v. Heyman, supra, per Brennan J. and Yuen Kun Yeu v. Attorney-General of Hong Kong, supra.) If this were a case in which William Phillips, as a professional engineer in private practice was consulted by the respondents as homeowners seeking advice respecting a small construction project, then the relationship between Mr. Phillips and the respondents would seem to be indistinguishable from that relationship which is described in Hedley Byrne & Co. v. Heller & Partners Ltd., [1964] A.C. 465 (H.L.). In those circumstances the respondents might well have been in a position to rely on Mr. Phillips' judgment or skill provided he would have reason to know that the respondents would act on his advice. In such a situation the special relationship or proximity would be clearly established.

[para58] However, Mr. Phillips was not acting in a private capacity but as an official of the appellant municipality. Nonetheless there was still such a close relationship that in the reasonable contemplation of Mr. Phillips, carelessness on his part might cause damage to the Manolakoses. It is necessary therefore to consider the second criterion for establishing liability, which is in this form:

> (2) are there any considerations which ought to negative or limit (a) the scope of the duty and (b) the class of persons to whom it is owed or (c) the damages to which a breach of it may give rise?

[para59] In applying this criterion it can be seen that there are considerations which, in this case, "negative or limit" (a) the scope of the duty, and (b) the [page1288] persons to whom it is owed. It must be remembered that Mr. Phillips, although a professional engineer, was a senior employee fulfilling certain specific duties on behalf of the city. He was neither dispensing advice to the respondents nor was he guaranteeing that the respondents' home improvement project (the retaining wall) would be a success. The respondents had hired a contractor to take care of their interests in this regard. Further, the granting of a building permit did not and could not relieve the respondent owners of their responsibility to have the work on the retaining wall carried out in accordance with the city's by-laws. Nor did Mr. Phillips' willingness to allow this relatively small and inexpensive project to proceed without requiring the respondents to incur the cost of obtaining drawings completed by a professional engineer relieve the respondents of that responsibility.

[para60] By means of its by-law, the city had put into place a system of inspections designed to ensure that at the crucial stages in the project and before the next step in construction was undertaken which would conceal earlier errors, the progress of the work could be reviewed. As noted earlier, it is impossible for a municipality to constantly monitor all the building projects proceeding within its limits at any given time. It is properly incumbent upon owners to inform the city when the time for inspection has arrived. Where the owner has given timely notice, the city must reasonably and properly inspect the work in progress. That is the obligation which the municipality imposed upon itself pursuant to its by-law. The concomitant responsibility cast upon the owners was to advise the city as to when the inspection could be made. Since neither the Manolakoses nor their contractors gave the requisite timely notice to the city as to when the critical inspections could be made, they were in breach of their obligation to the city and their failure to give notice rendered it impossible for the city to fulfill its duty to inspect. As a result of their failure to notify the city, the Manolakoses absolved the municipality from any liability and [page1289] their claim must be dismissed on that ground alone.

[para61] There may be cases in which the city would be liable to a negligent building owner. For example, if the city received due notice of inspection but negligently carried out the inspection and as a result missed a fatal flaw in the

construction, the city could be held liable. Nevertheless, where a by-law places upon a building owner a duty to inform the city when an inspection should be conducted and where the inspection would have revealed the very problem that ultimately manifests itself, then the owner's negligent failure to inform the city precludes the owner from recovering against the municipality. Such owners are the source of their own loss. The owners not the municipality must be responsible for and bear any losses occasioned to the owners as a result of the failure to comply with the building by-laws due to a failure to give timely notice to the municipality to inspect the work in progress.

[para62] Further, it was not reasonable for the respondents to rely upon Mr. Phillips' agreement to issue a permit as an indication that the wall was sound. That responsibility remained, as it should, with the owners who engaged contractors of their choosing to undertake and be responsible for the design and construction of the project on their behalf.

[para63] If tort law is, as it is said to be, a matter of policy, then it is fitting that owners remain primarily responsible for the work which they carry out on their property. It is the owners who should ensure through their contractors and subcontractors that the building is safe, structurally sound and complies with the municipal by-law. As well it is the owner who must ensure that due and proper notice of inspections is given to the municipality. If the policy were otherwise it would place an unreasonable and unfair burden upon all the other ratepayers of a municipality as it would require a municipality to be an insurer of the owner as to the compliance with its by-laws and in [page1290] that way an insurer of the proper design and workmanship of projects undertaken by an owner.

[para64] In Anns v. Merton London Borough Council, supra, Lord Wilberforce indicated that a public authority owed no duty to a negligent building owner who was the source of his or her own loss. He put it in this way at p. 758:

> To whom the duty is owed. There is, in my opinion, no difficulty about this. A reasonable man in the position of the inspector must realize that if foundations are covered without adequate depth or strength as required by the bylaws, injury to safety or health may be suffered by owners or occupiers of the house. The duty is owed to them -- not of course to a negligent building owner, the source of his own loss. [Emphasis added.]

A negligent building owner certainly is the source of his or her loss where, as here, the owner's negligent failure to inform the city that an inspection must be conducted precludes the city from taking steps which would have averted the loss. Nor can it be said that the city contributed to the loss suffered by the owners by its failure to insist upon engineers' drawings of the project. On this small project the city was entitled to rely upon the owners' complying with the by-law and giving timely notice that the inspection of the work could take place. If that had been done the inspection would have revealed the deficiencies and ensured that they were rectified, thus avoiding any loss to the owners. Although the city engineer waived the requirement of engineers' drawings as a favour to the owners, he did so in the very reasonable and proper expectation that the by-law inspection requirement would be complied with and in the knowledge that the inspection would reveal any deficiencies. It was the subsequent intervening breach of duty of the owners (and their contractor) which is in these circumstances the sole cause of their loss.

[para65] I would therefore agree with the conclusion of Lambert J.A. that the respondents cannot succeed in their claim against Mr. Phillips or the City of Vernon.

Liability of the Municipality to the Neighbours

[para66] That conclusion, however, does not constitute an answer to the claims against Vernon brought by the neighbours of the respondents. For the reasons set out earlier it was unreasonable for the respondents the Manolakoses to rely upon the city to ensure that their property improvement (the retaining wall) would be successful. Nonetheless it was

clearly reasonable for the neighbours who were completely blameless, who did not choose the contractors and who could not ensure that the required notice of inspection be given to the city, to rely upon the municipality to ensure that the construction carried out by the Manolakoses would not threaten the health or the safety of those residing below them on the hillside. Pursuant to s. 734 of the Municipal Act, city councils may pass by-laws, such as the one that presents itself in this case, for the protection of the health and safety of persons and the protection of property. The damage sustained by the neighbours is precisely that type of damage which the by-law was designed to avoid. It is therefore appropriate, with regard to the neighbours' claims to accept the trial judge's finding that Mr. Phillips was negligent in granting a building permit based on the inadequate information submitted to him by the contractor and subcontractor.

[para67] I would accept the apportionment of damages suggested by Lambert J.A. namely, 30% to the respondents the Manolakoses, 42% to the contractor and subcontractor on an individual allocation of 21% each, and 28% allocated to the chief building inspector for whom the city is vicariously liable. Further, the damages suffered by the neighbours are properly recoverable on the facts of this case. The retaining wall collapsed and it was the movement of the material from the wall down the slope that damaged the neighbours' property. It is [page1292] not therefore necessary to consider the problem of recovery for economic loss on the facts of this case.

Disposition

[para68] In the result, I would allow the appeal of Mr. Phillips and the City of Vernon in the action brought by the respondents the Manolakoses. I would also allow their appeal in the third party proceedings to the extent of the findings of contributory negligence on the part of Mr. and Mrs. Manolakos.

[para69] In the result, the appeal of the municipality will be allowed, the order of the Court of Appeal and the judgment at trial set aside and the actions of the Manolakoses dismissed with costs.

[para70] In action 22882-82, Kelowna, that is the action of the neighbours of the Manolakoses, I would allow the appeal and vary the Order of the Court of Appeal and the judgment at trial in that the defendants Peter and Voula Manolakos will be held contributorily negligent to the extent of 30%, Ralph Gohmann and Harry Barber 42% (apportioned 21% each) and the City of Vernon 28%. There should be no costs on that appeal.

The reasons of Wilson and L'Heureux-Dubé JJ. were delivered by

[para71] WILSON J. (dissenting in part):-- As my colleagues Justices La Forest and Cory point out, this case is to be distinguished from City of Kamloops v. Nielsen, [1984] 2 S.C.R. 2, on the basis that in this case it is the owners of the property and not a subsequent third party purchaser who are suing the City for negligence. The question is whether the fact that the owners failed to discharge their responsibilities under the by-law should disentitle them from recovering against the City who failed to discharge its responsibilities. My colleague Cory J. says yes and my colleague La Forest J. says no. On this aspect I agree with La Forest J.

[para72] I believe that the test of proximity set out by Lord Wilberforce in Anns v. Merton London Borough Council, [1978] A.C. 728, is met in this case. It must have been obvious to the City that any breach of duty on its part could cause damage to the plaintiffs just as it must have been obvious that it would cause damage to third party purchasers. The key issue is whether there is any reason then to exclude the owners from the class of persons to whom the City's private law duty of care is owed. Cory J. and Lambert J.A. (dissenting in the Court of Appeal) rely on Lord Wilberforce's statement in Anns v. Merton London Borough Council that a public authority owes no duty of care "to a negligent building owner (who is) the source of his own loss". Cory J. says that is the case here. If the owner had sent the notices which they were required under the by-law to send, the City would have made the necessary inspections, seen the defects in

construction, and ensured that they were rectified. But this, in my view, overlooks one very important aspect of the case, namely that the City issued a permit to the contractors to proceed with the construction despite obvious deficiencies in the design of the wall. The City assumed the risk that it could check on the design deficiencies as construction progressed. Yet it did not notify the plaintiffs to this effect. Thus, it seems to me perfectly reasonable for the owners, knowing that the permit to proceed had been issued on the basis of the design submitted by the contractors, to assume that the design had the City's approval and that they could rely on the contractors to give whatever notices were required to be given on their, the owners', behalf. This, after all, is what normally happens. The contractors are, in the normal course, the owner's agent for this purpose. They are included in the definition of "owner" in the statute. They are primarily responsible for the proper construction of the wall and know when the crucial stages for inspection by the City have been reached. Moreover, they knew how important it was, in light of the deficiencies in their design, that the notices be given in a timely fashion so that the City could conduct its inspection. The owners, on the other hand, had no way of knowing that they were taking any special risk in relying on the contractors to give the notices. Had the City [page1294] informed the owners that the plan was deficient and that it was therefore vital for the safety of the owners as well as for the safety of their neighbours that the requisite notices be given, I have no doubt that the plaintiffs would have attended to this matter personally or at the very least checked with their contractors to ensure that it was being done. But because of this omission on the part of the City which led the plaintiffs to rely on the contractors in the normal way, I do not believe that the plaintiffs can be viewed as "negligent", less still as "the source of their own loss".

[para73] I believe that negligence in the circumstances of this case must mean something more than a failure on the part of the owner to personally give the notices required by the by-law and I find support for this view in the decision of the English Court of Appeal in Dennis v. Charnwood Borough Council, [1982] 3 All E.R. 486, where, despite the fact that the plaintiffs had failed to meet all the requirements of the by-law, Templeman L.J. stated at p. 489:

> In my judgment, if local authorities are liable within the limits prescribed in the Anns case for negligence in connection with the discretionary inspection of building works, they must similarly be liable for negligence in failing to use reasonable care in considering and approving plans.
>
> There is no suggestion that Mr. and Mrs. Dennis, the building owners, were negligent or the source of their own loss. They were entitled to trust the builder and the council. They were entitled to claim damages against the builder if he was negligent. They were entitled to claim damages against the council if the council were negligently in breach of their duty to take reasonable care in the consideration of the plan of the house or in the exercise of their supervisory and discretionary power of inspection.

[para74] The decision in Dennis v. Charnwood Borough Council was explained by the House of Lords in Governors of the Peabody Donation Fund v. Sir Lindsay Parkinson & Co., [1985] A.C. 210, where Lord Keith stated at pp. 244-45:

> The decision is in my opinion to be justified on the basis that the plaintiffs, as owners who were the intended occupiers of the house, were within the ambit of the duty of care laid down in Anns. They were persons injury to whose safety or health might necessarily be expected to occur if the foundations of the house were inadequate. There can be no doubt that, under the ratio decidendi of Anns, a remedy against the local authority would have been available to any subsequent occupier who had purchased the house. The plaintiffs were in breach of certain material provisions of the relevant by-laws dealing with the adequacy of foundations, but the fact remains that plans showing the intended foundations had been submitted with their authority and had been approved. This approval might reasonably be taken as an indication that the foundations were satisfactory, and considering that the plaintiffs themselves had no

> technical knowledge nor understanding of the position and that their own safety and health were in issue, it would be unreasonable and unjust to hold that the local authority owed them no duty.

[para75] I think the present case parallels the Dennis case and I would apply to it the last sentence of the above quotation from Lord Keith's judgment. We are dealing here with inexperienced owners seeking to have a retaining wall built on their property and relying on the expertise of their contractors and on the watchdog function of the City. Both let them down. I think it was perfectly reasonable for the plaintiffs to rely on the City in that capacity particularly since it had issued a permit for the work to go ahead without any advice to the plaintiffs that it, the City, was taking a calculated risk in doing so and that subsequent on-site inspections were therefore absolutely vital.

[para76] I would dismiss the appeal with costs.

Rotstein v. North York (City) Chief Building Official

Between
Maxwell L. Rotstein, Nancy Gay Rotstein and Giuseppe Greco, appellants, and
Chief Building Official of the City of North York and Lorna Tamari Ulmer, respondents

[1995] O.J. No. 4575
Doc. RE 5239/95

Ontario Court of Justice (General Division)
Moldaver J.
Oral judgment: June 30, 1995. Written reasons: July 27, 1995.

Counsel:
Malcolm Mercer, for the appellants.
Thomas Lederer and Rhonda Cohen, for the respondent, City of North York.
Peter Wardle and Matthew Gotlieb, for the respondent,

Lorna Tamari Ulmer.

[para1] MOLDAVER J. (orally):-- This is an appeal from the decision of the Chief Building Official of the City of North York to issue Building Permit B 95 00662 in respect of Lots 3 and 4 on Plan 66M2281 in the City of North York.

[para2] The building permit in question authorized the construction of a very large home which the Ulmers wished to build on Lots 3 and 4 of a new four-lot subdivision located on Prue Avenue in the City of North York. Initially, the Ulmers had only purchased Lot 3. They had then sought approval from the Committee of Adjustment for a number of significant variances, which, if granted, would have enabled them to build a large home on Lot 3. Their application before the Committee was opposed, and the hearing was adjourned to allow the Ulmers to file a revised plan which would meet concerns raised by various members of the community and the Planning Department of the City of North York. Rather than proceeding in this fashion, the Ulmers purchased Lot 4, which adjoined Lot 3. They then retained an architect and instructed him to design their proposed home in such a way as to avoid Committee of Adjustment approval. Before doing so, however, the Ulmers consulted with counsel and the City. The architect complied, and the Ulmers applied for a building permit. The permit which was granted is the subject matter of this appeal.

[para3] The appeal itself is brought by Mr. and Mrs. Rotstein and Mr. Greco, who are neighbours living immediately north and south of the subdivision encompassing the Ulmer lots. They oppose the construction of the Ulmer home because, in their opinion, it constitutes a "monster" home, and, as such, it is incompatible with the vast majority of homes in the surrounding area.

[para4] The appeal raises a number of issues. The first concerns the proper interpretation of the word "lot," which has been defined in s. 2.52 of the City of North York's Zoning By-law to mean "a single parcel or tract of land which may be lawfully transferred or conveyed in accordance with the provisions of the Planning Act, as amended, from time to time."

[para5] There are a number of restrictions contained in the Zoning By-law which could apply to the proposed Ulmer residence, depending upon the interpretation of the word

"lot."

[para6] If, as the appellants contend, Lots 3 and 4 are to be considered as separate lots within the meaning of s. 2.52 of the Zoning By-law, then the Ulmer home would contravene several provisions of the zoning by-law as follows:

(a) the permitted coverage of lot 3 would exceed the permitted coverage of 35% and,

(b) the proposed building would intrude into the side yards of lots 3 and 4 and into the rear yard of lot 4.

This, in turn, would mean that the building permit should not

have been issued. (See s. 8(2) of the Building Code Act, 1992, S.O. 1992, c. 23, and s. 2(2) of Regulation 160/93.)

[para7] On the other hand, if, as the respondents contend, the word "lot" is meant to include any number of adjoining registered lots on a plan of subdivision under single ownership, then the proposed Ulmer residence would comply with the various provisions of the Zoning By-law, subject to the possible exception of the proposed terrace.

[para8] The appellants submitted that in the context of a registered plan of subdivision, a "single" parcel or tract of land could only mean a single registered lot. They further contended that two registered lots, even though adjacent and under single ownership, would not constitute a "single" parcel or tract of land. Such an interpretation, the appellants suggested, would run counter to the whole concept of severance under the Planning Act, R.S.O. 1990, c. P.13, which makes it clear that one parcel or tract of land ceases to be a single parcel or tract of land after severance. Furthermore, the appellants submitted that if the word "lot" was to be interpreted as the respondents suggest, then there would have been no need to modify the words "parcel or tract of land" with the word "single." The appellants also submitted that the wording of s. 6(10) of the zoning by-law lent support to their proposed interpretation of the word "lot." Section 6(10) reads:

> Yards Reserved For Open Space
>
> Any part of a lot that is required by this By Law to be reserved as a yard or other open space shall continue to
>
> be so used and shall be deemed not to form part of any adjacent lot for any purpose regardless of any change in ownership of the lot or any part thereof.

[para9] According to the appellants, the conclusion that a registered lot is a "lot," and two registered lots are two "lots," is consistent with s. 6(10), because that provision makes it apparent that the Zoning By-law contemplates adjacent "lots" which are commonly owned. Conversely, the appellants submitted that the proposed interpretation of the respondents in the context of s. 6(10) would mean that a property owner would be entitled to treat adjacent registered lots as one lot, and thereby avoid s. 6(10) entirely.

[para10] Finally, the appellants urged that their interpretation of s. 2.52 was in keeping with proper planning principles, reflecting, as it did, both the spirit and letter of the Subdivision Agreement (four single dwellings on the four registered lots), and ss. 4.1 and 4.2.1 of the official plan (new housing to be compatible in scale and physical character with the existing residential neighbourhood).

[para11] With respect, I cannot accept the appellants' suggested interpretation of the word "lot." Instead, I agree with the submissions of the respondents that there is nothing in the definition of that word which would restrict the combining of whole registered lots to create a parcel or tract of land across which a single-family dwelling could be erected, provided that the zoning designation permitted that particular use.

[para12] As the respondents have correctly pointed out, the method by which the City regulates the size of buildings is through the setback, length, height, and coverage requirements of the Zoning By-law. That By-law zones all land in the City according to a series of classes, zones, and symbols. In each of those categories, the By-law regulates the use of land and the erection, use, bulk, height, and location of buildings. As the affidavit evidence of William Ross (Senior Residential Plans Examiner in the North York Building Department) indicates, although the issue of "monster" homes has, in recent years, become a planning issue of concern, "the method by which the City regulates the size of homes is through the set-back, length, height and coverage requirements in the By-Law." His evidence is confirmed by the report of Elaine Hitchman, Commissioner of Planning, dated January 22, 1990. (See Fresh Application Record, Tab 4H.)

[para13] To my mind, it was never the purpose or intent of the City that the s. 2.52 definition of "lot" be used as the means of controlling the construction of "monster" homes on

adjacent lots. Indeed, if this had been the City's intention, the definition of the word "lot" could have been precisely framed to accomplish this.

[para14] One need only look to the definitions of the word "lot" which existed prior to the 1994 amendments of the Zoning By-law to realize this. Prior to 1994, the By-law contained three definitions of the word lot. One of those was "Lot, Registered," which was defined to mean "a lot described in accordance with land within a registered plan of subdivision." Had this definition been maintained in the 1994 amendments, I would have had no hesitation in accepting the position advanced by the appellants. However, that definition was not maintained. Instead, a general provision defining the word "lot" was enacted to replace the three definitions of that word (Lot (in general), Lot, Residential, and Lot, Registered) which had formed part of the pre-existing by-law.

[para15] The Report prepared by the Commissioner of Planning of the City to Council dated July 13, 1994, which preceded the 1994 amendments, is of some limited assistance in understanding the City's purpose in enacting the amended definition of the word "lot," and more particularly the mischief at which it was aimed. (See R. v. Heywood (1994), 94 C.C.C. (3d) 481.)

[para16] After referring to the three definitions of the word "lot" contained in the pre-1994 By-law, the Report continued as follows:

> The first definition implies that a lot can be any piece of land providing it fronts or abuts a street. In practise, the Building Department and Legal Department interpret "lot" as being land under a single ownership. The definition of "Residential Lot" is written like a zone regulation and not a definition. Staff propose to amend the definition of lot to read as follows:
>
> > "Lot means a single parcel or tract of land which may be lawfully transferred or conveyed in accordance with the provisions of the Planning Act, as amended, from time to time."
>
> This definition change should be seen as more of a clarification to the existing definition rather than a substantive change given that the proposed definition is similar to the existing interpretation used by the Building Department. Given that many of the General Provision regulations make reference to "lot", it is desirable to clarify as part of this by-law the definition of "lot". From this excerpt, it would appear that the mischief, if one could call it that, which the amended version sought to cure, related to the unnecessary confusion created by the pre-existing trio of definitions. One thing is certain. It was clearly not aimed at the mischief of "monster" homes. Otherwise, I would have expected this concern to have been specifically addressed, particularly since it was the pre-1994 definition of Lot (general) that had been previously used to deal with such matters as setback, coverage, and other like restrictions.

[para17] As well, this excerpt shows that the ensuing amendment tracked the proposed wording of the Planning Commissioner. By employing the words "parcel and tract of land," as opposed to the word "lot," I am satisfied that the City did not intend to restrict the word "lot" to the earlier definition of "Registered Lot," but, instead, to leave it wide enough to encompass a number of adjacent registered lots. I am further of the view that the word "single" was inserted to ensure that the definition went only so far as to include adjacent lots under single ownership. While the drafting could have been better, I am satisfied that the intent of the City was as I have described it.

[para18] I find further support for this conclusion from the definition of "parcel" found in Black's Law Dictionary, 5th edition (St. Paul, Minn.: West Publishing Company, 1979), p. 1002. There, the word "parcel" is defined as follows:

> "Parcel" as used with reference to land generally means a contiguous quantity of land in the possession of an owner. ... A contiguous quantity of land in possession

> of, owned by, or recorded as property of the same claimant person or company.

[para19] While it is true that the final portion of the definition reads: "Term may be synonymous with 'lot,' "I am not prepared to conclude that if the City had in mind the definition proposed by the appellants for the purpose of dealing with "monster" homes, it would have left the matter to chance by using the word "parcel," as opposed to "Registered Lot."

[para20] The same reasoning holds true for the definition of "tract of land," which, for the sake of completeness, is also defined in Black's Law Dictionary to mean:

> A lot, piece or parcel of land, of greater or less size, the term not importing in itself any precise dimension though "term" generally refers to a large piece of land. ... Term is synonymous with parcel of land and does not have reference to size but to contiguous quantity of land.

[para21] Finally, I accept the respondents' submission that the 1994 amended definition of the word "lot" was intended to be one of general application, referable to commercial, industrial, residential and other zones. That being so, surely it cannot be said that in defining the word "lot," knowing that it would have such wide and general application, the City was nonetheless purporting to deal with the specific problem of "monster" homes being constructed on adjacent registered lots. Any such suggestion is, in my opinion, untenable.

[para22] As for the s. 6(10) argument, I accept the respondents' position that this provision was intended to address the situation where an owner of two adjacent lots, each containing a building, seeks to satisfy a side yard requirement for each of the two buildings by "sharing" a single side yard between the two buildings. Section 6(10) simply mandates that the required side yard of one building cannot be applied to form the side yard or part thereof of an adjacent required side yard. In this regard, I also accept the respondents' contention that the word "yard" has meaning only in relation to a "building," not a "lot."

[para23] The second issue relates to the implication, if any, arising from the Subdivision Agreement. Sections c.4 and c.4.1 of that Agreement read:

> c. 4 - One building per registered lot;
>
> c. 4.1 - No division, redivision, or subdivision of any lot or lots on the Plan as originally registered shall be made so as to either increase or decrease the total number of building lots upon the Plan without the approval of Council or Committee of Adjustment, pursuant to the applicable legislation.

[para24] The appellants contend that the Subdivision Agreement should be treated as if it had the force of law, equivalent to a regulation or by-law, thereby bringing it within the purview of the words "applicable law" defined in s. 2(2) of Regulation 160/93. In support of this, reliance was placed on s. 51(6) of the Planning Act.

[para25] That being so, it was submitted that the proposed use of Lots 3 and 4 by the owners amounted to a breach of the Agreement, since the Agreement clearly envisioned the erection of four single-family dwellings on the four separate lots. In this regard, the proposed construction of the Ulmer home on Lots 3 and 4 contravenes c.4.1 of the Agreement, since it amounted to a "redivision of the lots on the Plan."

[para26] Again, with respect, I must disagree. In my opinion, the Subdivision Agreement did not take on the force of law, and therefore it did not come within the purview of the words "applicable law." It was nothing more than a contract between the City and the developer. The fact that it could be registered on title and enforced by the City under s. 51(6) of the Planning Act did not have the effect of converting it into a regulation or by-law, or something akin to either.

[para27] But even if I am wrong in this, I have not been persuaded that the proposed construction of the Ulmer home on Lots 3 and 4 amounted to a redivision of the lots on the Plan in contravention of c. 4.1. Instead, it amounted to an amalgamation of two registered lots, something which c. 4.1 neither contemplated nor prohibited.

[para28] Furthermore, I do not accept the suggestion that the Agreement allowed only for the erection of four single-family dwellings on the four registered lots. While the Agreement clearly restricted the number of dwellings to four, it did not preclude the construction of less than four dwellings. For these reasons, the Subdivision Agreement argument must also fail.

[para29] That then leaves the matter of the terrace. Although a great deal of intricate and technical argument was advanced by both sides on this issue, I am satisfied that if the terrace is a structure or building, only the retaining wall portion of it could be so classified. That being so, I accept the evidence of Mr. Ross that it amounted to a conforming "accessory building," and therefore it did not contravene the provisions of the Zoning By-law or the Building Code.

[para30] For all of these reasons, the appeal is dismissed.

Seel Enterprises Ltd. v. Toronto (City)

IN THE MATTER OF an application for an Order of Mandamus to
the Corporation of the City of Toronto;
AND IN THE MATTER OF 1361 and 1363 King Street West, in the
City of Toronto.

Between
Seel Enterprises Limited, applicant, and
The Corporation of the City of Toronto, and Michael L. Nixon, Commissioner and Chief Building Official for the Corporation of The City of Toronto, respondents

[1981] O.J. No. 1095

Ontario Supreme Court - High Court of Justice
Divisional Court - Toronto, Ontario
Osler, Southey and Smith JJ.
Heard: December 10, 1981.
Oral judgment: December 10, 1981.
Released: January 12, 1982.

Counsel:
A.C. Finkelstein, for the applicant.
M.J. Winer, for the respondents.

The judgment of the Court was delivered by

[para1] SOUTHEY J. (orally):-- This is an application for Judicial review in which the applicant seeks a order in the nature of mandamus requiring the respondent City ad the Chief Building Official to issue a building permit for certain improvements which the applicant seeks to make to premises at 1361-1363 King Street West. Those premises have been used for a lodging house at all material times and the proposed renovations would upgrade the lodging house by reducing the number of living units in it and increasing the space and amenities in each unit.

[para2] The permit has been refused because it falls within the exception contained in s. 6(1)(a) of The Building Code Act, at least that is the position taken by the respondents. Section 6(1)(a) reads as follows:

> 6.-(1) The chief official shall issue a permit except where,
>
> (a) the proposed building or the proposed construction or demolition will not comply with this Act or the building code or will contravene any other applicable law;

The two premises are located in the Parkdale area of Toronto as to which the zoning by-law of the City was amended on 30th day of January, 1978 to provide that no person should erect or use any building for the purpose of a boarding or lodging house in that area. The amendment to the zoning by-law went on to provide that the amendment did not apply to any dwelling house provided that such dwelling house was legally used as a boarding or lodging house on the 30th day of January, 1978.

[para3] The position taken by the respondent is that the permit should not be issued because the construction will contravene the amendments to the zoning by-law to which I have referred in that they relate to a "lodging house" in an area in which lodging houses are prohibited. There is, no doubt, in our minds that the municipality is justified in refusing to issue a building permit for the construction or renovation of a house where such construction or renovation will result in a contravention of the zoning by-law.

[para4] The applicant's submission is that there is no breach of the zoning by-law because the houses in question were legally used as "lodging houses" on the 30th day of January, 1978. It is acknowledged by the applicant that neither of these houses were licensed as "lodging houses" under By-law 412-74 passed on November 22, 1974. That by-law provided, generally speaking, that no person should keep a lodging house without first obtaining from the Corporation a licence authorizing him so to do. In the case of the building

at 1361 King Street West, the occupant had obtained a lodging house licence prior to 1977, but her application for renewal in 1977 was refused because of twelve outstanding items of repair and the lack of a second means of egress from the third floor. Such repairs and other means of egress were required under the applicable building code. In the case of 1361 King Street West, the occupant from time to time of that building had never obtained a lodging house licence and it is common ground between counsel that an application for such licence was made in 1976, but was refused again because of alleged violations of the building code. In the result, in our view, the user of these two properties as lodging houses on the 30th day of January, 1978 was not a legal use because of the violations not only of the licensing by-law, but also because of the building code.

[para5] Accordingly, in our view, the use as a lodging house did not fall within the exception to the 1978 amendment to the zoning by-law and the use of the properties for lodging houses was prohibited under the zoning by-law.

[para6] In these circumstances in our view, the respondent was justified in refusing to issue a building permit. It is unfortunate and unsatisfactory that certain officials of the respondent City were sending deficiency notices to the owner of the premises in question after the 30th of January, 1978 when ultimately any attempt to comply with those deficiency notices apparently was going to be rejected because of non-compliance with the zoning by-law. The owner in my view, has been treated in an unsatisfactory manner by the City in this respect, but we cannot find that the refusal to issue a building permit in the circumstances that I have outlined above was not justified.

[para7] Accordingly, the application will be dismissed.

[para8] In all circumstances the dismissal of the application will be without costs.

SMITH J.

Shell Canada Products Ltd. v. Barrie (City) Chief Building Official

Between
Shell Canada Products Limited, Applicant, and
Gordon Allison, Chief Building Official and the Corporation of the City of Barrie, Respondents

[1992] O.J. No. 1572
DRS 93-03696
Action No. 1120/92

Also reported at:
11 M.P.L.R. (2d) 43

Ontario Court of Justice - General Division
Toronto, Ontario
Davidson J.
July 24, 1992

Ian J. Lord, for the Applicant.
John D. Burgar, for the Respondents.

DAVIDSON J.:-- This is an application under the Building Code Act, R.S.O. 1990, Chapter B13 for an order granting the applicant a building permit to permit constructions of a self-serve gas bar kiosk, office, washrooms and storage space.

The application is by way of appeal from the refusal of the Chief Building Official of the City of Barrie to issue a building permit.

The facts are not materially in dispute.

The applicant purchased the property, 204 Grove Street in April 1991 and subsequently demolished the building on the property which had been a one-storey school board office.

The applicant's intention had always been to construct a gas bar service station and prior to its acquisition of the property, the respondent had advised the applicant that the property was zoned General, Commercial C4 which permitted such uses.

On May 16, 1991, the applicant applied to the City for site plan approval for the property as required under the Planning Act. A modification was made to the site plan and the Planning Committee recommended to City council that the site plan approval be granted. There was a referral back to Planning Committee in regard to a watercourse issue. Further consideration was had and the Planning Committee considered a staff report which had recommended approval of the site plan application but as at that date January 27, 1992, the Planning Committee recommended to City Council that site plan approval be refused and that a public meeting be scheduled to consider rezoning for residential. As at February 3, 1992, City Council approved and directed the City Clerk and the Director of Planning and Development to prepare a report to consider a zoning change from commercial C4 to residential.

On March 31, 1992, the applicant applied to the City for a building permit to construct the service station. On April

21, 1992, the Chief Building Official for the City wrote the applicant confirming that the Building Permit Application and plans complied with the zoning by-law and the building code but that it might contravene the Site Plan Control By-law and the Planning Act due to "the lack of a site plan that has been approved by the Council of the Corporation of the City of Barrie." The Chief Building Official took the position in the letter that whereas the application for building permit might contravene the Site plan Control By-law, he was not able to issue a permit at that time.

In response thereto, the applicant wrote the Chief Building Official May 5, 1992 stating inter alia -

> "In our view a Site Plan Control By-law and the absence of site plan approval are not applicable under the Building Code Act. We concur that actual development can not occur until the City or the Ontario Municipal Board grants site plan approval ..."

On May 6, 1992, the Chief Building official advised the applicant by letter, inter alia -

> "Whereas the proposed site plan has not been approved by the Council of the Corporation of the City of Barrie, you are hereby advised that permit application B920310 for a proposed self-serve gas bar and a mini convenience store has been denied

On June 15, 1992 the Planning Committee recommended to City Council that no public meeting be held to consider rezoning the property but that the staff be directed to draft an interim control by-law affecting the property.

On June 22, 1992, City Council adopted the Planning Committee recommendation and authorized a study with respect to the lands in regard to planning controls and approved the resolution including the feature "That no further action be taken until the results of the court action are known". The court action was this application.

On July 6, 1992, without notice to the applicant and without any planning report, City Council enacted an interim control by-law with respect to the applicant's lands at 204 Grove Street and provided that none of the lands "... shall be used for the purposes of an automotive service station." The interim control by-law would be in effect for a period of one year from July 6, 1992.

The relevant provisions of the Building Code Act, R.S.O. 1990, Chapter B13, are -

Section 6(1) -

> "The chief official shall issue a permit except where, (a) the proposed building or the proposed construction or demolition will not comply with this Act or the building code or will contravene any other applicable ..."

Section 15(1) -

> "Any person who wishes to appeal an order given or decision made by an inspector or chief official under this Act or the regulations may, within twenty days after the order or decision is made, apply to the judge of the Ontario Court (General Division) for a hearing and appeal.

Section 15(3) -

> "Where an application is made to a judge for a hearing under sub-section (1) the judge shall appoint a time for and hold the hearing and may rescind or affirm the order or decision of the Inspector or chief official or take such action as the judge considers the inspector or chief official ought to take in accordance with this Act and the regulations, and for such purposes the judge may substitute his or her opinion for that of the inspector or chief official."

In Woodglen & Co. Ltd. v. The City of North York, et al. (1984) 47 O.R. (2d), p. 614, Divisional Court at p. 619, -

> "The powers of the county court judge hearing an application under s. 15 are limited by s-s. (3). The judge may rescind or affirm the order or decision of the inspector or chief official or take such action as the judge considers the inspector or chief official ought to take in accordance with this Act and the regulations". The duty of the judge under this subsection is to do what the judge considers the inspector or chief official ought to have done. The judge has no powers other than those which were possessed by the inspector or chief official, and has no discretion to act or defer action, if that discretion was not enjoyed by the inspector or chief official. As stated earlier, I agree with the decision of the learned county court judge in this case that the chief official of the municipality was under a duty to issue the permit to Woodglen because the proposed construction would not contravene any

> law. That being so, the learned county court judge, in my view, was required by law to allow t,he appeal and order the issuance of the building permit.

In my opinion, under the Building Code Act, neither the chief official nor the judge on appeal has a discretion. If no law is contravened then the permit must issue.

It has been held that the time for considering what decision the Chief Building Official should have made is the date on which the rights of the applicant had crystallized. In this case that would have been on April 21, 1992 or, at the latest, on May 6, 1992 when the building permit was ultimately refused. Reference Wolfond, et al. v. The North York City Building Commissioner (1990), 1 M.P.L.R. (2d) p. 190, Haley, D.C.J. and H. and D. International Group v. Toronto, et al. (1988), 44 M.P.L.R. 187, Corbett, D.C.J.

The question then arises whether the absence of the site plan approval under the Planning Act is "other applicable law" within the meaning of Section 6(1)(a) of the Building Code Act.

The issue arose in re Revenue Properties Co. Ltd. v. The Corporation of the City of Toronto (1984) 26 M.P.L.R. 165, Matlow, C.C.J. In that case, the municipality took the position that the applicant was not entitled to a building permit until site plan approval had been given. The court concluded that site plan approval was not an absolute precondition for the issuance of the building permit and that it did not come within the area of "other applicable law". At p. 170, Matlow, C.C.J. stated -

> "Although it may be desirable and more expeditious
>
> that site plan approval be obtained before the issuance of a building permit in order to eliminate the need for further amendments to the building permit that might become necessary to satisfy the conditions of the granting of site plan approval, this potential difficulty does not persuade me that the legislation requires site plan approval as a precondition for the issuance of a building permit."

In H. & D. International, supra, Corbett, D.C.J. approved Revenue Properties and came to the same conclusion.

This was also the view of Hogg, D.C.J. in Summit Glen Developments Corporation v. Corporation of the City of Toronto (1989) 44 M.P.L.R. 50 at page 54, and I quote -

> "The next issue before me is whether a site plan approval pursuant to Section 40 (now Section 41) of the Planning Act is prerequisite to the issuing of a building permit.
>
> Under Section 40 of the Planning Act 1983: 'Construction, erection or placing of one or more
>
> buildings' cannot take place without approved site plan drawings.
>
> In my view, site plan approval is not a prerequisite to the issuance of a building permit but no construction may take place without it.

These were all Building Code Act cases.

In Revenue Properties, supra, Matlow, J. made reference at p. 170 as follows -

> "In Dominion Stores Limited v. Etobicoke (1982), 37 O.R. (2d) 661 ... Divisional Court, this same issue was raised but expressly not decided by the Divisional Court. Yet, in the result reached, an order was made requiring the issuance of a building permit before site plan approval, was granted because of the circumstances of that case.

The Dominion Stores case was not referred to in H. & D. International or Summit Glen Developments Corporation, supra.

In Dominion Stores Limited, Gallaghan, J., in giving the judgment of the Divisional Court, stated at p. 662 -

"The respondent has refused to issue the building permit because it has not given development control approval under Section 40 of the Planning Act, R.S.O. 1980, C. 379. It is clear beyond peradventure that the only reason that the respondent has not given its approval is that it does not want to permit access on to the applicant's lands from either of the local streets. It has refused to approve any development plans or drawings or enter into any development agreement which in any way provide access to or from the proposed supermarket on to the those local streets.

The issue before this court is whether the municipality is legally entitled to refuse to give development approval on that ground. While a certain amount of discussion took place before us as to whether development approval under Section 40 of the Planning Act is or is not a condition precedent to the issue of a building permit, I do not think it is necessary for the purposes of this application to decide that issue. I am of the opinion, assuming without deciding, that development approval is a condition precedent to the issuance of the building permit, that a municipality may not withhold such approval for a reason that is not authorized by law. If it were otherwise an applicant's legal right to a building permit could easily be frustrated."

In Quay West v. Corporation of the City of Toronto (1989), 47 M.P.L.R. 109, the Divisional Court per Southey, J. (Gray, J. concurring) in considering an application to quash an interim control by-law permitted an enlargement to request an order for mandamus to compel issuing of a building permit. The court refused to quash the interim control by-law. At page 111 Southey, J. states -

"In my judgment, we should not now direct the issuance of a building permit because the developers proposed condomium project is not a use permitted under the interim control by-law."

The court referred to Dominion Stores, supra, and re Revenue Properties, supra, describing them as decisions in which it was held a building permit should have been issued despite the lack of site plan approval. The court, per Southey, J. stated at p. 112 -

"Both arose from extraordinary circumstances in which the municipality was not acting in the good faith or was refusing developmental approval for an obviously unlawful reason. Having refused to quash interim control by-law in this case as one improperly enacted, I am not prepared to hold that this is one of those extraordinary cases in which the building permit should have been issued despite the absence of site plan approval."

In Quay West the court indicated that it was not satisfied that the chief official was under a duty to issue the permit because there had been no site plan approval at the time. Thereafter, the interim control by-law was passed which the court refused to set aside and then refused to issue a mandamus for the building permit. Saunders, J., concurring in the result stated at p. 112 -

"In my opinion, such an order (for issuing a building permit) ought not to issue because of the existence of the interim control by-law and the provisions of Section 34(9)(b) of the Planning Act. I do not consider it necessary to decide whether the chief official was under a duty in August 1988 to issue the permit despite the absence of a site plan agreement. It may be that such duty did exist on the basis of the reasoning in the Dominion Stores case.'"

In Wolfond, supra, the court considered Quay West and distinguished it. There, it was apparent on an agreed state of facts, that the proposed building of the applicants, referred to in their application for the building permit, complied with all applicable laws save and except the subsequently passed by-law which was one of general application prohibiting the

proposed building and not an interim control by-law.

In the case at bar, site plan approval had not been forthcoming. This was given as the reason for refusing the building permit and in that regard I can see no real distinction between the facts in this case and the facts in Quay West unless it was either that the interim control by-law related specifically to these lands and might be said to be discriminatory or enacted in bad faith, which is not really argued before me or, that City Council had resolved to take no further action but for a study of planning controls affecting the property until the result of this court hearing and thereafter changed their mind and passed the interim control by-law without notice. Notice, of course, is not necessary.

Quay West was decided after Revenue Properties and distinguished it and after H. & D. International. Although Summit Glen was decided after Quay West, the latter decision was not referred to, which is understandable as there was only three weeks between the two decisions.

I am not able to distinguish the facts in the case before me from the facts in Quay West. I am bound by that majority decision, it being from the Divisional Court and leave to appeal to the Ontario Court of Appeal having been dismissed by the Court of Appeal.

In the result, the application is dismissed with costs to the respondents fixed in the sum of $1,000.00

DAVIDSON J.

* * * * *

Supplementary Reasons

Released November 4, 1992

DAVIDSON J.:-- In my Reasons for Decision dated July 24, 1992, I indicated that I could see no real distinction between the facts in the case before me and the facts in Quay West v. Corporation of the City of Toronto (1989), 47 M.P.L.R. 109 and being bound by that majority decision in the Divisional Court, I dismissed the application for a building permit:

Subsequently, the applicant moved before me under Rule 59.06(2) alleging facts discovered after the date of my order.

In the application as originally argued before me, reference was had by both parties to an interim control by-law passed by the City Council of the City of Barrie on July 6, 1992. The existence of that interim control by-law was one of the factors which persuaded me that I was bound by the Quay West decision.

On the material filed before me on this motion to vary my order, it is apparent that on July 27, 1992, applicant's counsel requested from the City of Barrie copies of all interim control by-laws and amendments since the enactment of the city's comprehensive Zoning by-law 85-95 in 1985. It further appears that by letter dated July 31, 1992, the applicant's counsel obtained the history of interim control by-laws and amendments. Thereafter, it was learned that an interim control by-law applying to all lands in the City of Barrie, including the subject lands, was enacted December 14, 1987. That by-law was originally to expire December 14, 1988. Thereafter, By-law 88-353 amended that aforesaid interim control by-law by extending its effect until December 14, 1989, at which time it expired having not been earlier repealed or amended in respect of the subject lands.

Section 38(7) of the Planning Act, R.S.O. 1990, Chapter P13, provides -

> "Where an interim control by-law ceases to be in effect the council of the municipality may not, for a period of three years, pass a further interim control by-law that applies to any lands to which the original interim control by-law applied."

The interim control by-law which I gave effect to in my Reasons of July 24, 1992, was passed within that three year period of prohibition.

Had these facts been before me at the time of my original decision, I would have ruled that this case could have been distinguished from Quay West and that accordingly Quay West would not have been binding upon me. Additionally, I would have found this case to be in the category of "extraordinary" cases as stated by Southey, J. in distinguishing prior decisions at page 112.

Counsel for the respondents makes the point that the applicant has appealed to the Ontario Municipal Board to have the interim control by-law quashed and it is his position that that is where the consideration for its validity should be had and not before me. I agree that I am not being asked to quash the interim control by-law but I am being asked to consider its relevance to whether a building permit should be ordered or not.

Counsel made reference to three decisions of the Ontario Municipal Board on the affect of present Section 38(7) of the Planning Act.

Re Burlington Interim Control By-law 4000-589 (1988), 22 O.M.B.R. 233.

Re Etobicoke Interim Control By-law 1900-87 (1991), 25 O.M.B.R. 289, and

Re Newmarket Interim Control By-law 1991-136 (1992), unreported, January 30, 1992 O.M.B.

In the City of Burlington, the former interim control by-law was one that affected essentially all of the city and prohibited adult entertainment establishments. The second interim control by-law related to permitted uses being only agricultural and existing residential uses. The Board held that the purposes of the two interim control by-laws were widely different. The landowners appeal against the interim control by-law was dismissed.

In the City of Etobicoke, the Board expressed the view that the City of Burlington was wrongly decided. In doing so the Board stated, at page 293 -

> "The power conferred on the municipality pursuant to Section 37 of the Planning Act, 1983 (now Section 38) is an extraordinary one, which can only be exercised sparingly, gingerly, with the greatest care and circumspection. The clear intent of Section 37(7) (now Section 38(7)), is to provide a 'cooling off' period within which a municipality is prohibited from using the heavy armoury against property owners. Any fair reading of the sub-section leads one to the inevitable result that no interim control by-law, regardless its purport or intent, can be enacted within the prohibition period if it applies to the lands to which the earlier by-law had application."

In re Newmarket, the Board made reference to both re the City of Burlington and re the City of Etobicoke and preferred the latter view, and the landowners' appeal against the interim control by-law was allowed.

I prefer the reasoning in re The City of Etobicoke and re Newmarket to that of the reasoning in re The City of Burlington.

In the final analysis, it is my view that the only bar to the applicant's right to have a building permit issued was because of the decision in Quay West and, accordingly, for the reasons given originally and in these supplementary reasons, there will be an order varying my order of July 24, 1992 and providing that the respondents shall grant to the applicant a building permit to permit the construction of a two island self-serve gas bar with canopy and a 126 square meter building for a kiosk and office, washrooms and storage space.

The order for costs will also be varied and provide that the applicant shall have the costs of the original application and of this application fixed in the sum of $3,500.

Sixteenth Warden Ltd. et al. v. Wright, Chief Building Official, Corporation of the Town of Markham et al.; Loblaws Supermarkets Ltd. et al., Interveners

12 O.R. (3d) 653
[1993] O.J. No. 692
Action No. RE 1173/92

Ontario Court (General Division),
Day J.
March 26, 1993

APPEAL pursuant to s. 15(1) of the Building Code Act, R.S.O. 1990, c. B.13, from a decision of a chief building official refusing to issue a building permit.

Richard Storrey and Tom Friedland, for applicants.

Robert Robinson, for respondents.

N. Jane Pepino, Q.C., and Timothy J. Hill, for interveners, Loblaws and Loblaws Supermarkets Inc.

Hugh A. Christie, for intervener, The Oshawa Group.

Robert Macaulay, Q.C., for intervener, 648669 Ontario Ltd.

DAY J.:--

THE APPLICATION

This application is an appeal pursuant to s. 15(1) of the Building Code Act, R.S.O. 1990, c. B.13, from the refusal of the chief building official for the Town of Markham to issue a building permit.

THE INTERVENERS

The interveners, Loblaws Supermarkets Limited, 648669 Ontario Limited and Loblaws Inc., were granted leave to intervene as parties to this proceeding.

THE FACTS

1. Background

The applicant, Price Club Canada Inc. ("Price Club"), through a subsidiary company, is the purchaser under an agreement of purchase and sale dated February 6, 1992, of a site at the north-east corner of Woodbine Avenue and 16th Avenue, in the Town of Markham. The applicant, Sixteenth Warden Limited ("Sixteenth Warden"), is the owner of the said lands. Price Club proposes to construct a shopping centre, including a Price Club warehouse membership club, on the site.

2. Site plan approval and zoning

The proposed use of the site requires site plan approval under s. 41 of the Planning Act, R.S.O. 1990, c. P.13. Council is given the power to approve drawings which show such matters as the location of proposed buildings, their massing and conceptual design, and the relationship of the proposed buildings to adjacent buildings, streets and publicly accessible areas.

Site plan approval applications in the Town of Markham are approved by council as a whole, which comprises the planning committee for the town. Applications, with accompanying drawings and plans, are reviewed by the planning staff of the town, and circulated to interested departments in the town and Regional Municipality of York. After this review process, planning staff submits comments to the applicant and prepares a report for the town's planning committee. The application is then submitted to council.

On March 9, 1992, Price Club filed an application with the Town of Markham for site plan approval. The site plan proposed the construction of a shopping centre including a Price Club warehouse membership club and a separate multiple unit retail building. The separate multi-unit building will include a range of retail and personal service uses. The application was circulated by the planning department to the various departments for comments. Representatives of Price Club subsequently met on several occasions with the planning staff

for the Town of Markham and several revisions were made to the site plan as originally filed to reflect the comments of the planning staff and the departments to whom the application had been circulated.

The planning department for the town ultimately prepared a report dated April 21, 1992, in which it recommended approval of the site plan application subject only to two conditions. Both of those conditions are acceptable to the applicants. Most of the revisions to the site plan suggested in the report have already been made.

The report of the planning department considered the relevant zoning by-law and commented as follows:

> . . . the property is zoned Community Commercial (CC) by-law 118-79, as amended. The Legal Services Department has confirmed that the proposed development is permitted by the Zoning By-law.

The report of the planning department was put before the planning committee for the Town of Markham comprised of all members of Markham council, at a meeting on April 21, 1992.

Prior to the meeting on April 21, the planning committee held an in camera session at which the majority of the councillors were in favour of turning down the application.

The planning committee then elected to defer consideration of the report and directed that a public meeting be held on May 4, 1992, even though the Planning Act does not contemplate such a process. On May 4, 1992, a public meeting was held.

On May 12, 1992, the Council for the Corporation of the Town of Markham, acting as the planning committee, met to consider the site plan application. Council passed a resolution to "not approve" the site plan.

3. Building permit application

On April 24, 1992, Sixteenth Warden filed an application for a building permit. Initially, partial plans were submitted for the foundation of the buildings.

On May 13, 1992, the Chief Building Official for the Town of Markham refused to issue a building permit for the construction of the foundation.

On May 25, 1992, the applicant filed complete building plans for the buildings to be constructed on the site.

On May 27, 1992, the chief building official refused to issue a permit, notwithstanding his view that the application appeared to be substantially complete and in compliance with the Ontario Building Code, R.R.O. 1990, Reg. 61 (under the Building Code Act), and the relevant zoning by-law on the basis that site plan approval was not granted.

4. Interim control by-law

The within application was filed June 2, 1992. On June 23, 1992, two days prior to the original return date of this application, the respondent Town of Markham, without any notice to the applicants, enacted interim control by-law 115-92, the apparent intent of which was to frustrate the applicants' plans to construct a Price Club membership warehouse club on their site and to influence the result of this application which was already underway.

To tighten its grip, on September 29, 1992, the respondent Town of Markham, again without any notice to the applicants, enacted interim control by-law 183-92, to amend interim control by-law 115-92. The amendment adds a definition of "Commercial Club" to the interim control by-law and purports to prevent a "Commercial Club" from being built on the applicants' site.

Although the interim control by-law, as amended, ostensibly relates to sites other than the applicants' site, the facts are uncontested that the applicants' site is the only undeveloped site and thus the only site actually impacted by the interim control by-law.

The above-mentioned facts are further expanded herein.

THE LAW AND FINDINGS

1. The role of the judge hearing s. 15(1) appeal

The powers of a judge hearing an appeal pursuant to s. 15(1) of the Building Code Act are outlined in s. 15(3). Section 15(3) provides as follows:

> 15(3) Where an application is made to a judge for a hearing under subsection (1), the judge shall appoint a time for and hold the hearing and may rescind or affirm the order or decision of the inspector or chief official or take such action as the judge considers the inspector or chief official ought to take in accordance with this Act and the regulations, and for such purposes the judge may substitute his or her opinion for that of the inspector or chief official.

(Emphasis added)

The powers of the chief building official are stipulated in s. 6(1) of the Building Code Act, which provides:

> 6(1) The chief official shall issue a permit except where,
>
> (a) the proposed building or the proposed construction or demolition will not comply with this Act or the building code or will contravene any other applicable law.

Where the criteria are met, the mandate of the chief building official is without discretion.

It has been suggested that the question as to the date upon which the applicants' right to a building permit "crystallizes" for the purposes of the appeal is of critical importance. The applicants argue that the rights of a building permit applicant to a building permit for the purposes of an appeal under s. 15(3) must be determined as of the date of the application and not the date of the hearing. It is their view that if their application did not infringe s. 6(1) at the date of the application they are entitled to a permit, which right cannot be affected by any subsequent action on the part of the respondents. They rely upon Woodglen & Co. v. North York (City) (No. 2) (1984), 47 O.R. (2d) 614, 26 M.P.L.R. 40 (Div. Ct.); H & D International Group v. Toronto (City) (1988), 44 M.P.L.R. 187 (Ont. Dist. Ct.); and Summit Glen Development Corp. v. Toronto (City) (1989), 44 M.P.L.R. 50 (Ont. Dist. Ct.).

In Woodglen & Co. v. North York (City) (No. 1) (1983), 42 O.R. (2d) 385, 23 M.P.L.R. 13 (Div. Ct.), a development was proposed for land zoned for single family residences. An old official plan designated the lands for open space and greenbelt. The respondent municipality failed to bring forward a by-law implementing the official plan prior to the application for building permits. The chief building official of North York refused to issue the permits based on the intent of the municipality to rezone. The Divisional Court heard the matter by way of a mandamus application. Eberle J. held that in the absence of exceptional circumstances, where there is a specific remedy for the harm alleged under s. 15 of the Building Code Act, R.S.O. 1980, c. 51, the court's discretion ought not to be exercized in favour of mandamus.

The matter then proceeded before Haley Co. Ct. J. in Woodglen & Co. v. North York (City) (1983), 43 O.R. (2d) 289, 23 M.P.L.R. 18 (Co. Ct.). The court found that as the official plan was not "applicable law" as stipulated in s. 6 of the Building Code Act, R.S.O. 1980, c. 51, the chief building official could not have regard to it in refusing the application. The court ordered the issuance of the permits. The matter was appealed to the Divisional Court.

In Woodglen (No. 2), supra, North York's appeal was dismissed. Mr. Justice Southey, agreeing with Haley Co. Ct. J. on the issue of applicable law, dealt specifically with the interpretation that a court should place on s. 15. He stated,

at p. 619:

> The duty of the judge under this subsection is to do what the judge considers the inspector or chief official ought to have done.

(Emphasis added)

The applicants refer also to the decision of then District Court Judge Corbett in H & D International Group v. Toronto (City), supra. Adopting the decision of Southey J. in Woodglen (No. 2), the court held that an interim control by-law passed after the decision of the building commissioner to deny an application for a building permit was not "other applicable law" within the meaning of s. 6(1) of the Building Code Act, R.S.O. 1980, c. 51. The court states at p. 191:

> In my opinion, the rights of the applicant should be determined on the date of the decision of the chief building inspector. Applicants for building permits are entitled to a reasonable degree of finality respecting their entitlement to building permits, which is not afforded by determining those rights as of the date of the hearing.

Reference is also made to the decision of Hogg D.C.J. in Summit Glen Development Corp. v. Toronto (City), supra, wherein he writes at p. 53:

> In my view, the leading case in Ontario is Woodglen & Co. Ltd. v. North York (1984), 47 O.R. (2d) 614, 26 M.P.L.R. 40, 9 C.L.R. 232, 12 D.L.R. (4th) 146, 5 O.A.C. 313 (Div. Ct.). In that case Mr. Justice Southey dealt specifically with the interpretation that a Court should place on s. 15 and at p. 619 he held: "The duty of the judge under this subsection is to do what the judge considers the inspector or chief official ought to have done."
>
> In other words, the Judge hearing the appeal was to place himself in the shoes of the official at the time the decision was made.

(Emphasis in original)

And further at p. 53:

> With respect, in my view, Mr. Justice Southey in the Woodglen case, and Judge Marie Corbett in the H & D International case set forth the law that I should follow.

The respondents and interveners argued that the court should determine an applicant's right to a building permit as of the date of the hearing. If they are correct, the subsequent passage of the interim control by-law constitute "applicable law" thereby preventing the issuance of the permit. They cite the following decisions in support of this proposition: McDonald's Restaurants of Canada Ltd. v. Humm (1983), 24 M.P.L.R. 103 (Ont. Co. Ct.); Greengable Holdings Inc. v. Scarborough (City), Ontario County Court, Matthews Co. Ct. J., April 26, 1984 (unreported), and Quay West v. Toronto (City) (1989), 47 M.P.L.R. 109 (Ont. Div. Ct.), leave to appeal to the Court of Appeal refused (1987), 47 M.P.L.R. 109n.

In McDonald's Restaurants, the appellant had applied for a building permit for the construction of a restaurant after a decision of the Ontario Municipal Board which permitted the location of the restaurant on the lands in question. The town council, in an attempt to prevent the building of the restaurant, adopted a proposed new official plan under which, if implemented, a restaurant location at the site in question would not be permitted. Despite numerous inquiries the chief building official refused to come to a decision respecting the issuance of a building permit. The appellant requested a hearing pursuant to s. 15(1) of the Building Code Act, R.S.O. 1980, c. 51.

The court allowed the appeal. In his decision, Blair J. had this to say, at pp. 127-28, regarding the date at which the appellant's right to a permit crystallizes:

> As explained by Roach J.A., in Hammond v. Hamilton, supra, the Privy Council held in Toronto v. Toronto R.C. Sep. Schools Trustees, [1926] A.C. 81, 3 D.L.R. 880 (P.C.), that the legal right of a person to use his property as he sees fit and to have a building permit is to be judged as of the date of the hearing and is not in effect stabilized as of the date of the application for the permit. It would seem that to hold otherwise would be to preclude the council from legislating with respect to the subject.

The respondent and intervenors also rely upon Greengables

Holdings Inc. In that decision the court was asked to determine whether an interim control by-law, passed two weeks after the application for a building permit was submitted, justified the denial of the permit by the chief building official. Matthews D.C.J. referred to the powers of a judge on an appeal pursuant to s. 15 of the Building Code Act, R.S.O. 1980, c. 51, at p. 4:

> The words quoted, employing the present tense, in my opinion, mean simply that the judge should have regard to what the chief official should do under s. 6, having in mind the present state of legislation. The use of the present tense, in effect, incorporates the principle established by the Privy council in Toronto (City) v. Toronto Roman Catholic Separate Schools Trustees, [1926] A.C. 81 (P.C.), that the right of the applicant is to be judged as of the date of the hearing.

Finally, in Quay West, the Divisional Court was asked to determine whether the applicant, a developer, was entitled to an order for mandamus to compel the issuance of a building permit. Southey J., speaking for the court, held that as the developer's proposed condominium project was not a permitted use at the time of the appeal, while the interim control by-law was in effect, the court could not direct the issuance of a permit. He states at p. 111:

> In my judgment, we should not now direct the issuance of a building permit, because the developer's proposed condominium project is not a use permitted under the interim control by-law.

Mr. McQuaid argued that the developer's right to a permit crystallized on the date of his application for a permit. If the permit should have been issued in August 1988, the subsequent passage of the interim control by-law, he argued, is not a valid ground for now refusing the permit. He relied on s. 37(8) of the Planning Act, S.O. 1983, c. 1 which makes s. 34(9) applicable to an interim control by-law with necessary modifications. The relevant portion of s. 34(9) provides as follows:

> (9) No by-law under this section applies,
>
> . . . . .
>
> (b) to prevent the erection. . . for which a permit has been issued. . .
>
> The subsection does not exempt the erection of buildings for which a permit ought to have been issued before the effective date of the zoning by-law, but only buildings for which a permit has in fact been issued. I do not consider the addition of the words "or ought to have been issued" to be a modification necessary in applying s. 34(9) to an interim control by-law.

(Emphasis in original)

The difficulty herein appears to arise in reconciling ss. 6 and 15(3) of the Building Code Act, and s. 34(9) of the Planning Act with case law originating before and after the 1983 amendments to the Planning Act, R.S.O. 1980, c. 379. I see the Woodglen decision as being outside the context of an interim control by-law passed subsequent to a permit application and refusal. The case did not deal with the effect of interim control by-laws. This view is affirmed by the words of Southey J. in Woodglen (No. 2) (at p. 620):

> Municipalities no longer have the need to delay an application for a permit in order that new zoning by-laws may be made effective, because they have the power under s. 37 of the Planning Act, 1983 (Ont.), c. 1, to pass interim control by-laws, to be in effect for one year, when land-use policies are being reviewed or studied in the municipality or in a defined area.

Consequently, I do not consider myself bound by any decision which relies upon Woodglen as authority for the proposition that an interim control by-law passed subsequent to a permit application or refusal cannot serve to bar development.

The application herein does not revolve primarily around when the applicant's right crystallized for the purposes of s. 15(3) of the Building Code Act. Rather, it revolves around the proper interpretation of s. 34(9) of the Planning Act. The

municipality's authority to pass interim control by-laws is set forth in s. 38(1) of the Planning Act. Section 38(8) of the Planning Act makes s. 34(9) applicable to an interim control by-law with necessary modifications. The applicable portion of s. 34(9) provides as follows:

> 34(9) No by-law passed under this section applies,
>
> . . . . .
>
> (b) to prevent the erection or use for a purpose prohibited
>
> by the by-law of any building or structure for which a pemit has been issued under section 5 [now s. 6] of the Building Code Act, prior to the day of the passing of the by-law, so long as the building or structure when erected is used and continues to be used for the purpose for which it was erected and provides the permit has not been revoked under section 6 [now s. 6(4)] of the Building Code Act.

(Emphasis added)

This court must therefore decide whether the phrase "for which a permit has been issued" in s. 34(9) can be interpreted to mean "ought to have been issued". The only precedent cited which deals specifically with this issue in the context of an interim control by-law is Quay West. The respondents and interveners are correct in stating that the Divisional Court viewed the addition of the words "or ought to have been issued" as a modification that is not "necessary" in applying s. 34(9) to an interim control by-law. The respondents and interveners go on to argue that, notwithstanding any alleged injustice imposed upon the applicant by the refusal of the permit, I am precluded from issuing the permit; the Divisional Court's refusal to read in the modification, "or ought to have been issued" in Quay West, precludes me from doing so. I do not interpret the findings of the Divisional Court, in holding that such modification is "not necessary" in the circumstances of that case as intending to foreclose such an interpretation in every instance. Moreover, it would be preposterous for this court to slavishly adhere to the findings that the words, "or ought to have been issued", were not "necessary" as applied in the circumstances of a precedent case, if the end result in this case would amount to a travesty of justice.

At the core of this issue is the historic tension between the competing interests of property owners and municipalities. For many years in Ontario, a balance was maintained through the application of equitable principles, specifically the test enunciated by the Supreme Court of Canada in Ottawa (City) v. Boyd Builders Ltd., [1965] S.C.R. 408, 50 D.L.R. (2d) 704. The Boyd principles were abolished by the Divisional Court in Woodglen (No. 2) because it was felt that s. 6(1) of the Building Code Act, R.S.O. 1980, c. 51, codified the balance previously maintained through the application of equitable principles. Those charged with the review of the Planning Act also understood the need for legislation which was sensitive to the needs of all parties. The Report of the Planning Act Review Committee (April 1977) at paras. 11.12 and 11.13 is reflective of this concern:

> A municipal council should be able to control development on an interim basis when it decides to review or change the existing land use and development policies in a given area. The council may want to do so because it feels it was elected to institute a change in policy, or because it believes circumstances have changed since the zoning was enacted.. . .
>
> The Planning Act should allow the use of interim development control in a systematic and responsible manner that protects the rights of the affected parties.. . .

(Emphasis added)

In light of the spirit of the Planning Act, as evidenced by the Planning Review Committee Report, it is worth asking whether the respondents used their authority over interim development control in a systematic and responsible manner that protected the rights of the affected parties. The following events which led up to the passage of the interim control by-law, as amended, are uncontroverted:

(1) The planning department for the town recommended approval of the site plan application in a report dated

April 21, 1992, subject only to two conditions. Both of those conditions were acceptable to the applicants, and most of the suggested revisions to the site plan were made.

(2) This report was to be put before the planning committee (council members) at a meeting on April 21, 1992. Prior to that meeting, the planning committee held an in camera session at which the majority of the councillors were in favour of turning down the application before even hearing from the applicant and its architect and landscape architect with respect to the site plan.

(3) The planning committee then elected to defer consideration of the report and directed that a public meeting be held on May 4, 1992, even though the Planning Act does not contemplate such a process. At this meeting, various members of the public, including

local residents and eight members of council voiced their opposition to the location of a Price Club, without even giving lip service to site plan approval considerations. All of the members of council present at the meeting assured the community that the application would be refused, although presentations were made by the applicants' architect and landscape architect and no questions were directed to them about the features of the site plan.

(4) One of the councillors in attendance at the meeting of May 4, 1992, agreed that the location chosen by the Price Club was not correct, but pointed out that the town's solicitor had informed her that the application could only be turned down successfully on certain planning grounds related to the site plan. She advised that she intended to raise certain planning issues relating to the site plan when the matter came before council for approval. However, when the matter came before council, she raised no such issues. In fact, she had previously raised various issues with the planning department regarding the site plan, all of which had been responded to by the planning department.

(5) On May 12, 1992, the council passed a resolution to "not approve" the site plan. They did not give any reasons for not approving the site plan, nor did they comment as to which parts of the site plan they considered objectionable. Nor did council provide the applicant an opportunity to respond to any concerns of council by effecting changes to the site plan drawings.

(6) On May 27, 1992, the chief building official confirmed his refusal to issue the building permit, notwithstanding his view that the application appeared to be substantially complete and in compliance with the Ontario Building Code and the relevant zoning by-law.

(7) On June 23, 1992, being after the within application was launched and two days prior to the original return date the respondent, Town of Markham, without any notice to the applicants, enacted interim control by-law 115-92, limiting development of a "Community Commercial" site in the Town of Markham such that a "retail warehouse" was not permitted.

(8) On September 29, 1992, the respondent, Town of Markham, some three months after the original return date, again without any notice to the applicants, amended interim control by-law 115-92, adding a definition of "Commercial Club", thereby preventing a "Commercial Club" from being built on the applicants' site. As the uncontested position of the applicants is that the applicants' site is the only one which is presently undeveloped it is the only site actually impacted by the interim control by-law.

Not only was every step of the way conducted improperly, but the only reasonable inference I can draw from the timing of the interim control by-law and its amendment was that they were intended to sabotage these proceedings already under way and tie the hands of this court.

Based on the above, I can only conclude that the respondent Town of Markham did not use the interim control by-law and its amendment in a systematic and responsible way with a view to protecting the rights of affected parties. The sequence of events above noted demonstrates that the respondent Town of Markham, represented by its council, was mainly concerned with rather machiavellian political imperatives of a municipal government to which the applicants have fallen victim. Moreover, the competing private interests of the interveners are riding the coat-tails of such reprehensible municipal behaviour.

In the circumstances of this case, I find that the only fitting and proper conclusion for me to reach is that the building permit ought to have been issued; and I do so, all criteria having been met for the reasons following.

2. Should the chief building official have issued the building permit?

I must now deal with the question of whether the chief building official made the correct decision in refusing to issue the building permit at issue. In accordance with s. 15(3) of the Building Code Act, the judge must place him- or herself in the shoes of the chief building official as of the date of the receipt of the application, and decide whether the issuance of a building permit would contravene any applicable law.

In the application, the sole ground upon which the chief building official refused to issue a building permit to the applicants was the fact that the applicants did not yet have site plan approval for their development pursuant to s. 41 of the Planning Act.

(a) Site plan approval

Pursuant to the provisions of s. 41 of the Planning Act, the proposed use of the site in question requires site plan approval. Section 41(4) of the Planning Act provides as follows:

> 41(4) No person shall undertake any development in an area designated under subsection (2) unless the council of the municipality or, where a referral has been made under subsection (12), the Municipal Board has approved one or both, as the council may determine, of the following:
>
> 1. Plans showing the location of all buildings and structures to be erected and showing the location of all facilities and works to be provided in conjunction therewith and of all facilities and works required under clause (7)(a).

The scope of s. 41 of the Planning Act is narrow and restricted to the matters specifically enumerated in the section. In general, a municipality may only impose conditions relating to the internal arrangement of buildings and facilities and the provision of services and access to the specific development in considering site plan approval. In the words of the Ontario Municipal Board in First City Shopping Centre Group v. Gloucester (City) (1990), 25 O.M.B.R. 91 at pp. 101-02

> It is clear to the board that s. 40(7) of the Planning Act, 1983 only authorizes conditions to be imposed that relate to the internal arrangements of buildings and facilities and provisions of services and access to the specific development. The board cannot find in the words or intent any broader interpretation.

And further on p. 102:

> Section 40 [now s. 41], unlike s. 50 [now s. 51] of the Planning Act, 1983 limits consideration to the site and its development. Section 50 [now s. 51] allows much more scope in its considerations of land use impacts, compatibility with other uses, the provision of services and issues of prematurity.

The issue herein was addressed by the court in Revenue Properties Co. v. Toronto (City) (1984), 26 M.P.L.R. 165 (Ont. Co. Ct.). Matlow Co. Ct. J. said on pp. 169-70:

> Nor, in my opinion, would the issuance of a building permit

prior to the granting of site plan approval result in any contravention of the Building Code Act. In particular, I do not consider that the "proposed construction", in the circumstances of this case, would "contravene any other applicable law" as those words are used in s. 6(1)(a) of the Building Code Act merely because site plan approval has not yet been given. The actual construction, however, if it were to proceed without prior site plan approval would be in violation of the Planning Act. Accordingly, the issuance of a building permit would not be contrary to s. 6(1)(a) of the Building Code Act.

. . . . .

Although it may be desirable and more expeditious that site plan approval be obtained before the issuance of a building permit in order to eliminate the need for further amendments to the building permit that might become necessary to satisfy the conditions of the granting of site plan approval, this potential difficulty does not persuade me that the legislation requires site plan approval as a pre-condition for the issuance of a building permit.

It has been argued that this decision should be limited in application to extraordinary circumstances in which the municipality was not acting in good faith or was refusing developmental approval for an obviously unlawful reason. This issue is one of statutory interpretation and construction and I see no reason to limit its application to extraordinary circumstances. I therefore find that the proposed construction in the circumstances of this case would not contravene "any other applicable law" as those words are used in s. 6(1)(a) of the Building Code Act solely because site plan approval had not yet been given.

(b) Zoning By-Laws 118-79, 207-89 and 225-9

The interveners in the within application have raised a second ground on which the chief building official ought to have refused to issue the building permit, namely, that the proposed Price Club membership warehouse club is not a permitted use.

The position of the applicants is that the proposed Price Club membership warehouse club is a permitted use according to the provisions of the relevant Town of Markham zoning by-laws; more particularly, that the proposed Price Club membership warehouse club is a permitted use as a "commercial club" within the meaning of the applicable zoning by-law.

The applicants' site is zoned "Community Commercial (CC)" by Town of Markham by-law 225-91, which amends Town of Markham by-law 118-89, as amended by by-law 207-89. The Town of Markham by-law 207-89, s. 1.5.3, states that a "Shopping Centre" may be erected in a "Community Commercial (CC)" zone. Section 1.5.3 of by-law 207-89 further states that a "Shopping Centre" may contain a "Commercial Club". "Commercial Club" is defined in s. 2 of By-law 118-79 to mean "any club operated for profit or gain, excepting a private club or health club as defined".

The intervener, Loblaws, cites professional planner Michael Goldberg to the effect that a commercial club was intended to mean a social recreational entertainment, or a cultural facility which is operated for profit or gain. He cites as examples facilities such as a nightclub, which contains a nightly entertainment or a social club that may contain a mix of billiards, ice cream bar, meeting or similar such facilities. He opines that the Commercial Club designation does not include a shopping facility such as a Price Club warehouse as it is a new concept in the Ontario marketplace, not contemplated by the Act. No authority is cited for these propositions beyond Michael Goldberg's thesis. It is further argued that if the Price Club is found to be a permitted use, the "barbarians will be at the gate", if you will, setting up all manner of shop under the guise of a Commercial Club, including, but not limited to, such enterprises as a livestock auctioning yard. With all due respect to the able arguments of the intervener Loblaws, a livestock auctioning yard may be many things; a shopping centre it is not.

There can be no doubt that the Price Club is a club because it does have strictures of admittance for membership. It operates for profit or gain. It is also a centre in which people shop for goods. Put simply, to classify the Price Club

as a shopping centre-commercial club does not strain the wording of the Act. The fact that commercial clubs as a permitted use had been a part of the zoning by-laws since at least 1979, many years before Price Clubs or similar uses were contemplated in Canada, does not preclude a natural interpretation of the language as it stands.

CONCLUSION

For the reasons above stated, the criteria for the issuance of the building permit have been met. Accordingly I order that the building permit issue.

The parties may address me as to costs.

Order accordingly.

Stacey v. Oxford-on-Rideau (Township)

Between
Paul Stacey and Susan Darlene Robertson-Stacey and Ralph Robertson and Lois Robertson, Applicants, and
The Corporation of the Township of Oxford-on-Rideau and Philip Gerrard, Chief Building Official and the Rideau Valley Conservation Authority, Respondents

Ontario Judgments: [1989] O.J. No. 1365
Action No. 678/89

Ontario District Court - Leeds & Grenville Counties
Brockville, Ontario
Cosgrove D.C.J.
August 9, 1989

Timothy Pinos, for the Applicants.
Paul A. Jansen, for the Respondents.
Helmut Brodmann, for the Rideau Valley Conservation Authority.

COSGROVE D.C.J. (orally):-- This is an application under s. 15 of the Building Code Act, R.S.O. 1980, s. 51, as amended, in which the applicants seek a hearing and appeal for an order ...

(1) rescinding the respondent Philip Gerrard's refusal to issue a demolition permit and a building permit;

(2) directing that a demolition permit be issued to demolish the foundation of a fire-damaged building; and

(3) directing that a building permit be issued to "reconstruct" a building on the foundation remaining following demolition of a fire-damaged building ...

with respect to property known municipally as R.R. No. 1, River Road, Kemptville, Ontario, being Part Lot 30, Concession 1, Oxford-on-Rideau Township.

At the commencement of the application, counsel for the applicants agreed that the Rideau Valley Conservation Authority, who are significantly involved in this matter, should be added as a party respondent. That was with the agreement of the applicants' counsel and, as well, counsel representing the Corporation of the Township of Oxford-on-Rideau.

In addition, all counsel agreed that there should be added to the applicants the parents of the applicant Susan Darlene Robertson-Stacey, being Ralph Robertson and Lois Robertson. The court recommended this course of action as there appeared to be some possible technical problem with continuity in ownership of the property in issue. This, of course, would have some bearing on the status of the applicants to make the application under the section of the Statute in issue before the court. Accordingly, it was agreed by all that adding the parents by consent (who had, in fact, at one time owned the property and subsequently transferred it to Paul Stacey and Susan Darlene Robertson-Stacey) the matter of jurisdiction would be cured.

The facts which form the basis of the application are not complicated nor difficult. The facts are agreed upon by counsel for all parties. I should add that the solicitor for the respondent Township of Oxford-on-Rideau did not make submissions, but rather accepted that the major objection and opposition was that of the Rideau Valley Conservation Authority and that the issue was fairly presented to the court for a decision.

The essential facts placed before the court by way of the facta with supporting affidavits were summarized in point form by counsel for the applicants as follows:

(1) Prior to February 4, 1989, the applicants resided in a home owned by her father, i.e. by Susan Robertson-Stacey's father. It is the property referred to in the environs of Kemptville;

(2) The property was transferred to the applicants (as I've indicated, the parents of the applicants were added just to ensure that whatever the technical status of ownership at the time of application, it was one or the other). On February 4, 1989, fire occasioned significant damage to

this single-family residence. As a result of the fire, the house was uninhabitable. The application is to demolish what appears to be the remaining infrastructure which is charred but standing above an unharmed foundation;

(3) The applicants applied to the Township of Oxford-on-

Rideau for a demolition permit and building permit to raze and restore or "reconstruct" the single-family residence. It was agreed by the parties that what, in effect, was intended was that the structure that had been there initially and destroyed by fire would be replaced. From the material, the court noted that there was some waterproofing intended and that the height of the basement foundation would be raised approximately three feet. What was intended and sought was a replacement of the original building. The applicants were told by the Corporation that before their application could be processed, the approval of the Rideau Valley Conservation Authority was required;

(4) The applicants thus proceeded to make application to the Conservation Authority through its regular committees and procedures;

(5) On April 14th, the applicants were advised that their application for "reconstruction" was turned down by the Conservation Authority. The Authority did this by way of letter and in the letter set out the reasons why the Authority believed that it was, according to its mandate, required to reject the application for "reconstruction";

(6) The applicants subsequently applied for a demolition permit and a building permit from the Corporation by application dated June 23, 1989. They were informed by the respondents that the application would not be accepted or processed because of the turn-down by the Conservation Authority;

(7) The applicants had, as well, been told that they could appeal the decision of the Conservation Authority to the Mining and Lands Commissioner. That appeal is still pending;

(8) It was agreed by counsel that material filed in the respondent's factum by way of affidavit of Donald MacIver was similarly common and that the facts therein were jointly accepted by counsel. The pertinent sections of the exhibit to the affidavit relied upon deal with the policies of the Province of Ontario and the principles of Conservation Authorities. The principles relied upon in argument by counsel for the applicants appear at Page 11 of the respondent's application record, under the heading, "Principles" ...

> "(4) new development susceptible to flood damages or which will cause or increase flood related damages to existing uses and land must not be permitted to occur; however, some communities have historically located in the flood plain and, as a result, special consideration may be required to provide for their continued viability;"

Counsel also referred to the first heading under the caption "Policies" ...

> "(1.) General
>
> It is the policy of the Province of Ontario that:
>
> 1.1 ... All land use planning and resource management bodies within the Province have regard to the implications of their actions respecting the creation of new or the aggravation of existing flood plain management problems."

The issues before the court similarly are not extensive and were only two. The issues, in effect, are the interpretation of the legislation under which the Authority purported to act in response to the application for the demolition and "reconstruction", and the interpretation of the authority under which the respondent Corporation and its official purported to respond to the application for a building permit.

Counsel for the applicant characterized the two issues as follows:

The first issue was whether the Conservation Authorities Act and Regulations thereunder are-- and these words are in quotes --"any other applicable law" within the meaning of s. 6.1 of the Building Code Act, R.S.O. 1980, c. 51.

The second issue argued before the court was whether the "reconstruction" of a fire-damaged building constitutes "construction" within the meaning of s. 28.1.e of the Conservation Authorities Act and Regulation 175 thereunder.

On the first issue, both counsel referred to a decision of Judge Haley in Re: Woodglen & Co. Ltd. v. The City of North York et al., 43 O.R. (2d) 289. The headnote of the decision indicates that the issue before the court there concerned an application for a building permit and a refusal and an appeal, as is the case before the court.

The issue of what is meant by applicable law under s. 6.1 of the Building Code Act is dealt with at Page 295. The judge states, and this is at the top of the page ...

> "Section 6(1) of the Building Code Act provides that the chief official shall issue a permit except where the proposed building will not comply with the Building Code Act or the building code or will contravene any other applicable law.
>
> There is no issue here as to any failure to comply with the Building Code Act or the building code. The only question is what is comprised under the words "any other applicable law".
>
> Applicable law will include relevant statute law, e.g. the Planning Act, R.S.O. 1980, c. 379, and also the zoning by-laws of the municipality, as settled in Axelrod et al. v. City of Toronto et al. (1981), 15 M.P.L.R., 143. The respondent argues that the chief official must also consider as applicable law the Official Plan Amendment 259 adopted by by-law of the council on December 14, 1981. It argues that on that basis he was right in denying a building permit for a single-family dwelling which would be contrary to the official plan amendment and the District Plan 4-5, both of which intended the lands as open space."

It is the next paragraph that I underline, which I find useful and instructive to the court ...

> "In my opinion, the official plan and any amendments to it are not effective to regulate land use and are not, therefore, part of the applicable law the chief officer is to obey. Especially is this so in the case of Official Plan Amendment 259 which has not yet been approved by the Minister of Housing and is, therefore, subject to modification."

Both counsel relied upon this decision and attempted to extrapolate so as to assist the court in their respective positions as regards whether or not "applicable law" in this case includes the Conservation Authorities Act and the

Regulations thereunder.

On the second issue, counsel for both parties again made reference to a very recent decision, again of the District Court of Ontario, where it was agreed that, in effect, the law and the issue before the court involved the very interpretation of the very words which are before the court today. This is the decision of Re: Upper Thames River Conservation Authority v. The City of London et al., 67 O.R. (2d) 784. It is a decision of Judge Killeen, District Court Judge, dated February 20, 1989. I have been advised that this decision is under appeal at the present time. The decision, as I have indicated, is particularly germane inasmuch as the law to be interpreted-- the issue involves the same law as that before the court. The case is instructive because Judge Killeen, in addition to dealing with the law, goes through the history of the development of the background of the Conservation Authorities Act and Regulations from their inception in the Province of Ontario up to the present time and to the present governing law and regulations which, of course, are before the court for interpretation.

The facts, however, in the Thames decision are not the same as those before the court. Looking at Page 785, the facts briefly are as follows ...

> "In mid-April, 1988, Mrs. Soufan decided to start major renovations on the interiors of both buildings aimed at converting 1 High Street from a duplex into a fourplex and 6 Front Street into a sixplex. This work would have meant that the living units in the two buildings would increase from six units to 10 units and, as well, there would have been upward adjustments in space to be utilized for commercial purposes: see Mrs. Soufan's record, tabs D and R. It would seem that Mrs. Soufan planned to spend at least $75,000 on such renovation work based on later information filed with the city official in July."

The significance of those facts is to distinguish them from the facts which are at issue before the court. In the Thames decision, the work to be done was work that would be done within the existing four walls (or however many exterior walls there were) of the buildings owned by the private individual. That is distinguishable from the present case where the application is not only for "reconstruction" but is for the demolition of the fire-damaged building down to the existing basement walls or block foundation.

Counsel for the respondent Conservation Authority in addition relied upon a number of decisions to assist the court in its approach to methods of interpretation, one being the decision of Murray v. District of West Vancouver (1937), W.W.R. 269. The headnote is as follows ...

> "Since the cardinal principle of both the British and Canadian constitutions is the supremacy of Parliament or of a Legislature acting within the ambit of its powers, therefore where a statute admits of but one interpretation effect must be given to whatever its consequences."

In addition to that, counsel for the respondents drew the court's attention to the decision of The Canadian Pacific Railway Company v. The Department of Public Works of the Province of Ontario, 19 S.C.R. 189. This was a decision that, in effect, reminds judges that when they interpret legislation they must deal with legislation at hand, i.e. the legislation in effect at the time that the matter became an issue.

In argument, counsel for the applicants urged the court that the plain meaning of the word "construction" is inherently and significantly different than what his clients seek to do as regards the damaged premises. In other words, he argued that the "reconstruction" (first of all, they have applied for a demolition of the charred portions of the building) that is, its replacement, is not clearly the same as "construction".

Counsel for the applicants urged that if the court was to give effect to the argument by counsel for the Authority that "construction" means "reconstruction", that his clients who have been refused an application to rebuild their home will have been expropriated, and expropriated without compensation.

The material indicates that the insurance proceeds available for purposes of replacement of the damaged premises in the event that the applicants are not able to "reconstruct" on the very site where the building was damaged will be significantly less than those that will be available to them if they were required to look for a home somewhere else. Clearly, the court accepts that that is the effect of the denial of a permit for "reconstruction" of the premises, i.e. that it will be tantamount to expropriation and a significant economic loss to the applicants.

On the other hand, counsel for the Authority on the basis of the Thames decision has urged the court that the plain meaning of "construction" (he has referred to the Oxford Dictionary definition of construction viz: erecting walls, building, etc.) means the physical acts of building; that the definition of "construction" is wide enough to encompass the notion and word of "reconstruction" and, therefore, on the plain meaning of the word "construction", the court ought to include "reconstruction" and support the Authority's refusal to grant a permit and to support the Township's refusal as well, through its building official, to process the building application.

Counsel for the Authority urged the court as well that if the court finds that the word construction does not include the word "reconstruction", that not only will the Authority be limited in carrying out its mandate because of this application before the court but that, indeed, it will set a precedent and will have significant repercussions as regards the ability of

the Authority to carry out its mandate.

Counsel for the Authority, though, did concede that the Authority has no funds, or very limited funds, for either acquisition of properties by purchase or for expropriation purposes.

In effect, counsel for the respondent Authority says that his client, the Authority, had no choice but to refuse the applications on the basis of its interpretation of s. 28.1.e of the Conservation Authorities Act and Regulation 175. In addition to that, of course, he argued that the Township, the initial respondents, because this was "other applicable law" within the meaning of s. 61 of the Act, were justified in refusing as well to deal with an application for a building permit pending the final appeal by the applicants from the decision of the Authority to refuse approval for "reconstruction" of the project.

The court, after considering the authorities to which I have made reference and various other authorities by counsel, together with capable and extensive argument, has concluded that the applicants today will be successful; in other words, the relief sought will be granted for the following reasons.

I am satisfied on the basis of the Woodglen decision of Judge Haley and the test of relevancy that "any other applicable law" includes s. 28 and the Regulations under the Conservation Authorities Act (which was also assumed by Judge Killeen in the Thames decision).

The court is also satisfied that the plain meaning of the word "construction" within s. 28.1.e and Regulation 175 under the Conservation Authorities Act means just what it says, namely, initial construction, construction at the outset, the first building of a building, but not "reconstruction".

The court is convinced by reference to the Standard Oxford Dictionary that the word "reconstruction" is a separate, distinct and totally different word than the word "construction" (as almost any other concept with the same prefix-- creation and recreation; apply and reapply; furbish and refurbish). These are in language two different meanings --they are two different words-- they are defined differently. Therefore, when the court is urged by both counsel to follow the first approach to interpretation referred to by Judge Killeen in the Thames decision to which I have made reference, in the court's interpretation of the plain meaning of the words in issue I have come to the conclusion that the word "construction" does not include the word "reconstruction".

At Page 795 of the Thames decision, Judge Killeen states ...

> "As it seems to me, this enabling language must be given its plain and ordinary grammatical meaning. I have examined the context of the C.A.A. ..."

which is the Conservation Authorities Act,

> "... as a whole and the provisions of prior versions of the statute back to 1946 and can find no hint that any other approach is justifiable. Professor Driedger, in his seminal study, Construction of Statutes, 2nd ed. (1983), has described the modern general principle of statutory construction this way at p. 87:
>
> Today there is only one principle or approach, namely, the words of an Act are to be read in their entire context and in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament."

Judge Killeen then goes on ...

> "An example of this great principle in the modern cases may be found in the following passage from the judgment of Lord Atkinson in City of Victoria v. Bishop of Vancouver Island (1921), 59 D.L.R. 399 at p. 387:
>
> In the construction of statutes their words must be interpreted in their ordinary grammatical sense, unless there by something in the context or in the object of the statute in which they occur, or in the circumstances with reference to which they are used, to show that they were used in a special sense different from their ordinary grammatical sense."

I am cognizant of the thrust of the argument by counsel for the Authority that the interpretation of "construction" to exclude "reconstruction" has implications from a policy point of view as regards the Authority. I have also taken into account his argument that not to include "reconstruction" in "construction" may impinge on the effectiveness of the authority in carrying out its mandate to control flood plain lands. I appreciate those arguments, but at the same time I feel that I can find no support for the interpretation of "construction" including "re-construction" as did Judge Killeen in the ordinary grammatical use of the word "construction" nor in its context used in the statute or previous editions of the statute.

I am mindful as well that Judge Killeen in the Thames decision refers to s. 10 of the Interpretation Act and deals with it in his further analysis of the issue before him. At Page 797, he sets out s. 10 of the Act as follows ...

> "Every Act shall be deemed to be remedial, whether its immediate purport is to direct the doing of anything that the Legislature deems to be for the public good or to prevent or punish the doing of anything that it deems to be contrary to the public good, and shall accordingly receive such fair, large and liberal construction and interpretation as will best ensure the attainment of the object of the Act according to its true intent, meaning and spirit."

Judge Killeen at Page 798 adopts the caveat of Justice MacIntyre of the Supreme Court of Canada where Justice MacIntyre, for the majority, said ...

> "The Ontario courts have adopted the approach dictated by s. 10 of the Interpretation Act and they have construed the statute in the purposive manner. In this they have given effect fully to the avowed purpose of The Ontario Heritage Act, 1974. Accepting the approach so taken, I am not of the view, however, that in an effort to give effect to what is taken to be the purpose of the statute it is open to the court of construction to disregard certain provisions of the Act. The whole Act must be construed. It must be construed to give effect to the purpose above described but also to have regard for many provisions of the Act, particularly ss. 34 and 67, the purpose of which is to protect the interests of the landowner concerned. To ignore these provisions, or to read them down to where they are deprived of any real significance is not to construe the statute but to decline to assign any meaning to certain of the words that were used by the Legislature."

As I have indicated, the court feels that it recognizes the mandate, objectives and purpose underlying the Conservation Act; but that purpose has to be administered through the use of the English language, through statute and through words, and words in their plain and ordinary meaning; the court can't blink at the plain meaning of the words or word in the statute.

The comments of Justice MacIntyre as regards weighing the interest of the landlord in context of The Ontario Heritage Act takes me to the last point which is a further point made by counsel for the applicants, that is that the court in this case is also required to go through a balancing process. The court is required to do that because that is what the Ontario Government itself has adopted as a general policy promulgated for the various bodies and authorities acting under mandate from the province. That general policy is set out at Page 11 of the affidavit of the respondent under General Policies, viz ...

> "1.1 ... All land use planning and resource management bodies within the Province have regard to the implications of their actions respecting the creation of new or the aggravation of existing flood plain management problems."

This is an exhortation that in the general administration of the Act that the effect of the Act must also be considered by those administering it.

I accept the argument in conjunction with the further point or related argument (parallel argument) made by counsel for the respondent in his factum which was that where a statute confers a power, particularly one which may be used to deprive the subject of proprietary rights, the courts will confine those exercising that power to the strict letter of the statute. Counsel referred to the decision of Hinder v. Metropolitan

Toronto and Region Conservation Authority (1984), 16 O.M.B.R. 401. This is a decision of G. H. Ferguson, Q.C., Mining and Lands Commissioner. (He exercises the same power as the official to whom the applicants have forwarded an appeal from the decision of the authority in the present case.) In any event, in the Hinder decision at Page 433, the Commissioner states the following ...

> "While it is relevant to apply a broad interpretation to the administrative powers of a conservation authority, as was done in the Rosenberg case, this tribunal is of the opinion that where the act of a conservation authority is a legislative one and one that affects the rights of landowners generally, it may be more appropriate to apply the exception to the broad interpretation rule outlined on p. 258 of Maxwell on the Interpretation of Statutes, 12th ed. (1969), where it is noted,
>
> > "Where a statute confers a power, and particularly one which may be used to deprive the subject of proprietary rights, the courts will confine those exercising the power to the strict letter of the statute."

The court in this case has indicated that it is not applying the so-called strict interpretation but the plain interpretation of the words to the issue before the court. However, when the court analyzes and balances the effects, the objectives of the authority versus consequences to the landowners (applicants in this case), there are some important differences between this and the Thames decision by Judge Killeen. What I mean by that is in the Thames decision, the result of the refusal of the application to renovate presumably would have been a loss of profits to the applicants in that case. In the case at bar, obviously the effect, as I have indicated, to the applicants is expropriation without compensation. The applicants as a result of the decision rejecting their application to rebuild their home would be deprived of the use of their home and property.

As regards the stated objectives and the impact of the decision on the stated objectives of the Authority on the other hand in the Thames decision, because more units were being added (both commercial and residential) more people were being invited to live and shop in the building to be renovated, it seems to me there would be a greater risk of harm to a greater number of people and hence a potentially greater difficulty to the Authority than in the present case. In the present case, the applicants simply will be putting themselves back in the same position in which they were prior to the fire of February 4th. In other words, the risk of harm to persons in the flood plain lands would not be increased, but would remain the same. Considering that Judge Killeen came to the decision using this balancing procedure as well in the Thames decision that "renovation" was not caught by the word "construction", the court is confirmed in its analysis that, in fact, "construction" ought not in the present case be permitted to act as a bar to "reconstruction".

Finally, if as is urged by counsel for the respondent that the word "construction" is intended to mean "reconstruction", I believe that it should be so specified either in the governing Act or the Regulations or the by-law passed by the authority. It would appear from the Thames case and this case and from evidence given by counsel for the respondent that these types of applications are fairly frequent. I am convinced that the Authority or the Legislature in looking at the implications of including "reconstruct" under the word "construct" probably would agree that there would have to be at the same time other amendments to the Act or by-law to take into account the effect of such a meaning and a mechanism would have to be introduced to ensure adequate compensation to persons adversely affected by such action.

Accordingly, the application is ALLOWED.

Summit Glen Development Corp. v. Toronto
(City)

Between
Summit Glen Development Corporation, Applicant, and
The Corporation of the City of Toronto and Michael Nixon the Commissioner of Buildings and Inspections, Respondent

Ontario Judgments: [1989] O.J. No. 1195
Action No. 177429/89

Ontario District Court - Muskoka Judicial District
Bracebridge, Ontario
Hogg D.C.J.
May 23, 1989

James W. Harbell, for the Applicant.
A.A. Weretelnyk, for the Respondents.

HOGG D.C.J.:-- This is an application made pursuant to Section 15 of the Building Code Act, R.S.O. 1980, c. 51 as amended and for an order requiring the Respondent to issue a building permit for a structure at 81-87 Mutual Street, ("the Lands"). In addition the Applicant is requesting an order for the issuing of demolition permits.

The City of Toronto passed By-Law 169-79 on February 19th, 1979 respecting a height limit on an area which included the Lands. This By-Law was not approved by the Ontario Municipal Board.

On March 21st, 1988, Toronto City Council granted site plan approval for a structure to be erected on the Lands.

On May 5th, 1988 the Committee of Adjustments granted two variances to By-Law 169-79 and noted that the By-Law had never been approved by the Ontario Municipal Board.

A neighbour appealed the City's decision to the Ontario Municipal Board who held that By-Law 169-79 was not in effect and therefore variances from that By-law were not required.

A former owner of the Lands applied for a demolition permit on September 9th, 1988. It has not been granted.

On October 18th, 1988, the applicant requested a repeal of By-Law 169-79 from the City.

On October 20th, 1988, the City of Toronto Legal Department proposed to City Council a draft by-law and the following day Council referred the proposed repeal of By-law 169-79 to the City Land Use Committee for a public hearing.

On December 7th, 1988, the applicant applied for an am endment to the site plan which had previously been approved by Toronto City Council.

On January 24th, 1989 the applicant applied for a building permit for the proposed development. The applicant was advised the following day that the application would not be accepted because the proposed structure was too high and not in compliance with zoning By-Law 169-79. By letter dated February 6th, 1989 the respondents confirmed their position in denying the building permit.

On February 23rd, 1989 Toronto City Council revoked the Section 40 site plan approval which had been granted on March 21st, 1988. The applicant has appealed such refusal.

On February 23rd, 1989, Toronto City Council passed By-Law 187-89, an interim control bylaw pursuant to Section 37 of the Planning Act 1983. If approved by the Ontario Municipal Board this would prohibit the use of the Lands for an apartment building for a period of one year. This decision has been appealed.

Two buildings are on the Lands which have been vacant since November 5th, 1987 and were barricaded in 1988.

Section 15(1) of The Building Code Act provides for an application to a Judge of the District Court for a hearing an appeal.

Section 15(3) states:

> "Where an application is made to a judge for a hearing under subsection (1), the judge .....may rescind or affirm the order or decision of the inspector or chief official or take such action as the judge considers the inspector or chief official ought to take in accordance with this Act and the regulations, and for such purposes the judge may substitute his opinion for that of the inspector or chief official." (my emphasis)

I am of the opinion that By-law 169-79 does not apply to prevent the issuance of a permit because this by-law had not been approved by the Ontario Municipal Board and such approval is necessary before the by-law becomes effective.

On February 23rd, 1989 Toronto City Council passed interim control By-law 187-89 pursuant to Section 37 of The Planning Act 1983. This by-law would prohibit the use of the Lands for a period of one year.

In my view the issue is whether By-law 187-89 applies and that depends on the interpretation of the words in Section 15(3) of The Building Code "ought to take in accordance with this Act". Does the Judge place himself in the shoes of the official at the time the application for the permit was made and denied or at the time the application for hearing was filed? There have been a number of cases dealing with the interpretation and meaning of Section 15. In my view the leading case in Ontario is Re Woodglen & Co. Ltd. and City of North York et al. (1984), 47 O.R. (2d) 614 (Div. Ct). In that case Mr. Justice Southey dealt specifically with the interpretation that a Court should place on Section 15 and at page 619 he held:

> "The duty of the judge under this subsection is to do what the judge considers the inspector or chief official ought to have done." (My emphasis)

In other words, the judge hearing the appeal was to place himself in the shoes of the official at the time the decision was made.

Mr. Justice Southey went on to state:

> In respect of zoning, if the proposed construction complies with the zoning by-laws in force at the date of the application for the permit, then the intention of the municipality to rezone on prohibit such construction is not a valid reason for refusing or postponing the issuance of a permit."

This decision was followed last year in a decision of the District Court H. & D. International Group v. The Corporation of the City of Toronto, a decision of my sister Corbett. At page 9 of her Reasons for Judgment Judge Corbett stated:

> "...In my opinion, the rights of the applicant should be determined on the date of the decision of the chief building inspector. Applicants for building permits are entitled to a reasonable degree of finality respecting their entitlement to building permits, which is not afford by determining those rights as of the date of the hearing.
>
> I, therefore, adopt the approach taken by Mr. Justice Southey in the Woodglen case.....
>
> ...I find that By-law No. 209-88, (an interim control bylaw), passed after the decision of the building commissioner, is not applicable law within the meaning of Clause 6(1)(a) of Building Code Act."

With respect, in my view Mr. Justice Southey in Rosenberg in Re Federation of Metropolitan Toronto Tenant's Associations and city of York et al. (1988) 65 O.R. (2d) 245 (H.C.J.). At page 253 in giving judgment as a member of the Divisional Court, Mr. Justice Rosenberg stated:

> "I accept the interpretation urged by the respondents for the reasons argued by the respondents. The Act does not apply to vacant buildings."

Since the buildings in question are obviously vacant, the Act does not apply.

Therefore an Order will go as follows:

(a) granting a hearing of appeal pursuant to section 15 of The Building Code Act R.S.O. 1980, c. 51;

(b) requiring the respondents to issue a building permit for the construction of an eleven storey apartment building on Lands known as 81-87 Mutual Street, in the City of Toronto;

(c) requiring the respondents to issue a demolition permit as applied for in this case, and

(d) Costs of this motion to the applicants.

Re Superior Propane Inc. et al. and Corporation of the City of York *

Morden A.C.J.O., Griffiths and Abella JJ.A.
May 3, 1995

Appeal from an order of the Divisional Court (1991), 6 O.R. (3d) 117, 86 D.L.R. (4th) 60, 9 M.P.L.R. (2d) 165, dismissing an application for a declaration that a zoning by-law was invalid.

Stanley B. Stein, for appellants.

Stanley M. Makuch and Catherine Bray, for respondent.

Linda McCaffrey, QC, for intervenor, Attorney General of Ontario.

The judgment of the court was delivered orally by

MORDEN A.C.J.O.: -- This is an appeal by the applicants, Superior Propane Inc. and Propane Gas Association of Canada Inc., from an order of the Divisional Court dismissing their application for a declaration that By-law 1116-87, passed by the respondent, City of York, is invalid.

The facts and legislation which are relevant on this appeal are set forth in the two sets of reasons given in the Divisional Court, those of Mr. Justice O'Brien for the majority and those of Mr. Justice Hollingworth in dissent, reported in 6 O.R. (3d) 117, 86 D.L.R. (4th) 60.

There were motions for fresh evidence put before us on behalf of the intervenor, the Attorney General of Ontario. Their admissibility was not fully argued and little reliance was placed on the evidence. We are not satisfied that this evidence, which was submitted to support the view that the by-law is in conflict with the provincial legislation, meets the requirements for the admission of fresh evidence or that all of it is, in any event, relevant. These motions are dismissed.

On the appeal itself, we are in substantial agreement with the reasons of Mr. Justice Hollingworth. In our view, the Energy Act, R.S.O. 1980, c. 139, and the regulation enacted under it contain a comprehensive scheme to regulate propane dispensing, installation, handling and storage and that these matters are not subject to legislative authority by municipalities. In this regard we note that s. 29 of the Energy Act is worded more broadly than the similar provision in the Environmental Protection Act, 1971, S.O. 1971, c. 86, which was considered by this court in Ontario (Attorney General) v. Mississauga (City) (1981), 33 O.R. (2d) 395, 124 D.L.R. (3d) 385. This latter provision expressly required "a conflict" as a condition of the Environmental Protection Act, 1971 and the regulations under it prevailing over other legislation. We refer in this regard to Union Gas Ltd. v. Dawn (Township) (1977), 15 O.R. (2d) 722, 76 D.L.R. (3d) 613 (Div. Ct.), where a provision virtually identical to s. 29 (s. 57(2) of the Ontario Energy Board Act, R.S.O. 1970, c. 312) was applied.

In any event, if the requirement of conflict is implicit in s. 29 of the Energy Act, we are satisfied that there is a conflict of such a nature as to nullify the by-law. In Ontario (Attorney General) v. Mississauga (City), the majority of this court said at p. 410:

> [I]f the competing pieces of legislation are intended to advance the same policy and the provision in the statute covers the same ground as the by-law in a way to give rise to the interpretation that the statutory provision is intended ". . . completely, exhaustively, or exclusively [to express] what [shall be] the law governing the particular conduct . . . to which its attention is directed . . .", then there is a case of conflict. . . . If, in covering the same ground the subordinate legislation works at cross purposes to the provincial statute, then the case for conflict is reinforced.

At pp. 413, 414 and 415 this principle was applied to the facts of that case as follows:

> I gather from the argument on behalf of the city that the certificate of approval aspect of s. 8 [of the Environmental Protection Act, 1971] is a factor which strongly favours a conclusion that there is no conflict because, if a certificate is granted, this reduces the otherwise absolute prohibition and leaves room for the operation of the then more stringent provisions of the by-law. With respect, I take a different view of the effect of the certificate of approval feature. In a case where no certificate of approval is issued the two laws practically duplicate each other and there is no room for municipal regulation. Where a certificate has been issued then, it appears to me, the absolute prohibition in the by-law clashes with the legislative scheme embodied in the statute and the proper implementation of this scheme. The two pieces of legislation, in this regard, are at cross purposes. They are repugnant to each other.
>
> . . . . .
>
> I think that it is reasonable to conclude that the statutory provision in this relatively narrow field is of such a detailed and comprehensive nature that it leaves no practical room for the operation of the by-law.
>
> . . . . .
>
> The basic issue does not turn on a conflict between a policy of a Minister of the Crown and the by-law, although such a conflict may be involved, but rather on a conflict between the policy of the Legislature as to the way matters covered by s. 8 should be dealt with and that reflected in the by-law. As I have said, these two policies are at cross purposes and, accordingly, the by-law should be declared to be inoperative.

These statements are applicable to the case before us. We agree with the conclusion of Mr. Justice Hollingworth that the provincial law and the by-law are at cross-purposes. We think that the by-law is at cross-purposes with the regulation because it negates the operating effect of the latter respecting tank size, height, setbacks, and protection.

We also agree with Hollingworth J. that the basic and predominant purpose of the by-law is one of advancing safety concerns respecting the handling, etc., of propane and not land use planning. While the legislative history of the by-law may indicate recognition on the part of the municipality that safety was a matter for the province, it is clear that the genesis of the by-law was a concern to enact safeguards to protect the inhabitants with respect to the installation of propane tanks in the City of York. We refer to the minutes of the Legislation and Planning Committee held on September 5, 1984. The terms of the by-law are consistent with the intention to give effect to safety concerns.

We do not share the view of the majority of the Divisional Court that this is properly a case of the "by-law merely enhanc[ing] the statute". First, there is the operative conflict to which we have referred. Second, the authority of the municipality relates, generally, to land use planning and not safety respecting propane handling. This may be compared to the situation in Mississauga where the municipal power authorized by-laws relating to nuisances "of any kind", thereby putting municipalities into the field covered by the statute: see pp. 408-09. Third, even if one were to assume that the by-law in this proceeding properly relates to land use planning, there then would be no reasonable basis for regarding it as enhancing a law enacted for a different purpose.

For these reasons the appeal is allowed, the order of the Divisional Court is set aside, and an order is made granting the relief sought by the applicants. There will be no order respecting the costs of the application in the Divisional Court. The costs of the appeal, including those of the motion for leave to appeal, will be payable by the respondent to the appellants. The costs of the motions respecting fresh evidence will be payable by the Attorney General to the respondent.

Appeal allowed.

SCHEDULE A

Section 3 of York (City) By-law 1-83, as amended by Zoning By-law 1116-87

2. THAT Section 3 of City of York By-law Number 1-83, as amended, be and the same is hereby further amended as follows:

a) by inserting in Subsection (28) a new paragraph (16a), as follows:

"(16a) All propane or compressed natural gas storage and dispensing equipment shall comply with the regulations contained in Subsection (35) of this Section."

b) by inserting, after the word "for", in the heading appearing after paragraph (16), in Subsection (28), the following:

"Motor Vehicle Fuelling Systems Conversion and Repair Shops,".

c) by deleting the word "gasoline" in Paragraph (18) of

Subsection (28), and inserting in its place, the word "fuel".

d) by adding, as a new Subsection (35) the following:

"(35) PROPANE AND COMPRESSED NATURAL GAS STORAGE
TANK(S) OR DISPENSING EQUIPMENT

Notwithstanding any other provisions of this By-law, no propane or compressed natural gas storage or dispensing equipment shall be erected or used on any lands unless and until the following regulations are complied with:

i) The aggregate size of any propane storage tank or tanks shall not exceed 10,000 litres;

ii) The aggregate size of any compressed natural gas storage tank or tanks shall not exceed 2,500 litres;

iii) The maximum height of any propane and compressed natural gas storage tank and dispensing equipment shall not exceed the average roof line of the tallest

building on the lot or 3.7 metres whichever is less;

iv) No propane storage tank or compressed natural gas compressor unit and tank shall be erected or used in any front yard, or in any side yard directly abutting a public highway or lane, or closer than 15 metres to a railway right-of-way, or closer than 30 metres to any of the following:

a) a building or structure on the property or on any adjacent property;

b) the street line of a public highway or lane;

c) an R-District;

d) the lot line of any property containing a residential use;

v) Screening in the form of landscaping or fencing and protection in the form of bollards or barriers shall be provided immediately adjacent to any above grade portion of any propane storage tank or natural gas

compressor unit and tank(s)

Section 13 of York (City) By-law 1-83, as amended by Zoning By-Law 1116-87

3. THAT Section 13, Subsection (2), of City of York By-law Number 1-83, as amended, be and the same is hereby further amended as follows:

Caselaw

a) by renumbering paragraph (r) as paragraph (s);

b) by adding a new paragraph (r) as follows:

"(r) Motor Vehicle Fuelling System Conversion Repair Shop;"

4. THAT Section 13, Subsection (4), of City of York By-law Number 1-83, as amended, be and the same is hereby further amended as follows:

a) by adding a new paragraph (k) as follows:

"(k) No Motor Vehicle Fuelling System Conversion and Repair Shop shall be erected or used closer than 90 metres to:

i) any use District other than an M or T District;

ii) any property in an M District lawfully used for the purpose of a residential use, including a nursing home, lodge, and home for the aged, or a mixed residential and commercial use; or

iii) any property in an M District lawfully used for the purpose of a library, school, day nursery, church, synagogue, parish hall, hospital, health clinic, private club, fraternal society, place of assembly, place of amusement, public hall, or any similar institutional or recreational use."

SUBJECT to the provisions of Subsection (31) of Section 34 of the Planning Act, 1983, this By-law shall come into force on the date of its passing.

ENACTED and PASSED this 15th day of June A.D. 1987.

SCHEDULE B

Planning Act, 1983, S.O. 1983, c. 1, s. 3

3.(1) The Minister, or the Minister together with any other minister of the Crown, may from time to time issue policy statements that have been approved by the Lieutenant Governor in Council on matters relating to municipal planning that in the opinion of the Minister are of provincial interest.

(2) Before issuing a policy statement, the Minister shall confer with such municipal, provincial, federal or other officials and bodies or persons as the Minister considers have an interest in the proposed statement.

(3) Where a policy statement is issued under subsection

(1), the Minister shall cause it to be published in The Ontario Gazette and he shall give or cause to be given such further notice thereof, in such manner as he considers appropriate, to all members of the Assembly, to all municipalities and to such other agencies, organizations or persons as he considers have an interest in the statement.

(4) Each municipality that receives notice of a policy statement under subsection (3) shall in turn give notice of the statement to each local board of the municipality that it considers has an interest in the statement.

(5) In exercising any authority that affects any planning matter, the council of every municipality, every local board, every minister of the Crown and every ministry, board, commission or agency of the government, including the Municipal Board and Ontario Hydro, shall have regard to policy statements issued under subsection (1).

(6) Except as provided in subsection (5), nothing in this

section affects nor restricts the Minister in the carrying out of the Minister's duties and responsibilities under any other section of this Act including the determining or declaring of any matter to be a matter of provincial interest and the procedure followed in so determining or declaring.

T.H. CRITELLI LTD. v. LINCOLN TRUST AND SAVINGS CO. et al.

86 D.L.R. (3d) 724
Affirmed 111 D.L.R. (3d) 179

Ontario High Court of Justice
Grange, J.
January 23, 1978

ACTION for damages for nuisance arising out of the construction of a building adjacent to the plaintiff's building. [page725]

T. H. Rachlin, Q.C., for plaintiffs.

J. Broderick, Q.C., for defendant, Lincoln Trust and Savings Company.

H. J. Daniel, Q.C., for defendant, City of St. Catharines.

GRANGE, J.:-- This is an action by the owner and the occupier of a building against the owner and occupier of a neighbouring building arising out of the construction of that latter building, and against the City of St. Catharines for issuing the necessary building permit. The construction resulted in increased snow loads to the plaintiffs' building and the claim is for the cost of reinforcement to the roof to guard against the risk of collapse and to comply with the relevant municipal by-law. Damages are agreed upon and the sole question is liability.

The facts are simple enough. The plaintiffs' building which is on the south side of King St. in the City of St. Catharines ("the City"), and is a two-storey building, was erected in two stages; the first or rear portion was erected in 1947, and had its roof rebuilt after a fire in 1955; and the second being the front or King St. section was built in 1962. Both sections were built to the edge of the lot to the west. At the time of construction that lot was occupied by a hotel, most of which was four storeys high but any part of that hotel which was adjacent to the plaintiffs' land did not project above the plaintiffs' building.

Prior to 1975 the National Building Code which was incorporated into a by-law of the City set out snow-load requirements and according to that Code the roof of the plaintiffs' building prior to the erection of the building by the defendant Lincoln Trust and Savings Company ("Lincoln Trust") needed to withstand a snow load of 30.4 lbs. per square foot. The evidence is that the Code requirement is, if anything, conservative but is almost universally accepted as the standard in construction circles. Actually the roof was built beyond the minimum standard to withstand a load of 50 lbs. per square foot.

The Lincoln Trust building was erected in 1973 to a height of nine storeys and the east wall thereof was built throughout its length flush with the lot line and west wall of the plaintiffs' building. The result of this, of course, was to create a considerable projection by the Lincoln Trust building on its east edge above the roof of the plaintiffs' building. This in turn had a very marked effect on the snow-load requirements of the plaintiffs' roof because the lee created caused and will continue to cause the accumulation of snow on the roof of the lower building adjacent to the higher. The evidence is that the snow drift reaches its maximum when the higher building exceeds the lower by eight feet and any height increase above that is of little consequence, but once that differential [page726] exists between adjacent buildings in St. Catharines the snow-load requirement is increased to 114 lbs. per square foot. To bring the plaintiffs' roof up to that requirement will cost $14,433 and the plaintiffs sue for that amount.

I should only add that at the time of construction by the plaintiffs the zoning by-law permitted construction of buildings to a height of six storeys and both the plaintiffs and Lincoln Trust were at all times entitled to build right to the edge of their lot lines. The National Building Code has now been replaced by the Ontario Building Code but the same snow-load requirements are imposed and accepted by the municipality.

When Lincoln Trust representatives first approached the City for a building permit they were met with reluctance because of fear of the very problem that gave rise to this action, but a permit

was issued after Lincoln Trust gave the City an indemnity. It is agreed between all the parties that if I should find liability on the part of Lincoln Trust I need not consider the position of the City which is apparently entitled by the agreement to its costs from Lincoln Trust on a solicitor-and-client basis.

The problem raises many interesting issues. There is no evidence of negligence in the construction on the part of Lincoln Trust or its contractors, the construction to the lot line was in accordance with law and there was no action that could have been taken (short of building away from the lot line) in the actual construction that would prevent the harm that befell the plaintiffs. Moreover the plaintiffs, in constructing the roof on their premises, knew or should have known that it was lawful and possible (although most unlikely) for their westerly neighbour to construct a building up to six storeys in height immediately adjacent to the west wall and a six-storey building would have caused as much injury as the nine-storey building actually built. In short the defendant Lincoln Trust made a lawful and non-negligent user of its property and upon that basis denies liability.

One would think this problem must often arise in this wintry clime, but I have been referred to and can find no cases directly on point. Perhaps the dearth arises from reluctance such as that originally exhibited by the defendant City to grant building permits for proposed buildings adjacent to and higher than their neighbours. There are cases -- see Meredith v. Peer (1917), 39 O.L.R. 271, 35 D.L.R. 592 -- dealing with the fall of snow and ice from a roof onto a neighbour's property and imposing an obligation to take reasonable steps to prevent it, and there are cases dealing with the escape of snow and ice and water from one's property imposing liability if one does not take steps to prevent that escape: see Taylor et al. v. Robinson et al., [1933] O.R. 535, [1933] 3 D.L.R. 73, and Berry v. Trinidad Leaseholds (Canada) Ltd., [1953] O.W.N. 623, [1953] 4 [page727] D.L.R. 504. But all the cases seem to deal with some manner of construction which could have been altered or added to to avoid the potential damage. Here the damage was inevitable once the defendant's building rose eight feet higher than the plaintiffs' and the damage was caused not by the escape of snow from the defendant's land but the entrapment of snow on the plaintiffs'.

It seems the question falls to be decided on general principles of negligence and nuisance and the user of land. These subjects were recently reviewed by the Court of Appeal in Pugliese et al. v. National Capital Com'n et al.; Beaver Underground Structures Ltd. et al. Third Parties, released August 8, 1977, 17 O.R. (2d) 129, 79 D.L.R. (3d) 592. The action was for damages for the lowering of the ground water table below the plaintiffs' lands by the construction of a sewer by or for the defendant on its neighbouring lands. The matter came before the Court of Appeal on a motion to dismiss as disclosing no reasonable cause of action, the defendants relying, inter alia, on Mayor, Aldermen & Burgesses of Borough of Bradford v. Pickles, [1895] A.C. 587, which asserted the right of a landowner to appropriate percolating water and deprive his neighbour thereof even if it be done maliciously. Howland, J.A. (as he then was), reviewed the English, American and Australian cases and found that in the latter two jurisdictions the harsh English rule was not accepted. After considering the Canadian cases he refused to apply the English rule and denied to the defendants an "unlimited licence to wreak havoc on their neighbours". He held there could be liability in negligence or nuisance. In considering the latter cause of action he stated, at p. 45 [pp. 153-4 O.R., p. 617 D.L.R.]:

> In determining whether a nuisance exists, it is not sufficient to ask whether an occupier has made a reasonable use of his own property. One must ask whether his conduct is reasonable considering the fact that he has a neighbour. As Lord Wright pointed out in Sedleigh-Denfield v. O'Callaghan et al., [1940] A.C. 880 at p. 903:
>
> > "A balance has to be maintained between the right of the occupier to do what he likes with his own, and the right of his neighbour not to be interfered with. It is impossible to give any precise or universal formula, but it may broadly be said that a useful test is perhaps what is reasonable according to the ordinary usages of mankind living in society, or more
> >
> > correctly in a particular society."

After conceding that minor nuisances arising out of a normal and reasonable user of land are not actionable, he went on to say, at pp. 46-7 [p. 154 O.R., p. 618 D.L.R.]:

> Beyond this point it is necessary to ask if the conduct of an occupier of land has been reasonable vis-à-vis his neighbour. The taking of all reasonable care is not a defence to an action for nuisance. If an operation cannot by the exercise of reasonable care and skill be prevented from causing a nuisance, then it cannot lawfully be undertaken, unless there is either a statutory authorization, or the consent of those injured: [page728]

In my view this principal is very much applicable to the case at bar. The two legal maxims cujus est solum ejus usque ad coelum et ad inferos (freely, he who owns the soil owns it from the centre of the earth to the sky) and sic utere tuo ut alienum non laedas (freely, one must use one's own land so as not to injure another's) are as put by Rigby, L.J., in Jordeson v. Sutton, Southcoates & Drypool Gas Co., [1899] 2 Ch. 217 at p. 243, "driven to their logical extreme ... irreconcilable. Some practical limitation of one by the other has to be arrived at."

There is, in my view, in cases such as this, a good deal of legal advantage in being there first. In the case at bar the plaintiffs constructed their building taking reasonable precautions and reasonably not expecting a building such as the defendant's as its immediate and adjacent neighbour. The defendant Lincoln Trust on the other hand knew before construction of the existence of the plaintiffs' building and that the planned construction would inevitably cause damage. Surely it was incumbent upon Lincoln Trust to take steps to prevent that damage.

The fact that those steps could only be taken upon the plaintiffs' land, i.e., the reinforcement of the plaintiffs' roof, does not, in my view, affect the matter. Lincoln Trust obviously could not enter upon the plaintiffs' lands without their consent but that consent was not sought. The defendant's building was an exceptionally high building for St. Catharines and before constructing it Lincoln Trust should have sought ways to avoid the damage that would otherwise inevitably ensue.

We are not here concerned with the situation before the construction of the new building. It might be, of course, that the plaintiffs would have refused entry. In such event the defendant's position might have been very strong when a claim against it was advanced after the construction. It might also be that the plaintiffs might have sought an injunction to prevent the construction. Perhaps that relief would have been refused upon the ground of the adequacy of the damage remedy. We are here concerned only with the relief available to the plaintiffs when the damage has already been done. The plaintiffs' claim is in damages and in my opinion they are entitled to recover.

There will, therefore, be judgment for the plaintiffs against the defendant Lincoln Trust for $14,433 and costs. In accordance with this finding and the agreement of counsel the action against the City will be dismissed without costs, leaving it to the City to recover its costs from Lincoln Trust in accordance with the agree- [page729] ment between them. If I have misunderstood these agreements or if any further order is required I may, of course, be spoken to.

Judgment for plaintiff against defendant Lincoln

Trust and Savings Company; action against City

of St. Catharines dismissed.

Re **Re Teperman & Sons Ltd. and Toronto** et al.

(1975), 7 O.R. (2d) 533

ONTARIO
COURT OF APPEAL
KELLY, JESSUP
and HOULDEN, JJ.A.
18TH FEBRUARY 1975

APPEAL from the judgment of the Divisional Court, 5 O.R. (2d) 507, 50 D.L.R. (3d) 675, dismissing an application for mandamus directing the issuance of demolition permits and for declaratory relief.

J.E. Eberle, Q.C., and Julia Ryan, for applicant, appellant.

D.C. Lyons, Q.C., for respondents.

The judgment of the Court was delivered orally by

JESSUP, J.A.:-- On May 7, 1974, the applicant applied to the Building Commissioner of the City of Toronto pursuant to the building by-law (No. 300-68) for permits for the demolition of some 36 dwelling-houses on Quebec and Gothic Aves. in the City of Toronto on which the owners intended to construct apartment buildings in accordance with the zoning of the lands on which the buildings are located. The application complied in all respects with the by-law and was supported with all the requisite material. The Commissioner has withheld the issuance of permits on the grounds that some few of the dwelling-houses were still occupied.

Meanwhile, on June 28, 1974, the Planning Amendment Act, 1974 (Ont.), c. 53, came into force; it added [by s. 6] s. 37a to the Planning Act, R.S.O. 1970, c. 349. That section provides that a council of a municipality may declare an area of demolition control and that thereafter there shall not be demolition of any residential property in the area without the issuance of a permit by council. The City of Toronto promptly declared the entire area of Toronto as an area of demolition control.

The Divisional Court, for reasons with which I agree, held that under the terms of the by-law, the circumstance that certain of the residential dwelling-houses were still occupied did not justify the refusal to issue demolition permits applied for. In the result, the Court held that the applicant had a right on May 7, 1974, to the demolition permits it applied for. However, with respect to that right, the Divisional Court in a careful judgment, the reasons of which were given by Mr.

Justice Henry, said [5 O.R. (2d) 507 at pp. 516-7, 50 D.L.R. (3d) 675 at pp. 684-5:

> In the case at bar, Teperman had a right to the issue of the demolition permits on May 7, 1974. That right crystallized by its making the application. But the right to demolish the house was not created by the permit or the right to it; nor was it a property right. As we have said, the permit merely removes the restraint on the general right of an owner to dispose of a building on his land. (We here assume Teperman to be in the same position as the owner.) Thus, Teperman did not then acquire a particular right in the sense of the authorities and no particular right has been taken away by the enactment of section 37a and its implementing by-law. Teperman is in the same position as any other person who may be at liberty to demolish subject to any law that has been or may be enacted affecting that activity.

In my respectful opinion, there is no precedent in law for the principle which the Divisional Court there followed. In my view, the right which Teperman acquired on May 7, 1974, was an acquired or crystallized right, within the meaning of the authorities and one which accordingly survived subsequent legislation, in the absence in that legislation of express words or necessary implication for a retrospective effect.

With respect to the retrospective effect of s. 37a of the Planning Act, Mr. Justice Henry said in his reasons [at p. 518 O.R., p. 686 D.L.R.]:

> On this approach, the question is whether the Legislature

intended to leave intact, and to allow to take effect any proceeding put in motion under the former provisions, namely, s. 7 of the building by-law. Again a distinction has been made as to the right to obtain the permit and the right to demolish the buildings.

Legislature has put its mind to the possible interaction of s. 37a and prior provisions in municipal by-laws. For example, by s-s. (6) it is provided that subject to certain matters, the council shall on application issue a demolition permit where a building permit has been issued to erect a new building on the site of the residential property sought to be demolished. In that circumstance, there is an absolute right to obtain a permit from the council. Nothing is said about what is to happen if a demolition permit has previously been issued and we conclude that the Legislature did not intend to entrench it.

Furthermore, s-s. (16) provides that where a permit to demolish residential properties is obtained under the new provision it is not necessary for the holder to obtain a permit from the Commissioner under the building by-law (which is a by-law under s. 38(1), para. 7). Here again, the interaction of the new section with the building by-law has been considered by the Legislature and the obtaining of a licence under the building by-law is made unnecessary.

In my respectful opinion, neither s-s. (6) nor s-s. (16) of s. 37a lead to the conclusion that a retrospective effect to the legislation is to be inferred. Indeed, at least with respect to s-s. (16), it is very arguable that exactly the opposite inference is to be drawn.

In my respectful submission, there is nothing in the legislation under consideration which by express words or necessary implication abrogates the right acquired by the applicant on May 7, 1974.

In the result, the appeal must be allowed with costs. I would set aside the judgment of the Divisional Court and in its place order and adjudge that the applicant receive the relief set out in the notice of motion dated August 25, 1974, and further declaring that the provisions of s. 37a of the Planning Act are not applicable to the demolitions to be carried out pursuant to the permits ordered to be issued. The applicant will also have its costs below.

Appeal allowed.

Re **Thomas C. Assaly Corp.** Ltd. in Trust and City of Ottawa

18 O.R. (2d) 198
ONTARIO

ONTARIO
HIGH COURT OF JUSTICE
DIVISIONAL COURT
LERNER, GOODMAN AND CRAIG, JJ.
16TH DECEMBER 1977.

APPLICATION for judicial review of a decision of a municipal council.

J. P. Nelligan, Q.C., for applicant.

F. C. Askwith, for respondent, City of Ottawa.

Blenus Wright, for Attorney-General for Ontario.

The judgment of the Court was delivered by

CRAIG, J.:-- This is an application for judicial review of a decision of the council of the respondent municipality. The issue in this case is whether in the circumstances hereafter mentioned the respondent can require the applicant to enter into a development control agreement pursuant to a by-law authorized by s. 35a(2) of the Planning Act, R.S.O. 1970, c. 349, as amended [1973, c. 168, s. 10]; and also whether the applicant can be required to pay to the respondent the sum of $73,700 required to be paid as a condition of the development or redevelopment pursuant to a by-law authorized by s. 35b(1) and (6) of the Planning Act.

The facts are as follows. The applicant is the owner of certain lands situate in the City of Ottawa in the Judicial District of Ottawa-Carleton known as Lots 1 to 5, South Gloucester St., Lots 1 to 5, North Nepean St. and Lot C, Bronson Ave. E., as shown on registered plan No. 2996. Prior to December, 1973, a number of single-family residences and converted single-family residences existed on the subject lands. During the month of December, 1973, the appropriate building permits were duly granted by the building inspector for the City of Ottawa to the applicant herein, for the purpose of demolition of these structures; and thereafter they were demolished and removed from the subject lands so that the said lands are now vacant. The lands in question occupied an area of 59,500 sq. ft., being an entire city block. In the month of February, 1977, the applicant applied for a building permit to construct what is said to be a single building but which may be described as an apartment complex consisting of two towers of 21 and 23 storeys respectively containing 292,343.45 sq. ft. of floor space and 464 dwelling units. The two towers will stand upon a common foundation; and will have a garage and amenity area.

The Planning Act provides as follows:

35a(1) In this section and in section 35b, "redevelopment" means the removal of buildings or structures from land and the construction or erection or other buildings or structures thereon.

(2) Where there is an official plan in effect in a municipality, the council of the municipality in a by-law passed under section 35 may, as a condition of development or redevelopment of land or buildings in the municipality or in any defined area or areas thereof, prohibit or require the provision, maintenance and use of the following facilities and matters or any of them and may regulate the maintenance and use of such facilities and matters:

1. Widenings of highways that abut on the land that is being developed or redeveloped.

2. Subject to The Public Transportation and Highway Improvement Act, facilities to provide access to and from the land such as access ramps and curbings including the number, location and size of such facilities and the direction of traffic thereon.

3. Off-street vehicular parking and loading areas and

access driveways including the surfacing of such areas and driveways.

4. Walkways and all other means of pedestrian access.

5. Removal of snow from access ramps, driveways, parking areas and walkways.

6. Grading or change in elevation or contour of the land and the disposal of storm, surface and waste water from the land and from any buildings or structures thereon.

7. Conveyance to the municipality, without cost, of easements required for the construction, maintenance or improvement of any existing or newly required watercourses, ditches, land drainage works and sanitary sewerage facilities on the land.

8. Floodlighting of the land or of any buildings or structures thereon.

9. Walls, fences, hedges, trees, shrubs or other suitable groundcover to provide adequate landscaping of the land or protection to adjoining lands.

10. Vaults, central storage and collection areas and other facilities and enclosures as may be required for the storage of garbage and other waste material.

11. Plans showing the location of all buildings and structures to be erected on the land and the location of the other facilities required by the by-law.

12. Perspective drawings and plans showing building elevations and cross sections of industrial and commercial buildings and residential buildings containing twenty-five or more dwelling units.

. . . . .

(4) A by-law that includes provisions authorized by subsection 2 may,

. . . . .

(b) require that the owner of the land enter into one or more agreements with the municipality dealing with the facilities and matters referred to in subsection 2; and

(c) prohibit the issuance of building permits until the plans referred to in paragraphs 11 and 12 of subsection 2 have been approved by the municipality and until the agreements referred to in clause b have been entered into.

. . . . .

35b(1) As a condition of development or redevelopment of land for residential purposes, the council of a municipality may, by by-law applicable to the whole municipality or to any defined area or areas thereof, require that land in an amount not exceeding 5 per cent of the land proposed for development or redevelopment be conveyed to the municipality for park purposes.

. . . . .

(6) The council of a municipality may accept money to the value of any land required to be conveyed under this section in lieu of such conveyance and the provisions of subsection 11 of section 33 apply mutatis mutandis to all moneys so accepted.

Purporting to act pursuant to the authority contained in s. 35a of the Planning Act, the respondent enacted By-law 43-77 on February 21, 1977, being a by-law to amend its general zoning by-law. By-law 43-77 provides, in part, as follows:

17a.(1) Notwithstanding any of the other provisions of this by-law, the Chief Building Inspector of the Corporation shall not issue a building permit or any combination thereof for the development or redevelopment of any lands or building or structure or any part thereof in the City of Ottawa until:

. . . . .

(B) agreements have been entered into with the owner of the land for which the permit or permits have been applied for dealing with the prohibition or the provision, maintenance and use of the following facilities and matters, and the regulation of the maintenance and use of such facilities and matters;

Then follows the same 12 enumerated facilities and matters named in s. 35a(2) of the Planning Act, quoted above.

When the applicant applied for a building permit to erect this apartment complex the respondent refused to permit its chief building inspector to issue a building permit therefor until two conditions were met. Firstly, requiring that the applicant enter into a development control agreement with the respondent in accordance with s. 17a.(1) of the said by-law, and, secondly, that the applicant pay the sum of $73,700 to the municipality in lieu of the dedication of 5% of the lands for public purposes pursuant to a by-law of the city upon the authority of s. 35b(1) and (6) of the Planning Act.

If what is contemplated by the applicant herein is a "development or redevelopment" within the meaning of s. 35a of the Planning Act, and s. 17a.(1) of By-law 43-77, then the municipality is entitled to impose both conditions. If it is not such a "development or redevelopment" then it is not entitled to impose either one of the conditions.

The word "redevelopment" is defined by s. 35a(1) but nowhere is the word "development" defined in that section or in s. 35b. Counsel for the applicant submits that this project is not a "redevelopment" within the meaning of the definition for two reasons. Firstly, considering the definition in s. 35a(1) quoted above, the demolition and removal of buildings took place some four years ago at a time when the city did not have a by-law requiring a development control agreement. It may be questionable whether a by-law enacted after the removal of buildings but before the erection of other buildings can or should be enforced under ss. 35a and 35b even though it is now a redevelopment of the land. Without deciding that point I am prepared to hold for the purpose of this judgment that it is not a "redevelopment". His second reason for stating that this is not a "redevelopment" is that it is beyond the scope or power of the council of a municipality to require an applicant for a building permit who wishes to erect a single building to enter into a development control agreement pursuant to s. 17a. (1) of the by-law because of the wording in s. 35a(1) and (2) of the Act referring to buildings or structures in the plural. This submission is also raised by counsel for the applicant in connection with the issue as to whether this project is a "development". Section 17a.(1) of the by-law does not follow the exact wording of s. 35a(2) but refers to "lands or building or structure". The Interpretation Act, R.S.O. 1970, c. 225, s. 27(j) provides as follows:

27. In every Act, unless the contrary intention appears,

. . . . .

(j) words importing the singular number or the masculine gender only include more persons, parties or things of the same kind than one, and females as well as males and the converse;

Having in mind that the object and intent of ss. 35a and 35b is to place conditions on the development or redevelopment of land or buildings, it is my view that the emphasis is not whether such development or redevelopment constitutes one or more buildings but the emphasis is upon the magnitude of the project which may require the imposition of conditions in order to establish orderly development or redevelopment. It is my view that in the interpretation of the meaning of the words "land", "buildings" or "structures", where those words appear in ss. 35a and 35b the plural includes the singular and the converse.

Since I have adopted the submission of counsel for the applicant (for the purpose of this decision) that this project is not a "redevelopment", then obviously it must be taken to be an application with respect to the use of vacant land; and the question is whether it is a development of vacant land within the meaning of the Act and the by-law. Section 35a(2) preserves the distinction between the development of "land or buildings".

If the erection of a building or buildings is not development of vacant land, then what is it? That is normally the way in which land is developed, but perhaps not exclusively. A parking lot would be an example to the contrary. I have alluded to the absence of any definition of the word "development" in ss. 35a and 35b; and counsel for the applicant submits that the Act should be construed strictly as being restrictive of common law rights of user of land. However, on the facts before us this proposed apartment complex is one of considerable magnitude, and a project which would obviously concern the respondent municipality in connection with the "provision, maintenance and use of the ... facilities and matters" enumerated in the 12 sub-paragraphs of s. 35a(2) of the Planning Act; being matters dealing with the orderly growth and development of the community. It is my view that the legislation is remedial in nature and should be given such liberal interpretation as may be necessary to achieve the purpose and object of the legislation. The Interpretation Act provides as follows:

> 10. Every Act shall be deemed to be remedial, whether its immediate purport is to direct the doing of anything that the
>
> Legislature deems to be for the public good or to prevent or punish the doing of any thing that it deems to be contrary to the public good, and shall accordingly receive such fair, large and liberal construction and interpretation as will best ensure the attainment of the object of the Act according to its true intent, meaning and spirit.

It is my opinion that the case Re Bruce and City of Toronto et al., [1971] 3 O.R. 62, 19 D.L.R. (3d) 386 (C.A.), dealing with the general zoning by-law of the City of Toronto, is applicable and particularly the language of Kelly, J.A., at p. 67 O.R., p. 391 D.L.R., as follows:

> The underlying purpose of the implementing by-law is, accordingly, to establish and maintain for each of the areas or zones into which the municipality is divided for the purposes of the plan, standards with respect to the use of land and the use and erection of buildings which will enhance and preserve the quality of life in the municipality and the amenities considered conducive to the health, safety, convenience and welfare of the inhabitants. On this account, I consider the by-law to be remedial and one to be accorded a liberal interpretation to the end that it may afford to the people of the community protection against departures from or encroachment upon the standards adopted by the municipality as expressive of these purposes.

Such an approach is, I believe, compatible with the proven necessity for the employment of external controls for the preservation of a fair standard of housing and land use and the expressed will of the people for a universal application of orderly planning to that end. I am not unmindful that it has not been uncommon for by-laws dealing with the use of lands and the use and erection of buildings to be referred to as restrictive by-laws and to be accorded a strict interpretation due to the fact that they have been approached as infringements on the freedom of choice of the owner and the use to which he may put his land.

Notwithstanding this, it is my belief that Ontario Courts now accept that the obligation imposed on the municipal council to plan for the growth and development of the community demands recognition of the necessity for means to compel the observance of the rights of the community to determine and enforce the direction in which the community should be shaped, and that in this regard the rights of the community are paramount to the rights of the owner.

Counsel for the applicant relied upon Re Slau Ltd. and City of Ottawa et al. (1977), 14 O.R. 514, 74 D.L.R. (3d) 181, a decision of the Divisional Court; as authority for the proposition that single or individual buildings are not "developments" within the meaning of ss. 35a and 35b of the Planning Act. In Slau the owner sought an order of mandamus directing the issue of a building permit that had been refused because the owner had declined to enter into a development control agreement. The application was with respect to construction of new foundations and exterior wall to square out the corner of an existing building consisting of an area some 7.44 ft. in width by 24 ft. in length. Steele, J., stated at p. 519 O.R., pp. 185-6 D.L.R.:

Redevelopment is defined for the purpose of that section and has a very broad general meaning with respect to major redevelopment projects within a municipality. It does not deal with individual buildings or parts thereof.

I am of the opinion that the term "development" has a meaning analogous to "redevelopment" within s. 35a of the Planning Act and that neither relate to minor construction such as a small portion of a building or structure. It follows that the city's by-law has no application to this building.

I agree fully with the result of that decision. In my view, the ratio of the case is that the words "redevelopment" and "development" have a broad general meaning with respect to major development "and that neither relate to minor construction such as a small portion of a building or structure". It is distinguishable from the instant case on that ground and also because in this case it is a major project dealing with the development of vacant land.

There will, therefore, be an order dismissing the application, with costs.

Application dismissed.

Re **Thorman et al. and City of Cambridge**

18 O.R. (2d) 142
ONTARIO

ONTARIO
HIGH COURT OF JUSTICE
CRAIG, J.
8TH NOVEMBER 1977.

APPLICATION for an order directing the issuance of a building permit.

G. Y. Martiniuk, for applicants.

John V. Cosman, for respondent.

CRAIG, J.:-- This is an application for an order in the nature of mandamus directed to the Corporation of the City of Cambridge and to its building inspector to issue a building permit to the applicants to allow for the construction of a washroom in a part of a building owned by the plaintiffs; which part is to be used either as a variety store or as a self-contained apartment unit.

There was also an application to me pursuant to the Judicial Review Procedure Act, 1971 (Ont.), c. 48, s. 6(2). It was submitted that part of the building in question has been vacant for a period in excess of a year and that there is likelihood of damage if vacancy continues to exist; and that the application was one of urgency within the meaning of the aforesaid s. 6(2). While counsel for the respondent did not admit that the application came within s. 6(2), he stated expressly that he did not oppose the submission that the matter was one of some urgency. On that basis I did grant leave to make the application for judicial review to me as a Judge of the High Court, rather than to the Divisional Court.

The applicants are the executors of the estate of Karl Thorman, deceased, who was at the time of his death in March, 1977, the owner of lands and building known municipally as 1366 Thorman Place, in the City of Cambridge, in the Regional Municipality of Waterloo. The building situate thereon consists of a 100-year-old two-storey part and a one-storey addition constructed in the year 1945 approximately. It is all one building; and presently zoned "detached single family residential" pursuant to By-law 2750 for the City of Cambridge. This by-law was passed in the year 1971 and subsequently approved by the Ontario Municipal Board. It is admitted that the original two-storey part operates as a legal non-conforming use consisting of two separate self-contained apartment units constructed and used prior to the passing of By-law 2750. The one-storey addition was used and operated as a "butcher shop" from and after 1945 until the month of January, 1976. It is admitted too that the operation of this butcher shop was a legal non-conforming use -- at least until the month of January, 1976. The butcher shop was operated by lessees (husband and wife) subsequent to 1969. Upon the death of the husband lessee in January, 1976, the surviving lessee posted a notice on the premises and also in the local newspaper as follows:

> Closing -- Thorman Meat Market is closing due to the death of the proprietor Ivan Thorman. The family wishes to thank all their former customers throughout the years.

The surviving lessee attempted to sell the butcher shop as a "going concern" by approaching three individuals but the business was not listed for sale with any real estate broker or advertised in any newspaper. The butcher shop remained vacant from January, 1976, until the present time and has not been used for any purpose in the meantime. On February 26, 1976, the surviving lessee advised the City of Cambridge Tax Department in writing that the butcher shop was closing and that the business was discontinued because of the death of her husband. She further requested that the city not levy any business tax after January 31, 1976. The city complied with this request. On November 26, 1976, the owner of the building (which included the butcher shop) applied in writing to the city to change the commercial rate affecting the property to a residential rate; and the rate was so changed by the city effective January 31, 1976. This application also indicated that "Refrigeration and Meat Equipment Removed".

As a result of discussions with the City of Cambridge planning staff, on May 9, 1977, the applicants submitted building permit applications to the City of Cambridge Building Department requesting building permits to install a washroom in the butcher shop addition portion of the premises to be used alternatively in connection with a variety store or a separate new self-contained apartment unit. On June 3, 1977, the building department of the City of Cambridge refused to issue either building permit on advice of the planning department that the proposed use would contravene the zoning By-law 2750.

The questions for decision on this motion are, firstly, whether the legal non-conforming use of part of the building as a butcher shop has been lost by reason of discontinuance; and if not, whether the butcher shop status permits that portion of the premises to be used for what is claimed to be a similar use (i.e., a variety store). If the non-conforming use of part of the building as a butcher shop has been lost by reason of discontinuance, then are the applicants entitled to use that part of the building formerly used as a butcher shop as a self-contained apartment unit?

The Planning Act, R.S.O. 1970, c. 349, s. 35(7)(a), provides as follows:

> 35(7) No by-law passed under this section applies,
>
> (a) to prevent the use of any land, building or structure for any purpose prohibited by the by-law if such land, building or structure was lawfully used for such purpose on the day of the passing of the by-law, so long as it continues to be used for that purpose ...

Counsel for the respondent concedes that the onus is upon the municipality to prove discontinuance of the non-conforming use. On the facts of this case there has not been a mere temporary interruption of the use. It has been for a period in excess of 20 months; and the application to the municipality for a change from a commercial to a residential assessment indicates an intentional discontinuance of the use. What constitutes a discontinuance is a question of fact. In the case of Gayford v. Kolodziej, [1959] O.W.N. 341, 19 D.L.R. (2d) 777, the Court of Appeal held that the discontinuance of a tourist home catering to the public during the summer season and its use as a private summer residence was tantamount to a discontinuance for the whole year; and to remove it from the exemption. It is, therefore, my view that the use exemption with respect to the butcher shop has been lost by reason of discontinuance.

Having found that the "butcher shop" non-conforming use has been lost by reason of discontinuance of the use, it is not necessary to decide the interesting question as to whether this particular exemption would extend to a variety store; or whether a butcher shop is essentially the same as a variety store use.

The remaining issue is whether the applicants are entitled to a building permit for a use of that part of the building formerly used as a butcher shop, as a self-contained apartment unit. The building permit in this case is for a washroom which does not involve the erection of a building or the enlargement or extension of an existing building. This issue also involves a consideration of s. 35(7)(a) of the Planning Act as quoted above. The zoning by-law in question was enacted pursuant to the Planning Act, s. 35(1), paras. 1 and 2, as follows:

> 35(1) By-laws may be passed by the councils of municipalities:
>
> 1. For prohibiting the use of land, for or except for such purposes as may be set out in the by-law within the municipality or within any defined area or areas or abutting on any defined highway or part of a highway.
>
> 2. For prohibiting the erection or use of buildings or structures for or except for such purposes as may be set out in the by-law within the municipality or within any defined area or areas or upon land abutting on any defined highway or part of a highway.

In Central Jewish Institute v. City of Toronto, [1948] S.C.R. 101, [1948] 2 D.L.R. 1, the Supreme Court of Canada dealt with

a city by-law prohibiting the use in a certain area of the city of any land for any purpose except a one-family dwelling-house (with some extensions which are not relevant for the purpose of this case). The question was whether such by-law applied to the property owned by Central Jewish Institute when the by-law was passed; and in which it purported to carry on a school. The finding of fact in that case was that the building owned by the applicant was used to a very limited extent for school purposes on the date of the passing of the by-law; and that the principal use of the building was on that date that of a rooming- or guest-house. The use of a building as a school and as a rooming- or guest-house were both uses prohibited by the zoning by-law. On the date of the passing of the by-law it was the intention of the Central Jewish Institute to expand the school operations to the entire building. It was held that if on the date of the passing of the by-law a part of the building is used for a purpose prohibited by the by-law, the building as a whole is exempt.

With reference to the exemption provided for in the legislation (which did not differ in substance from what is now s. 35(7) of the Planning Act), Rand, J., stated at p. 109

S.C.R., p. 8 D.L.R.:

> It will be seen that the exemption is not to the existing use but to the building; and there is no implication that it is the whole of the building that must be so used or that the use must be the sole use. The language would be satisfied by a partial use as if, for instance, an owner was carrying on a grocery store on the ground floor and using the second storey for his home: could it seriously be questioned that the use of the lower floor in such a case would be protected by the exemption? If that same business were extended to the upper storey, could it be said that the exemption did not continue or was lost? The building would still be used on the ground floor for the prohibited purpose; the building as a whole would be exempt; and I think it would necessarily follow that no such extension could bring about a forfeiture of the exemption. In any case the question is whether a real use, in good faith, is being made of the building, a use not merely incidental to some other use, but possessing an individuality of its own.

[Emphasis added.]

Counsel for the respondent sought to distinguish the Central Jewish Institute decision upon two grounds, firstly, that at the time of the passing of the by-law there was an intention to use all of the building for school purposes; and, secondly, that the entire building would be used as one school (rather than as in the instant case, an additional separate self-contained apartment to be used separately from the other two apartment units). It is true to say that the intention to use the "butcher shop" area as a residential unit was not considered by the owners at the time of the enactment of the zoning by-law; and that is a distinction from the Central Jewish Institute case. However, it is my view that the facts of the instant case bring it within the reasoning stated by Rand, J., in the Central Jewish Institute decision and also the decision of the Divisional Court in the case of R. v. Barry Humphrey Enterprises Ltd. et al. (1977), 15 O.R. (2d) 548, 76 D.L.R. (3d) 550. I refer also to the language of Middleton, J., the trial Judge in a similar type of case involving the interpretation of legislation providing for restricted area by-laws, Re Hartley and City of Toronto (1924), 55 O.L.R. 275 at p. 278 [affirmed 56 O.L.R. 433], as follows:

> The provision of the Municipal Act [now the Planning Act] may work very harshly. It should, I think, be strictly construed and should not be held to apply to any case that does not fall clearly within its provisions.

This decision was approved by the Supreme Court of Canada in the Central Jewish Institute case and was also applied by McRuer, C.J.H.C., in R. ex rel. Courneyea v. Girvin, [1956] O.W.N. 73 at p. 76. See also R. v. Heit, [1963] 2 O.R. 471 at p. 474, 40 D.L.R. (2d) 133 at p. 136, [1963] 3 C.C.C. 1 (C.A.).

Again referring to s. 35(7)(a) of the Planning Act, the exemption therein contained does not refer to part or parts of a building. There is only one building which at the material time was legally used for more than one self-contained residential apartment unit. It is apparent that this was the

principal or substantial use of the building and the butcher shop area was a minor or collateral use. On the basis of Central Jewish Institute the entire building enjoys the exemption from the provisions of the zoning by-law. Stated another way, the exemption is for a use that can fairly be described as one for self-contained residential apartment units or as a multiple dwelling. It is my view that since the building is not being extended beyond its existing limits, one more such apartment is not outside of the exemption. Counsel for the respondent conceded that the principle stated in the Central Jewish Institute case would permit the enlargement of the two existing apartments, or one of them, into the area formerly used as a butcher shop, so that such area could be used for residential purposes; but he opposed the creation of a separate residential unit. This distinction drawn by counsel for the respondent is one that I am not prepared to adopt. My decision is not only supported by authority, but it appears to be a sensible result. The proposed use of the "butcher shop" area as a separate residential apartment unit is one that is considered to be a higher and more desirable use than that of a butcher shop in an area zoned for "detached single family residential" use. The material and photographs before me in the application indicate that the entire building is solidly constructed with a presentable appearance. It is not made to appear that any tenant (present or future) in either one of the two existing apartment units would want to expand into the "butcher shop" area; or assume any additional rental or other costs involved in such an expansion.

Counsel for the respondent submitted that the applicants should have applied to the Committee of Adjustment (with a further right of appeal to the Ontario Municipal Board) for a "minor variance" pursuant to s. 42(1) and (2) of the Planning Act. In answer thereto counsel for the applicants submits, firstly, that great delay and uncertainty are involved in such an application; but more importantly that he has a legal right to the relief claimed.

There will, therefore, be an order requiring the issuance of a building permit as requested herein; and a declaration that the one-storey addition referred to herein shall be used only as a self-contained residential apartment unit. The applicants are entitled to their costs, to be taxed.

Order accordingly.

Re Corporation of the **City of Thunder Bay and Estate of Mary Kasstan** et al.

43 O.R. (3d) 703
[1999] O.J. No. 667
Docket Nos. 97-1161, 97-1163 and 97-1164

Ontario Court (General Division),
Stach J.
March 1, 1999

APPLICATION for confirmation of an emergency order under s. 31(24) of the Planning Act, R.S.O. 1990, c. P.13.

David G. Nattress, for applicant.
Francis J. Thatcher, for respondent, Micalda Kasstan.
Mary D. Bird, for respondent, Clara Kasstan.
Randall V. Johns, for Public Guardian and Trustee (as guardian of the property of Clara Kasstan).

STACH J.: -- In one of its provisions, the Planning Act, R.S.O. 1990, c. P.13, s. 31(24) and (25) ("the Act"), permits municipalities to make repair orders and to carry out immediate remedial work on property that poses an immediate danger to the health or safety of any person. The applicant here, the Corporation of the City of Thunder Bay ("the city") seeks an order from this court confirming an emergency order previously issued by the city under s. 31(24) of the Act for immediate remedial and other work to residential premises 1101 Frederica Street West ("the residence") in the City of Thunder Bay. The city seeks to recover from the respondents $14,995.48, the amount expended under the emergency order for the "clean-up". This amount includes work charges for the property on which the residence was situate, and on four adjacent lots.

The respondents in this application are related to one another. They have an interest in the residential premises, or one or more of the adjacent lots. At the time in question, however, only the respondents Clara Kasstan and Micalda Kasstan were actual occupants of the residence. They are the persons most directly affected by the emergency order, and it is they who challenge the city's application for confirmation. In doing so, Micalda and Clara Kasstan raise serious Charter issues regarding the manner in which the city exercised its powers under the Act.

In order to highlight the issues raised in this application, some understanding of the relevant factual background is required.

Factual Background

From the material filed one gleans that Clara Kasstan, a former music teacher, is a proud and fiercely independent woman in her mid-70s. She is part of a large family but, with one important exception, is distanced from them. The exception is her sister Micalda. After living in southern Ontario, Clara Kasstan returned to Thunder Bay some years ago and lived in the family residence at 1101 Frederica Street with another family member. That family member passed away in 1991 Thereafter, Clara Kasstan remained alone in the residence until her sister Micalda moved in with her in 1996. Clara Kasstan has an income of approximately $980 per month.

Micalda Kasstan receives income monthly from her Canada Pension and Old Age Pension. There is no significant difference in age between Micalda and her sister Clara and it is probably fair to say that Micalda Kasstan is as proud and fiercely independent as Clara. Despite the death of their mother many years ago, paper title to the family residence remains in the name of their late mother's estate. Because their late mother died without a will, several next of kin also have an interest in the residence.

The residence at 1101 Frederica Street first came to the attention of the city officials in 1996 as a result of a complaint respecting the condition of its yard. Ultimately (under a different process from that at issue here), the city engaged contractors to clean up the yard. Officials of the city attended at the premises on September 2 and 3, 1997 to monitor the yard clean-up. Clara and Micalda Kasstan objected strongly to the presence of city personnel and city agents on their premises. They say that such persons were unlawfully on

their premises, a position vigorously contested by the city. For purposes of this application, I am prepared to assume (without deciding) that city officials and agents were lawfully present in the yard (but only the yard) on September 2 and 3, 1997.

On September 2 and 3, Donna Mahoney, a licensing and enforcement officer with the city, allegedly made observations about the condition of the yard and the circumstances of Clara and Micalda Kasstan. In her affidavit sworn January 13, 1998, Mahoney deposes that on September 3 she acquired information that:

(a) the furnace of the residence was not in use;

(b) the house was heated in winter by electric heaters;

(c) in her perception Clara and Micalda Kasstan were unkempt, dirty and emitted a horrible odour;

(d) the smell emanating from the house was horrible;

(e) (from Clara Kasstan) there was no running water in the residence;

(f) there was evidence in the yard of rotten apples and worm and bug-infested potatoes and onions which Clara Kasstan allegedly claimed to be her food.

During the clean up of September 2 and 3, Clara Kasstan and Micalda Kasstan had vehemently objected to the presence of city officials on their property as unlawful and the police were called to the site as a consequence. Also on September 3, 1997, Donna Mahoney contacted representatives of the city's fire and the health departments and requested that they check the residence to identify potential safety and health hazards. When representatives of the fire and health departments arrived, Clara and Micalda Kasstan refused them entry.

The conditions catalogued by Donna Mahoney on September 2 and 3 allegedly raised concerns in her over the health and safety of the occupants of the residence, Clara and Micalda Kasstan.

Some time later, also on September 3, 1997, the police, presumably with the knowledge of Donna Mahoney (and, one suspects, at her instance), made application to a justice of the peace under s. 16 of the Mental Health Act, R.S.O. 1990, c. M.7 for a warrant to apprehend Clara and Micalda Kasstan and to take them to a psychiatric facility in Thunder Bay for psychiatric assessment.

There is no material before this court regarding the information the police actually presented to a justice of the peace on September 3, but it is common ground that a warrant of apprehension was issued under s. 16 of the Mental Health Act against both Clara Kasstan and Micalda Kasstan on September 3 and executed on September 4. In my opinion, it is significant that the city made no concurrent application to the justice of the peace on September 3, 1997 for a search warrant to permit inspection of the residence on September 4, 1997.

On September 4, 1997 Donna Mahoney and Murray Haywood, also a licensing and enforcement officer, attended at the residence with the police officers when the police executed the warrant of committal against Clara and Micalda Kasstan. Neither Mahoney nor Haywood had a search warrant. According to paras. 16 and 17 of the affidavit of Donna Mahoney:

> The Police removed the two ladies from the house at approximately 2:00 p.m. on the afternoon of September 4, 1997. It was at that time that I could see through the open front door the horrible conditions inside the house. I attach as Exhibit "D" hereto a series of pictures taken by Murray Haywood, also a Licensing and Enforcement Officer with the City of Thunder Bay. The picture identified as number 1 is a view of the rear door of the house, number 2 is a view through the front door into the living room, number 3 is a view of the rear porch from the door and number 4 is a view through the clothesline door.
>
> In consultation with Murray Haywood, we determined that a situation dangerous to safety and health existed and an emergency order was issued pursuant to s. 31(24) of the Planning Act . . .

What emerges clearly from this deposition is that the decision by city officials to issue an emergency order was not made until after the on-site "inspection" in the afternoon of September 4, 1997. While present at the scene on September 4, Murray Haywood took a series of polaroid photographs which were filed as exhibits on this application. I infer from the affidavit of Donna Mahoney and certain of the photographs taken by Murray Haywood that both Mahoney and Haywood were within the property lines and very near the front and rear doors of the Frederica Street residence during the afternoon of September 4.

Indeed, the photographs in question focus on the interior of the residence seen through its opened doors. Whether Donna Mahoney and Murray Haywood had a right to be present there and to conduct themselves as they did, without a search warrant, is very much in issue: see, for example, R. v. Evans, [1996] 1 S.C.R. 8, 104 C.C.C. (3d) 23.

When the committal order was executed on September 4, 1997, Clara and Micalda Kasstan were apprehended by police and removed from the residence against their will. According to Clara, she was handcuffed and dragged out of the house. Both were taken to the Lakehead Psychiatric Hospital. They remained hospitalized as involuntary patients for 14 days. Micalda Kasstan was ultimately found to be competent to care for herself and to manage her property. She was discharged.

Clara Kasstan may suffer from a mental disorder. She was found to be incompetent to manage her personal affairs and, in September 1997, the Public Guardian and Trustee assumed guardianship over her property, a situation which continues to the date of this hearing. Ultimately, Clara discharged herself from hospital and took up residence in rented accommodation with her sister, Micalda. The remedial work performed to their residence at 1101 Frederica Street was carried out by or at the instance of the city while Micalda and Clara were involuntary patients at the Lakehead Psychiatric Hospital.

The Planning Act

The sections of the Planning Act which come into play in this application are contained in Part IV of the Act which deals with COMMUNITY IMPROVEMENT. Principally we are concerned with a number of subsections under s. 31 of the Act. The subsections are reproduced, in part, below:

31(4) Subject to subsection (5), when a by-law under this section is in effect, an officer and any person acting under his or her instructions may, at all reasonable times and upon producing proper identification, enter and inspect any property.

(5) Except under the authority of a search warrant issued under section 158 of the Provincial Offences Act, an officer or any person acting under his or her instructions shall not enter any room or place actually used as a dwelling without requesting and obtaining the consent of the occupier, first

having informed the occupier that the right of entry may be refused and entry made only under the authority of a search warrant.

(6) If, after inspection, the officer is satisfied that in some respect the property does not conform with the standards prescribed in the by-law, he or she shall serve or cause to be served by personal service upon, or send by prepaid registered mail to, the owner of the property and all persons shown by the records of the land registry office and the sheriff's office to have any interest therein a notice containing particulars of the nonconformity and may, at the same time, provide all occupants with a copy of such notice.

(7) After affording any person served with a notice provided for by subsection (6) an opportunity to appear before the officer and to make representations in connection therewith, the officer may make and serve or cause to be served upon or send by prepaid registered mail to such person an order . . .

. . . . .

(16) When the owner or occupant upon whom an order has been served in accordance with this section is not satisfied with the terms or conditions of the order, the owner or occupant

may appeal to the committee by sending notice of appeal by registered mail to the secretary of the committee within fourteen days after service of the order, and, in the event that no appeal is taken, the order shall be deemed to have been confirmed.

(18) The municipality in which the property is situate or any owner or occupant or person affected by a decision under subsection (17) may appeal to a judge of the Ontario Court (General Division) by so notifying the clerk of the corporation in writing and by applying for an appointment within fourteen days after the sending of a copy of the decision . . .

. . . . .

(24) Despite any other provisions of this section, if upon inspection of a property the officer is satisfied there is nonconformity with the standards prescribed in the by-law to such extent as to pose an immediate danger to the health or safety of any person the officer may make an order containing particulars of the nonconformity and requiring remedial repairs or other work to be carried out forthwith to terminate the danger.

(25) After making an order under subsection (24), the officer may, either before or after the order is served, take or cause to be taken any measures he or she considers necessary to terminate the danger, and for this purpose the municipality has the right, through its employees and agents, to enter in and upon the property from time to time.

(26) The officer, the municipality or anyone acting on behalf of the municipality is not liable to compensate the owner, occupant or any other person by reason of anything done by or on behalf of the municipality in the reasonable exercise of its powers under subsection (25).

(27) Where the order was not served before measures were taken by the officer to terminate the danger, as mentioned in subsection (25), the officer shall forthwith after the measures have been taken, serve or send copies of the order, in accordance with subsections (7), (8) and (9), on or to the owner of the property and all persons mentioned in subsection (6) and each copy of the order shall have attached thereto a statement by the officer describing the measures taken by the municipality and providing details of the amount expended in taking the measures.

(28) Forthwith after the requirements of subsection (27) or (28) have been complied with the officer shall apply to a judge of the Ontario Court (General Division) for an order confirming the order made under subsection (24), and . . .

. . . . .

(c) the judge in disposing of the application may confirm the order or may modify or quash it and shall make a determination as to whether the amount expended by the municipality in taking the measures to terminate the danger may be recovered by the municipality in whole, in part or not at all.

(Empahsis added)

Discussion

Counsel for the respondents Micalda and Clara Kasstan take the position that, although the committal warrant did authorize the police officers to attend at the residence for purposes of executing the committal order under the Mental Health Act, the by-law enforcement officers, Mahoney and Haywood, could not lawfully enter upon the premises at the same time for purposes of their inspection under s-s. (24) except with a search warrant. They argue, in short, that the activities of Mahoney and Haywood on September 4, 1997 constituted a warrantless search of the premises. This argument assumes some significance in view of the inspection requirement of s-s. (24) and the factual background previously recited.

If by-law enforcement officer Donna Mahoney had been persuaded of "an immediate danger to health or safety" on September 2 or September 3, 1997, one infers that she would have issued an emergency order under s. 31(24) at that time,

and similarly, that she would not have considered it necessary to solicit further opinion from the fire and health departments of the city. Indeed, her own affidavit makes it clear that the decision to issue the s. 31(24) order was a direct consequence of the late afternoon inspection of September 4.

Counsel for the respondents argued that an application for a search warrant under s. 31(5) of the Act should have been made to the justice of the peace on September 3, 1997 at the same time the police made their application for a committal order. I find merit in that position

From the reaction she and other city officials received on September 3, Donna Mahoney must certainly have known that her further presence and that of other by-law enforcement officers was unwelcome anywhere on the subject property and that a search warrant was necessary to carry out the inspection of the residence contemplated by s. 31(24). Indeed, Mahoney knew that Micalda and Clara Kasstan had categorically refused entry to officials of the city's Fire Department and Department of Health on September 3.

The Law

The material portion of s. 31(24) reads as follows:

> 31(24) Despite any other provisions of this section, if upon inspection of a property the officer is satisfied that there is nonconformity with the standards prescribed in the by-law to such extent as to pose an immediate danger to the health or safety of any person the officer may make an [emergency] order . . . .

(Emphasis added)

In this segment of the argument, much attention was focused on the meaning to be accorded to "inspection". It is not defined in the Act. Accordingly, I attribute to the term inspection what I perceive to be its plain and ordinary meaning in this context, namely, "an official examination". [See Note 1 at end of document] In my opinion, this kind of official examination cannot be effected in circumstances like those present here without actual entry onto the premises.

Inspections are specifically referred to in s-s. (4) of the Act. The statutory, procedure governing entry into a place actually used as a dwelling is specified in s-s. (5) and clearly mandates a request for and the consent of the occupier, "having informed the occupier that the right of entry may be refused and entry made only under the authority of a search warrant." Failing such consent, entry can be effected only under the authority of a search warrant.

The meaning to be accorded "inspection" in s. 31(24) of the Act and its concomitant requirements must be informed by s-ss. (4), and (5) of the Act. Subsection (24) does not, in precise terms or by necessary implication, diminish the requirements for entry from those specifically outlined in s-ss.(4) and (5) and, in my opinion, if it attempted to do so, it could not pass constitutional muster under the Canadian Charter of Rights and Freedoms. [See Note 2 at end of document] Neither, in my opinion, is there any basis for the argument that the by-law enforcement officers possessed common-law authority to trespass upon the private property of the respondents to conduct the inspection.

The opening words of s-s. 24, viz, "despite any other provisions of this section", are, indeed, words of qualification but, in my opinion, are intended to contradistinguish the more cumbersome and time-consuming procedures of s-ss. (6) through (18) of s. 31 which are clearly inconsistent with and unworkable in the more emergent situations contemplated by s-s. (24): see para. 15 above [p. 709 ante]. The opening words do not, however, eliminate the requirement clearly spelled out in s-s. (24) for an inspection to take place; nor do they, for purposes of such inspection, eliminate the constitutional safeguards that govern entry comprised in s-s. (5).

I do not suggest that there may never be circumstances which so patently constitute immediate and serious danger to human health or safety that constitutional safeguards may have to be sacrificed. I do suggest that, in reference to the Planning Act, such circumstances must certainly be rare.

In s-ss. 31 (24) and (25), the legislature has delegated to municipal authorities extraordinary power to interfere with "property" [See Note 3 at end of document] where verified nonconformity poses an immediate danger to the health or safety of any person. The exercise of such power is not, however, without some restraint. As Sopinka J. observed in R. v. Kokesch, [1990] 3 S.C.R. 3 at p. 17, 61 C.C.C. (3d) 207 at p. 218:

> This Court consistently has held that the common law rights of the property holder to be free of [state] intrusion can be restricted only by powers granted in clear statutory language.

And at p. 29-30 S.C.R., p. 228 C.C.C.:

> Even before the enactment of the Charter, individuals were entitled to expect that their environs would be free of prowling government officials unless and until the conditions for the exercise of legal authority are met: see Eccles v. Bourque [1975] 2 S.C.R. 739; and Colet v. the Queen, [1981] 1 S.C.R. 2. The elevation of that protection to the constitutional level signifies its deep roots in our legal culture. La forest J. put it in this way in Dyment, supra, in words that commend themselves to me (pp. 427-28):
>
> > Grounded in man's physical and moral autonomy, privacy is essential for the well-being of the individual. For this reason alone, it is worthy of constitutional protection, but it also has profound significance for the public order. The restraints imposed on government to pry into the lives of the citizen go to the essence of a democratic state.

The yard clean-up performed by the city and its agents on September 2 and 3 was by its nature less intrusive than the subsequent search of the dwelling. Yet, on September 2 and 3 the city appears to have followed the statutory procedure precisely, with due observance of its safeguards to the citizen. This raises the question why city officials, on September 4, 1997 opted for a shortcut in pursuing a more serious intrusion into the privacy of Clara and Micalda Kasstan. Given the factual background I have already outlined, Mahoney and Haywood knew or ought to have known that they were trespassing on the premises when they performed their inspection of the residence on September 4. These by-law enforcement officers were effectively piggy-backing their inspection of the residence onto the quite separate, and distinct committal warrant being executed by police under the Mental Health Act.

I have little doubt that the conduct of Donna Mahoney was carried out with the best of intentions and executed in good faith. I observe also that the results of a further inspection of the residence reasonably called for intervention by way of remedial work. It is nevertheless clear that an "ex post facto justification of searches by their results is precisely what the Hunter standards were designed to prevent" (R. v. Kokesch, per Sopinka J., at p. 29 S.C.R., p. 227 C.C.C.). Also as noted by Sopinka J. (at p. 33 S.C.R., p. 231 C.C.C.): "Any doubt they may have had about their ability to trespass in the absence of specific statutory authority to do so was manifestly unreasonable, and cannot, as a matter of law, be relied upon as good faith for the purposes of s. 24(2) [of the Charter]".

Also as noted by the authorities, the absence of prior authorization raises a presumption of unreasonableness: see Hunter v Southam Inc., [1984] 2 S.C.R. 145 at pp. 162-63, 14 C.C.C. (3d) 97 at pp. 109-10, per Dickson J. (as he then was). In the hearing before me, the city presented no evidence to rebut the presumption. It seems apparent, moreover, that no protocol existed in the city's planning department regarding the procedure employees should follow in exercising the extraordinary powers delegated to its by-law enforcement officers under s. 31(24) of the Planning Act. The result in my opinion is an infringement of the Charter rights of Clara and Micalda Kasstan to be secure against unreasonable search.

Section 24(1) of the Charter permits the court to grant such remedy as it considers appropriate and just in the circumstances. Where municipalities are granted extraordinary powers to interfere with the property of a resident, the municipality must, in exercising such power, be scrupulously

careful not to overstep and, at the very least, must ensure

that the statutory conditions for the exercise of that power are lawfully satisfied. Although I find that the remedial work ultimately performed by the city was reasonably necessary, was reasonable in scope and was performed at a reasonable cost, nevertheless, I hold that the just and appropriate remedy here is to withhold confirmation of the city's emergency order and to direct that the amount expended in clean-up by the city may not be recovered. In view of the wide dispositional latitude given to the court in s. 31(28) of the Planning Act (see para. 15 above [p. 710 ante]) it may be unnecessary to resort to s. 24(1) of the C harter in reaching this conclusion. For reasons previously outlined, however, I prefer to rest my decision upon both grounds.

The city's application is dismissed. Costs may be spoken to by appointment to be arranged through the trial co-ordinator or by teleconference

Order accordingly.

Notes

Note 1: See also The Concise Oxford Dictionary of Current English, 8th ed. (Oxford: Clarendon Press, 1990 and Black's Law Dictionary, revised 4th ed. (St. Paul: West Publishing, 1968).

Note 3: According to its definition in s. 31(1), "property" means a building or structure of part of a building or structure, and includes the lands and premises appurtenant to and all mobile homes, mobile buildings, mobile structures, outbuildings, fences and erections thereon whether heretofore or hereafter erected, and includes vacant property.

Toronto Area Transit Operating Authority v. Mississauga (City)

Between
Toronto Area Transit Operating Authority, and
The Corporation of the City of Mississauga and Frank Spagnolo, Chief Building Official for the Corporation of the City of Mississauga

[1996] O.J. No. 843
Court File No. RE5539/95

Ontario Court of Justice (General Division)
Milton, Ontario
Morrison J.
February 6, 1996.

Counsel:
Edith Dover for the applicant.
Brian Duxbury for the respondents.

[para1] MORRISON J. (orally):-- I would like to thank counsel for their very thorough presentations in this matter. I would like to file a list of the authorities provided to me, and if there is a transcript of this decision prepared, a copy of the authorities should be attached to it.

[para2] The applicant, Go Transit, has brought two applications before the Court. The first application for relief was brought in 1992 against the City of Mississauga, and again by way of a new application in 1995, the applicant again seeks relief against the City of Mississauga.

[para3] The two applications concern two different Go construction sites, but involve essentially the same issues. The first application brought by the applicant in 1992, sought relief in respect to a building addition that was being constructed at the West Plant Management Facility located at 3500 Wolfedale Road in Mississauga.

[para4] After the application was filed in 1992, the parties entered into interim minutes of settlement which resulted in the facility eventually being completed. Certain sums of money were paid into Court by the applicant, and the application from 1992 is still before the Court to be decided and the monies are still in Court.

[para5] The 1995 application was brought by the applicant in connection with a 14 million dollar expansion of the Streetsville Go Station located in the City of Mississauga. Go Transit is seeking recision of an Order to Comply, and a Stop Work Order issued against Go Transit by the respondent City. Go Transit also seeks declarations that Go Transit is not required to obtain a building permit, nor is it required to file a site plan. In addition, Go Transit seeks a declaration that it is not required to make a parkland dedication payment, nor payment of development charges to the City.

[para6] When the 1995 application was brought before the Court, the parties again entered into interim minutes of settlement on July 21st, 1995, without prejudice to their positions. An interim Order was issued pursuant to the minutes. The construction work has continued, and the City has agreed not to prosecute upon its Stop Work Orders. A similar approach was taken in 1992 to complete the Wolfedale project.

[para7] The legal concern is whether the City of Mississauga, as a municipality, has the jurisdiction under the Building Code Act, the Planning Act, and the Development Charges Act, to require a Crown agent to comply with their requirements. Go Transit argues the City has no jurisdiction, and also that the City hasn't met the threshold requirement of the Development Charges Act in any event.

[para8] The main issues raised by these applications are as follows:

(1) Is Go Transit a Crown agency and therefore, not affected by the operation of the Planning Act, the Ontario Building Code, or the Developmental Charges Act, because those Acts do not specifically state that they

are to be "binding upon the Crown"

[para9] The key issue here is whether Go transit is a Crown agency. If it is, does it receive the same immunity as the Crown? If the Crown receives the benefit of the Ontario Interpretation Act to give it immunity, does the Crown agency get the same benefit?

(2) If Go is a Crown agency, is it required to obtain a building permit in order to construct the Streetsville Go Station expansion?

[para10] As a part of this issue, it must be decided whether the City of Mississauga has jurisdiction or authority under the Building Code Act, Statutes of Ontario, 1992, chapter 23, to require Go Transit to obtain a building permit.

(3) If Go Transit is a Crown agent, is it required to file and obtain municipal approval of a site plan? Also, is Go transit required to make a parkland dedication payment before it can construct the Streetsville Go Station?

[para11] As a part of that issue, it must be determined whether the respondents have the authority or jurisdiction under the Planning Act, R.S.O. 1990, chapter (P - 13), to require Go Transit to obtain municipal approvals of the site plan and whether it can demand a monetary contribution in lieu of a parkland dedication.

(4) If Go Transit is a Crown Agency, is it required under the Development Charges Act, R.S.O. 1990, chapter (D-9) to pay development charges in respect of the Streetsville Go Station expansion?

[para12] As a part of this issue, it must be determined whether the respondent has the jurisdiction or authority under the Development Charges Act, to require charges to be paid by Go Transit.

(5) A fifth issue is whether a Stop Work Order issued by the City of Mississauga, ought to be rescinded in order to permit the completion of the construction of the Streetsville Go Station.

[para13] The Provincial Legislation known as Toronto Area Transit Operating Authority Act, 1990 R.S.O. T-13, s. 2(9), specifically states that the authority (namely Go Transit) is an agency of the Crown. Go Transit means Toronto Area Transit Operating Authority.

[para14] The Crown Agency Act, 1990, R.S.O. volume 3 c. C48, sets out the meaning of "Crown Agency" and the definition would include the Toronto Area Transit Operating Authority.

[para15] Under s. 2 of the Crown Agency Act, it states specifically:

A Crown Agency is for all its purposes an agent of Her Majesty and its powers may be exercised only as an agent of Her Majesty.

[para16] The applicant argues that the Interpretation Act of Ontario, R.S.O. 1990, c. 1.11, s. 11, states:

No Act affects the rights of Her Majesty, her heirs or successors unless it is expressly stated therein that Her Majesty is bound thereby.

[para17] Go Transit argues that no Act can affect a Crown Agent unless the Act expressly states that it does. It argues that the reference to Her Majesty or the Crown, includes agents of the Crown or Her Majesty.

[para18] The Planning Act, Building Code Act and Development Charges Act, are all silent on whether they are to be binding on Her Majesty. Therefore, the applicant argues that it is not bound by any of the Provincial Acts upon which the respondent relies for jurisdiction to demand a building permit from Go, to require a filing of a site plan by Go, and for Go Transit to make monetary contributions to the City.

[para19] The City stresses that the Federal Interpretation Act is different in its wording, and because of that

difference, a broader test should be applied using a "mentions or refers to" test, even if dealing with Provincial Legislation. The City argues that a contextual approach must be taken. It argues there is a judicial narrowing of Crown immunity. The City argues that the Development Charges Act expressly states that it applies to all lands, and thus must bind the Crown. The City also argues that Go has waived any immunity by voluntarily applying for a building permit.

[para20] The City of Mississauga's position is that the applicant, Go Transit, must comply with the Building Code Act, more particularly described as an Act to revise the Building Code Act. It is under that Act that the City of Mississauga claims that the applicant must obtain a building permit. The City argues that Go Transit is bound by the Building Code Act like everyone else and must obtain a building permit. As part of its own procedure, before a building permit will be issued, the City takes the position that an applicant for a building permit must pay developmental charges and must file a site plan and have it approved, and in addition must pay a parks levy or contribution.

[para21] In this case the City made the demands for payment but never did set out the amounts. The City states that failure to do so is not important for this issue.

[para22] The applicant refuses to make any payment to the City of Mississauga by way of developmental charges. It refuses to file a site plan for the City's approval under the Planning Act, and it refuses to pay a parks levy under the authority of that same Act. The applicant argues that it is not bound by the requirements of the Building Code Act, Planning Act, or the Development Charges Act, because no where in those Provincial Acts is there any statement that such legislation is to be expressly binding on Her Majesty, heirs or successors. Under the Crown Agency Act, the applicant argues that a Crown Agency would include Go Transit, and therefore for all purposes, is an agent of Her Majesty and has immunity from these Acts, and any by-laws made under them. The applicant hastens to set out that, in fact, it does comply with all of the building codes in Ontario, and safety regulations, and is very conscious of the need for safety. It also has stated that it is prepared to assume complete responsibility for any negligence in the construction of its stations. However, Go Transit is concerned that if it is bound by section 8 of the Building Code Act requiring it to obtain a building permit, this would permit the municipality to go on and demand a payment of developmental charges and to require a site plan to be approved before any building permit would be given.

[para23] The respondent stresses there is a need for safety enforcement. The applicant argues it complies with all building code requirements and co-operates in every way with safety regulations.

[para24] In summary, the applicant argues that the Ontario Building Code is not binding upon it because it is a Crown agent by the Act that created it, and under the Crown Agency Act. The applicant then points to the Ontario Interpretation Act which states that before any legislation is binding on the Crown, it must state that fact.

[para25] Those Acts which I have named before do not contain such statements.

[para26] The applicant states that the City is simply demanding, under the Planning Act, a payment of money in lieu of a conveyance of land before any building permit will be given. The applicant's opinion is that the City of Mississauga is not refusing to issue a building permit because of concerns over safety issues connected to the construction of the expansion, but rather, the applicant contends that the real issue here is money, and it is an attempt by the City to make Go Transit pay developmental fees and a payment of money in lieu of parks simply because it intends to expand the Streetsville Go Station. The applicant points out that it should be clear to the respondent City, that there is no legislation to permit it to take the stand that it does against Go.

[para27] In essence, the applicant argues that the respondent's position is strictly one based on an attempt to make Go Transit pay money, knowing that as a Crown Agency it

is not required to do so.

[para28] The land in question consists of some 17 acres of land. The expansion will lead to a Go Station several times the size of the present station, and will require such things as a new building platform and parking lots. Go Transit is paying 100 percent of the 14 million dollar cost and argues the City will not incur any capital costs but will receive the benefit of the improvements. Go argues that as a Crown Agency, it maintains its own extensive engineering and design standards and these all comply with the Ontario Building Code. The expansion is for the general welfare of the area and will benefit the community as a whole without the respondent's making any capital investments whatsoever.

[para29] I agree with the concern of Go, that because its facilities cross different municipal boundaries, such facilities cannot be subject to various municipal requirements. These requirements may differ, and it is important that Go have consistency for operational efficiency.

[para30] Ultimately, the operating costs are borne by the public.

[para31] The City agreed that if there were three municipalities on the rail line, one after the other, each municipality could and perhaps should demand that Go Transit meet the individual demands of each municipality under the three Provincial Acts before development could proceed.

[para32] I disagree with such a position. The laws simply do not permit this because of the special status that Go has. If the Ontario Legislature intended Crown Agencies to be bound by the Planning Act, the Building Code Of Ontario, and the Developmental Charges Act, it would have specifically stated that fact in those Acts as it has in other Provincial Legislation. The Ontario Interpretation Act requires this to be done if that is the intent of the legislature. Go sets out that other municipalities have recognized and accepted the need for consistency, and Go attempts to co-operate with them. Go argues this is the very reason why it voluntarily applied for a building permit on January 20th, 1995, namely, to inform the City of Mississauga of its intention. Its position at Court is that it was not required to have a building permit because it is a Crown Agency, and there was no waiver by applying.

[para33] The building permit fee was paid by Go Transit, but the City of Mississauga responded, advising the building permit would not be provided until Go Transit filed a site plan, obtained site plan approvals, paid developmental charges and made a parkland dedication payment. Go Transit had already entered into an agreement with a contractor to commence construction and time was of the essence. Construction commenced on February 27th of 1995. The City repeated its demands on June 22nd, 1995. On July 5th, 1995, the City issued an Order to Comply, and a Stop Work Order, which halted the expansion of the Streetsville Go Station. The applicant then applied to the Court by way of a Notice of Application dated July 11th, 1995. The matter was adjourned sine die, but not later than December 22nd with minutes of settlement being filed. These minutes of settlement provided that construction work could be continued and the Order to Comply and Work Stop Order issued by the City were stayed pending return of the matter before the courts.

[para34] I believe that my judgment should set out that after the application commenced on December 20th, 1995, the parties were encouraged by the Court, because they represented two public bodies, to try once again to reach an agreement. The parties accepted the invitation of the Court and on consent the matter was adjourned to permit further consultation before another Justice, who held a mid-trial conference. However, the parties obviously could not resolve their differences and they returned to the Court. The matter has now been fully argued and the parties desire a Ruling by the Court.

[para35] It is my understanding of the law that under the Interpretation Act, no Act can affect a Crown Agent unless the Act expressly states that it does, and it is to be noted that none of the Acts that I have mentioned earlier expressly state that they do. It is under those Acts the City of Mississauga seeks to have jurisdiction over the applicant.

[para36] I find that the applicant is a Crown Agency and for all purposes is an agent of Her Majesty, and its powers may be exercised as an agent of Her Majesty.

[para37] The City has failed to produce any authority to the contrary. The Interpretation Act clearly states that no Act affects the rights of Her Majesty unless it is expressly stated therein that Her Majesty is bound. The Acts in question in this application do not state that they are binding on Her Majesty or Crown Agency. It is clear that the legislature could have stated the Acts were binding upon the Crown, but they do not. The Legislature did state in other Acts that the Crown was specifically bound by legislation in those cases. Examples of this are found in The Environmental Assessment Act, R.S.O. chapter E. 18 s. 4, which states: "This Act binds the Crown". Similarly, in the Expropriations Act, R.S.O. 1990, chapter E.26, the Legislature stated: "This Act binds the Crown", in section 3.

[para38] The City has argued that "Crown does not include a Crown Agent". I reject the City's argument in that regard. In Professor Hogg's book on Liability of the Crown, 2nd ed. 1989, c. 11, page 248, it is observed that such a question is usually resolved by asking whether the corporation is "an agent of the Crown", and if the answer is yes, the corporation is an agent of the Crown.

[para39] In addition, in the case before me, there is expressed statutory designation of Go Transit as a Crown Agent. The Courts should respect such designation. A general rule, explains Professor Hogg, page 253, if a Statute expressly provides that a public corporation is to be "an agent of the Crown", then the corporation will be an agent. In addition, the Supreme Court of Canada in the case of R. v. Eldorado Nuclear, (1983) 4 D.L.R. (4th) 193, page 205, the Court confirmed that a reference to the Crown in a Statute, extends to Crown Agents. Mr. Justice Dixon said that if this were not the interpretation to be given to section 16 of the Federal Interpretation Act, the section would have no meaning since the Crown only acts through servants and agents. The same principle of law applies to the provinces and their Interpretation Acts.

[para40] I reject the City's argument that a contextual approach must be taken. The City argues that there is a judicial narrowing of Crown immunity, and it argues that the Developmental Charges Act expressly states that it applies to all lands, therefore, the City argues this must bind the Crown. I also reject the argument that the various Acts in question apply to the Crown by necessary implication. Such an argument by the City fails, in my view, because it has not shown that the purpose of the legislation would be "wholly frustrated", or a logical implication arises that the Crown is bound.

[para41] The Ontario Legislature could easily have stated in all of the Acts in question concerning this matter, that the Acts bind the Crown. This has not occurred and hence the application of the Interpretation Act applies. The Interpretation Act is very clear and precise in its wording. The Crown and its agent is not bound by any legislation, unless it specifically states the Crown is bound.

[para42] In this regard, I'm following the principle stated in the case of Re Doxtator (1984), a High Court decision by Mr. Justice Osborne. In that case, it was stated that where a Provincial Act does not contain an express provision that the Crown is bound, the Act does not bind the Crown. His Lordship stated that it was not difficult to legislate a change, because all that is required to make the Crown subject are the words of express application. I also agree with the reasons and the result in the case of College d'arts and the City of Ottawa (1994), 20 O.R. (3d) 541, where Mr. Justice Cunningham found that the Development Charges Act does not bind the Crown or its agents. I further agree with the argument put forth by the applicant that unless there is shown an increased need for services, the threshold test has not been met under the Development Charges Act. This Act provides that development charges can be imposed if development increases the need for services.

[para43] There is no evidence in the material before me that would support such a conclusion. In any event, that Act

still does not specifically state that it is to be binding on the Crown.

[para44] I agree with the argument of Go Transit, that because it voluntarily applied for a building permit, this does not mean that it has waived its immunity. I again adopt the reasoning on the same issue of waiver, as set forth by Mr. Justice Cunningham in the College d'arts v. City of Ottawa decision. Such a voluntary act should not create a waiver of any Crown immunity that might otherwise apply. In the result, after combining the reading of the Interpretation Act, the Crown Agency Act, and the case law, I find that the Toronto Area Transit Operating Authority is not bound by the Building Code Act, the Planning Act or the Development Charges Act. Therefore, the City has no right to refuse to issue a building permit to the Authority for the expansion of the Streetsville Go Station. My decision also applies to both applications and, therefore, that would also apply to the expansion of the Wolfedale Road facility.

[para45] I find that Go was acting as an agent of the Crown, and as such has immunity as described in the Act. It is not required to be subject to the authority of the City under the Provincial Acts set out in this application. It did not waive the immunity it has by applying for a building permit, and as a result, a declaration will go that Go Transit as a Crown Agent is not required to apply for a building permit in order to construct the addition at the Wolfedale Road facility, and the City has no jurisdiction or authority under the Building Code to demand that Go Transit obtain a building permit prior to constructing the addition.

[para46] Further, concerning the Wolfedale facility, a declaration will go that Go Transit as a Crown Agent, is not required to apply for site plan approval in order to construct the addition, and that the City has no jurisdiction or authority under the Planning Act to demand that Go Transit obtain site plan approval or enter into a site plan agreement or undertaking prior to constructing the Wolfedale Road facility.

[para47] A declaration will also go that Go Transit as a Crown Agent is not required to pay development charges in the amount of $15,167.57, or any other amount, in order to construct the addition. These monies will be returned to the Authority.

[para48] In relation to the 1995 application, a declaration will go that Go Transit as a Crown Agent is not required to applying for a building permit in order to construct the Streetsville Go Station expansion, and the City has no jurisdiction or authority under the Building Code Act to demand that Go Transit obtain a building permit in order to construct the Streetsville Go Station expansion.

[para49] Further, a declaration will go that Go Transit is a Crown Agent and is not required to apply for municipal approvals such as site plan approval, or to make a parkland dedication payment in order to construct the Streetsville Go Station expansion, and further, that the respondents have no jurisdiction or authority under the Planning Act to demand that Go Transit obtain municipal approvals, such as site plan approval or make a parkland dedication payment as a condition of constructing the Streetsville Go Station expansion.

[para50] A further declaration will go that Go Transit as a Crown Agent, is not required to pay development charges in order to construct the Streetsville Go Station expansion, and the respondents have no jurisdiction or authority under the Development Charges Act to require Go Transit to pay a development charge with respect to the Streetsville Go Station explanation.

[para51] The Court: Anything else?

[para52] Ms. Dover: Your Honour, with respect to the '95 application, just because construction is still continuing, could we also have an Order as set out in sub paragraph 1A, of the Notice of Application Order, rescinding the Order to Comply and Stop Work Order found on page three of the application record?

[para53] The Court: Yes, I should have said that. There will be an Order to go rescinding the Order to Comply in the

Stop Work Order dated July 5th, 1995.

[para54] Ms. Dover: With respect to the '92 application, I think you stated that monies were paid in to court and those monies will be returned? I just want to make sure that the Order is specific that the monies will be paid out of court to

the credit of Go Transit. That makes it smoother.

[para55] The Court: Well what I could do is ask you to draw up the Order --

[para56] Ms. Dover: Okay.

[para57] The Court: And have it approved and I can sign it if you wish and then it will be filed.

[para58] Ms. Dover: Thank you.

[para59] The Court: If that's the way you wish to do it?

[para60] Ms. Dover: And I guess the last point to address is the issue of costs. We would ask that costs follow your decision and be granted in favour of Go Transit.

[para61] The Court: Yes, you are requesting me to fix the costs?

[para62] Ms. Dover: Unfortunately I don't know if my friend is prepared to make argument on the amount of costs or not. Unfortunately I don't have the exact figures with me today. I don't know if that's something that my friend would prefer us to discuss and then speak to you if need be.

[para63] The Court: Well I would ordinarily fix them today, otherwise I would make an order that the costs can be assessed.

[para64] Mr. Duxbury: Sir, I would like to speak to the issue of costs.

[para65] The Court: Yes, go ahead.

Mr. Duxbury - Submissions as to Costs.
Ms. Dover - Submissions as to Costs.

[para66] The Court: The general rule in connection with costs is that costs should follow the event and I see no reason why that should not be the case. The applicant shall be entitled to its costs on a party and party basis to be assessed.

[para67] Ms. Dover: Thank you, Your Honour.

Toronto (City) Chief Building Official v. Vaghela Holdings Inc.

Between
Michael L. Nixon, Chief Building Official, for the Corporation of the City of Toronto, Applicant, and
Vaghela Holdings Inc., Respondent

[1993] O.J. No. 2054
DRS 94-03073
Action No. RE 2848/93

Ontario Court of Justice - General Division
Toronto Weekly Court
Wilkins J.
Heard: September 9, 1993.
Oral Judgment: September 9, 1993.
Released: September 14, 1993.

T.H. Wall, for the Applicant.
Mauro Marchianni, for the Respondent.

[para1] WILKINS J. (orally):-- In the matter of Michael L. Nixon, Chief Building Official for the Corporation of the City of Toronto, and Vaghela Holdings Inc., this is an application brought to enforce the provisions of the City of Toronto Interim Control By-law 129-93, passed February 5, 1993, against the respondent who was the owner of 1460 Gerrard Street East, Toronto.

[para2] Prior to the passage of this Interim Control By-law, the respondent had made application for a building permit and this process was under way at the time the new Interim Control By-law came into force and effect. The wording of the Interim Control By-law and the provisions of s. 34(9) of the Planning Act make it clear that unless the erection or use prohibited by the Interim Control By-law is already in place, or the building permit has already been issued, as at the date of the by-law's passage or prior to that date, then the erection or use or both are caught by the Interim Control By-law, notwithstanding an application for a building permit may be pending. The exception to this rule, as contained in the cases referred to me, is in the event of a gross or undue delay by the municipal authority or in extraordinary circumstances which would demonstrate that the municipality has not been acting in good faith, or that the permit has been refused for unlawful reasons. A review of the evidence in this case makes it clear that no undue delay or bad faith has been exhibited and there has been no unlawful refusal to issue the permit by the applicant. The respondent is, unfortunately, one of those persons whose application for a permit has been caught in mid-stream by the enactment of the Interim Control By-law.

[para3] After the Interim Control By-law came into effect, the respondent proceeded with certain renovations to the property without a building permit and entered into commercial activity prohibited by the Interim Control By-law, as well as placing unauthorized signage on the premises.

[para4] The evidence before me does not demonstrate when the commercial activity had been carried on and whether or not it had existed before February 5, 1993. The onus to demonstrate that the commercial activity had existed prior to the enactment of the by-law rests upon the respondent and not upon the applicant.

[para5] The order of Somers J., dated July 12, 1993, required all of the material in this matter that was to be relied on by the respondent to be filed before cross-examinations. On this basis, I have refused to accept a late affidavit which the respondent sought leave to file after the completion of the cross-examinations. It was further put to me by counsel that the situation was one where a building permit ought to have issued. I find that there are no facts to support that proposition.

[para6] The application that has been put before this court has been brought by a chief official, as contemplated by s. 26(1) of the Building Code Act, R.S.O. 1990, c.13 and not by the Corporation of the City of Toronto, a rate payer or a local board as contemplated by s.328 of the Municipal

Act, R.S.O. 1990, c.45. On that basis, the relief sought, pursuant to the terms and provisions of the Municipal Act, and more particularly s. 328 of that Act, is not before the court and, as such, the Corporation will not be barred or prevented from bringing any subsequent application as it may see fit to enforce its rights under the provisions and terms of the Municipal Act.

[para7] In this matter, I will only deal with the application as it relates to the Building Code Act and, as I have pointed out, that is without prejudice to any additional rights the Corporation may have for subsequent enforcement under the other statutes.

[para8] I, therefore, find for the applicant and direct the respondent to comply forthwith with all of the terms and provisions of the City of Toronto Interim Control By-law 129-93. The respondent shall further make any and all applications necessary to obtain any such permits as may be advised or any such permits which the applicant may require if so advised. But, until further order of this court, or expiration of the Interim Control By-law, or determination of the validity of the Interim Control By-law by the Ontario Municipal Board, the respondent shall comply with each and every term of Interim Control By-law 129-93.

[para9] Having regard to the circumstances of this case and the parties that were before the court and the party left out and having regard to the mixed success, there will be no order as to costs.

WILKINS J.

ONTARIO

COURT OF APPEAL
ZUBER, BLAIR AND CORY JJ.A.
30TH SEPTEMBER 1986

APPEAL from a judgment of the Divisional Court, 47 O.R. (2d) 734, 12 D.L.R. (4th) 396, 27 M.P.L.R. 89, dismissing an application for judicial review of the refusal of the respondent building inspector to issue a building permit.

B.H. Kellock, Q.C., and J.D. Murphy, for appellant.
M.J. Winer, Q.C., for respondents.

The judgment of the court was delivered by

CORY J.A.:-- On this appeal, primary consideration must be given to the scope and application of the Ontario Heritage Act, R.S.O. 1980, c. 337, together with a City of Toronto by-law passed pursuant to that Act. In addition, a determination must be made as to whether the provisions of the Planning Act, R.S.O. 1970, c. 349, s. 35a, enacted by 1973, c. 168, s. 10, are pertinent to the amendment proposed by the appellant to the plans for the seventh floor of the Eaton's College St. building. Lastly, there is an issue as to whether a representation made by the appellant to restore the seventh floor which was relied upon by the municipality is binding and whether, on the facts of this case, the doctrine of estoppel can and should be applied so as to prevent the appellant from resiling from that representation.

Factual background

The pertinent facts of this case are set out with great clarity in the reasons of Henry J., given on behalf of the Divisional Court, reported in 47 O.R. (2d) 734, 12 D.L.R. (4th) 396, 27 M.P.L.R. 89. It is nevertheless necessary for these reasons to make reference to the facts, and perhaps it is convenient to set them out at this point.

In 1973, the appellant (T.C.S.C.L.) took title to the block of lands in downtown Toronto contained within the rectangle formed by Yonge St., College St., Hayter St. and Gerrard St. This was the site of the Eaton's College St. store.

In December, 1974, the council of the respondent municipality the City of Toronto (the City) passed By-law 419-74 which purported to implement s. 35a of the Planning Act, as amended in 1973. The aim of the by-law was to require, as a condition of development within the City, that all developers enter into a development agreement with the municipality with respect to all the facilities and matters set out in s. 35a of the Planning Act as it then stood.

In November, 1975, the City council passed By-law 510-75 pursuant to the provisions of s. 29(6)(a) of the Ontario Heritage Act. The by-law designated the old Eaton's building which was on the site to be of architectural or historical value. The result was that pursuant to s. 33 of the Act any alterations "likely to affect the reason for the designation" were prohibited without the consent of the City's council. The City's decision to "designate" the building as one of architectural or historical value was based upon a recommendation and report made by the Toronto Historical Board (the Board). These reasons are attached to the by-law as sch. "B" and, in effect, are a repetition of the Board's report and recommendation. The schedule reads as follows:

SCHEDULE "B"

Reasons for the designation of the T. Eaton Co. Limited, Eaton's College Street building at No. 412-448 Yonge Street

The T. Eaton Co. Limited, Eaton's College Street building, 412-448 Yonge Street at Hayter Street, through to 49 College Street (1917) 1928-33 by Ross & Macdonald; Sproatt & Rolph,

Associates, is designated to be of architectural value as a notable example (though unfinished) of the type of large scale building using simplified classified forms that typifies commercial design in the 1920s and 1930s. The building coordinates the finest materials and workmanship with a scale rarely seen in Canada or in the work of Canadian architects. The building is also important because it effectively defines the intersection of Yonge and College streets setting the tone and scale for many of the buildings in the area.

As a result of the designation of the building, T.C.S.C.L., in order to proceed with its plans, made a presentation to the Board in 1976. The ensuing discussions were described by the managing director of the Board as "both cordial and productive". They were certainly extensive and detailed and dealt with both the interior and exterior of the Eaton's College St. store.

During the course of its written presentation to the Board, T.C.S.C.L. stated that "the 7th floor which contains the Round Room (a restaurant) and the Auditorium will be maintained and restored ...".

The discussions culminated in the submission of two reports of the Board to City council made in July and August of 1976. The first report contained the following:

The Board was most favourably impressed with the proposal involving the retention and restoration of the main store building and the Yonge Street wing to the south of the main building, and with the expressed intention to maintain and restore all the key spaces on the 7th floor, including the Round Room and the Auditorium.

The Board then recommended:

That Council commend Toronto College Street Centre Limited for their proposal to retain and restore the main store building and the Yonge Street wing to the south of the main building, and for their intention to maintain and restore all the key spaces on the 7th floor, including the Round Room and the Auditorium; and that the appropriate officials be encouraged to provide all possible assistance in endeavouring to find an acceptable solution which would enable the preservation of the 7th floor.

. . . . .

That Council refuse the application under Section 34 [of the Ontario Heritage Act] to demolish the College Street wing, and that the applicants be requested to meet further with representatives of the Toronto Historical Board and of other appropriate City departments to discuss methods of retaining the College Street facade both for its value in the streetscape and for its functional importance as a sheltered arcade to Bay Street.

The second report of the Board contained the following:

While the Board's concern for the retention of the College Street wing has not been met, the intent of Toronto College Street Centre Limited to finish the west facade of the main seven-storey block in a manner compatible with its College Street facade is noted and the incorporation of major matching elements from the wing would make a substantial contribution toward the restoration of this architecturally important structure.

One of the three recommendations contained in this second report was:

That Council consent to the application under Section 33 to alter the designated property in accordance with the revised proposals contained in the August 11, 1976 letter to the Toronto Historical Board from Toronto College Street Centre Limited and stated in discussions between the Board and Toronto College Street Centre Limited, with the condition that, since the detailed plans for the alterations are incomplete, the applicants be requested to continue discussions with the Board and other appropriate City officials as these plans evolve and prior to their implementation.

It is evident that the restoration and maintenance of the seventh floor was of very considerable importance in the discussions that took place between T.C.S.C.L. and the Board.

On August 28th, City council had before it the recommendations of the Board together with a letter of August 12, 1976, written by Gordon C. Bacque, vice-president and general manager of T.C.S.C.L. The letter from Mr. Bacque contained the following statement:

> Our willingness to undertake the restoration of this building, the construction of rental residential accommodation and preservation of the 7th floor, we believe is a very beneficial proposal for the City.

On August 28th, council adopted the following recommendation:

> 1. That Council consent to the application, under Section 33 of the Ontario Heritage Act, to alter the main Eaton's College Street Building and the Yonge Street Wing in accordance with the applicant's proposal dated July 22, 1976, as revised in a letter to the Toronto Historical Board, dated August 11, 1976.

The proposal referred to included the restoration and maintenance of the seventh floor.

On September 10, 1976, solicitors for T.C.S.C.L. wrote to the City of Toronto taking the position that since they had undertaken to restore a designated building they should receive the density bonus as of right rather than by the exercise of the City's discretion. This submission was accepted in October, 1978, when the City's council passed a by-law granting the density bonus in accordance with the request of the developer.

In November, 1976, T.C.S.C.L. presented a "development review application" which was required by By-law 419-74. In the description of the project submitted in support of this application, T.C.S.C.L. made specific reference to its intention to "restore floor 7 of the existing 7-storey building". The covering letter noted that "an additional copy of the information (contained in the application) has been made available to the Toronto Historical Board for their review to ensure that our proposal is in conformity with the City's approval". In passing, it should be observed that the "approval" can only refer to the consent to alter the building given by the City under the Ontario Heritage Act in August, 1976. Detailed plans were submitted with the development application. The plans relating to the seventh floor clearly depicted the intention to maintain and restore the existing auditorium and restaurant.

On November 29, 1976, the Board commented favourably on the plans submitted and, once again, made reference to the proposed restoration of the seventh floor auditorium, restaurant and foyer as being "particularly satisfying".

On February 28, 1977, City council considered a report submitted by the commissioner of planning with regard to the proposed development agreement. This report included the recommendations not only of the planning department but of public works, building, parks and recreation, development and the Toronto Historical Board. Solicitors for T.C.S.C.L. attended the meeting and reviewed the recommendations of the commissioner of planning and accepted them with minor reservations which are not relevant to this case. Council then adopted the recommendations by resolution and authorized the City solicitor to enter into a development agreement with T.C.S.C.L. The agreement was to carry out the recommendations of the commissioner of planning as approved by T.C.S.C.L.'s solicitors. The recommendations included the following:

> (a) That the development shall be constructed substantially in accordance with the applicant's sketch drawings D1-D11 ...
>
> . . . . .
>
> (e) That the applicant shall have submitted detailed drawings of the proposed renovations to the Designated Buildings to the Toronto Historical Board for review prior to the commencement of such work.

The drawings referred to included the plans for the

restoration of the seventh floor.

The development agreement was executed on April 20, 1977. Subsequent to the signing of this agreement, construction work commenced. It continued throughout the years 1977, 1978 and into 1979. During this time, the College St. wing of the old Eaton's store was demolished pursuant to the agreement between T.C.S.C.L. and the City. In the course of this construction, some $500,000 was spent on the restoration of the seventh floor.

While the construction work was proceeding, T.C.S.C.L. promoted its project to potential tenants in a brochure which contained the following statement:

> Stage 7 -- the new name for this seventh floor complex -- will continue to provide entertainment and dining pleasures reminiscent of its elegant past.
>
> The Auditorium is completely refurbished to incorporate the latest technical equipment. ... The famous Round Room will reopen and continue to operate in the classic tradition in an art deco atmosphere. It is totally restored and will once again be a dining landmark.

In 1979, several plaques were affixed at various locations throughout the interior of the building. They commemorated its importance as an element of Ontario's heritage.

On January 23, 1979, the Supreme Court of Canada delivered its judgment in Canadian Institute of Public Real Estate Companies et al. v. City of Toronto et al. (1979), 103 D.L.R. (3d) 226, 8 O.M.B.R. 385, [1979] 2 S.C.R. 2. The result of that decision was that Toronto City By-law 419-74 was struck down. In the result, the development agreement which had been entered into by the City pursuant to that by-law was invalid. However, on June 22, 1979, the Planning Amendment Act, 1979 (Ont.), c. 59, was passed. By s. 3 of that Act, all development agreements which had been entered into pursuant to s. 35a of the Planning Act, R.S.O. 1970, c. 349, as amended, were retroactively validated in so far as they dealt with "facilities and matters" enumerated in s. 35a.

On January 17, 1980, after more than two years of work on the exterior and interior of the building, T.C.S.C.L. advised the City that it now found that the restoration would impose an unacceptable financial burden and that it now intended to convert the seventh floor to office accommodation. It requested that Plan D-7, which pertained to the restoration of the seventh floor and which was a part of its agreement with the City, be deleted and replaced by a plan designating the space for office purposes.

City council considered the request in detail. It requested and received extensive reports from the land committee of council, the commissioner of planning and development, other interested parties including the Toronto Historical Board, and the developer. On May 26, 1980, T.C.S.C.L., for the first time, set forth its position that the designation of the College St. building under the Ontario Heritage Act was not wide enough to include the restoration of the seventh floor. In support of this position, T.C.S.C.L. put forward the reasons for designation of other buildings under the Ontario Heritage Act in 16 other by-laws. It was argued that those reasons made it clear when the interior of the buildings was included in the designation. I cannot accept this argument. I agree with the conclusion of Henry J. [pp. 741-2 O.R., p. 403 D.L.R.] that the references to internal or external features as a reason for designation are haphazard and disclose no pattern.

Following some months of discussion and review of reports, the City council unanimously determined that it would not consent to the proposed changes to the seventh floor.

The battle lines were then drawn. In June, 1982, T.C.S.C.L. applied for a building permit to proceed with the proposed conversion of the seventh floor to office space. The building permit application was refused a week later. The chief building officer took the position that he was bound by s. 6(1)(a) of the Building Code Act, R.S.O. 1980, c. 51. This section prohibited him from granting an application if it was in contravention of any applicable law. He considered the application to be in contravention of the "designation" of the building made pursuant to s. 33 of the Ontario Heritage Act and

therefore that it was contrary to applicable law. T.C.S.C.L. then launched this application to the Divisional Court.

In considering this summary of the facts, it should be remembered that T.C.S.C.L. is a large company experienced in land development. It at all times had access to and received excellent legal advice. There was no imbalance in the bargaining positions of T.C.S.C.L. and the City.

Further, both T.C.S.C.L. and the City accepted or clearly appeared to accept the proposition that the municipality could designate the building as a historical site and that such a designation could include all, or portions, of the interior of the building.

T.C.S.C.L. and the City agreed that there should be a restoration and maintenance of the seventh floor of the interior of the building. This was a vitally important factor throughout the negotiations between the City and T.C.S.C.L.

The City of Toronto relied strongly upon the undertaking and commitment of T.C.S.C.L. to restore and maintain the seventh floor. T.C.S.C.L. benefited from this undertaking and commitment both in the form of the permission granted to demolish the College St. wing of the former Eaton's store and in the unreserved confirmation of the increased density awarded to T.C.S.C.L.

Decision of the Divisional Court

The Divisional Court held that the application for a building permit to convert the seventh floor to office space contravened applicable laws. It determined that the application contravened s. 33(1) of the Ontario Heritage Act, which prohibits alterations to a building if they are "likely to affect the reason for the designation" unless such alterations are specifically approved by the municipal council. It found that the reasons for designating the building as one of architectural value were broad enough to include its internal features as well as the external. As a result, the prohibition set out in s. 33(1) of the Ontario Heritage Act applied and the building permit application was thus contrary to that Act. The chief building officer was therefore justified in refusing to issue the building permit.

It was further determined that T.C.S.C.L. was estopped from seeking to convert the seventh floor to office space in light of the assurance it had given to the City that this floor would be preserved and maintained.

Lastly, it was found that the undertaking to preserve and maintain the seventh floor was properly included in the development agreement as "facilities or matters" provided for under s. 35a(2), paras. 11 and 12, of the Planning Act, R.S.O. 1970, c. 349, as amended by 1973, c. 168, s. 10. Although the original by-law authorizing development agreements had been held to be invalid, it was determined that this agreement was reinstated by the Planning Amendment Act, 1979 which, once again, gave it the effect of law. It was also found that the proposed conversion of the seventh floor to office space constituted a development or a redevelopment within the meaning of s. 35a. It was therefore decided that on this basis as well the chief building officer was justified in refusing to issue the building permit in light of its contravention of applicable laws.

The Ontario Heritage Act, its scope and application in light of the facts of this case

Guidance and direction for the interpretation of the Ontario Heritage Act has been provided in the reasons of McIntyre J., speaking for the majority of the Supreme Court of Canada, in Re Trustees of St. Peter's Evangelical Lutheran Church and City of Ottawa (1982), 140 D.L.R. (3d) 577, 14 O.M.B.R. 257, 45 N.R. 271 (S.C.C.). At p. 591 D.L.R., p. 278 N.R., he stated:

> The Ontario Heritage Act, 1974 was enacted to provide for the conservation, protection and preservation of the heritage of Ontario. There is no doubt that the Act provides for and the Legislature intended that municipalities acting under the provisions of the Act, should have wide powers to interfere with individual property rights. It is equally evident, however, that the Legislature recognized that the preservation of Ontario's heritage should be accomplished at

> the cost of the community at large, not at the cost of the individual property owner, and certainly not in total disregard of the property owner's rights.

Further, at p. 593 D.L.R., pp. 280-1 N.R., he put forward the position that the Act was to be interpreted pursuant to the direction of s. 10 of the Ontario Interpretation Act. He wrote:

> The Ontario Courts have adopted the approach dictated by s. 10 of the Interpretation Act and they have construed the statute in the purposive manner. In this they have given effect fully to the avowed purpose of the Ontario Heritage Act, 1974. Accepting the approach so taken, I am not of the view, however, that in an effort to give effect to what is taken to be the purpose of this statute it is open to the court of construction to disregard certain provisions of the Act. The whole Act must be construed.

In that case, the Supreme Court of Canada accepted the position that the provisions of the Ontario Heritage Act, 1974 allowing municipal interference with private property rights should be construed purposively and liberally in order to allow municipalities to effectively preserve Ontario's heritage. On the other hand, the court recognized that there was a counterbalancing need to give equally liberal construction to those provisions of the Ontario Heritage Act, 1974 that were designed to protect the landowner's rights.

It is worth noting that in the case at bar, T.C.S.C.L. has chosen not to take advantage of the provisions of the Ontario Heritage Act designed for the protection of its rights as a landowner. As a result, the interpretation of those provisions of the Ontario Heritage Act is not in issue.

Pursuant to the directions set out in the St. Peter's case, it is appropriate to consider the specific purpose of the Act and its provisions as a whole.

The aim of the Ontario Heritage Act is to conserve, protect and preserve the heritage of Ontario. These aims are to be achieved by the Minister of Culture and Recreation, acting either through the Ontario Heritage Foundation or the advisory committees of municipalities. To achieve its aims the Act must interfere with private property rights. To counterbalance such interference numerous procedural safeguards are enacted for the benefit of the property owner.

Pursuant to the Act, a building may be designated by a municipality to be of historic or architectural value or interest. The designating by-law is then registered against the property. When that is done, the designated property is not to be altered if the alteration is "likely to affect the reason for the designation". By s. 1 of the Act, "alter" is defined as:

> (a) ... to change in any manner and includes to restore, renovate, repair or disturb and "alteration" has a corresponding meaning.

In this case, the property had been designated by by-law as having historical or architectural significance in 1975. It was then essential that the procedures outlined in the Act to either contest the designation or obtain consent to the alterations be followed. No attack was ever made on the designation. Nor did T.C.S.C.L. undertake the review procedure before the conservation review board provided for in Part III of the Act. It was therefore incumbent upon the owner (T.C.S.C.L.) to comply with s. 33 of the Ontario Heritage Act and obtain permission to alter the building. This was done by the owner in 1976.

It is the position of T.C.S.C.L. that the reasons for the designation make it apparent that the by-law refers only to the external features of the building and not to the internal features of the seventh floor. I cannot accept this contention. It is contrary to the wording of the reasons itself and to the very intent and purpose of the Ontario Heritage Act.

In the brief reasons for designation the following sentence appears:

> The building coordinates the finest materials and workmanship

with a scale rarely seen in Canada or in the work of Canadian architects.

Those words are, in my opinion, sufficient to indicate that the interior of the building was affected just as much as the exterior. This conclusion is based upon the wording of the reasons, the manner in which they are drawn and the provisions

of the Ontario Heritage Act pertaining to the reasons for designation.

By s. 27(1), the Act requires that the by-law contain:

(a) a legal description of the designated property;

(b) the name and address of the owner; and

(c) a short statement of the reason for designation of the property.

These reasons will often be drawn by members of the Ontario Heritage Foundation or by the municipality's local advisory committee. Members of these bodies cannot be expected to have either legal training or experience in drafting municipal by-laws. In order to comply with the objects of the Act it is appropriate to give these reasons the same broad interpretation that must be applied to the Act itself.

Section 33(1) of the Ontario Heritage Act reads as follows:

33(1) No owner of property designated under this Part shall

alter the property or permit the alteration of the property where the alteration is likely to affect the reason for the designation as set out in subsection 29(6) or (14), as the case may be, unless he applies to the council and receives consent in writing to make such alteration.

It was earlier indicated that the definition of "alter" and "alteration" is very wide. In addition, the use of the word "likely" in s. 33 requires that the section be given a broad and liberal interpretation. It is a word that denies a narrow approach to the scope of the reasons for the designation.

There are other provisions of the Ontario Heritage Act which indicate that a broad meaning must be attributed to s. 33 and to any "reason for the designation" given pursuant to that section.

For example, s. 30 provides that where a notice of intention to pass a by-law designating a property is served and published under s. 29(3), the provisions of ss. 33 and 34 apply as if the building had already been designated. This section would appear to provide a means of maintaining the status quo so that a building can be preserved until all the requisite investigations and hearings have been completed. If s. 33 were not to be given a wide meaning then the owner of a building served with a s. 30 notice would none the less be at liberty to alter the building and so destroy the architectural or historical features that the municipality was attempting to preserve.

Section 38 of the Act provides for the inspection of designated properties. Subsection (2) reads:

38(2) No person shall obstruct a person authorized to make an investigation under this section or conceal or destroy anything relevant to the subject-matter of the investigation.

This provision would have little significance unless the Act were vitally concerned with the interiors of buildings as well as their exteriors.

Where the Act wishes to restrict its provisions to the exterior of a building, that is made very clear. Section 42 provides:

42. Where a by-law has been passed under section 41, no person shall in the area defined in the by-law erect, demolish or remove any building or structure, or alter the external portions thereof, without a permit therefor issued by the council of the municipality unless,

(a) the by-law has been deemed to be repealed under

subsection 41(8);

(b) the Board has issued an order refusing approval of the by-law; or

(c) in the case of demolition or removal, 180 days have elapsed as provided for in subsection 44(2).

(Emphasis added.)

A reading of the Ontario Heritage Act as a whole makes it clear that s. 33 must be given a wide and liberal interpretation. To do otherwise would frustrate the very purpose and intent of the Act. The property designation can and undoubtedly will often refer to both the interior and the exterior of the designated building. To give such a broad interpretation of the section conforms with the directions given in the St. Peter's case, supra. Nor can such a wide interpretation in any way diminish the rights of the property owner to either contest the "designation" of the building or to pursue the procedures which can be undertaken by an owner as a result of such a designation. Those rights of the property owner are simply not in issue in this case.

Not only should s. 33 of the Ontario Heritage Act be given a wide and liberal interpretation, but so too should the reasons for designation attached to a by-law passed pursuant to that section. It would be illogical to give the statute a wide and purposive interpretation and yet narrowly construe the brief reasons required by the Act for the designation of a building as one of historical or architectural importance.

I therefore agree with the conclusion of the Divisional Court that the reasons attached to the by-law designating the Eaton's College St. building as one of historical and architectural importance are wide enough to include the interior of the building and in fact do include the seventh floor of the interior. It follows that the chief building officer was correct to refuse the application by T.C.S.C.L. for a building permit as the application contravened applicable laws (the Ontario Heritage Act) as provided by s. 6(1) of the Building Code Act, R.S.O. 1980, c. 51. This finding, in itself, is sufficient to require that the appeal be dismissed. However, there are two other matters to which reference should be made. Was the development agreement between T.C.S.C.L. and the City of Toronto within the provisions of s. 35a of the Planning Act as it existed at that time?

It will be remembered that By-law 419-74, which was purportedly enacted by the City of Toronto pursuant to s. 35a of the Planning Act as it then stood, was struck down by the Supreme Court of Canada in the case of Canadian Institute of Public Real Estate Companies et al. v. City of Toronto et al. (1979), 103 D.L.R. (3d) 226, 8 O.M.B.R. 385, [1979] 2 S.C.R. 2. Section 3 of the Planning Amendment Act, 1979, was enacted subsequent to that decision. It provided:

3. Every agreement entered into by a municipality after the 16th day of December, 1973 and before the day that section 35a of The Planning Act, as re-enacted by section 1 of this Act, comes into force, to the extent that the agreement deals with facilities and matters mentioned in subsection 2 of section 35a of The Planning Act as it exists on the day before this Act comes into force, is hereby declared to be valid and binding.

This legislation reinstated only those portions of a development agreement between a developer and municipality that related to the "facilities and matters" mentioned in s-s. (2) of s. 35a of the Planning Act. What are those facilities and matters? They are set out in s. 35a(2) of the Planning Act which read:

35a(2) Where there is an official plan in effect in a municipality, the council of the municipality in a by-law passed under section 35 may, as a condition of development or redevelopment of land or buildings in the municipality or in any defined area or areas thereof, prohibit or require the provision, maintenance and use of the following facilities and matters or any of them and may regulate the maintenance and use of such facilities and matters:

1. Widenings of highways that abut on the land that is being developed or redeveloped.

2. Subject to The Public Transportation and Highway Improvement Act, facilities to provide access to and from the land such as access ramps and curbings including the number, location and size of such facilities and the direction of traffic thereon.

3. Off-street vehicular parking and loading areas and access driveways including the surfacing of such areas and driveways.

4. Walkways and all other means of pedestrian access.

5. Removal of snow from access ramps, driveways, parking areas and walkways.

6. Grading or change in elevation or contour of the land and the disposal of storm, surface and waste water from the land and from any buildings or structures thereon.

7. Conveyance to the municipality, without cost, of easements required for the construction, maintenance or improvement of any existing or newly required watercourses, ditches, land drainage works and sanitary sewerage facilities

on the land.

8. Floodlighting of the land or of any buildings or structures thereon.

9. Walls, fences, hedges, trees, shrubs or other suitable groundcover to provide adequate landscaping of the land or protection to adjoining lands.

10. Vaults, central storage and collection areas and other facilities and enclosures as may be required for the storage of garbage and other waste material.

11. Plans showing the location of all buildings and structures to be erected on the land and the location of the other facilities required by the by-law.

12. Perspective drawings and plans showing building elevations and cross sections of industrial and commercial buildings and residential buildings containing twenty-five or more dwelling units.

The Divisional Court found that the term "facilities and matters" set out in s. 3 of the Planning Amendment Act was sufficiently broad to include the plans of the restoration of the seventh floor of the Eaton's College St. building.

With the greatest respect, I differ from that conclusion. Paragraphs 11 and 12 must refer back to the other 10 items set out in s. 35a(2). None of these items can by any means be extended to encompass the restoration of the seventh floor. In my view, this section of the Planning Amendment Act did not require the developer to even file the plans pertaining to the restoration of the seventh floor.

Nor do I think that the restoration of the seventh floor can be termed either a development or a redevelopment as those words are used in s. 35a(2) of the Planning Act as it then existed. Redevelopment was defined for the purpose of the section as meaning the removal of buildings or structures from land and the construction or erection of other buildings or structures thereon. Development must mean the erection of buildings or structures on land and not a renovation of a particular floor of a building. However, this conclusion does not eliminate the development agreement from all consideration in this case.

In light of the undertaking of T.C.S.C.L. to restore the seventh floor, should the doctrine of estoppel be applied to prevent the developer from resiling from that commitment?

A consideration of this issue must be based on the assumption that, contrary to the conclusion reached earlier, the reasons for the designation are not wide enough to include the interior of the building. I am in complete agreement with the factual conclusions of the Divisional Court that T.C.S.C.L. unequivocally undertook and committed itself to restore the Round Room and Auditorium on the seventh floor of the Eaton's College St. building. There can be no doubt that this

undertaking was important to the City. The City, in reliance upon that undertaking, gave a consent to T.C.S.C.L. to demolish portions of the building on the site; to make exterior alterations to the building and to increase the density on the site. This unequivocal undertaking and assurance given by T.C.S.C.L. was intended to affect and did in fact affect the legal relations between the parties. The assurance was acted upon by the City as the basis for bestowing benefits upon T.C.S.C.L. Ordinarily, an individual to whom such representations had been made and who acted upon them in the manner set out above would be entitled to raise the defence of estoppel.

The principles of estoppel have been most recently considered by the Supreme Court of Canada in Engineered Homes Ltd. v. Mason et al. (1983), 146 D.L.R. (3d) 577, [1983] 1 S.C.R. 641, 47 N.R. 379. McIntyre J., speaking for the court, said at pp. 580-1:

> The requirements of a successful defence based on promissory estoppel are conveniently set out in Halsbury's Laws of England, 4th ed., vol. 16, para. 1514, p. 1017, in these words:
>
> "1514. Promissory estoppel. When one party has, by his words or conduct, made to the other a clear and unequivocal promise of assurance which was intended to affect the legal relations between them and to be acted on accordingly, then, once the other party has taken him at his word and acted on it, the one who gave the promise or assurance cannot afterwards be allowed to revert to their previous legal relations as if no such promise or assurance had been made by him, but he must accept their legal relations subject to the qualification which he himself has so introduced. This doctrine, which is derived from a principle of equity enunciated in 1877, has been the subject of considerable recent development and is still expanding. It differs from estoppel in pais in that the representation relied upon need not be one of present fact."

In Town of Fort Frances v. Boise Cascade Canada Ltd. et al. (1983), 143 D.L.R. (3d) 193 at p. 217, [1983] 1 S.C.R. 171, 46 N.R. 108 at pp. 136-7, Estey J. set out the principle in this way:

> The conditions in which the doctrine of promissory estoppel operates to prevent a party from insisting upon strict legal performance of a contract remain, in some respect, uncertain. It seems clear, however, that the principle which allows a party to raise a promise or representation that was made to him as a defence, is based upon the inequity of allowing the other party to resile from his statement where it has been relied upon to the detriment of the person to whom it was directed ...

The foregoing principles are applicable to individuals. Nevertheless, there remains a question whether the doctrine of estoppel can be invoked by a municipality. To state the obvious, a municipality is a creature of legislature and derives all its powers from statute. Further, it appears that the doctrine of estoppel may not be relied upon if its effect is to allow a municipality to perform an act which would otherwise be ultra vires. Having made that statement, it must be noted that the authorities appear to be conflicting on this issue: see, for example, County of Wentworth v. Hamilton Radial Electric R. Co. et al. (1916), 33 D.L.R. 439, 54 S.C.R. 178, and Rur. Mun. of Portage La Prairie v. Rur. Mun. of Cartier, [1925] 4 D.L.R. 1035, [1925] S.C.R. 691, and, to the contrary, London Street R. W. Co. v. City of London (1904), 3 O.W.R. 123 (C.A.), and St. Michael's College v. City of Toronto, [1926] 2 D.L.R. 244, [1926] S.C.R. 318.

In the case at bar, T.C.S.C.L. seeks to resile from its undertaking set out in the development agreement. Can the City then rely upon the defence of estoppel as against an individual and insist upon T.C.S.C.L. making good on its representations? I think it would be proper for the municipality to do so on the facts of this case.

There is no question that the municipality had the requisite authority pursuant to the provisions of the Ontario Heritage Act to pass a by-law which would designate both the exterior and the interior of a building as having architectural or historical importance. Both parties assumed that the City had

such authority and that it could pass the required by-law. There was no objection raised against the by-law. Indeed, perhaps as a result of the representations, assurances and undertakings of T.C.S.C.L., the City took no further steps to pass an amended by-law or expand the reasons for the designation. In short, T.C.S.C.L. undertook to restore the seventh floor. The City relied upon that undertaking and acted upon it by granting benefits to T.C.S.C.L.

The authorities indicate that in a situation such as is presented in this case a municipality can set up a defence of estoppel against an individual. In Toronto City v. Russell, [1908] A.C. 493, 78 L.J.P.C. 1 (P.C.), the issue was whether or not Russell could attack the sale of his land by the City of Toronto for arrears of taxes on the grounds that proper and requisite notice of the sale had not been given to him. The Privy Council found for the municipality and Lord Atkinson stated as follows at p. 501 (A.C.):

> There is no evidence to shew that the plaintiff up to a short time before bringing this action, ever complained that he had not received the notice which his counsel now insist was a condition precedent to a valid sale, or that the sale was invalid for any reason. On the contrary, he treated the sale as valid, but mistook the effect of it on his right to redeem. Their Lordships think that, in the absence of all explanation by the plaintiff other than that given in his evidence on discovery, the legitimate inference to be drawn is that he consented to dispense with this notice--that is, he waived it.

Although the term "waived" was used, it was synonymous with the concept of "estoppel". For example, in Estoppel by Representation by Spencer Bower and Turner at pp. 319-20 the following appears:

> The truth is, perhaps, that whereas a fairly successful attempt may be made to state with precision what is meant by "estoppel" and by "election", the term "waiver" when used in a similar connotation is not capable of exact definition in the light of the authorities. Possibly it may be regarded as usefully describing an end result; but its application to the process by which that result is brought about is almost invariably attended with ambiguity as to the essential nature of that process. The term when so employed is used sometimes in one significance and sometimes in another, and the result is that its use has dangers which may be avoided only by foregoing it as a useful term when considering either estoppel or election.

That the concepts of estoppel and waiver may sometimes be synonymous is also illustrated by Ex parte Lewin (1885), 11 S.C.R. 484 at pp. 492-3.

In Municipality of Delta v. Wilson (1911), 17 W.L.R. 680 (B.C.C.A.); affirmed 22 W.L.R. 931 (P.C.), an action was brought by the Municipality of Delta to recover dyking dues. The defendant counterclaimed alleging that the by-law under which the dyke was constructed was illegal and claimed damages for trespass. Macdonald C.J.A. made reference to the doctrine of estoppel in these circumstances at pp. 684-5 where he stated:

> Under these circumstances, I do not think it is now open to the appellant to complain either of trespass or damages resulting from the construction of the works. It is not necessary to hold that he acquiesced in the want of formality in the passage of the by-law, though, I think, by his laches he has disentitled himself to attack it. It is sufficient if he can properly be held to have consented to or acquiesced in the carrying out of the undertaking in the manner in which it was carried out. Such acquiescence I regard as an answer to any claim for trespass or damages resulting naturally from the construction or the mode of construction of the dyke and ditch. The appellant's complaint, when sifted down, comes to this, that he does not receive as great a benefit from the ditch, with dams, boxes, and flood-gates in it, as he would have received had it been a continuous ditch; that he is not able to drain his lands as effectually as if the ditch had been a continuous one.

It was argued that the doctrine of estoppel is inapplicable to cases where statutory requirements have not been complied with, and the dictum of Chief Justice Strong in Township of

McKillop v. Township of Logan, 29 S.C.R. 702, is relied upon for this proposition. I think that contention cannot be given effect to, in view of the decision of the Privy Council in Toronto City v. Russell ...

The Privy Council dismissed the appeal brought by Wilson and commented upon "the disastrous consequences which would ensue if the validity of a by-law of this type could be challenged long after action had been taken upon it" (p. 936). That statement could appropriately be made with regard to the attack brought by T.C.S.C.L. upon the by-law in this case.

In summary, it was at all times within the general competence of the City to adopt reasons for the designation of the building that would make it clear that the interior was affected as well as the exterior. T.C.S.C.L. gave an undertaking to restore the seventh floor. The City relied and acted upon the undertaking. In those circumstances, T.C.S.C.L. can and should be estopped from attacking the validity of the City's by-law even if in its present form it should be considered to be inadequate to pertain to the interior of the College St. building.

In the result, I would dismiss the appeal with costs.

Appeal dismissed.

(1986) 33 M.P.L.R. 177 (OMB)

Re: **Toronto OPA 333** - Excerpt from Page 230:

D. ENVIRONMENTAL ISSUES

Early in the hearing, after hearing the evidence of only one witness, the Board heard a motion from STOP requesting the Board to find that it did not have jurisdiction to approve OPA 333. STOP contended that no approvals could be given by the Board until an environmental assessment had been carried out, and the rights of interested parties in respect of such an assessment had been exhausted. After hearing submissions from the various parties at the hearing, the Board dismissed the motion for the reasons given in its oral decision attached to this decision as App. "D". STOP's counsel then informed the Board that STOP was seeking a judicial review of the Board decision, and asked to be excused from the Board hearing, explaining that STOP did not have adequate funds to be represented in two places at one time and that STOP had decided to use its funds for legal counsel in connection with the Court proceedings rather than at the Board. Some five weeks later the Court upheld the Board's decision, and counsel for STOP once again took an active part in the hearing.

[An Application for Judicial Review of the decision set out below was dismissed with costs to the City and Stadium Corp. Callahan, ACJHC, Reid, J., and Boland, J.'s judgment stated "We see no error in the reasons of the Ontario Municipal Board… The Court File in the matter was #698/86.]

33 M.P.L.R. 177 Re: Toronto OPA 333 Excerpt from Page 305 et seq::

APPENDIX D

MEMORANDUM OF ORAL DECISION delivered by H.E. STEWART, P.G. WILKES and P.H. HOWDEN on June 13, 1986

The Board has before it a motion brought on behalf of Save Toronto's Official Plan Inc. (hereinafter referred to as STOP) during the course of a hearing resulting from the referral by the Minister of Municipal Affairs to this Board of OPA 333 and appeals from the City's enactment of certain bylaws which purport to implement the official plan amendment. These by-laws and OPA 333 were adopted by the City of Toronto in respect of lands comprising a p proximately 200 acres south of Front Street, referred to as the Railway Lands.

The motion requests the Board to find that it does not have jurisdiction to approve OPA 333. It further requests the Board to allow the appeals with respect to By-laws 611-85, 612-85 and 204-86.

Mr. Makuch, counsel for STOP, submitted that by s. 5(1) of the Environmental Assessment Act, R.S.O. 1980, c. 140, an environmental assessment as defined in this Act is required respecting the provision of infrastructure required for the development of the Railway Lands, including roads, parks, sewer services and bridges. He further submitted that, by operation of s. 6 of the Environmental Assessment Act, no approval can be given by this Board to the matters before it until an environmental assessment has been provided as required by the Act and the rights of interested parties in respect of such environmental assessment under that Act have been exhausted.

He concluded that the hearing should not proceed until the process under the Environmental Assessment Act has been completed, or in the alternative until the Board's jurisdiction is determined by way of a stated case to a court of competent jurisdiction.

Mr. Makuch stated that in order for the motion to succeed it must meet three tests:

(1) that there is before the Board a plan or program in respect of an enterprise or activity by a municipality;

(2) that there are serious environmental concerns and serious

concerns over the process to be followed to deal with environmental issues, and

(3) that the undertaking is not exempted by the regulations issued under the Environmental Assessment Act.

In respect of his first test, he referred the Board to the following sections of the Environmental Assessment Act: Ss. 1(kJ, 1 (o), 3 and 5. Section 1(o) defines an "undertaking" to include an enterprise or activity or a proposal, plan or program in respect of an enterprise or activity by a municipality". Section 1(k) defines a "proponent" as one who "(i) carries out or proposes to carry out an undertaking, or (ii) is the owner or person having charge, management or control of an undertaking

The relevant portion of s. 3 provides that the Environmental Assessment Act applies to "(a) .... proposals, plans or programs in respect of enterprises or activities by a municipality or municipalities ...

As the Board understands Mr. Makuch's argument, it follows then by operation of s. 5 that if the municipality is the proponent of a plan in respect of an enterprise or activity to provide developmental infrastructure such as parks, roads, and services to which the Act applies, it must submit an environmental assessment to the Minister of the Environment before the undertaking (which includes a plan for same) is proceeded with.

The Board has considered all of the submissions of counsel on this point. It further has considered the purpose of the Environmental Assessment Act as expressed in s. 2, and is fully cognizant of the importance of the issues to which that Act addresses itself. The Board, in view of the statement of purpose in s. 2, agrees that its provisions should be given a liberal interpretation bearing in mind the purposes which it seeks to achieve. However, it must be determined on the facts before us whether this plan for provision of infrastructure falls within the purview of the Act.

To demonstrate that the City is the proponent of a p lan to provide infrastructure, Mr. Makuch referred to three documents:

(i) OPA 333, Section 11 of which, sets out the requirements to be met when the City considers the removal of the holding provision of the proposed zoning by-law for the various areas of the Railway Lands (referred to as "precincts");

(ii) the Memorandum of Conditions agreed to by principal holders of title interests in the Railway Lands, being Canadian National Railway Company and Marathon Realty Co. Ltd. and,
(iii) the Precinct Agreement entered into in respect of Precinct A (known as the Stadium Precinct) by the City and CN.

The latter precinct is said to be the only one of the 13 precincts of the Railway Lands for which a precinct agreement as defined and provided for in s. 11 of OPA 333 has been executed as of this date. The statutory authority relied upon by the City for this mode of development control is the City of Toronto Act 1971, s. 16, as amended.

The Board has considered all of the provisions of these documents referred to by counsel on the issue of whether they indicate that the City is the proponent as defined in s. 1(k). Without exception, these provisions indicate that the land owner or principal tenant (in the case of Precinct A that party being CN) is responsible for, owns, manages and controls the works during their design and construction until, if ever, such works are assumed by the City. For Precinct A, CN is responsible for the design and construction of all infrastructure including any decisions as to when it is to be designed and constructed. If CN chooses not to proceed with such designated construction and does nothing, then no infrastructure would be provided.

The documents indicate that the City's role is to set the quality standards which the infrastructure is to meet, and in some instances to determine the order in which work is carried out in order to avoid, for instance, the serious repercussions which could arise if services are not ready when required. By s. 3.01 of the Precinct A agreement, the City and CN agree that .... CN shall have the overall responsibility for the design and construction of all infrastructure provide d that all such

design and construction shall be carried out in accordance with the provisions hereof", and that any approval by the City does not release CN of its responsibility for ensuring that the design and construction conforms to certain approved standards. Mr. Makuch referred to s. 3.03 which sets out the standards of construction. The only provision referred to the Board which mentions a timing control for the provision of infrastructure relates to those elements which should be ready to serve the proposed Stadium on opening day, and that provision expressly states that the parties are not bound to meet a set deadline. Failure to provide the elements set out in s. 5.01 by opening day affects whether the Stadium will open and whether other portions of the precinct would proceed. However, if CN for some reason decides not to provide the required infrastructure, there is nothing in the agreement that would allow the City to force CN to bring it about. CN is to construct the streets and parks, and s. 3.11(5) of the Precinct A agreement states that until the City assumes them, CN is not obliged to allow them to be used by the public. Similar provisions apply to the sewer services, sidewalks, intersections and plantings. As all other precinct plans are to follow the procedures set out in s. 11 of OPA 333, it appears that other precinct agreements are to follow the same form in respect of provision of infrastructure. From all of the above, the Board finds that the City's role in these matters is to assure that the work is of a certain quality and uniformity and in some cases to direct the sequencing of events but not to pre-empt the management and control responsibilities of the precinct developer.

As a consequence of the above finding, the Board concludes that the City is not a proponent of the provision of infrastructure as defined in s. 1(k) of the Environmental Assessment Act. We further find that the proposed provision of infrastructure cannot be said to be an enterprise or activity by a municipality to which the Act applies, and therefore the obligation to submit an environmental assessment as required by s. 5 of the Environmental Assessment Act does not arise. Accordingly, the Board finds that in regard to s. 6, the Board is not precluded from approving OPA 333 or dealing with the by-law appeals.

Further, it should be noted that s. 6 forbids the issuance of an approval that is required "in order to proceed with the undertaking". If the undertaking is, as Mr. Makuch has defined it, a plan for the provision of infrastructure, there appears to be no answer to Mr. Leibel's submission that approval of the official plan amendment is not required in order to proceed with such infrastructure.

In view of its findings, the Board does not deem it necessary to deal with the submissions respecting Mr. Makuch's third test, whether the undertaking is exempted from the provisions of the Environmental Assessment Act by the regulation made thereunder.

Mr. Makuch also dealt with certain issues which do not have a direct bearing on the question of jurisdiction. These issues fall under the general heading of the second of his three tests, and are set out below.

First, he feels that it is important to emphasize the fact that there are several significant environmental issues that have already been identified and that must be resolved before any development takes place.

Secondly, he is concerned about the process set out in the documents for resolving environmental issues, particularly as such a process relates to the lack of opportunity for public participation over time.

Finally, he feels that the recent proposed modification to OPA 333 which would permit Metro to bring disputed matters before the Municipal Board is an improper delegation of power, and of questionable value in resolving environmental issues.

While none of these submissions of Mr. Makuch bears directly on the question of jurisdiction, such submissions having been heard at this stage of the hearing, the Board makes the following comments with regard to them.

There seems to be implicit in Mr. Makuch's remarks a concern that the Municipal Board will be unable to carry out its responsibilities in dealing with environmental issues, and issues relating to process.

At this stage in the proceedings the Board has no reason to share this concern.

As Mr. McQuaid points out, we have heard no expert evidence in connection with environmental issues; nor submissions from the City or others in this regard. We have not heard submissions from the Cit y or Metro as to the merits of any proposed modification to OPA 333. Asa consequence, we are unable to give consideration of any substance to these matters at this time.

We would like to assure all parties that this Board intends to give full consideration to all matters of environmental concern and process in accordance with the Board statutory obligations, including those set out in s. 2 of the Planning Act.

As a final point, the Board notes that nothing in this decision regarding jurisdiction will preclude the carrying out of an environmental assessment under the Environmental Assessment Act should such be required of a proponent of a future undertaking on the Railway Lands. in saying this the Board notes, for example, that Metro could be such a proponent in instances where it is not otherwise exempt under the provisions of Reg. 293 of the Act.

As to Mr. Makuch's suggestion that the Board should state a case to the Courts, the Board has concluded from the submissions of all counsel that such action would not be appropriate or necessary in this instance.

F or the foregoing reasons, the motion brought on behalf of STOP will be dismissed.

RE CORPORATION OF THE CITY OF **TORONTO**
and P & M CONSTRUCTION LIMITED et al.
Ontario Supreme Court (High Court of Justice],
Robins J.

Judgment—February 2, 1981.
(1981) 16 M.P.L.R. 85

ACTION for an order requiring removal of kitchenette facilities installed in contravention of by-law and Building Code.

D. Leibson, for plaintiff.
H.M Pomerantz, for defendant P & M Construction Limited.

February 2, 1981. ROBINS J.:—This action is brought by the corporation of the City of Toronto against P & M Construction Limited, the owner of premises municipally known as 17 Edgewood Avenue, Toronto. This dispute involves the use of these premises in such a way as to permit culinary facilities therein.

17 Edgewood Avenue is a three story and basement detached building of brick construction. In the basement, there is a superintendent's suite composed of a bedroom, livingroom, kitchen and three piece bathroom. The basement also has four bed-sitting rooms, each equipped with a kitchenette facility consisting of a hot plate, sink and refrigerator, and each having a three piece bathroom.

On the first floor, there are eight bed-sitting rooms, each equipped with a kitchenette facility of a hot plate, sink and refrigerator, with a sitting area and a three piece bathroom. On the second floor there are eight similar bed-sitting rooms and on the third floor there are eight more such bed-sitting rooms, each equipped with the same kitchenette facilities.

These dwelling units are occupied by monthly or bi-monthly tenants. To the rear of the premises there is a vacant area with an unimproved surface measuring *54'* by *105'*. That area is accessible by a ravine to the north of the premises but there is no access from the street over which the defendant has ownership or control.

It appears that the defendant was confronted with a problem in building on the lands upon which the building in question is located in that they were partially in a R4Z3 Zone and partially in a R2Z2 Zone. To permit construction of a "detached lodging house" the defendant in 1975 brought application before the Committee of Adjustment for a variance of the zoning by-law to permit construction of premises described as a "detached lodging house" and more particularly as shown on plans and specifications filed with the committee.

The committee decided that in the circumstances the request of the applicant was reasonable and should succeed. It found that it was within its jurisdiction to allow the proposed lodging house to be constructed, but imposed as a condition that an area of not less than 45 sq. feet be occupied by a bona fide owner or a superintendent of the building.

Pursuant to the decision of the Committee of Adjustment, the defendant in the normal course made application to the City of Toronto for a building permit and filed detailed plans indicating the specifications of the proposed lodging house to be constructed. Those plans have been submitted to me as Ex. 5. It is clear that there is nothing in them indicating any kitchenette facilities in the rooms of the building other, of course, than in the area to be occupied by the superintendent or owner in accordance with the Committee of Adjustment's decision.

The premises were commenced in 1975 and completed in the spring of 1976. As part of the original construction, and contrary to the plans and specifications it had submitted, the defendant installed such piping as necessary for the installation of kitchen sinks and roughed-in waste pipes and vents. An inspector from the building department of the city inspected the premises and according to his evidence, recognized that that portion of the work was not in accordance with the permit and so reported to his superiors.

I am satisfied that the defendant knew that that work was not in compliance with the plans and specifications and undoubtedly proceeded in the hope that the changes would either be ignored by the city or subsequent approval would be obtained. In any event, the building was completed. A plumbing permit, subsequently applied for, did not include the piping necessary for kitchen sinks in the bed-sitting rooms.

After completion, the owner, according to the evidence given by him, encountered some difficulty in renting the rooms without any kitchenette facilities. In order to make them more rentable a unit containing a kitchen sink, a refrigerator and two hot plate elements was installed. This is a compact type of unit often used in small apartment facilities. The city takes objection to those units and has brought this action to compel their removal. Subsequently, that is after completion of the premises when the problem had become manifest, the defendant made application to both the city and to the Committee of Adjustment for relief but without success.

I should note that the premises also do not conform to the city

zoning by-law which requires one parking space for each dwelling unit where the defendant is obviously unable to provide.

An application to permit the kitchenette facilities after they had been installed, as I have said, was made to the city in October 1977. No response was received from the city save such as can readily be implied by the city's issuance of the writ in this action on January 2 1st, l978.

In sum, the defendant is operating a building with kitchenette facilities in each and every room when such facilities were not provided for in the plans submitted to and approved by the city. The defendant is also operating these premises without the necessary parking facilities.

In my view there can be no question on the evidence but that there has been a breach of the pertinent civic by-law and a breach of The Building Code Act, 1974 (Ont.), c. 74.1 make reference to s. 5 [re-en. 1978, c. 40, s. 2(1)] of that Act which provides that no person shall construct a building unless a permit has been issued therefore by the chief official and subs. 5 [en. 1978, c. 40, s. 3] of s. 6, whereby no person shall construct or cause to be constructed a building in a municipality except in accordance with the plans, specifications, documents and other information on the basis on which a permit was issued and any changes thereto authorized by the chief official. The changes to the plans here were not authorized to the knowledge of the defendant and accordingly the defendant is in breach of that legislation.

There is similar provision in the city by-law. Clearly a builder is obliged to build in accordance with the plans submitted. That is not the case here. I am satisfied also that these living facilities constitute "dwelling units" within the meaning of the city by-law. A "dwelling unit" is intended to include a room designed or intended for the use of one or more persons as living accommodations in which "culinary and sanitary conveniences are provided" for the exclusive use of such person or persons. The sanitary conveniences are clearly provided for here and there is no objection to them, they were included in the original plans. Culinary conveniences, giving the term culinary its ordinary dictionary meaning, are conveniences pertaining to the kitchen or cooking and involving the processes of cooking. The facilities which were to be erected under the plans filed and pursuant to the decision of the Committee of Adjustment made no provision for that type of convenience. By adding that the defendant acted in violation of the legislation and having regard to its obligation to comply with the building permit has also operated premises in a manner contrary to the relevant bylaws. The installation of those facilities required the defendant to provide parking space which he cannot and has not done.

The city does not take the position that if the culinary facilities are removed there is any obligation on the defendant to provide parking. Evidently there have been some changes in the by-law since the original application to the Committee of Adjustment and the issuance of the permit, and the city does not contend that there would be any breach of the by-law if the cooking facilities were removed.

In these circumstances I see no alternative but to require the defendant to bring its building into conformity with the plans which it submitted and in sum and substance to thereby make it the building contemplated by the plans and specifications. To do that it is necessary to require the removal of all kitchenette facilities, that is, the hot plates, kitchen sinks and refrigerators, and also the connections and installations related thereto, from all bed-sitting rooms at No. 17 Edgewood Avenue.

In the course of argument, Mr. Pomerantz indicated to me that he wishes to make a further attempt to have the city agree to some proposal which would be mutually satisfactory to both parties and which would eliminate the necessity of ripping out all of the kitchen units in issue which in his submission would result in unnecessary waste. Obviously, counsel for the city is not in a position to deal with that request. It is a matter which would have to be dealt with by the appropriate city authorities. It appears to me that in all of the circumstances in this matter, and particularly having regard to the time which has elapsed that no one will be prejudiced and no harm will befall the city if an appropriate period is granted to the defendant to make whatever further representations it wishes to eliminate the necessity of enforcing the order which I am obliged to make in these proceedings.

As I have already said, I am satisfied that there has been a breach of the law and the defendant must remove the kitchenette facilities. My order will be stayed until September 1, 1981.

In the result an order will go requiring the defendants, their servants, agents, successors and assigns to remove all kitchenette facilities composed of a hot plate, kitchen sink and refrigerator and all facilities, connections and installations related thereto from all bed-sitting rooms at No. 17 Edgewood Avenue, save and except the one apartment in which such facilities are permitted and included in the plans and specifications.

I see no reason why costs should not follow the event here.

Order accordingly.

Re **Trivest Developments Ltd**. et al. and City of Toronto

(1986), 57 O.R. (2d) 799
[1986] O.J. No. 1040

Ontario
Court of Appeal
Dubin, Blair and Thorson JJ.A.
October 20, 1986

NOTE: An appeal from the judgment of Smith J. of the High Court of Justice, reported at (1986), 54 O.R. (2d) 728 (H.C.J.) was dismissed with costs, the result of the appeal being reflected in the catchlines. The decision of the court endorsed on the appeal record was as follows:

The narrow issue before Mr. Justice Smith was whether, on the agreed facts, the work proposed to be performed by the respondents within the residential property required a demolition permit. We find no error in the approach taken by Mr. Justice Smith to the resolution of this issue. In our opinion, the Building Code Act, R.S.O. 1980, c. 51, and the Planning Act, 1983 (Ont.), c. 1, are not statutes in pari materia in so far as the meaning to be given to the word "demolition" is concerned, and the judge below did not err in looking to the different purposes served by the legislative provisions here in question. We therefore agree with his conclusion that the proposed work, if proceeded with, would not constitute a demolition of the residential property or any part thereof, so as to require a demolition permit.

It is further to be observed that the council of the City of Toronto acted beyond the scope of the authority given to it by the City of Toronto Act, 1984 (Ont.), c. Pr6, when it refused a demolition permit for a period of 365 days. The discretion given to it in this regard was limited to situations where a new building is to be erected in place of the building to be demolished, which was not this case. Because, however, we have concluded that what the respondent proposed would not, in any event, amount to a "demolition", this is not an appropriate case for remitting the matter to the council for its reconsideration.

The appeal is therefore dismissed with costs against both the appellant city and the intervenors. However, the costs will be as of one appeal since we do not consider that a hearing of a cross-appeal in support of the main appeal was necessary on the grounds advanced.

M.J. Winer, Q.C., and T. Yao, for appellant.
Y.J. Hamlin, for respondent.
J. De Klerk and S. Bennett, for intervenors.

Trucena Properties Ltd. v. Toronto(City) Chief Building Official

IN THE MATTER OF The Building Code Act, R.S.O. 1980, c. 51

Between
Trucena Properties Limited, Applicant, and
Michael L. Nixon, Chief Building Official for the City of Toronto, Respondent

Ontario Judgments: [1989] O.J. No. 474
Action No. M165501/88

Ontario District Court - York Judicial District
Toronto, Ontario
Sheard D.C.J.
Heard: December 12, 13 and 15, 1988
Judgment: March 9, 1989

Michael S. Steinberg, for the Applicant.
Andrew Weretelnyk, for the Respondent.

SHEARD D.C.J.:-- This is an application under subsections 15(1) and 15(3) of the Building Code Act, R.S.O. 1980, c. 51, made in consequence of the refusal of an official of the Toronto Buildings Department to accept an application for a building permit.

The applicant Trucena is the owner of a parcel of land in the City of Toronto, municipally known as 2 Small Street, which it bought in July, 1987. In October, 1987, Trucena retained a land-use planning firm and architects to proceed with plans to construct an eight-storey mixed industrial use building on the Small Street site. In November, 1987, an interim control by-law, No. 780-87, was enacted by the City of Toronto, which limited the uses permitted for the area that included Small Street. Trucena's proposed use was planned to comply with this by-law.

On February 11, 1988, Trucena's architects submitted a Preliminary Review Application to the Toronto Department of Buildings and Inspections. This showed the use and size of the proposed building and included preliminary design drawings. This material was examined by David Finbow, a plan examiner employed in the office of the chief building official, Mr. Nixon.

In light of his perusal of the Preliminary Review material, Mr. Finbow completed a form which set out items of non-compliance with zoning requirements. This form was delivered by Mr. Finbow to representatives of Trucena's architects and planners at a meeting on March 22, 1988. At that meeting Mr. Finbow also said that a building permit application would be premature until the proposed site plan had been approved by the Land Use Committee and that no building permit would be issued until a site plan agreement had been registered on title.

Notwithstanding Mr. Finbow's discouraging statement of what he describes as the policy of the buildings department, Trucena's architects, on April 15, 1988, attended at the buildings department with architectural and other drawings to submit an application for a building permit. This material was refused, for the aforementioned reason that land use (site plan) approval was required before applying for a building permit.

The following day, April 16, a notice appeared in the Globe and Mail of a public meeting pursuant to the Planning Act to consider amendments to the Official Plan and Zoning By-law, to be held May 18.

The proposed amendments included a substantial downzoning of density: from 7 times to 3 times lot area. The effect of this reduction, if applicable, would be the abandonment of Trucena's proposed project. Trucena decided that the most prudent course of action it could take was to attend at the meeting to ask for exemption from the revised by-law if it were adopted. At the meeting the new proposals were approved without change and sent on to City Council for its meeting June 13. Trucena's request for exemption was heard at the May 18 meeting but Trucena decided afterwards to launch this application (which was issued

on May 27) without waiting for Council's response. On June 17, 1988, the Toronto City Council passed By-law 527-88, being Official Plan Amendment No. 463, and By-law 528-88, being a zoning by-law, which by-laws, among other things, implemented the reduction in density proposal. An appeal by Trucena has been taken to the Ontario Municipal Board as to both by-laws.

On April 15, although the building department refused to accept the application for a building permit, it did accept an application for approval by City Council of plans and drawings to be submitted within an area of site control. On May 9 a report was prepared setting out six reasons why the proposed development did not comply with the zoning by-law.

The most conspicuous of the several issues involved in this application is the question of whether the respondent properly refused to accept and process Trucena's application for a building permit.

The Building Code Act provides:

5(1) No person shall construct or demolish or cause to be constructed or demolished a building in a Municipality unless a permit has been issued therefor by the Chief Official.

6(1) The chief official shall issue a permit except where,

(a) the proposed building or the proposed construction or demolition will not comply with this Act or the building code or will contravene any other applicable law.

(b) [NOT RELEVANT]

(c) the application therefor is incomplete or any fees due are unpaid.

As has been mentioned the reason the building permit application was not accepted was that it was premature; that it was necessary first for site plan approval to be obtained. Site plan approval has its statutory authority in Section 40 of the Planning Act, S.0. 1983.

It is argued for the respondent that site plan approval is "other applicable law" within the meaning of s. 6(1) of the Building Code Act. The extension of that argument is that prior site plan approval was a necessary precondition for issuance of a building permit.

That very point was considered by my brother Matlow in Re Revenue Properties Co. Ltd. and Corporation of the City of Toronto et al (1984), 26 M.P.L.R. 165. He expressed the view (p. 170) that "Although it may be desirable and more expeditious that site plan approval be obtained before the issuance of a building permit in order to eliminate the need for further amendments to the building permit that might become necessary to satisfy the conditions of the granting of site plan approval, this potential difficulty does not persuade me that the legislation requires site plan approval as a precondition for the issuance of a building permit."

I appreciate that there are different views expressed on the subject by other judges and that there is no judgment that is binding upon the court of which I am a member. In my opinion, and in accordance with the views expressed by Judge Matlow, site plan approval pursuant to s. 40 of the Planning Act, 1983, is not "other applicable law" within the meaning of s. 6(1) of the Building Code Act.

It accordingly follows that I find that the chief building official (acting through his appropriate representatives) should not have refused to accept for perusal the application for a building permit, and the material tendered in support, on April 15, 1988.

It is argued by the respondent that in any event the material supplied by the applicant for the building permit was deficient.

Reference has been made to six items mentioned in Mr. Finbow's letter of May 9, 1988. These items of concern to Mr. Finbow were all complied with, according to the evidence Mr. Finbow gave on his cross-examination on his affidavit sworn September 30 (transcript page 22, Q. 94).

Further issues were raised by Stephen Matusek, a professional engineer and manager of the east team in the plan examination division in the office of the chief building official. These are referred to in Mr. Matusek's affidavit (at pages 65 and 66 of the supplementary record) and responded to in the affidavit of Richard Francis Taylor (at pages 73 to 76, the supplementary record).

Mr. Steinberg puts reliance on the "substantial compliance" principle that is to be found in such cases as Re 261532 Development Corp. Ltd. et al. and City of Toronto et al. (1974), 4 0.R. (2d) 614 and Re Triforce Construction Ltd. et al. and City of Toronto et al. (1974), 4 0.R. (2d) 729, judgments of the Divisional Court.

In the latter case Pennell, J. puts it this way (at p. 734):

> As a first principle, the applicants must establish a prima facie right to a permit based upon compliance with the building by-laws that have been approved by the municipal board. Time was when the Court confined the prima facie right to strict compliance. Immersed in the progress of the law, the rule to that effect yielded to "substantial compliance" : Re David Gallo Building Co. Ltd. and City of Toronto et al, [1973] 3 0.R. 892, 38 D.L.R. (3d) 536, Re Bismark Holdings Ltd. et al and City of Toronto et al. [1973] 3 0.R. 887, 38 D.L.R. (3d) 531; Re Cogan et al. and City of Toronto (1974), 3 0.R. (2d) 661, 46 D.L.R. (3d) 481.

On the material that is before me it would appear that the application is substantially in order. Ultimate compliance with applicable by-laws and related requirements must be achieved, but the relief asked for in the application to this Court should not be refused, for reasons of insufficiency, since it appears that Trucena has substantially complied with the requirements for a building permit.

In the argument that was presented so ably by both counsel, a major issue involved the intepretation to be placed on subsection 15(3) of the Building Code Act:

> 15(3) Where an application is made to a judge for a hearing under subsection (1), the judge shall appoint a time for and hold the hearing and may rescind or affirm the order or decision of the inspector or chief official or take such action as the judge considers the inspector or chief official ought to take in accordance with this Act and the regulations, and for such purposes the judge may substitute his opinion for that of the inspector or chief official.

The question is, on an appeal to a judge from a decision of the chief inspector, should the judge look at the matter as it stands at the date of the appeal hearing, or as it was when the decision was made by the chief official.

Here, the downzoning By-law 528-88 has been enacted, about two months after the refusal of the chief official which is the subject of this application. If that by-law is applicable to the decision, the applicant must fail since the by-law drastically reduces the ground coverage from 7 times to 3 times, and the applicant's drawings and other material would be grossly inappropriate.

The judgment of the Divisional Court in Woodglen & Co. Ltd. v. Corporation of the City of North York et al. (1984), 26 M.P.L.R. 40 is the highest authority, thus far, on the point. There, Southey, J. says (at p. 46):

> The powers of the County Court Judge hearing an application under s. 15 are limited by subs. (3). The Judge "may rescind or affirm the order or decision of the inspector or chief official or take such action as the Judge considers the inspector or chief official ought to take in accordance with this Act and the regulations." The duty of the Judge under this subsection is to do what the Judge considers the inspector or chief official ought to have done. (My emphasis.)

Mr. Weretelnyk notes that s. 15(3) speaks in the present tense, compared to the past tense used in the extract from Woodglen quoted above, and argues that that statement by Southey, J. in any case is obiter.

With due respect to Mr. Weretelnyk's submissions I consider that I am bound by the judgment in the Woodglen case on this point. In my opinion it was essential to the decision reached and the apparent difference in tense is simply interpretive of the subsection.

Accordingly the subsequent enactment of By-law 528-88 must be ignored since it did not exist when the Chief Official made the decision which gave rise to this application.

As to extending the time for making this application, I am satisfied that there are prima facie grounds for granting relief to the applicant and that there are reasonable grounds for applying for an extension. To have complied with subsection 15(1) this application should have been made within twenty days from April 15, that is by May 5, 1988. It was not in fact made until May 27. No prejudice to the respondent has resulted.

Pursuant to subsection 15(5) the time for making the application is extended to the date when it was in fact made.

Mr. Steinberg indicated that he would be content with an order in similar form to the order made by Judge Matlow and in the Revenue Properties case. I think that form of order is appropriate here, with some variation.

There shall accordingly be an order as follows:

(1) extending the time for bringing the application to May 27, 1988.

(2) requiring the chief official of the City of Toronto to accept the application of the applicant for a building permit on the lands municipally known as 2 Small Street, Toronto, and within thirty days thereafter to issue a building permit unless the refusal can be justified under s. 6 of the Building Code Act and in accordance with these reasons. The application for the building permit shall be dealt with as though it had been received on April 15, 1988.

(3) awarding the costs of this application to the applicant.

If further time is required, beyond the aforementioned thirty days, or if the building permit is refused on grounds that are disputed by the applicant, the parties shall be at liberty to make further application to this Court in the context of the present application.

SHEARD D.C.J.

APPLICATION for an order directing the issuance of a building permit.

Ian C. Wallace, for applicant.

Douglas G. Dawson, for respondents.

CARTER CO. CT. J.:-- This is an application for a hearing and appeal brought pursuant to s. 15 of the Building Code Act, R.S.O. 1980, c. 51.

On June 10, 1983, the applicant, through his agent, applied to the respondent municipality for a building permit to erect a single-family residence on the lands more particularly described in the style of cause herein.

On June 21, 1983, the clerk-treasurer of the respondent municipality returned the application to the applicant's agent with a letter reading as follows:

> We return herewith the application submitted on behalf of A. Turnbull as it was deferred by the Council of the Village of Bayfield pending their legal advice on the ownership of the proposed site. The matters raised by the Bayfield Ausable Conservation authority will have to be addressed as well.

The "matter raised" by the Bayfield Ausable Conservation Authority refers to certain concerns that authority had communicated to the applicant and respondent on June 20, 1983, indicating that, if such concerns were overcome by the applicant, it would approve a fill and construction application submitted to it by the applicant.

The applicant originally launched this application on January 10, 1984, before the presiding judge of the County of Middlesex, and on March 1, 1984, The Honourable Judge Flinn transferred the application to this county -- the lands in question being located in this county. On June 5, 1984, the applicant obtained an order from this court (on consent of the respondent) extending the time within which this application should be brought, as required by s. 15(1) and (5) of the Building Code Act.

At the outset of the hearing before me the applicant launched a preliminary motion that the objection of the respondent be confined to those set out in the letter of June 21, 1983, to which I have referred, and not include other objections raised by the respondent after this application had been commenced, that is to say, on the basis of alleged breaches of the land-use by-law, contravention of existing zoning as to access and set-back requirements, and contemplated expropriation proceedings.

I reserved on that preliminary motion and heard evidence and argument on all aspects of the matter.

Notwithstanding the British Columbia case Re Homfray and Building Inspector of City of Kamloops (1933), 46 B.C.R. 475, wherein Fisher J. held the municipality was limited to the grounds of refusal set out by the building inspector and not other grounds, I am of the opinion that the preliminary motion should fail, as I consider the clerk-treasurer's letter in the instant case not a refusal of the building permit but a deferral of its consideration by the village council pending resolution of two specific issues. That being so, I can see no reason why, when the matter came on for consideration by the village council, other grounds of objection may not be raised.

In Re Ormerod et al. and Township of Ancaster et al., [1971] 3 O.R. 729, 21 D.L.R. (3d) 541, and in R. v. Toronto; Ex p. 94 Crescent Rd. Ltd., [1961] O.W.N. 129, subsequent objections by the municipalities concerned were given effect to by the court.

I may add that unlike Gale J. (as he then was) in Re Skyway

Drive-In Theatres Ltd. and Township of London, [1947] O.W.N. 489, I am not convinced that the deferral of consideration of the application for a building permit, pending clarification of two specified matters, amounted to a refusal. In the Skyway case, the learned justice accepted the formal statement of counsel that the township clerk had advised him the permit would not be issued. I merely raise this point to buttress my opinion that the municipality, in the absence of a refusal, has the right to raise further objections at this hearing.

The first matter I would deal with is whether the question of the ownership of the proposed site constitutes good grounds for deferring the consideration of the application by the village council.

Section 6 of the Building Code Act provides, in part, as follows:

> 6(1) The chief official shall issue a permit except where,
>
> (a) the proposed building or the proposed construction or demolition will not comply with this Act or the building code or will contravene any other applicable law;

By-law 131-1978 of the Village of Bayfield provides in s. 2.2.1 thereof:

> To obtain a permit the owner or his authorized agent shall file an application with the chief official in writing by completing the prescribed forms available at the Office of the Municipality, and in a form, manner and content satisfactory to the Chief Official.

I consider that part of the village by-law to which I have referred "other applicable law" within the meaning of s. 6(1)(a) of the Building Code Act and, accordingly, if the application was not filed by "an owner or his authorized agent" it would contravene such applicable law.

I have noted the judgment of the Divisional Court in Re Solmor Builders Ltd. and Town of Mississauga et al.; Re Lornal Construction Ltd. and Town of Mississauga et al., [1973] 3 O.R. 521, 37 D.L.R. (3d) 349, to the general effect that the terms "owner" and "agent" are not to be so defined so as to exclude bona fide applicants for a permit.

The matter before me is distinguishable from that case, however, in so far as the ownership of the applicant to parts of the land has been questioned by not only the respondent municipality, but also the Attorney-General of Canada on behalf of Her Majesty the Queen in right of Canada and by persons by the names of Thomas and Elizabeth Constable in proceedings under the Certification of Titles Act, R.S.O. 1980, c. 61. It would seem to me, as a matter of common sense, that those matters should be dealt with before issuing a permit to the applicant. I cannot subscribe to the applicant's contention that the civil courts are the appropriate forum to determine damages due to a person suffering loss from another party building on land in which he has an interest. That contention, while true, must be read in the context that unnecessary litigation should not be encouraged by an already overburdened court system, when the factual issues can be determined by proceedings already under way.

I would therefore affirm the decision to defer made by the village authorities on this ground.

Although my finding on the above ground is sufficient to dispose of this matter, I shall deal briefly with the other grounds given by the respondent, in the event that this matter goes to a higher court.

(a) Clarification of conservation authority

In my view the applicant had satisfied the conservation authority's requirements for the permit immediately required, that is to say, the fill permit; the applicant had a geotechnical investigation made by Peto MacCallum Limited, a firm of consulting engineers, and this was submitted to the conservation authority. On December 12, 1983, an official of the authority notified the applicant's agent that if the recommendations of the consulting engineers were adhered to "it is my opinion that the Executive Committee of the Conservation

Authority would approve an application under the Fill, Construction and Alteration to Waterways Regulations for the construction of a cottage at this location".

It would seem to me that although concerns may have existed when the matter was deferred by the respondent on June 10, 1983, when the matter came on before me on June 14, 1984, the situation appeared to be that the authority would grant the application conditional on the consulting engineer's recommendations being adhered to. Within this context, I do not consider the concerns on this point a valid reason for deferring consideration of the building permit application.

(b) Section 4.7 of land-use by-law, and question of access

The respondent did not argue that s. 4.7 of the land-use by-law had been contravened nor did it argue the question of access to the property. The evidence of Donald F. May, a qualified planning and land-use consultant, was that the proposed construction did not offend s. 4.7, and I accept that. I also accept the evidence of Mr. May, and on the basis of the plans filed, that there is access to the property.

I therefore do not accept these objections as legitimate reasons for refusing a permit.

(c) Set-back requirements

The only evidence in relation to set-back requirements was tendered by the applicant's witness, and that was to the effect that the location of the proposed construction did not violate the set-back requirements set out in the land-use by-law. However, if the proceedings under the Certification of Titles Act delineates the boundaries of the lands the applicant alleges to be his in a manner other than what he claims them to be, this may well have a bearing on the question of whether the proposed construction complies with the set-back requirements, and is another reason, in my opinion, that the results of the Certification of Titles Act proceedings should be awarded before a definitive ruling is given on the application for a building permit.

(d) Expropriation proceedings

This matter is further complicated by reason of the respondent commencing expropriation proceedings. In the light of North American Life Ass'ce Co. v. City of Chatham (1979), 10 R.P.R. 144, and Re Brownlow Mount Pleasant Developments and City of Toronto et al. (1973), 2 O.R. (2d) 390, 43 D.L.R. (3d) 57, and it appearing to me that at the time the applicant's application for a building permit there was some evidence of the village's intention to expropriate, that being indicated in a letter to its solicitor, dated March 23, 1983, from the village clerk, this leads to the question whether that was sufficient evidence of an intention to expropriate so as to overcome the applicant's prima facie right to a building permit if he meets all other requisites of building codes and by-laws. In Poppett's (Caterers) Ltd. v. Maidenhead Borough Council, [1970] 3 All E.R. 289, Winn L.J. said at p. 294:

> As I said in the course of the very interesting submission of counsel for the applicants, he unfurled a standard (which he was not prepared to nail to his mast) when he said that the only competent, effective and adequate form of evidence to establish the intention of an authority was a formal resolution passed by that authority and produced to the court. If he made that submission with any serious intent I am bound to say that I reject it.

and at p. 293, Sir Gordon Wilmer said:

> I further think that evidence to support the judge's conclusion is to be found in the minutes of the committee meetings, which were confirmed by the local authority, and in some of the letters passing between various officials, all going to show that there was in fact an intention to demolish the premises.

I have reluctantly come to the conclusion that the evidence before me to show an intention to expropriate falls short of that relied on by the learned judges in appeal in the Poppett's (Caterer's) Ltd. case, supra.

I therefore do not accede to the motion brought by the

respondent's counsel that these proceedings be stayed or adjourned until such time as the expropriation proceedings have been completed.

Upon all the evidence I have heard, I have come to the conclusion that the proper order I should make (within the powers granted by s. 15(3) of the Building Code Act) is that the respondent issue a building permit to the applicant upon his ownership of the lands in question, or sufficient thereof to enable him to conform to the land-use by-law of the respondent municipality being upheld in the Certification of Titles Act proceedings, and that such permit, when issued, be conditional on his adhering to the recommendations made by Peto MacCallum Limited, consulting engineers, and I do so order.

I would have allowed costs of these proceedings to the successful applicant, except that at the conclusion of the evidence I directed the applicant to submit written argument by June 24, 1984, that is to say, 10 days after the conclusion of the hearing. No request was made to have that time extended, and the applicant did not in fact submit written argument until August 3, 1984. There will therefore be no order as to costs.

Order accordingly.

Union Gas Ltd. v. Township of Dawn

Tecumseh Gas Storage Ltd. v. Township of Dawn

15 O.R. (2d) 722

ONTARIO
HIGH COURT OF JUSTICE
DIVISIONAL COURT
KEITH, MALONEY AND DONOHUE, JJ.
22ND FEBRUARY 1977.

APPEAL from a decision of the Ontario Municipal Board approving two municipal zoning by-laws.

J. J. Robinette, Q.C., and L. G. O'Connor, Q.C., for appellant, Union Gas Limited.

P. Y. Atkinson, for appellant, Tecumseh Gas Storage Limited.

W. B. Williston, Q.C., and J. A. Campion, for respondent, Township of Dawn.

T. H. Wickett, for Ontario Energy Board.

The judgment of the Court was delivered by

KEITH, J.:-- Pursuant to leave granted by this Court on November 24, 1975, upon application made in accordance with s. 95(1) of the Ontario Municipal Board Act, R.S.O. 1970, c. 323, the following questions are submitted to this Court for its opinion:

(a) Is section 4.2.3. of By-law 40 of the Township of Dawn as amended, ultra vires of the respondent municipality

(b) Is the Ontario Municipal Board therefore without jurisdiction to approve the respondent's By-law 40 as amended including section 4.2.3. thereof

The Township of Dawn in the County of Lambton, a rural agricultural township in south western Ontario, passed its first comprehensive zoning by-law on June 18, 1973 (By-law 40), and amending By-law 52 on September 3, 1974.

These two by-laws came before the Ontario Municipal Board on April 16 and 24, 1975, for approval. In addition to the parties appearing in this Court, two other parties interested in the effect of these by-laws were represented at the Municipal Board hearings, but the Ontario Energy Board, one of the most vitally interested parties, inexplicably was not.

The relevant sections of the by-law, as amended, read as follows:

1.1 Section 1 -- Introduction

Whereas the Council has authority to regulate the use and nature of land, buildings and structures in the Township of Dawn by by-law subject to the approval of the Ontario Municipal Board and deems it advisable to do so.

1.2 Now therefore the Council of the Corporation of the Township of Dawn enacts as follows:

Title

2.1 This by-law shall be known as the "Zoning By-law" of the Township of Dawn.

Penalty

3.3.1. Every person who contravenes by-law is guilty of an offence and liable upon conviction to fine of not more than three hundred (300) dollars for each offence, exclusive of costs. Every such fine is recoverable under the Summary Convictions Act, all the provisions of which apply except that the imprisonment may be for a term of not more than twenty-one (21) days.

3.3.2. Where a person, guilty of an offence under this by-law has been directed to remedy any violation and is in default of doing such matter or thing required, then such matter or thing may be done at his expense, by the Corporation of the Township of Dawn and the Corporation may recover the expense incurred in doing it by action or the

same may be recovered in like manner as municipal taxes.

Section 4 -- General Use and Zone Regulations

4.1 Uses Permitted.

4.1.1. No land, building or structure shall be used or occupied and no building or structure or part thereof shall be erected or altered except as permitted by the provisions of this by-law.

4.2.3 Except as limited herein nothing in this by-law shall prevent the use of any land as a right-of-way, easement or corridor for any oil, gas, brine or other liquid product pipeline and appurtenances thereto, but no appurtenances in the form of a metering, booster, dryer, stipper or pumping station, shall be constructed closer than 500 feet to any adjacent residential or commercial zone or rural residence, except as otherwise provided. All transmission pipelines to be installed from or to a production, treatment or storage site shall be constructed from or to such site to and along, in or upon a right-of-way, easement or corridor located as follows:

(a) running northerly or southerly within 100 feet perpendicular distance from the centre line dividing the east and west halves of a concession lot;

(b) running easterly and westerly within 100 feet perpendicular distance from a concession lot line not being a township, county or provincial road or highway;

(c) across, but not along a township, county or provincial road or highway.

Nothing herein shall prevent the location of a local distribution gas service line upon any street, road or highway.

On May 20, 1975, the Ontario Municipal Board released its decision approving of By-law 40 as amended. The reasons are devoted almost exclusively to s. 4.2.3 as amended and the objections of the appellants thereto. To fully understand the approach taken by the Municipal Board, the following extracts from these reasons are quoted [4 O.M.B.R. 462 at pp. 463-6]:

The Township consists of flat agricultural land with soil rated in the Canada Land Survey as A2. The Board was advised by the representative of the Ministry of Agriculture and Food that the soil is of the Brookstone clay type which requires particular attention to drainage because the land is so flat and that this was the reason it was rated A2 rather than A1. The soil is very productive if properly drained and worked. As drainage is installed the soil responds to cash crops such as corn and soya beans. Drainage is accomplished generally by a grid system of tile drainage lines approximately 40 ft. apart throughout the whole of the Township. These feed into municipal drains which generally follow lot and concession lines and eventually drain to the south-west into the Sydenham River. An example of this method of drainage in the Township is shown on ex. 9, filed. This also indicates the position of the Union Gas Company pipeline which runs in a diagonal direction across the tile drains referred to above. Because the pipeline runs across the drains, a header line is required to direct the flow of the water into the municipal drain.

The evidence indicates that in respect of the pipeline installation on a right of way that may be 60 ft. wide or more, and the header line parallel to it, the farmer in using his equipment must gear down each time before crossing these installations rather than continuing in the usual sweep of the farm land. This time-consuming and inconvenient operation is necessary every time the farmer crosses the pipeline easement area. In addition, the evidence clearly indicated that upon excavation for the pipeline, the soil composition is disturbed and impacted so that growth is hampered for several years until the soil is returned to its normal state. The company indicated in evidence that a new method for laying lines and conserving the topsoil for future development had been devised. This may alleviate the problems, but only time will tell.

. . . . .

The Union Gas Limited (hereinafter to be referred to as

"the Company") operates in the south-west part of the Province and has important connections with Consumers Gas Company of Toronto and other systems for whom it stores gas in the summer months for delivery in the winter. The relationship of the Union Gas Limited operation to other systems in the Province are well illustrated on ex. 33, filed. The hub of their system is in Dawn Township from which all the distribution and transmission lines radiate. The importance of the Company to the municipality is illustrated by ex. 26 filed, which shows that for the years 1970 to 1974 inclusive, the Company paid taxes which formed a significant portion of the total Township levy varying from 24.3% to 30.6% in those years.

The by-law provides that transmission lines are to be laid in corridors 200 ft. wide running along the half lot lines in a north-south direction and along concession lines in an east-west direction, "across but not along a township, county or provincial road or highway", s. 4.2.3.

This corridor concept was the chief source of objection registered by the Company which in evidence indicated that the corridor method of laying their lines would be very costly. This was particularly so when some of the existing lines are now laid in a diagonal direction. When new looping lines are required they are now planned to run generally parallel to the existing lines. If they were to follow the corridors the length of line would be increased, in some cases the diameter of the pipe would have to be greater, and perhaps they might also require additional compression facilities. The additional costs were shown to be large and would result in increased costs to the public.

The Board must weigh the possibility of incurring these increased costs against the need for protecting the farm industry against unnecessary and unplanned disturbance in future years. There was ample evidence to indicate that the need for pipeline installations would increase in the future. There was also evidence to indicate that about 50% of the existing lines are already built in a north-south and east-west direction and that the corridor concept has therefore in fact found practical use in the past (exs. 7 and 27). It was the argument of counsel for the applicant that once the corridors were established the extra cost for looping will not be as significant.

Argument of counsel for the Tecumseh Gas Storage Limited was that the use of land for pipelines was not in fact a use of land as envisaged under s. 35(1)1 of the Planning Act, R.S.O. 1970, c. 349. To bolster this argument counsel referred the Board to the case of Pickering Twp. v. Godfrey, [1958] O.R. 429, 14 D.L.R. (2d) 520, [1958] O.W.N. 230. The Board finds that the instant case can be distinguished from the quoted case which dealt specifically with the making of a quarry or gravel pit as a "land use". In addition, the Board finds that the use of land for installation of a pipeline fits the definition arrived at in the case above quoted [at p. 437] as meaning: "the employment of the property for enjoyment, revenue or profit without in any way otherwise diminishing or impairing the property itself."

The second major argument of counsel was that the municipality has no jurisdiction to deal with pipeline installation because of the existence of the Ontario Energy Board Act, R.S.O. 1970, c. 312, which creates the Ontario Energy Board and gives it jurisdiction to determine the route for a transmission line, production line, distribution line or a station (s. 40(1)). The Board was also referred to s. 57 of the Ontario Energy Board Act which reads as follows:

"57(1) In the event of conflict between this Act and any other general or special Act, this Act prevails.

(2) This Act and the regulations prevail over any by-law passed by a municipality."

In the opinion of the Board the above section provides only for the event of a conflict between the Ontario Energy Board Act and any other Act. It does not, nor can it be interpreted to mean that no other Act can be effective. It does not in the opinion of the Board prohibit the municipality from dealing with those matters referred to in s. 35 of the Planning Act.

The major considerations of the Ontario Energy Board are not directed towards planning. It is the responsibility and

duty of Council to plan for the proper and orderly development of the municipality having regard to the health, safety, convenience and welfare of the present and future inhabitants of the municipality all within the framework of the Planning Act.

The Board is of the opinion that zoning by-laws must provide for all ratepayers a degree of certainty for reasonable stability. This can be accomplished by passing restricted area by-laws for land use on a planning basis with proper and responsible study and public input. The evidence indicates that the municipality has indeed acted in a reasonable and responsible manner to achieve this end. The consideration for the farming community which forms a large proportion of the municipality is a proper and reasonable one. There is no certainty as to where the Ontario Energy Board may finally decide to place the pipelines required by the criteria they have and will develop. They will, however, have the legislative document before them giving the corporate expression of the municipality to indicate where, on the basis of planning considerations, the pipelines should go. The Ontario Energy Board will then, on the basis of its criteria and the evidence heard, be in a position to give its decision on the ultimate route chosen.

In the meantime, the municipality will by legislation inform all its ratepayers where the pipelines should be laid. The farmer will be able to proceed with the least amount of interference both during construction of pipelines on or near his lands and indeed in his everyday work. The pipeline companies will benefit from this as well. With less interference to the farmer there should be fewer difficulties experienced both in the installation of the pipelines and the servicing and maintenance of the pipelines and the tile drain systems.

By-law 40 as amended was enacted by the Council of the respondent in accordance with the powers given to municipal councils by s. 35 of the Planning Act, R.S.O. 1970, c. 349. The relevant portions of that section read as follows:

35(1) By-laws may be passed by the councils of municipalities:

1. For prohibiting the use of land, for or except for such purposes as may be set out in the by-law within the municipality or within any defined area or areas or abutting on any defined highway or part of a highway.

2. For prohibiting the erection or use of buildings or structures for or except for such purposes as may be set out in the by-law within the municipality or within any defined area or areas or upon land abutting on any defined highway or part of a highway.

Section 46 of the Planning Act is identical with s. 57(1) of the Ontario Energy Board Act, R.S.O. 1970, c. 312, quoted in the reasons of the Ontario Municipal Board. Fortunately, s. 46 of the Planning Act has no equivalent to s. 57(2) of the Ontario Energy Board Act or the Court might well have been forced to assert that its views prevailed over one or other or both of the statutes.

The appellant Union Gas operates an extensive network of natural gas transmission lines throughout south-western Ontario delivering this energy to customers, both wholesale and retail, extending from Windsor on the south-west, to Hamilton and Trafalgar on the east and Goderich and Owen Sound on the north.

It supplies scores of city, town and village municipalities in this extensive and heavily-populated area and its lines traverse 16 counties which contain upwards of 140 township municipalities. The municipal councils of each of these has the same power under the Planning Act to pass zoning by-laws.

The principal source of the supply of natural gas to Union Gas is the Trans-Canada pipeline which enters the southern part of Ontario in Lambton County just south of Sarnia and connects with a major compressor station of Union Gas in the Township of Dawn. There are four other major compressor stations operated by this appellant, one just west of London, another at Trafalgar between Hamilton and Toronto, one near Simcoe and the fourth south of Chatham. These stations are essential to maintain pressure throughout the pipeline network.

In addition, Union Gas lines serve as feeders for companies

like the Consumers' Gas Company serving Metropolitan Toronto and another extensive area of Ontario.

In addition, a significant portion of the source of natural gas transmitted by Union Gas, comes from local wells found in south-western Ontario, a number of which are located in the Township of Dawn.

The company also maintains reserves of gas in natural underground storage fields, some but by no means all of which are also located in the Township of Dawn.

The local wells and the storage fields must all be connected to the distribution lines and the compressor stations.

The second appellant, Tecumseh Gas Storage Limited, is equally affected by the impugned by-law, but no detailed description of its operations was presented to the Court.

I have stressed these points to illustrate firstly how insignificant are the local problems of the Township of Dawn when viewed in the perspective of the need for energy to be supplied to those millions of residents of Ontario beyond the township borders, and to call to mind the potential not only for chaos but the total frustration of any plan to serve this need if by reason of powers vested in each and every municipality by the Planning Act, each municipality were able to enact by-laws controlling gas transmission lines to suit what might be conceived to be local wishes. We were informed that other township councils have only delayed enacting their own by-laws pending the outcome of this appeal.

At the conclusion of the argument of this appeal I informed counsel, on behalf of the Court, that the Appeal Book had been endorsed as follows:

> The appeal will be allowed with costs. In view of the importance of the issue, which is raised in this appeal insofar as it relates specifically to the Energy Board's jurisdiction as challenged by a municipal council, and in deference to the lengthy reasons delivered by the Ontario Municipal Board, the Court will in due course, deliver considered reasons which will be the basis of the formal order of the Court.

It is not necessary for my purpose to trace the history and origins of the present Ontario Energy Board Act as amended. Reference to s. 58 of the present Act will suffice to show that this industry has developed over many years under provincial legislation. Section 58 reads as follows:

> 58. Every order and decision made under,
>
> (a) The Fuel Supply Act, being chapter 152 of the Revised Statutes of Ontario, 1950;
>
> (b) The Natural Gas Conservation Act, being chapter 251 of the Revised Statutes of Ontario, 1950;
>
> (c) The Well Drillers Act, being chapter 423 of the Revised Statutes of Ontario, 1950;
>
> (d) The Ontario Fuel Board Act, 1954;
>
> (e) The Ontario Energy Board Act, 1960;
>
> (f) The Ontario Energy Act, being chapter 271 of the Revised Statutes of Ontario, 1960; or
>
> (g) The Ontario Energy Board Act, 1964.
>
> that were in force on the day the Revised Statutes of Ontario, 1970 is proclaimed in force shall be deemed to have been made by the Board under this Act.

Pursuant to s. 2 [am. 1973, c. 55, s. 2] of the Act, the Ontario Energy Board is composed of not less than five members appointed by the Lieutenant-Governor in Council. It has an official seal, and its orders which must be judicially noticed are not subject to the Regulations Act, R.S.O. 1970, c. 410.

By s. 14, many of the powers of the Supreme Court of Ontario are vested in this Board "for the due exercise of its jurisdiction".

Section 18 is important having regard to the penalty

provisions of the township by-law quoted above. That section reads as follows:

> 18. An order of the Board is a good and sufficient defence to any action or other proceeding brought or taken against any person in so far as the act or omission that is the subject of such action or other proceeding is in accordance with the order.

Section 19 [am. 1973, c. 55, s. 5(1)] vests power in the Board to fix rates and other charges for the sale, transmission, distribution and storage of natural gas.

Under s. 23 [am. ibid., s. 8] the Board is charged with responsibility to issue permits to drill gas wells.

Section 25 prohibits any company in the business of transmitting, distributing or storing gas from disposing of its plant by sale or otherwise without leave, and such leave cannot be granted without, inter alia, a public hearing.

Section 30 provides that any order of the Board may be filed with the Registrar of the Supreme Court and is enforceable in the same way as a judgment or order of the Court.

Part II of the Act deals specifically with pipe lines and I quote s. 38(1), s. 39, s. 40(1), (2), (3), (8), (9) and (10), s. 41(1) and (3), and s. 43(1) and (3):

> 38(1) No person shall construct a transmission line without first obtaining from the Board an order granting leave to construct the transmission line.
>
> . . . . .
>
> 39. Any person may, before he constructs a production line, distribution line or station, apply to the Board for an order granting leave to construct the production line, distribution line or station.
>
> 40(1) An applicant for an order granting leave to construct a transmission line, production line, distribution line or a station shall file with his application a map showing the general location of the proposed line or station and the municipalities, highways, railways, utility lines and navigable waters through, under, over, upon or across which the proposed line is to pass.
>
> (2) Notice of the application shall be given by the applicant in such manner as the Board directs and shall be given to the Department of Agriculture and Food, the Department of Municipal Affairs, the Department of Highways and such persons as the Board may direct.
>
> (3) Where an interested person desires to make objection to the application, such objection shall be given in writing to the applicant and filed with the Board within fourteen days after the giving of notice of the application and shall set forth the grounds upon which such objection is based.
>
> . . . . .
>
> (8) Where after the hearing the Board is of the opinion that the construction of the proposed line or station is in the public interest, it may make an order granting leave to construct the line or station.
>
> (9) Leave to construct the line or station shall not be granted until the applicant satisfies the Board that it has offered or will offer to each landowner an agreement in a form approved by the Board.
>
> (10) Any person to whom the Board has granted leave to construct a line or station, his officers, employees and agents, may enter into or upon any land at the intended location of any part of the line or station and may make such surveys and examinations as are necessary for fixing the site of the line or station, and, failing agreement, any damages resulting therefrom shall be determined in the manner provided in section 42.
>
> 41(1) Any person who has leave to construct a line or station under this Part or a predecessor of this Part may apply to the Board for authority to expropriate land for the purposes of the line or station, and the Board shall

thereupon set a date for the hearing of such application, and such date shall be not fewer than fourteen days after the date of the application, and upon such application the applicant shall file with the Board a plan and description of the land required, together with the names of all persons having an apparent interest in the land.

. . . . .

(3) Where after the hearing the Board is of the opinion that the expropriation of the land is in the public interest, it may make an order authorizing the applicant to expropriate the land.

. . . . .

43(1) Any person who has leave to construct a line may apply to the Board for authority to construct it upon, under

or over a highway, utility line or ditch.

. . . . .

(3) Without any other leave and notwithstanding any other Act, where after the hearing the Board is of the opinion that the construction of the line upon, under or over a highway, utility line or ditch, as the case may be, is in the public interest, it may make an order authorizing the applicant so to do upon such terms and conditions as it considers proper.

Finally, with respect to the statute itself, it may not be amiss to again quote s. 57:

57(1) In the event of conflict between this Act and any other general or special Act, this Act prevails.

(2) This Act and the regulations prevail over any by-law passed by a municipality.

In my view this statute makes it crystal clear that all matters relating to or incidental to the production, distribution, transmission or storage of natural gas, including the setting of rates, location of lines and appurtenances, expropriation of necessary lands and easements, are under the exclusive jurisdiction of the Ontario Energy Board and are not subject to legislative authority by municipal councils under the Planning Act.

These are all matters that are to be considered in the light of the general public interest and not local or parochial interests. The words "in the public interest" which appear, for example, in s. 40(8), s. 41(3) and s. 43(3), which I have quoted, would seem to leave no room for doubt that it is the broad public interest that must be served. In this connection it will be recalled that s. 40(1) speaks of the requirement for filing a general location of proposed lines or stations showing "the municipalities, highways, railways, utility lines and navigable waters through, under, over, upon or across which the proposed line is to pass".

Persons affected must be given notice of any application for an order of the Energy Board and full provision is made for objections to be considered and public hearings held.

In the final analysis, however, it is the Energy Board that is charged with the responsibility of making a decision and issuing an order "in the public interest".

While the result in the case of Campbell-Bennett Ltd. v. Comstock Midwestern Ltd. and Trans Mountain Oil Pipe Line Co., [1954] S.C.R. 207, [1954] 3 D.L.R. 481, 71 C.R.T.C. 291, might perhaps be different today, having regard to the facts of that case and subsequent federal legislation, the principles enunciated are valid and applicable to the case before this Court.

In the Campbell-Bennett case, the defendant Trans Mountain Pipe Line was incorporated by a special Act of the Parliament of Canada to construct interprovincial pipe lines. During the course of construction of a pipe line from Acheson, Alberta to Burnaby, British Columbia, some work was done in British Columbia by the plaintiff for which it claimed to be entitled to a mechanics' lien on the works in British Columbia, and to enforce that lien under the British Columbia Mechanics' Lien Act by seizing and selling a portion of the pipe line.

At p. 212 S.C.R., p. 486 D.L.R., Kerwin, J. (as he then was), on behalf of himself and Fauteux, J. (as he then was), said:

> The result of an order for the sale of that part of Trans Mountain's oil pipe line in the County of Yale would be to break up and sell the pipe line piecemeal, and a provincial legislature may not legally authorize such a result.

Then at pp. 213-5 S.C.R., pp. 487-9 D.L.R., Rand, J., on behalf of himself and the other three members of the Court, said:

> The respondent, Trans Mountain Oil Pipe Line Company, was incorporated by Dominion statute, 15 Geo. VI, c. 93. It was invested with all the "powers, privileges and immunities conferred by" and, except as to provisions contained in the statute which conflicted with them, was made subject to all the "limitations, liabilities and provisions of any general legislation relating to pipe lines for the transportation of oil" enacted by Parliament. Within that framework, it was empowered to construct or otherwise acquire, operate and maintain interprovincial and international pipe lines with all their appurtenances and accessories for the transportation of oil.
>
> The Pipe Lines Act, R.S.C. 1952, c. 211, enacted originally in 1949, is general legislation regulating oil and gas pipe lines and is applicable to the company. By its provisions the company may take land or other property necessary for the construction, operation or maintenance of its pipe lines, may transport oil and may fix tools therefor. The location of its lines must be approved by the Board of Transport Commissioners and its powers of expropriation are those provided by the Railway Act. By s. 38 the Board may declare a company to be a common carrier of oil and all matters relating to traffic, tools or tariffs become subject to its regulation. S. 10 provides that a company shall not sell or otherwise dispose of any part of its company pipe line, that is, its line held subject to the authority of Parliament, nor purchase any pipe line for oil transportation purposes, nor enter into any agreement for amalgamation, nor abandon the operation of a company line, without leave of the Board; and generally the undertaking is placed under the Board's regulatory control.
>
> Is such a company pipe line so far amenable to provincial law as to subject it to statutory mechanics' liens The line here extends from a point in Alberta to Burnaby in British Columbia. That it is a work and undertaking within the exclusive jurisdiction of Parliament is now past controversy: Winner v. S.M.T. (Eastern) Limited, [1951] S.C.R. 887, affirmed, with a modification not material to this question, by the Judicial Committee but as yet unreported. The lien claimed is confined to that portion of the line within the County of Yale, British Columbia. What is proposed is that a lien attaches to that portion of the right of way on which the work is done, however small it may be, or wherever it may be situated, and that the land may be sold to realize the claim. In other words, an interprovincial or international work of this nature can be disposed of by piecemeal sale to different persons and its undertaking thus effectually dismembered.
>
> In the light of the statutory provisions creating and governing the company and its undertaking, it would seem to be sufficient to state such consequences to answer the proposition. The undertaking is one and entire and only with the approval of the Board can the whole or, I should say, a severable unit, be transferred or the operation abandoned. Apart from any question of Dominion or Provincial powers and in the absence of clear statutory authority, there could be no such destruction by means of any mode of execution or its equivalent. From the earliest appearance of such questions it has been pointed out that the creation of a public service corporation commits a public franchise only to those named and that a sale under execution of property to which the franchise is annexed, since it cannot carry with it the franchise, is incompatible with the purpose of the statute and incompetent under the general law. Statutory provisions, such as s. 152 of the Railway Act, R.S.C. (1952) c. 234, have modified the application of the rule, but the sale contemplated by s. 10 of the Pipe Lines Act is sale by the company, not one arising under the provisions of law and in a proceeding in invitum. The general principle was stated by Sir Hugh M. Cairns, L.J. in Gardner v. London, Chatham and

Dover Railway (1867), L.R. 2 Ch. 201 at p. 212:--

"When Parliament, acting for the public interest, authorizes the construction and maintenance of a railway, both as a highway for the public, and as a road on which the company may themselves become carriers of passengers and goods, it confers powers and imposes duties and responsibilities of the largest and most important kind, and it confers and imposes them upon the company which Parliament has before it, and upon no other body of persons. These powers must be executed and these duties discharged by the company. They cannot be delegated or transferred."

In the same judgment and speaking of the effect of an authorized mortgage of the "undertaking" he said:--

"The living and going concern thus created by the Legislature must not, under a contract pledging it as security, be destroyed, broken up, or annihilated. The tolls and sums of money ejusdem generis--that is to say, the earnings of the undertaking--must be made available to satisfy the mortgage; but, in my opinion, the mortgagees cannot; under their mortgages, or as mortgagees--by seizing, or calling on this Court to seize, the capital, or the lands, or the proceeds of sales of land, or the stock of the undertaking--either prevent its completion, or reduce it into its original elements when it has been completed."

Several further and compelling submissions were made to the Court on behalf of the appellants, but having regard to the first submission which is irresistible and of fundamental importance, I do not think it necessary to deal with all of the arguments advanced.

Reference should be made, however, to two of them. First, attention should be directed to "An Act to regulate the Exploration and Drilling for, and the Production and Storage of Oil and Gas", 1971 (Ont.), c. 94, commonly referred to as the Petroleum Resources Act.

The objects of this legislation can be readily understood by reference to s. 17(1) of the statute, which reads as follows:

17(1) The Lieutenant Governor in Council may make regulations,

(a) for the conservation of oil or gas;

(b) prescribing areas where drilling for oil or gas is prohibited;

(c) prescribing the terms and conditions of oil and gas production leases and gas storage leases or any part thereof, excluding those relating to Crown lands, and providing for the making of statements or reports thereon;

(d) regulating the location and spacing of wells;

(e) providing for the establishment and designation of spacing units and regulating the location of wells in spacing units and requiring the joining of the various interests within a spacing unit or pool;

(f) prescribing the methods, equipment and materials to be used in boring, drilling, completing, servicing, plugging or operating wells;

(g) requiring operators to preserve and furnish to the Department drilling and production samples and cores;

(h) requiring operators to furnish to the Department reports, returns and other information;

(i) requiring dry or unplugged wells to be plugged or replugged, and prescribing the methods, equipment and materials to be used in plugging or replugging wells;

(j) regulating the use of wells and the use of the

subsurface for the disposal of brine produced in association with oil and gas drilling and production operations.

The importance of this Act is reflected in s. 18 which reads as follows:

18(1) In the event of conflict between this Act and any

other general or special Act, this Act, subject only to The Ontario Energy Board Act [1964], prevails.

(2) This Act and the regulations prevail over any municipal by-law.

Similarly, although it was not referred to in argument, the Energy Act, R.S.O. 1970, c. 148 [since repealed by 1971, Vol. 2, c. 44, s. 32, and superseded by the Energy Act, 1971, and the Petroleum Resources Act, 1971], deals with other aspects of the natural gas and oil industry. The objects of the legislation are set out in s. 12(1) which I need not quote, but again s. 13 of this Act is identical in its wording to s. 18 of the Petroleum Resources Act, 1971, quoted above.

The second of the additional submissions to which reference should be made is based on a cardinal rule for the interpretation of statutes and expressed in the maxim generalia specialibus non derogant. For a discussion of the effect of this rule I will only refer to the case of City of Ottawa v. Town of Eastview et al., [1941] S.C.R. 448 commencing at p. 461 [1941] 4 D.L.R. 65 at p. 75, 53 C.R.T.C. 193, and to the Dictionary of English Law (Earl Jowitt), at p. 862.

In the case before this Court, it is clear that the Legislature intended to vest in the Ontario Energy Board the widest powers to control the supply and distribution of natural gas to the people of Ontario "in the public interest" and hence must be classified as special legislation.

The Planning Act, on the other hand, is of a general nature and the powers granted to municipalities to legislate with respect to land use under s. 35 of that Act must always be read as being subject to special legislation such as in contained, for example, in the Ontario Energy Board Act, the Energy Act and the Petroleum Resources Act, 1971.

In the result, therefore, and in response to the questions with respect to which leave to appeal was granted, this Court

certifies to the Ontario Municipal Board:

(a) Section 4.2.3. of By-law 40 as amended, of the Township of Dawn is ultra vires the said municipality, and

(b) The Ontario Municipal Board therefore is without jurisdiction to approve the said by-law as amended in its present form by reason of section 4.2.3. thereof.

This Court further certifies that should the Ontario Municipal Board see fit to exercise the powers vested in it by s. 87 of the Ontario Municipal Board Act, the said By-law 40, as amended, may be approved after deleting from s. 4.2.3. the words "Except as limited herein" at the commencement of the said section and all the words after the word "thereto" in the fourth line of the said by-law as printed down to and including the words "road or highway" in subcl. (c) of the said s. 4.2.3., so that s. 4.2.3. as so approved would read:

Nothing in this by-law shall prevent the use of any land as a right-of-way, easement or corridor for any oil, gas, brine or other liquid product pipeline and appurtenances thereto.

Nothing herein shall prevent the location of a local distribution gas service line upon any street, road or highway.

The appellants and the Ontario Energy Board are entitled to their costs of this appeal.

Appeal allowed.

Re **Upper Thames River Conservation Authority** and City of London et al.

67 O.R. (2d) 784
[1989] O.J. No. 393
Action No. 6917/88
ONTARIO

District Court of Ontario
Killeen D.C.J.
February 20, 1989.

APPLICATION for an order rescinding a building permit.

R.G. Inglis, for applicant.

J. Hoffer, for respondent, Nella Soufan.

J. Barber, for respondents, City of London and Rocky Cerminara, Chief Building Official for City of London.

KILLEEN D.C.J.:-- The applicant, Upper Thames River Conservation Authority (hereinafter called the Authority), brings this application to obtain an order under s. 15 of the Building Code Act, R.S.O. 1980, c. 51, rescinding a building permit issued by one Rocky Cerminara, the chief building officer for the City of London.

The respondent, Nella Soufan, is the owner of properties at 1 High St. and 6 Front St. in London. On January 19, 1987, she purchased these properties for a total price of $200,000. At the time of purchase, 1 High St. was a "duplex" and 6 Front St. a "fourplex" and they were used for both residential and office purposes.

In mid-April, 1988, Mrs. Soufan decided to start major renovations on the interiors of both buildings aimed at converting 1 High St. from a duplex into a fourplex and 6 Front St. into a sixplex. This work would have meant that the living units in the two buildings would increase from six units to 10 units and, as well, there would have been upward adjustments in space to be utilized for commercial purposes: see Mrs. Soufan's record, tabs D. and R. It would seem that Mrs. Soufan planned to spend at least $75,000 on such renovation work based on later information filed with the city official in July.

Unfortunately, Mrs. Soufan embarked on this renovation work without obtaining building permits from the city, as she clearly should have, and her problems were accentuated by reason of the unusual location of her properties.

Both of her properties are located near the Thames River and unquestionably fall within an area over which the Authority has environmental control powers by virtue of the Conservation Authorities Act, R.S.O. 1980, c. 85 (hereinafter called C.A.A.), and, more especially, O. Reg. 171/88 under which the Authority has regulatory powers over the floodplain within the Authority's defined geographic area of jurisdiction. Section 3 of O. Reg. 171/88 reads, in part, as follows:

> 3. No person shall,
>
> (a) construct any building or permit any building to be constructed in or on a pond or swamp or in any area susceptible to flooding during a regional storm;
>
> . . . . .
>
> except in accordance with a permission issued under section 4.

It is conceded that the subject properties are both within an area susceptible to flooding during a regional storm; as such, construction -- whatever that term may mean -- is prohibited without the permission of the Authority.

In late April, members of the Authority's staff became aware of the fact that Mrs. Soufan was proceeding apace with her renovations and a letter was written to her advising of the requirements and strictures contained in O. Reg. 171/88. At about the same time, the London building department seems to have been galvanized into action as well. As early as April 26, 1988, a building inspector had attended at the site and issued

orders for each property requiring Mrs. Soufan to obtain building permits forthwith. Mrs. Soufan seems to have been determined, at this early stage at least, to stonewall both the Authority and the city building inspectors because she continued with her work without making any hint of compliance with O. Reg. 171/88 or the local building by-law. Finally, on May 3rd, the building department issued stop-work orders against both properties and this step appears to have halted work on site.

On June 7th, Mrs. Soufan filed a formal application with the Authority seeking a "Consent to Construct" under the C.A.A. and O. Reg. 171/88. Shortly after, on July 4th, Mrs. Soufan finally got around to making formal application to the City of London for the issuance of building permits for the renovation work at both properties.

These various applications follow tortuous paths over the next several months and it is necessary to describe them. The "Consent to Construct" application of Mrs. Soufan went, first, to a body within the Authority known as the Water Management Advisory Board. This body conducted a hearing on June 23rd and quickly recommended that Mrs. Soufan's application be granted. This favourable recommendation did not, however, end Mrs. Soufan's problems with the Authority. The application then went, as it was required to do, to the executive committee of the Authority and the executive committee decided to overturn the recommendation and direct a full-dress hearing on the consent question under s. 28(3) of the C.A.A. This latter hearing went forward on August 11th with Mrs. Soufan appearing as a party to the proceeding. By letter to Mrs. Soufan, dated August 15th, the executive committee confirmed its overturning of the recommendation of the lower body in the Authority hierarchy and refused approval of the application. Paragraph 2 of this letter sets out the reasons for the refusal in the following language:

> The Committee resolved to deny the Application as submitted. In the opinion of the Authority, the reconstruction and renovation of the two existing structures would substantially increase the potential for property damage due to flooding. The area proposed for development is within the Floodway (defined as the area below the 1:100 Year Flood Elevation) of the Thames River where Provincial and Conservation Authority floodplain management policies generally prohibit building or filling.

Following this adverse decision, Mrs. Soufan elected to appeal the decision of the executive committee, under s. 28(5) of the C.A.A., to the Minister of Natural Resources. This appeal which, by practice is heard by the Mining and Lands Commissioner, is now pending.

Mrs. Soufan's roughly contemporaneous attempt to obtain relief at the city level -- through her building permit applications -- met with different results. She had learned as far back as May 3rd that the renovation work would have led to results in contravention of the applicable zoning by-law. Accordingly, she made an application to the local committee of adjustment for a minor variance permitting the planned changes in the interior of her properties. On June 13th, following a hearing on June 6th, the committee of adjustment released its decision in which it granted the minor variance, thereby permitting her to do the renovations she had already, in fact, embarked upon in April, subject to the issuance of building permits.

While the record before me is not clear on everything that Mrs. Soufan did after the favourable committee of adjustment decision, it is clear that she, or someone on her behalf, brought her difficulties with the Authority to the attention of the London municipal council. She had applied for building permits to Mr. Cerminara on July 4th. At its meeting of September 19th the council decided to pass a resolution, after an apparently spirited debate, directing Mr. Cerminara to issue the required building permits to Mrs. Soufan on condition that she save harmless the city from any claims arising from their issuance. This step was taken in the teeth of a joint memorandum signed by the city administrator and city solicitor, advising against the issuance of permits because of Mrs. Soufan's possible violation of the O. Reg. 171/88. This memorandum says, in part:

> Mayor and Members
> City Council

Re: Deferred Matter No. 1 --
September 19, 1988 Council Meeting
1 and 3 High Street -- Soufan and UTRCA

This letter is being submitted as a result of numerous inquiries regarding the position of the Civic Administration on the above matter.

The Civic Administration is of the opinion that, having regard to the circumstances, there is greater justification for not issuing a building permit than there is for issuing one, for the following reasons:

1. In the absence of the Authority's permission, the construction in question allegedly contravenes the floodway regulations, a situation which technically prevents the Chief Building Official from issuing a permit. This is not a case of oversight by the owner in failing to get the Authority's permission; the owner actually sought but was refused permission ...

The upshot was that Mr. Cerminara issued building permits on October 14th. Then followed this application by the Authority under the Building Code Act seeking an order setting aside the issuance of such permits. As I have said, the Authority seeks its relief under s. 15 of the Building Code Act. The relevant provisions of s. 15 are s-ss. (1) and (3):

15(1) Any person who considers himself aggrieved by an order given or decision made by an inspector or chief official under this Act or the regulations may, within twenty days after the order or decision is made, apply to the judge of the county or district court for a hearing and appeal.

. . . . .

(3) Where an application is made to a judge for a hearing under subsection (1), the judge shall appoint a time for and hold the hearing and may rescind or affirm the order or decision of the inspector or chief official or take such action as the judge considers the inspector or chief official ought to take in accordance with this Act and the regulations, and for such purposes the judge may substitute his opinion for that of the inspector or chief official.

All counsel acknowledge that the Authority falls into the category of an "aggrieved" person within s. 15(1) of the Act. Of course, this concession of responding counsel -- Mr. Hoffer for Mrs. Soufan and Mr. Barber for the city -- is subject to their common position that, on the facts of this case, the issuance of the building permits was perfectly proper and lawful.

Put in a nutshell, Mr. Inglis' argument for the applicant Authority is grounded on an interpretation of the language of s. 28(1)(e) of the C.A.A. which reads this way:

28(1) Subject to the approval of the Lieutenant Governor in Council, an authority may make regulations applicable in the area under its jurisdiction,

. . . . .

(e) prohibiting or regulating or requiring the permission of the authority for the construction of any building or structure in or on a pond or swamp or in any area susceptible to flooding during a regional storm, and defining regional storms for the purposes of such regulations;

His position may, I think, be fairly summarized as flowing from a set of propositions:

(1) First, he submits that the renovation work carried on and to be carried on by Mrs. Soufan falls within the plain meaning of the term "construction" as employed in this section.

(2) Because Mrs. Soufan's work is caught by this section, she was required to obtain the Authority's consent for it under O. Reg. 171/88.

(3) Her failure to obtain such consent means that her work to date and in the future would be unlawful activity, as being contrary to the combined effect of the C.A.A. and O. Reg. 171/88.

(4) Her work also falls within the meaning of the term

"construct" as used in s. 5(1) of the Building Code Act.

(5) Finally, as a consequence of all of the above, the London council should not have ordered, and Mr. Cerminara should not have issued, building permits for Mrs. Soufan because s. 6(1)(a) of the Building Code Act requires a chief building officer not to issue a building permit if the proposed work will contravene any other applicable law.

This syllogistic-like argument of Mr. Inglis is challenged vigorously by counsel for Mrs. Soufan and the City of London. They argue, essentially, that the position of the Authority must fail because internal renovations of the kind contemplated by Mrs. Soufan do not fall within the reach of the terms "construction", "construct" and "building", as used in the C.A.A. and O. Reg. 171/88. If they do not, then, of course, the chief building officer issued his building permits lawfully and it cannot be said that the permits "... contravene any other applicable law ..." within s. 6(1)(a) of the Building Code Act.

Counsel for the respondents provide four supporting propositions for their central argument:

(1) Permission is only required from the Authority where a fresh building or, perhaps, an addition to an existing building is to be constructed.

(2) O. Reg. 171/88, read contextually, clearly cannot apply to internal renovations.

(3) The term "construction" as used in the C.A.A. must be interpreted within the context of that Act and not by reference to the definition section of the Building Code Act, an Act with different purposes.

(4) The terms "construction", "construct" and "building", as used variously in the C.A.A. and its subsidiary regulation, O. Reg. 171/88, should be strictly construed where their application could deprive an owner of proprietary rights or, alternatively, where they might have penal consequences.

In approaching the somewhat complex questions raised by counsel in this case, one must, I think, start with an analysis of the key provisions of the relevant statutes and regulation. The C.A.A. was first enacted by S.O. 1946, c. 11. It is a relatively early example, in Ontario, of an attempt at environmental protection legislation. The full title of the original C.A.A. gives some idea of what it was attempting to achieve:

> An Act to provide for the Establishment of Conservation Authorities for the purposes of the Conservation, Restoration and Development of Natural Resources, other than Gas, Oil, Coal and Minerals and for the Prevention of Floods and of Water Pollution.

Generally speaking, the C.A.A. called for procedures whereby its objects would be implemented by local entities known as "conservation authorities". These local authorities would be responsible, within a designated region embracing two or more municipalities, for the development of a "scheme" aimed, broadly, at protecting the natural resources of the watershed within the defined territorial jurisdiction of the various local authorities set up across Ontario. The present applicant Authority was, of course, one of the authorities so created under the C.A.A.

While the original C.A.A., in s. 13, defined the powers of the local authorities -- ranging from the power to study and investigate the watershed to the power to purchase, lease or even expropriate lands -- it did not address the power to oversee the construction of buildings on the watershed. Indeed, s. 16, which was the precursor of the present s. 28 of the C.A.A., restricted an authority's power to pass regulations to largely internal matters such as the conduct of meetings, the powers of officers and so on.

Inevitably, the 1946 Act underwent many changes down through the years. The Conservation Authorities Act, R.S.O. 1960, c. 62 replaced old s. 16 with an enlarged s. 20. By s. 20 the authorities were given greatly increased powers to pass regulations aimed at the broader objects of their existence. However, while s. 20(1)(d) enabled an authority to pass regulations prohibiting or regulating the placing or dumping of fill, it did not mention any regulatory power over construction projects on floodplain lands. Section 20(2)(b) went on to

provide that such regulations "... shall not interfere with any rights or powers conferred upon a municipality ...".

By the Conservation Authorities Amendment Act, S.O. 1961-62, c. 16, the regulation of "construction", in addition to fill, was first introduced into the C.A.A. The relevant provision reads as follows:

> 9. Clause d of subsection 1 of section 20 of The Conservation Authorities Act is repealed and the following substituted therefor:
>
> (d) prohibiting or regulating the construction of any building or structure, or the placing or dumping of fill of any kind, in or on a pond or swamp or in any area below the high-water mark of a lake, river, creek or stream.

Then, in the following year, another amendment was introduced which had the effect of providing separate clauses for the subjects of fill and construction regulation (S.O. 1962-63, c. 20):

> 4(1) Clause d of subsection 1 of section 20 of The Conservation Authorities Act, as re-enacted by section 9 of The Conservation Authorities Amendment Act, 1961-62, is repealed and the following substituted therefor:
>
> (d) prohibiting or regulating the construction of any building or structure in or on a pond or swamp or in any area below the high-water mark of a lake, river, creek or stream;
>
> (e) prohibiting or regulating the placing or dumping of fill of any kind in any defined part of the area over which the authority has jurisdiction in which in the opinion of the authority the control of flooding or pollution or the conservation of land may be affected by the placing or dumping of fill.

The first regulation of significance under the Act was O. Reg. 139/61, effective on July 1, 1961. This regulation gave the Authority the power to control the placing or dumping of fill on floodplain lands and called for a special application procedure if someone wished to obtain permission to place or dump fill. After the passage of the two amendments to the C.A.A. which gave the Authority powers of approval over construction work, O. Reg. 322/64 was passed as a replacement for O. Reg. 139/61. New O. Reg. 322/64 followed the principle of the statutory amendments and set up a regulatory scheme for construction work and the placing or dumping of fill on the floodplain: s. 3 purported to prohibit such work but the following sections -- ss. 4 to 7 -- then went on to set up an "application" procedure under which an interested person could apply to the Authority for permission to carry out construction or fill work. This application procedure is substantially the same as the procedure outlined in present O. Reg. 171/88, although later amendments to the predecessor to present s. 28 of the C.A.A. fleshed out this procedure by making it mandatory that the Authority hold hearings in certain cases and also allowing an applicant to appeal to the Minister if an application were refused by the executive committee of the Authority.

Two final points should be made about the course of the changes to the C.A.A. through the years. First, while old s. 20(2)(b) expressly stated that regulations passed under the C.A.A. could not interfere with any rights or powers conferred upon a municipality, present s. 28(2)(b) substantially narrowed the earlier provision by providing that such regulations could not "... interfere with any rights or powers conferred upon a municipality in respect of the use of water for municipal purposes, ...". Second, it is to be noted that no version of the C.A.A. including the present one, has ever attempted to define such critically important terms of present s. 28 as "construction", "building" and "structure". Equally, present O. Reg. 171/88 and its predecessors, do not define the terms, "construction", or "construct" although s. 1 of the Regulation defines "building" as meaning "... a building or structure of any kind; ...".

As I have said, the C.A.A. has undergone many changes through the years to make it a more effective and comprehensive piece of environmental legislation. Section 28 is an example of one of the changed provisions and was obviously aimed at permitting the enactment, by Authorities, of regulations which would enable them to implement their powers in a manner consistent with the objectives of the statute itself.

For the purposes of this case, the relevant provision of s. 28 is s. 28(1)(e), already quoted above. This rather sparse provision is the only one which purports to give a local Authority any sort of control over construction projects, of whatever kind, on floodplain lands. The critical enabling language in the paragraph is that which empowers the enactment of regulations "... prohibiting or regulating or requiring the permission of the authority for the construction of any building or structure ...". Rather remarkably, nowhere in this section, or elsewhere in the C.A.A., is there a special definition section or other provision, which attempts to define the intended scope or sweep of this paragraph. Was it intended, for example, to permit regulations only dealing with the construction of new buildings or structures or, alternatively, would it also permit regulations controlling both additions to existing buildings and internal construction work, of whatever kind, in existing buildings?

By contrast, the Building Code Act enacted to permit municipalities to exercise control over construction projects within their boundaries, contains much more specific guidance. Section 5(1) contains a broad controlling provision phrased this way:

> 5(1) No person shall construct or demolish or cause to be constructed or demolished a building in a municipality unless a permit has been issued therefor by the chief official.

But s. 1(1), a definition section, adds flesh and blood to s. 5 by providing the following important definitional content for the words "construct" and "construction":

> (e) "construct" means to do anything in the erection, installation or extension or material alteration or repair of a building and includes the installation of a building unit fabricated or moved from elsewhere, and "construction" has a corresponding meaning;

This definition makes it abundantly clear that building permits are called for not only in the case of construction of new buildings but, also, for internal repairs and renovations of a material character.

Leaving aside the difficulties with s. 28(1)(e) of the C.A.A. itself, one is also faced with the compounding factor of O. Reg. 171/88, enacted under the enabling powers of s. 28(1)(e). Regardless of the reach, or lack of reach, of s. 28(1)(e), one must decide, as an almost discrete problem, how far O. Reg. 171/88 has gone with the regulatory powers contemplated by s. 28(1)(e) of the parent C.A.A.

The relevant portions of O. Reg. 171/88 are these:

> 3. No person shall,
>
> (a) construct any building or permit any building to be constructed in or on a pond or swamp or in any area susceptible to flooding during a regional storm;
>
> . . . . .
>
> 4. Subject to the Ontario Water Resources Act or to any private interest, the Authority may permit, in writing, the construction of any building or the placing or dumping of fill or the straightening, changing, diverting or interfering with the existing channel of a river, creek, stream or watercourse to which section 3 applies, if, in the opinion of the Authority, the site of the building or the placing or dumping and the method of construction or placing or dumping or the straightening, changing, diverting or interfering with the existing channel will not affect the control of flooding or pollution or the conservation of land.
>
> 5(1) A signed application for permission to construct a building must be filed with the Authority and include,
>
> (a) four copies of a plan of the property showing the proposed location of the building, its elevation and the proposed final grade plan;
>
> (b) four copies of a complete description of the type of building to be constructed, including drainage details;
>
> (c) four copies of a statement of the dates between which the construction will be carried out; and

> (d) four copies of a statement of the proposed use of the building following completion of the construction.

Similarly to the C.A.A., the Regulation fails to define the critical term "construct" although s. 1 does define the terms "building or structure" as meaning "... building or structure of any kind ...".

I turn now to the meaning to be given to the terms "construction" and "building" as those terms are used in s. 28(1)(e) of the C.A.A. If, of course, this provision does not encompass internal renovations within an existing building, most clearly and, a fortiori, subordinate O. Reg. 171/88 cannot reach internal renovations because the regulation would be ultra vires to that extent: after all, a subordinate regulation cannot override and over-reach its parent statute.

Section 28(1)(e) of the C.A.A. purports to regulate "... the construction of any building or structure ..." on floodplain lands. The critical terms, "construction", "building" and "structure" are, as I have said, left undefined.

As it seems to me, this enabling language must be given its plain and ordinary grammatical meaning. I have examined the context of the C.A.A. as a whole and the provisions of prior versions of the statute back to 1946 and can find no hint that any other approach is justifiable. Professor Driedger, in his seminal study, Construction of Statutes, 2nd ed. (1983), has described the modern general principle of statutory construction this way at p. 87:

> Today there is only one principle or approach, namely, the words of an Act are to be read in their entire context and in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament.

An example of this great principle in the modern cases may be found in the following passage from the judgment of Lord Atkinson in City of Victoria v. Bishop of Vancouver Island (1921), 59 D.L.R. 399 at p. 402, [1921] 3 W.W.R. 214, [1921] A.C. 384 at p. 387:

> In the construction of statutes their words must be interpreted in their ordinary grammatical sense, unless there be something in the context, or in the object of the statute in which they occur, or in the circumstances with reference to which they are used, to show that they were used in a special sense different from their ordinary grammatical sense.

Considered in the light of this principle, can, then, the language of s. 28(1)(e) support an interpretation which allows the Authority to control internal renovations in an existing building? The Shorter Oxford English Dictionary, 3rd ed. (1973), p. 408, provides, inter alia, the following definitions of "construction":

> 1. The action of framing, devising, or forming, by the putting together of parts; erection, building; ... 2. The manner in which a thing is constructed or formed; structure ... 3. A thing constructed ...

The verb "construct" is similarly defined: "1. To make or form by fitting the parts together; to frame, build, erect ...". At p. 249, "building" is defined this way: "2. That which is built; a structure, edifice ...". Finally, "structure" is defined at p. 2156:

> 1. The action, practice or process of building or construction ... 2. Manner of building or construction; the way in which an edifice, machine, etc. is made or put together ... 3. The mutual relation of the constituent parts or elements of a whole as determining its peculiar nature or character ... 4. That which is built or constructed; a building or edifice of any kind, esp. one of considerable size and imposing appearance ... 6. An organized body or combination of mutually connected and dependent parts or elements ...

To me these definitions, and similar ones in other dictionaries, state expressly or, by implication, that, in ordinary parlance, the terms in question embrace work aimed at the erection of some complete structure or edifice, of whatever kind, and not work aimed at the mere renovation of such an

existing structure.

Section 28(1)(e) talks of regulations "... for the construction of a building ...". I do not see how this simple, unambiguous language can be tortured or stretched to include internal repair and renovation work within an existing building.

It is not, I think, uninstructive to consider here what the legislature did, in defining the term "construct", in the Building Code Act. There, the legislative draftsman obviously felt that it would be foolhardy to leave the term undefined as it was used in s. 5(1) of the Act. Hence, the definition section of that Act, s. 1, broadly defined "construct" to make it clear that building permits were required not only for the construction of new buildings but, also, the "... material alteration or repair of a building ...".

Mr. Inglis raised essentially two major points in aid of his central submission that O. Reg. 171/88 should catch Mrs. Soufan's work, namely, (1) that it would be illogical and inappropriate to give the terms "construction" and "construct", as used in the C.A.A. and O. Reg. 171/88, different and narrower meanings from those set forth in the Building Code Act and (2) that, in any event, they were broad enough to embrace renovations work. As to his first point, as I have said, the language of the Building Code Act will not support him. Plainly, there, the legislature chose to particularize the definitional content of these terms and, in effect, enlarge upon their ordinary meanings by reference to the special definition contained in s. 1. In support of his second point Mr. Inglis relied upon the case of Dawson Creek v. Lougheed, [1959] 19 D.L.R. (2d) 249 (B.C.C.A.). There, the question was whether s. 711(c) of the British Columbia Municipal Act, R.S.B.C. 1979, c. 290, which purported to regulate the "... construction of buildings ..." for fire-protection purposes, was restricted to the construction of new buildings only or included the power to regulate additions and alterations to existing buildings. The court held that the language was, in fact, broad enough to include the proposed additions and alterations. However, it is plain that the court gave this broad interpretation to the subsection by examining the context within which it was included. Coady J.A, at pp. 251-2, carefully tied his holding to introductory language of the section and an immediately preceding subsection:

Section 711 of the Municipal Act, 1957 (B.C.), c. 42, reads as follows:

"711. The Council may, for the health, safety, and protection of persons and property, and subject to the 'Health Act' and the 'Fire Marshal Act' and the regulations made thereunder, by by-law [am. 1958, c. 32, s. 314(a)]:

"(a) Regulate the construction, alteration, repair or demolition of buildings and structures:

"(c) Establish areas to be known as 'fire limit' and regulate the construction of buildings in each of such areas in respect of precautions against the danger of fire, and discriminate and differentiate between the areas as to the character of the buildings permitted in each of them."

. . . . .

The opening words of s. 711 seem to me to indicate a clear intention of the Legislature to authorize municipalities to enact by-laws for the health, safety and protection of persons and property. The authority therefore to fix fire limits and provide for Regulations with respect to the construction of buildings within a fire area or fire areas must be read and interpreted having reference to the opening words of s. 711. It would seem strange indeed that the Legislature intended to restrict municipalities, when fire areas are established, to the regulation of construction of buildings only, and not to the regulation of additions to present buildings or alterations thereto. It is clear that building by-laws adopted by municipalities pursuant to s. 711 may regulate additions to or alterations of present buildings, and I see no particular reason why the phrase "construction of buildings" as appears in s. 711(c), should be restricted only to what in effect would be the construction of new buildings. The meaning to be assigned to the word "construction", s. 711(c), must be related to the context. When read with the context, and more particularly

> the opening words of s. 711, it seems clear to me that the word "construction" in s. 711(c) should be taken to include reconstruction, addition and alteration, and should not be interpreted so as to confine it to the construction of a new building only: see Craies on Statute Law, 5th ed., pp. 93-4.

Obviously, in that case, Coady J.A., concluded that the interpretation urged by the landowner appellant would have led to an absurd result and one which was inconsistent with the contextual setting of the subsection.

> That case is not this case. I find nothing in s. 28 of the C.A.A. -- or for that matter anywhere else in the Act -- to indicate that the legislature intended the Authority to exercise powers over renovations within an existing building on the floodplain.

> In coming to this conclusion, I am deeply conscious, as well, of the direction to judges embarking upon statutory construction contained in s. 10 of the Interpretation Act, R.S.O. 1980, c. 219:

> 10. Every Act shall be deemed to be remedial, whether its immediate purport is to direct the doing of any thing that the Legislature deems to be for the public good or to prevent or punish the doing of any thing that it deems to be contrary to the public good, and shall accordingly receive such fair, large and liberal construction and interpretation as will best ensure the attainment of the object of the Act according to its true intent, meaning and spirit.

This statutory commandment, which seems first to have been enacted in 1849 (S.C. 1849 (12 Vict.), c. 10) has long been ignored or explained away by generations of lawyers and judges in Ontario and, indeed, elsewhere in Canada. The record of studied indifference is well diagrammed in Professor Eric Tucker's brilliant essay, "The Gospel of Statutory Rules Requiring Liberal Interpretation According to St. Peter's" (1985), 35 U.T.L.J. 113.

> Recently, the Ontario Court of Appeal attempted to resuscitate s. 10 in the case of Re Trustees of St. Peter's Evangelical Lutheran Church and City of Ottawa (1980), 30 O.R. (2d) 740, 118 D.L.R. (3d) 528, 14 M.P.L.R. 51 (Ont.C.A.). MacKinnon A.C.J.O., for the court, said this about the court's approach to the interpretation of the Ontario Heritage Act, S.O. 1974, c. 122, at p. 741:

> We are of the view that the matter really comes to a narrow compass on the particular and peculiar facts of this case. It should be said at the opening that the object and purpose of the Ontario Heritage Act, 1974 (Ont.), c. 122, is clear. It is to preserve and conserve for the citizens of this country, inter alia, properties of historical and architectural importance. The Act is a remedial one and should be given a fair and liberal interpretation to achieve those public purposes which I have recited.

While MacKinnon A.C.J.O. does not say he is applying s. 10 in express terms, it seems clear that his words are a paraphrase of it and that he must have intended to apply it.

> The actual decision of the trial and appellate courts in the St. Peter's case was reversed by the Supreme Court of Canada but, as I read the judgment of the Supreme Court, it does not disavow the view of MacKinnon A.C.J.O. that a judge must take a liberal and purposive approach to a statute if, at least, it is obviously remedial. What the Supreme Court added, however, as a sort of cautionary footnote to s. 10, was that it cannot be used to eviscerate the plain and obvious meaning of a statutory provision which does no violence or mischief to the complete statutory edifice and objects. McIntyre J., for the majority, said this (140 D.L.R. (3d) 577 at p. 593, [1982] 2 S.C.R. 616 at pp. 623-4, 20 M.P.L.R. 121):

> The Ontario courts have adopted the approach dictated by s. 10 of the Interpretation Act and they have construed the statute in the purposive manner. In this they have given effect fully to the avowed purpose of The Ontario Heritage Act, 1974. Accepting the approach so taken, I am not of the view, however, that in an effort to give effect to what is taken to be the purpose of the statute it is open to the court of construction to disregard certain provisions of the Act. The whole Act must be construed. It must be construed to give effect to the purpose above described but also to have regard for many provisions of the Act, particularly ss. 34

and 67, the purpose of which is to protect the interests of the landowner concerned. To ignore these provisions, or to read them down to where they are deprived of any real significance, is not to construe the statute but to decline to assign any meaning to certain of the words that were used by the Legislature.

I have approached my interpretation of s. 28(1)(e) in the spirit of s. 10 of the Interpretation Act but I cannot conclude that it assists the Authority. The term "construction", as used in the statutory language, cannot bear the burden of the enlarged meaning ascribed to it by counsel for the Authority whether considered alone, contextually or within the objects of the Act. There is simply no evidence in a dictionary, common parlance, or the broad framework of the Act leading to the conclusion that the environmental objects of the Act will be defeated if the Authority does not have control over internal renovations of an existing building.

In the event I might be wrong in my interpretation of s. 28(1)(e), I feel I should also move on to consider the effect of O . Reg. 171/88. Here, of course, I am assuming -- against my own holding -- that s. 28(1)(e) of the C.A.A. does empower the Authority to enact a regulation under which it could regulate not only fresh construction but, also, renovations.

The inherent fragility of the Authority's position is, I think, accentuated by an examination of O. Reg. 171/88. The combined effect of ss. 3 and 4 of the Regulation, quoted above, is to prevent the construction of any kind of building in a floodplain without the permission of the Authority and the permission is to be granted only if the Authority is satisfied the site of the building and method of construction "... will not affect the control of flooding or pollution or the conservation of land ...".

The difficulty with this language is that it is narrower than the language of s. 28(1)(e) of the C.A.A. Note that s. 4 of the Regulation speaks of "the construction of any building" (emphasis added), and later mentions "the site of the building". This phraseology surely seems directed to the fresh construction of some kind of complete discrete entity and not internal renovations, however sized.

Section 5(1) continues this theme by reference to the procedure contemplated for an application for permission to construct a building. This subsection tells the applicant about the written materials he must supply to support his request for a permit from the Authority. Section 5(1)(a) requires "... four copies of a plan of the property showing the proposed location of the building, ..."; s. 5(1)(b) calls for "... four copies of a complete description of the type of building to be constructed ..."; s. 4(d) calls for "... four copies of a statement of the proposed use of the building ...". If this Regulation were intended to cover renovations of any kind, I would have thought that the provisions of s. 1, containing a definition of "building", s. 3 describing the scope of construction work covered and, more especially, s. 5, specifying the materials to be filed in support of a permit, would have been phrased far differently then they are.

In short, assuming the Authority could have enacted a regulation under C.A.A. to control internal renovations or repairs to any existing building, I do not consider that this regulation was crafted to achieve that result. What it does do is control the actual construction of any building, that is, any type of structure from, perhaps, a pup tent to a skyscraper but it does not control renovations within an existing structure at all.

I consider that all the points taken by counsel are subsumed in my interpretative conclusions on the meaning of the relevant provision of the C.A.A. and O. Reg. 171/88. In the result, the application must be dismissed because the issuance of building permits to Mrs. Soufan did not contravene the C.A.A. or its subordinate Regulation, O. Reg. 171/88.

Unless I hear from any counsel within 10 days indicating a desire to argue the question of costs, I feel the applicant Authority should pay the party-and-party costs of the City of London and Mrs. Soufan forthwith after assessment.

Application dismissed.

Re **Vanderschot et al. and Township of North Easthope** et al.

24 O.R. (3d) 286
[1995] O.J. No. 4820

Ontario Court (General Division), Divisional Court
White, Moldaver and McDermid JJ.
June 20, 1995

STATED CASE pursuant to s. 94 of the Ontario Municipal Board Act, R.S.O. 1990, c. O.28.

Raymond G. Colautti and Paul J. Courey, for applicants.

Michael E. Mitchell and Michael A. Jaeger, for respondents.

C.D. Johnston, for Attorney General of Canada.

No one appearing for Attorney General of Ontario.

BY THE COURT: -- This stated case arises from a proceeding before the Ontario Municipal Board and is referred to this court under s. 94 of the Ontario Municipal Board Act, R.S.O. 1990, c. O.28. The stated question is as follows:

> Are the following by-laws constitutionally valid and within the authority of the Township of North Easthope and the Township of Ellice; namely By-laws 2-94 and/or 26-94 of the Township of Ellice, By-laws 3-94 as amended by by-law 7-94 and/or 16-94 of the Township of North Easthope?

The applicants own land in the vicinity of the Stratford Airport. The by-laws in question seek to impose height restrictions on any new building or structure erected on land in a specified area surrounding the Airport. The applicants challenge the constitutional validity of the by-laws.

The history of the by-laws and the agreements between the townships and the Minister of Transport pursuant to s. 5.81 of the Aeronautics Act, R.S.C. 1985, c. A-2, are reviewed in the factums before us.

The pith and substance of these by-laws is the regulation of airspace by the imposition of height restrictions in respect of lands adjacent to airports, which is a subject-matter that falls within the exclusive legislative jurisdiction of the Parliament of Canada. Therefore, Interim Control By-law 2-94 of the Township of Ellice and Interim Control By-law 3-94 of the Township of North Easthope (as amended by By-law 7-94), being passed pursuant to s. 38 of the Planning Act, R.S.O. 1990, c. P.13, a provincial statute, are ultra vires each township to the extent that they attempt to regulate airspace.

The second set of by-laws was passed by the townships pursuant to agreements entered into with the Minister of Transport under s. 5.81 of the Aeronautics Act and both have been registered in accordance with the provisions of the Statutory Instruments Act, R.S.C. 1985, c. S-22, s. 5. The applicants submit with respect to these by-laws that:

1. interim control by-laws made pursuant to s. 38 of the Planning Act cannot validly impose height restrictions because they deal with a subject matter that falls within the exclusive legislative jurisdiction of Parliament; and

2. because Article 2.01 of each agreement with the Minister of Transport permits the Townships to pass interim control by-laws only "in the same manner and to the same extent as it may pass an interim control by-law respecting the use of land", it follows that interim control by-laws passed by the Townships pursuant to their agreements with the Minister of Transport cannot impose height restrictions.

Section 5.81(1) of the Aeronautics Act, R.S.C. 1985, c. A-2, reads as follows:

> 5.81(1) The Minister may enter into an agreement with a provincial authority to authorize the provincial authority to regulate, in the same manner and to the same extent as it may

> regulate the use of lands within its jurisdiction, the use of lands adjacent to or in the vicinity of an airport or airport site that are not the subject of regulations made pursuant to subsection 5.4(2), for the purpose of ensuring that the use is not incompatible with the safe operation of an airport or aircraft.

The "conditional authorization" contained in para. 2.01 of the agreement between Her Majesty the Queen in Right of Canada, represented by the Minister of Transport, and the respective municipalities reads as follows:

> 2.01 The Minister authorizes the Township to pass an interim control by-law, in the same manner and to the same extent as it may pass an interim control by-law respecting the use of lands within its jurisdiction, respecting the use of lands adjacent to or in the vicinity of the Stratford Municipal Airport for the purpose of ensuring that that use is not incompatible
>
> with the safe operation of an airport or aircraft, on condition that such by-law is carried out in compliance with the terms of this agreement.

In our opinion, s. 5.81 of the Aeronautics Act does not purport to enlarge the powers granted by the provincial legislature to municipalities in s. 38 of the Planning Act, but rather purports to allow a provincial authority (in this case a municipality), to exercise a power in relation to a subject-matter that falls within the exclusive legislative jurisdiction of the Parliament of Canada. Paragraph 2.01 of the agreement simply gives the municipality the authority to exercise that federal power in accordance with the procedural requirements and temporal restrictions contained in s. 38 of the Planning Act. In passing the interim control by-laws in question, the municipalities were not exercising provincial powers under s. 38 of the Planning Act, but rather the delegated federal power under the Aeronautics Act. However, they were required to exercise the delegated federal power as if they were passing an interim control by-law under s. 38.

The words "in the same manner" refer to the procedural requirements of s. 38. The words "to the same extent" refer to the temporal restrictions of s. 38, i.e., under s. 38(1) of the Planning Act an interim control by-law shall not be in effect for a period exceeding one year from the date of its passage, but pursuant to s. 38(2) of the Act it may be extended provided that the total period during which it is in effect does not exceed two years from the date it was passed.

Accordingly, we are unable to accept the applicants' position on this issue.

The applicants also submit that Parliament cannot delegate powers to a municipality and that a municipality lacks the capacity to receive delegated powers to legislate with respect to a matter within the exclusive legislative jurisdiction of Parliament.

The position of the respondents and the Attorney General for Canada is that although Parliament cannot delegate its powers to a provincial legislature (because it would alter the division of powers set out in ss. 91 and 92 of the Constitution Act, 1867), it may delegate its powers to a municipality. They rely in part on the following portion of the judgment of Stevenson J. in R. v. Furtney, [1991] 3 S.C.R. 89 at p. 104, 8 C.R.R. (2d) 160:

> I agree with Driedger in "The Interaction of Federal and Provincial Laws" (1976), 54 Can. Bar Rev. 695, when he concludes that inter-delegation is constitutionally impermissible because there is a constitutional prohibition founded upon the granting of exclusive powers to the Parliament on the one hand, and the provincial legislatures on the other.
>
> The prohibition is against delegation to a legislature. There is no prohibition against delegating to any other body . . .

Therefore, we conclude that there is no impediment to Parliament delegating to the townships the power to pass by-laws that impose height regulations in order to regulate airspace around an airport and we agree that Parliament has the

power to delegate that power to the townships in the instant case.

The next question is whether the townships had the capacity to receive the delegated power to legislate with respect to a matter within the exclusive legislative jurisdiction of Parliament.

The applicants' position on this issue is that:

1. a municipality is a creature of the provincial legislature and can exercise only those powers conferred upon it by that legislature; and

2. a municipality cannot stand in a higher position than the body that confers powers upon it (the provincial legislature), when it comes to receiving delegated powers from Parliament that purport to give it the power to legislate in relation to a subject-matter within the exclusive legislative jurisdiction of Parliament; and

3. the provincial legislature has not bestowed upon the townships expressly or impliedly the power to receive the delegated federal power to regulate height under the Aeronautics Act.

Anomalous as it may seem, it is our opinion that, following the above-quoted principle in Furtney, once a municipal corporation is created, there is no bar to its receiving and exercising the powers delegated by Parliament in the circumstances before us. In Furtney, the Lieutenant Governor does not appear to have been authorized to receive the delegated federal power but was found to have the capacity to receive it. Also, we adopt the following passage from E.A. Driedger, Q.C., "The Interaction of Federal and Interprovincial Laws" (1976), 54 Can. Bar Rev. 695, at pp. 700-01:

> If Parliament cannot delegate to a legislature, it does not follow that Parliament cannot delegate to a provincial board. The provincial board is not the legislature or an agent of the legislature. The corporation of the city of Ottawa is not the legislature of Ontario or an agent of the legislature, and there is no reason why Parliament could not, for example, delegate power to the city of Ottawa to regulate navigation on the Rideau Canal within city limits; that the legislatures have exclusive jurisdiction and control over municipal institutions is irrelevant. The legislature could not control or direct the exercise of this federal power. Legislatures can speak only by statutes and if in the example cited the legislature were to attempt by statute to regulate the exercise of this legislative power received from Parliament, that statute would be ultra vires as being in relation to federal property or navigation or shipping.

The proposition was also advanced that even if Parliament can delegate federal power to a municipality, before the municipality can exercise the delegated power, it must have been authorized by the provincial legislature that created it to do so. The question then becomes, "Did the Ontario Legislature, either expressly or by necessary implication, bestow upon the Townships the right to enter into the agreements in question with the Minister of Transport and to accept and exercise these delegated powers?"

We believe that s. 2 of the Airports Act, R.S.O. 1990, c. A.15, provides a complete answer to that question. It reads as follows:

> 2(1) The Crown in right of Ontario, represented by the Minister, may enter into agreements with the Government of Canada, any municipality, corporation or individual, or any one or more of them, with respect to any matter in relation
>
> to the acquisition, establishment, extension, improvement, construction, operation, or maintenance of airports to serve any one or more areas in Ontario, and the Minister may provide funds to the municipality, corporation or individual for such purposes.
>
> (2) Any municipality may enter into agreements under subsection (1).

The section specifically gives a municipality the power to enter into an agreement with the Government of Canada "with

respect to any matter in relation to the acquisition, establishment, extension, improvement, construction, operation, or maintenance of airports to serve any one or more areas in Ontario". The enumerated matters are broad enough to encompass the agreements in question. The express powers granted to municipalities by s. 2 of the Airports Act, must fairly be implied to carry with them the ancillary power to accept and exercise delegated federal powers and to pass such by-laws as are necessary to give full effect to agreements between the municipalities and the Government of Canada relating to the enumerated matters.

Therefore, in passing the second set of by-laws, the townships were not exercising powers within the exclusive legislative jurisdiction of the provincial legislature. Rather, they were exercising federal powers validly delegated by Parliament that they were impliedly authorized by the Province of Ontario to receive.

The fact that the agreements between the Minister of Transport and the townships were not signed by the Minister is not fatal in light of s. 4.3(1) of the Aeronautics Act, which permits the Minister to authorize any person to exercise or perform any of his or her powers or duties. We are satisfied from paras. 15 and 16 and ex. "G" to the affidavit of Dean Broadfoot, sworn April 21, 1995, that the person who executed the agreements held the necessary authority and that they were validly executed on behalf of the Minister.

Accordingly, the answer to the stated case is that:

1. Interim Control By-law 2-94 of the Township of Ellice and Interim Control By-law 3-94 of the Township of North Easthope (as amended by By-law 7- 94), being passed pursuant to s. 38 of the Planning Act, R.S.O.

   1990, c. P.13, a provincial statute, are ultra vires each Township to the extent that they attempt to regulate airspace.

2. Interim control By-law 26-94 of the Township of Ellice, and Interim control by-law 16-94 of the Township of Easthope are constitutionally valid and intra vires said Townships.

The applicants shall pay the costs of this stated case to the respondents fixed in the amount of $4,500.

Order accordingly.

Walker v. Kingston (City)

Between
John Walker, Applicant, and
Corporation of the City of Kingston, Respondent

[1991] O.J. No. 1193
DRS 93-02730
Action No. M2217/90

Also reported at:
6 M.P.L.R. (2d) 316

Ontario Court of Justice - General Division
Kingston, Ontario
Campbell J.
Heard: May 24, 1991
Judgment: July 5, 1991

Harvey M. Rosen, for the Applicant.
Norman C. Jackson, for the Respondent.

CAMPBELL J.:-- This is an application by one John Walker for the reinstating of a building permit issued by the City of Kingston on June 7th, 1990. The permit was revoked by the Chief Building Official on August 13th, 1990. The permit had been issued on plans submitted by the applicant and in particular on the strength of his earlier filed letter of February 23rd, 1990, reading as follows:

> "This letter is my confirmation that the existing building at 1 Couper Street is being used as a two- family dwelling and that there are only two dwelling units in the building."

The subject premises comprise what has been described as a duplex at premises municipally known as 1 and 1A Couper Street on the north side of that street. Following the issue of the permit the applicant commenced construction by excavating and installing all or part of the foundation materials but by the time of the revocation of the permit that work had not proceeded above ground level. Since the revocation no further work has been performed on the property.

The City of Kingston zoning by-law 8499 was passed in the year 1975 and approved by the Ontario Municipal Board on September 7th, 1977. It has undergone sundry amendments since that time which have no bearing on the matter in issue on this application. The proposed construction consists of a substantial westerly addition adjoining the previously existing three storey six bedroom building. The addition is part two storey and part three storey. The plans for the addition involve some eight additional bedrooms, so labelled on the plans, with one bathroom and access to an existing kitchen in the original building. The third storey of the proposed addition involves a vacant area with eight foot ceilings and is merely described on the plans as "third floor area to be finished to living space in the future". This area measures between 1200 and 1300 square feet.

On July 16th, 1990, an Order to Comply was issued to the applicant requiring confirmation of "the use of the existing premises at 1 Couper Street to conform with zoning by-law 8499" and requiring plans "to show the purposes of the unfinished area on the third floor of the proposed addition". No satisfactory reply to these requirements was forthcoming from the applicant although through his solicitors the applicant stated that the existing premises were residential premises "currently rented to and occupied by six tenants" and stating that "there could be no plans prepared to show the purposes of the unfinished area on the third floor of the proposed addition". It is to be noted that amongst other things the plans show no provision for access to the third floor area. The Chief Building Official wrote to the applicant under date of August 8th, 1990, indicating and explaining continued concern for satisfactory information and warning of early revocation of the permit in supplement to the stop work order contained in the July 16th document. The revocation of the permit was communicated to the applicant by letter of the city's senior building inspector.

The Planning Act, 1983, statutes Ontario, 1983, chapter 1, by

its section 34(1) indicates that zoning by-laws may be passed by councils of local municipalities for prohibiting use of land other than for such specific purposes as may be set out in the by-law and prohibiting erecting, locating or using any buildings or structures for any other than such purposes. Provision is made for the designation of zones referable to such by-laws. The by-law designates the subject property as Zone A. The relevant provisions in by-law 8499 include certain definitions to which I shall briefly refer.

Section 1.2 provides for the prohibitions authorized by the Planning Act other than for uses as specified in the by-law.

By section 4.25 "dwelling unit means one or more rooms together with private lavatory accommodation and one kitchen and designed and/or used for exclusive residential occupancy by one family as defined in this by-law".

Section 4.27, "dwelling, two family: a building having independent exterior wall and containing only two dwelling units".

Section 4.36 defines "family" to mean

(a) one person occupying a dwelling unit, or

(b) this option (b) is of doubtful continuing force or effect since its prohibitions refer to relationships now barred by new section 34a of the Planning Act. The amendment to the Planning Act creating section 34a revokes any authority that may previously have existed to pass by-laws that distinguish between persons who are related and persons who are unrelated in respect of the occupancy of a building or structure and provides that a provision in any by-law that distinguishes between persons who are related and persons who are unrelated in respect of the occupancy of a building or structure ceases to have effect on the date this section goes into force, namely February 2nd, 1989.

Option (c) in the definition of "family" reads: "A group of not more than five unrelated persons occupying a dwelling unit."

In light of the statutory amendment in 1989 to which I have just referred I am reading down this provision in (c) by deleting the word "unrelated" so that (c) will now in effect read "a group of not more than five persons occupying a dwelling unit".

I cannot agree with counsel for the applicant that the effect of the 1989 amendment should result in the complete revocation of section 4.36 of the by-law.

Subsequent to the issue of the building permit it became known to the city building department and acknowledged by the applicant that the existing building was being occupied by six and sometimes more persons. this of course is in breach of the permissable use under (c) above quoted from the by-law.

This application has come to the court pursuant to section 15 of the Building Code Act, R.S.O. 1980, chapter 51, giving the court authority to rescind or affirm the order or decision of the inspector or chief official to take such action the court considers that the inspector or chief official ought to take in accordance with the Act and the regulations "and for such purposes the judge may substitute his opinion for that of the inspector or chief official". Section 6 of the Building Code Act requires that the chief official shall issue a permit except where the application is incomplete or where proposed building or construction will not comply with the Building Code Act "or will contravene any other applicable law". Subsection 4 of section 6 provides for revocation of a permit "where it was issued on mistaken or false information".

Section 8 of the Act provides that where an inspector finds that any provision of the Act is being contravened he may make an order in writing, as was done by the order of July 16th, directing compliance forthwith or within a reasonable time to rectify the perceived contravention.

Section 11 permits an inspector whether before or after the issue of the permit to require the production of drawings and specifications and to require relevant information relating to a building or part thereof.

Clearly on the evidence the assurance by the applicant in his letter of February 23rd, 1990, to which I have referred, that the original part of the building "is being used as a two family dwelling", in the light of the subsequently discovered breach by occupation by more than five persons, known to the applicant, must be regarded as "mistaken or false information" and constituted full authority for the making of the order to comply in that the continuation of the project would be noncompliance by reason of contravention of an applicable law, in this case the law as stated in the zoning by-law. The requirement for detailed plans of the unfinished large area in the third storey of the addition was and continues to be an authorized and necessary requirement. If the future plans for the third storey area were to involve the creation of a third self-contained dwelling unit this would of course be a prohibited use under the definition of "one-family dwelling" and "two-family dwelling" as permitted in the by-law. If on the other hand the space is to be used for a substantial number of individual rooms or say a common room this requirement would have to be viewed in the light of the existing plans for the proposed construction. The Chief Building Official and the inspectors in his department had full authority to make both requirements which formed the basis for the revocation of the permit. I find that the order to comply and the subsequent order of revocation of the permit were proper procedures in accordance with the Building Code Act. I confirm both orders and find no ground for substituting any opinion by me to the contrary.

The fact of the expenditures by the applicant for the preliminary subsurface work is irrelevant to this application.

The argument of counsel for the applicant that the matter should proceed without more in accordance with the filed plans and that prosecution and penalty for any future illegal use should be awaited would frustrate the intent and meaning of the by-law and cannot be sustained.

The application for reinstating the permit is dismissed.

The respondent will have its costs when assessed.

G. SUMMARY OF FINDINGS

H. CONCLUSIONS

RESERVED REASONS FOR JUDGMENT

J.W. QUINN J.:--

A. INTRODUCTION

[para1] This case involves guinea pigs, by-laws and a building permit. For approximately six years the applicants bred guinea pigs in a small, barn-like structure on their property. In 1996 the structure was destroyed by fire. The applicants were desirous of rebuilding. They unsuccessfully applied for a building permit from the respondent and now appeal to this court pursuant to s. 25(1) of the Building Code Act, 1992. [See Note 1 below]

Note 1: S. O. 1992, c. 23.

B. OVERVIEW

[para2] The applicants are husband and wife. They own real property ("Property") located in the Town of Lincoln. The Property, purchased in 1991, is in an area zoned for residential use. At the time of purchase, the Property contained a residence and one dilapidated outbuilding ("barn"). Although there is some dispute as to precisely when the respondent became aware that the applicants were breeding large numbers of guinea pigs on the Property, it is clear that this fact was known to municipal officials at least as early as August, 1992. At that time, the respondent received complaints from neighbours regarding various animals, including the guinea pigs, being kept on the Property but nothing was done to require the applicants to either cease or reduce their guinea pig breeding operation.

[para3] The applicant, Denise Walton ("Mrs. Walton") is a dedicated guinea pig fancier and bred these animals for show purposes. Customarily she would breed the guinea pigs in such a fashion as to produce approximately 125 each year. From that number she would keep thirty of the best specimens for herself and give away the rest. This scenario was repeated annually.

[para4] Subsequent to the purchase of the Property, the applicants renovated and enlarged the barn. They installed heat, insulation and air conditioning to facilitate their breeding operation. In 1996 the barn was destroyed by fire and 123 guinea pigs perished.

[para5] Mrs. Walton [See Note 2 below] applied to the respondent for a permit to rebuild the barn. She completed the usual application form, paid the required fee and was assigned a permit number. There is some dispute as to whether a permit was issued and subsequently revoked or whether the application was refused. Be that as it may, she was informed by the respondent that to reconstruct the barn for the purpose of its previous use contravened the governing zoning by-law.

Note 2: It appears that Mr. Walton did not, at any time, have contact with the respondent and is an applicant in these proceedings only because he is a joint owner of the Property.

C. THE ISSUES

[para6] Although the ultimate issue to be determined, of course, is whether the decision of the chief building official of the respondent was correct, there are four preliminary issues to be addressed:

1. Credibility.

2. When did the respondent first learn that the applicants were breeding large numbers of guinea pigs on the Property?

3. Did the chief building official of the respondent refuse to issue a building permit or did he issue, and then revoke, the permit?

4. What was the basis for the decision of the chief building official?

D. CHRONOLOGY OF EVENTS

[para7] I will summarize, by way of a chronology, the key events leading to these proceedings:

September, 1990 - Mrs. Walton, in the company of a friend, Kenneth Shank, attended at the offices of the respondent to inquire whether it would be permissible to raise guinea pigs on the Property which the applicants,

at that point, were contemplating purchasing. [See Note 3 below] Ernie Allan ("Allan"), a By-Law Enforcement Officer with the respondent, advised that such use was not contrary to any by-law. According to Mrs. Walton, Allan was aware that the applicants had in mind housing at least 100 guinea pigs. Allan maintains that he assumed the inquiry was as to keeping a small number of guinea pigs as pets. He denies any knowledge that the operation would reach the numbers attained. This conflict in the evidence will be

dealt with later in these Reasons.

Note 3: The property was zoned R3 under By-Law 78-85, which had been in force since 1978. The surrounding lands were zoned for existing residential use and future residential development.

1990 - The applicants made an offer to purchase the Property but apparently it was not accepted by the owner.

1991 - In preparation for making another offer to purchase the Property, Mrs. Walton maintains that she repeated the earlier inquiry of Allan and received the same favourable response.

September, 1991 - The purchase of the Property was completed and the applicants took possession. Guinea pigs immediately were housed in the existing barn and this continued up to the date of the fire.

November, 1991 - The respondent received its first complaint in respect of the Property. The complaint related to the keeping of ducks and geese. Allan attended at the Property and was advised by Mrs. Walton that she had two ducks (as pets for her terminally ill son) and since they were both male, "there would be no more." She also advised Allan that she kept a number of guinea pigs on the premises. As I understand the evidence, the number was not specified at that time.

August, 1992 - Allan received a further complaint that the number of animals on the property had increased to six ducks, twelve rabbits, two dogs and approximately 100 guinea pigs. He orally informed Mrs. Walton that she may have to get rid of the animals since their presence was contrary to the zoning by-law.

February 15th, 1993 - The respondent passed Town of Lincoln Comprehensive Zoning By-Law No. 93-14-Z1 ("new by-law"). It was not approved by the Ontario Municipal Board until 1995 when it replaced By-Law No. 78-85 ("old by-law").

March, 24th 1993 - The respondent received another complaint in respect of the number of animals kept on the Property. [See Note 4 below]

Note 4: Although the written records of the respondent do not reveal this fact, Allan alleges that the complaint included an objection to a foul odour emanating from a pile of manure stacked on the Property.

March 25th, 1993 - The respondent issued an Order to Comply in respect of the old by-law. The order read, in part:

> ... I have received further complaints about you having animals on your property.
>
> As I have stated in the past, this is contrary to the Zoning By-Law 78-85, as amended, Section 3.4(a)(xvii) [See Note 5 below] and I have enclosed a copy for your information.
>
> While I have been involved with this investigation for some time, at the beginning there were two ducks to deal with, but now information has
>
> come to my attention that there are other animals on the property at present.
>
> There is also a pile of manure on the property which adds to the problem.
>
> I have no alternative than to issue an order that the fowl and animals be removed from the property by Friday, April 30, 1993 ...
>
> The applicants requested the opportunity to address the respondent on the issue.

Note 5: This section reads:

> 3.4 Uses Prohibited
>
> (a) Notwithstanding anything contained herein, the following uses are prohibited in any zone:
>
> ...
>
> (xvii) keeping or raising of any bull, ox, cow, horse, sheep, goat, pig or other cattle, or any poultry, or any reptile or any wild animal including any tamed or domesticated wild animal, on any residential lot or in any building or structure on such lot, or on any lot or in any building or structure in an Urban Residential Zone.

April 7th, 1993 - Bram Radix ("Radix"), the chief building official [See Note 6 below] for the respondent, attended at the
>
> Property and noted the presence of the following animals: three ducks and a number of ducklings to be sold; nineteen miniature rabbits; five goats (two of which were scheduled to be sold); and 125 guinea pigs.

Note 6: The chief building official is so designated under

the Building Code Act, 1992.

April 19th, 1993 - The applicants attended a Council meeting of the respondent. The minutes of the meeting include the following passages:

> Mrs. Walton distributed packages to members of Council containing several letters of support for her keeping of the animals in question ... She agreed that she is in fact breaking the by-law as she has the noted number of animals ... She stated that her reason for having the ducks ... is that her son is dying of Kawasaki disease ... and the ducks were purchased as pets in order to help give him a goal to help him in his rehabilitation ... She advised that ... her son developed a severe allergy to cow's milk and now can only have goats milk ... [and] if forced to get rid of the goats, she would have no choice but to apply for welfare ... She advised that the cost of purchasing goat's milk from stores would be upwards of $10.00 per day which she cannot afford ... [She] then proposed to Council that if she can keep her 3 goats and the original 2 ducks, she would arrange to have the manure hauled away every week ...
>
> Mr. Radix ... confirmed the number of animals which were counted by him on the property on April 7th, 1993, being as follows: 3 ducks plus a number of ducklings to be sold; 19 rabbits; 5 goats, 2 of which are to be sold; and 125 guinea pigs.
>
> Mrs. Walton responded to the information noting that in October of 1990, she was given permission by the Town's By-law Enforcement Officer for the 2 ducks and guinea pigs. She referred to the guinea pigs [and] ... expressed the opinion that this is not a prohibited use in the by-law.
>
> The Chief Building Official ... noted that the By-law Enforcement Officer was asked if they could have some guinea pigs but that he did not envision a number such as 125. Members of Council questioned whether the guinea pigs would be a legal use. The Chief Building Official noted the definition in the zoning by-law and advised that staff are seeking a legal opinion with respect to the guinea pigs. There was a general discussion of the restrictions on animals in both By-law No. 78-85 and the new Zoning By-law No. 93-14-Z1 ...
>
> Members of Council then raised questions regarding the rabbits and guinea pigs. Mrs. Walton advised that she would go to court over the guinea pigs ...
>
> Opinion was then expressed by some members of Council that even if the owner got rid of the goats, over 100 animals would remain and this may not solve the problem ...
>
> Mrs. Edith Miller was granted leave to speak ... she is a neighbour ...

approximately 11 persons in the audience identified themselves as neighbours in agreement with Mrs. Miller ... Mrs. Miller stated that there has [sic] been problems with odours and flies in the spring and summer ... there were never problems prior to the Walton's animals ... Mrs. Miller advised that the neighbours did accept a compromise last year for 2 ducks and the goats only, but that the number of animals escalated to the current number anyway ...

There was discussion as to whether the by-law may even apply to the guinea pigs and the rabbits. There was discussion ... and opinion expressed that the number not the type is the issue ... Opinion was expressed that having one or two animals is different than this situation. It was noted that staff have been very compassionate and tried to resolve the issue ... but the issue has now expanded out of control ...

In the result, no decision was made to reduce the number, or restrict the keeping, of guinea pigs. Council upheld the Order to Comply.

May 6th, 1993 - The following letter was forwarded to the respondent by Reverend D. B. Brubacher: [See Note 7 below]

At the request of Mrs. Walton, I inspected [the Property] on ... May 5, 1993. I found no goats, ducks or any other animals prohibited by By-Law 78-85 [no.] xvii on the [P]roperty. The manure pile also has been removed. Three rabbits and the guinea pigs remained.

Note 7: Mrs. Walton, apparently, at this point, had refused to allow employees of the respondent to attend at the Property. Rev. Brubacher was enlisted as a "go-between" of sorts.

September, 1993 - The applicants were advised by the respondent of a complaint received from a neighbour regarding flies and an odour of manure. The complainant alleged that the applicants' barn contained 150 guinea pigs.

September 7th, 1993 - The Council of the respondent met. One of the topics discussed was whether the applicants' guinea pigs constituted a health problem. [See

Note 8 below]

Note 8: This court was never presented with evidence to support a finding that there was a health problem.

September 17th, 1993 - Radix prepared a memorandum for the mayor and members of council regarding the meeting of September 7th, 1993. It read, in part:

The minutes of this meeting reflect Council's request for a report from

the Chief Building Official to deal with the Town's legal ability to restrict guinea pigs ...

Presently certain types of animals including domesticated wild animals [See Note 9 below] are prohibited in residential zones. At the Council meeting of April 19, 1993, no decision was made to reduce the number or restrict the keeping of guinea pigs ...

Staff will ... investigate with the Solicitor the cost and viability of preparing an Animal Control By-Law.

Note 9: Guinea pigs are not considered to be wildlife.

September 17th, 1993 - Dr. June Mergl, a veterinarian practicing in Niagara Falls, provided a "To Whom It May Concern" letter which spoke favourably of Mrs. Walton and her guinea pig operation. This letter was attached as an exhibit to the affidavit of Mrs. Walton filed as part of the application record. However, it is hearsay evidence and, in the absence of an acknowledgement of the truth of its contents by the respondent, it is not admissible in this proceeding.

September 22nd, 1993 - The Office of The Medical Officer of Health for Regional Niagara, provided a letter to the applicants which, as well, was favourable to their cause. However, it suffers from the same evidentiary flaw as the letter from Dr. Mergl.

March 29th, 1994 - Allan prepared a memorandum to Radix. It included the following:

... on March 29, 1994, two neighbours attended at this office regarding the [applicants] and the activity at [their] residence and barn.

I have been advised that there are as many as ninety bags of manure placed between the house and barn over a time period of about two weeks ... before it is removed ...

I have been advised that there have been as many as five dogs on the property at one time.

In view of the above, I am asking that Council be made knowledgeable of this and also has there been an interpretation of pets?

Finally I am requesting that Reverend David Brubacher be made aware of this and request that he attend at the [applicants'] residence, as he was the person that made the final inspection on May 5, 1993.

October 30th, 1995 - The Ontario Municipal Board approved the new by-law.

March 8th, 1996 - A fire destroyed the barn. It was approximately thirty-five years old at the time. All that remained was the concrete foundation and half of one wall. It is common ground that the extent of the damage is such that

the structure cannot be restored but must be rebuilt.

March 11th, 1996 - The applicants applied for a building permit. The description of the work, as set out in the Permit Application, read, "replace fire damaged building" and the zoning was shown as R1.

March 18th, 1996 - According to the applicants, Radix advised them that a building permit would issue if they provided a letter indicating that the use of the barn would not involve any commercial activity. Radix was concerned that, although a home occupation [See Note 10 below] was permitted within a R1 zone, it must be carried on solely within the dwelling. Subsequently, Radix concluded that the use of the barn for a guinea pig breeding operation, on the scale that had been practised in the past, did not qualify as an "accessory use" within the meaning of the new by-law and would, indeed, be an illegal use. Radix requested from the applicants a written undertaking not to use the barn for the raising of guinea pigs on the previous scale.

Note 10: Pursuant to section 4.143 of the new by-law, Home Occupation is defined as:

> ... an occupation, trade, business, profession or craft carried on as a secondary and incidental use within a single detached dwelling, which use is carried on solely by the residents of the dwelling in which the home occupation is located, and is carried on entirely within a single detached dwelling.

March 19th, 1996 - The applicants provided the letter as requested by Radix but not the written undertaking. As well, they paid the required fee for the building permit ($105.00). The respondent issued a receipt. The letter from the applicants stated:

> The building to replace the existing building at 2843 Red Maple is not going to be used in any way for gain or profit. This building is only for previous existing use.

March 20th, 1996 - Radix prepared a memorandum for the mayor and members of Council which contained these references:

> Recently a small barn which was located in a residential zone, and which housed a large number of guinea pigs, was destroyed by fire. Mrs. Walton applied for a building permit to construct a new accessory building of similar size. The proposed size of the structure and its location would comply with the zoning by-law. Mrs. Walton was clear that the purpose for constructing the accessory building was to raise guinea pigs ...
>
> Many Council Members will recall the large number of complaints that were received three years ago regarding the guinea pigs and the subsequent Council Meeting which dealt with the subject. The conflict has created a

tremendous amount of tension in the neighbourhood.

Upon examining the application and in consultation with the Town Solicitor, Mr. Janzen, I have decided not to grant a permit ... for the following reason:

> It is my interpretation that the raising of a large number of guinea pigs in an accessory building, on land which is zoned Residential, does not conform with the following definitions in Zoning By-law No. 93-14-Z1 ... [See Note 11 below]

Note 11: The memorandum went on to set out the definitions for "accessory use" and "accessory building or structure."

March 22nd, 1996 - Radix wrote to the applicants and stated, in part:

> On March 8th, 1996 your barn type accessory building was destroyed by fire. According to the Fire Department report, 150 to 200 guinea pigs housed in the structure were also destroyed by the fire.
>
> ... you applied for a building permit to reconstruct the accessory building located in a Residential Zone (R.1), for the purpose of raising guinea pigs.
>
> Upon examining the application and in consultation with the Town Solicitor, and after informing Members of Council, I have decided not to grant a permit to construct the accessory building for the following reason:
>
> It is my interpretation that the raising of guinea pigs in an accessory building, on land which is zoned Residential, does not conform with the following definitions in Zoning By-law No. 93-14-Z1 ...
>
> > 4.1 Accessory Use: means a use customarily incidental, subordinate and exclusively devoted to a principal use, located on the same lot therewith.
> >
> > 4.2 Accessory Building or Structure: means a detached building or structure not used for human habitation, but used to house an accessory use and includes a private garage.
> >
> > ...
> >
> > Please also find attached a cheque which covers the full refund of the building permit application fee.

E. LEGISLATION

1. The Building Code Act, 1992

[para8] The pertinent portions of the applicable sections of the Building Code Act, 1992 are as follows:

1. In this Act,

...

'construct' means to do anything in the erection, installation or extension or material alteration or repair of a building ... and 'construction' has a corresponding meaning;

...

8(1) No person shall construct ... a building ... in a municipality unless a permit has been issued therefor by the chief building official.

(2) The chief building official shall issue a permit under subsection (1) unless,

(a) the proposed building, construction ... will contravene this Act or the building code or any other applicable law;

...

(10) Subject to section 25, the chief building official may revoke a permit issued under this act,

(a) if it was issued on mistaken, false or incorrect information;

...

(d) if it was issued in error;

...

10(1) Even though no construction is proposed, no person shall change the use of a building or part of a building ... unless a permit has been issued ...

(2) The chief building official shall issue a permit under subsection (1), unless,

(a) the building if used as proposed would result in a contravention of this Act or the building code or any other applicable law ...

...

25(1) Any person who considers themselves aggrieved by an order or decision made by [a] ... chief building official under this Act or the regulations ... may, within twenty days after the order or decision is made, appeal the order or decision to a judge of the Ontario Court (General Division).

...

(4) ... the judge shall hold a hearing and may rescind or affirm the order or decision of the ... chief building official or take such action as the judge considers the ... chief building official ought to take in accordance with this Act ... and, for such purpose, may substitute his or her opinion for that of the ... chief building official.

[para9] It should be noted that prior to April 7th, 1993, the term "applicable law", as found in s. 8(2)(a) and s. 10(2)(a), was not defined in the Act. However, on that date the regulations to the Act were amended to provide for the following definitions: [See Note 12 below]

Note 12: Ontario Regulation 160/93, made under the Building Code Act, amending Reg. 61 of R.R.O. 1990.

Applicable law means, for the purpose of section 8 of the Act, any general or special Act, and all regulations and by-laws enacted thereunder, which prohibit the proposed construction or demolition of the building unless the Act, regulation or by-law is complied with.

Applicable law means, for the purposes of clause 10(2)(a) of the Act, any general or special Act, and all regulations and by-laws enacted thereunder, which prohibit the proposed use of the building unless the Act, regulation or by-law is complied with.

2. The New By-law

[para10] The applicable provisions are these:

SECTION 1: TITLE, DEFINED AREA AND INTERPRETATION

...

1.3 INTERPRETATION

1.3.1 For the purpose of this By-law, the definitions and interpretations given herein shall govern.

In their interpretation and application, the provisions of this By-law shall be held to be the minimum requirements, except when expressly stated otherwise, adopted for the promotion of public health, safety, convenience or general welfare.

Every use, building and structure in the defined area shall conform to the relevant zone provisions and any other relevant applicable provision or requirement contained therein.

Whenever two or more provisions or requirements of this By-law are at variance, one to the other, the more restrictive shall apply except where specifically stated otherwise.

1.3.2 For the purpose of this By-law:

(a) words used in the present tense shall be deemed to include the future tense:

...

(c) the words "use", "used" or "occupy" shall be deemed to include the words "intended, arranged or designed for use or occupancy" or "intended, arranged or designed to be used or occupied" or "intend, arrange or design for use or occupancy";

...

SECTION 2: SCOPE AND EFFECT OF THIS BY-LAW

2.1 Within the defined area no person shall, or cause, any land to be used or any building or structure to be located, used, altered or erected, in whole or in part, except in conformity with the provisions contained herein.

...

SECTION 4: DEFINITIONS

All words and phrases contained herein shall carry their customary meaning, with the exception that the following words and phrases shall be defined as indicated:

4.1 Accessory Use means a use customarily incidental, subordinate and exclusively devoted to a principal use, located on the same lot therewith.

4.2 Accessory Building or Structure means a detached building or structure not used for human habitation, but used to house an accessory use and includes a private garage.

...

SECTION 6: GENERAL PROVISIONS

The regulations of this Section shall apply to all zones.

...

6.2 ACCESSORY USES, BUILDINGS AND STRUCTURES

In accordance with subsection 6.39(i) and except as provided otherwise within a specific zone, accessory buildings and structures not attached to the main building shall:

(a) not be established until or unless the main building or use to which it is accessory is established;

(b) not be used for human habitation;

(c) not be used for gain or profit ...

...

6.5 BUILDING RESTORATION

(a) ...

(b) Nothing in this By-Law shall prevent the replacement of a dwelling ... which has been partially or completely destroyed by fire ... on all or part of the existing foundation.

...

6.39 USES PERMITTED IN ALL ZONES

Nothing in this By-Law shall prevent the use of land for the following uses:

...

(i) Building or structure accessory to any permitted use, except where specifically precluded, and subject to the provisions of subsection 6.2 and any other requirement contained herein.

...

SECTION 11: RESIDENTIAL 1 ZONE (R1)

In an R1 Zone, no land shall be used and no building or structure shall be used, altered or erected except in accordance with the following provisions:

11.1 PERMITTED USES

(a) single detached dwelling

(b) group home

(c) home occupation.

3. The Planning Act [See Note 13 below]

[para11] Section 34 (1) of the Planning Act is germane to this application. It provides, in part:

Note 13: R.S.O. 1990, c. P. 13.

34(1) Zoning By-laws may be passed by the councils of local municipalities:

1. For prohibiting the use of land, for or except for such purposes as may be set out in the by-law ...

2. For prohibiting the erecting, locating or using of buildings or structures for or except for such purposes as may be set out in the by-law ...

...

4. For regulating the type of construction and the ... character and use of buildings or structures to be

erected ...

...

(9) No by-law passed under this section applies,

(a) to prevent the use of any land, building or structure for any purpose prohibited by the by-law if such land, building or structure was lawfully used for such purpose on the day of the passing of the by-law, so long as it continues to be used for that purpose;

F. DISCUSSION OF THE ISSUES

1. Credibility

[para12] I state the obvious when I say that the ability to observe a witness in the box is an important component of assessing credibility. Nonetheless, it is certainly possible to make findings of credibility based upon transcripts of out-of-court examinations. The evidence in this proceeding consists of affidavits from Mrs. Walton, Kenneth Shank, Allan and Radix together with transcripts of the cross-examinations conducted in respect of those affidavits. With this in mind, I now look at the issue of credibility, in particular, the credibility of Mrs. Walton.

[para13] To gauge the credibility of Mrs. Walton, one must understand the degree of her involvement with guinea pigs. The following facts arise from her evidence:

(a) She is a member of the Ontario Cavy Club. [See Note 14 below]

Note 14: The term "cavy" is the official appellation for "guinea pig."

(b) For the past 20 years she has been listed with the Ontario Cavy Club as a breeder.

(c) The Ontario Cavy Club hosts shows on a monthly basis which Mrs. Walton attends.

(d) She also appears at shows held by the Dominion Rabbit and Cavy Breeders Association, "three or four times a year."

(e) She is a member "of various [cavy] clubs all over the United States."

(f) "There are shows all through the United States" which the applicants take in "maybe once a month."

(g) It was her estimate that, in total, she attends from 12 to 16 shows each year.

(h) Mrs. Walton is a former director of the Ontario Cavy Club and "was the show chair person for years." She "ran the shows [and she] would make sure all the paperwork got to the show secretaries ..."

(i) In her evidence she described the seven breeds of guinea pigs that she raised, including Textels. She stated, "I was instrumental in bringing Textels into the country and recognizing that breed. ... I was on the standards committee with the Ontario Cavy Club and we got that as a recognized breed."

[para14] Mrs. Walton gave detailed evidence regarding her breeding methods all of which were designed to produce the best possible "show quality babies." In her words, "Anything that I keep for ... breeding has to be able to go on the show table and win at least the best of breed. I'm very fussy." Customarily she would count on approximately 125 guinea pig births annually. From this number she would keep 30 each year. The rest she gave away.

[para15] With this background, I shall now move on and

deal with specific examples of Mrs. Walton's credibility.

[para16] Since the fire, she has been raising guinea pigs in the library of her home. [See Note 15 below] When cross-examined she testified that she was unsure whether she actually would move the guinea pigs into the barn should it be rebuilt: (Transcript, p. 78, Q. 464)

Note 15: This was an addition to the applicants' residence and was constructed in 1995.

Q. And with respect to the building that burned down, you described to me in essence that the building had been partitioned or had three separate areas. [See Note 16 below]

Note 16: One area contained the guinea pigs and the other areas were used for miscellaneous storage purposes.

A. Yes.

Q. Would it be your intention to replace those areas similar to the way they were pre fire?

A. Yes.

Q. And with respect to the area that was devoted for guinea pig use before the fire, would it be your intention to continue to raise guinea pigs in that section?

A. Right now I don't know if I'm even going to put guinea pigs back in there if I get the building. They're very convenient where they are ...

Q. So right now you're saying you don't know if you'd move them out of your house?

A. No, I don't know. They are convenient where they are ...

...

Q. Where's your library, basement, main floor?

A. The library is the turret on the main floor.

Q. That was built as a library?

A. Yes.

Q. You don't use it as a library now?

A. No, I don't. We haven't really finished it completely. It does have nice bevelled glass windows and bevelled glass doors though.

...

Q. ... but you're not sure, you might move your guinea pigs into the structure?

[Counsel]

Don't answer the question.

Q. Is that a refusal?

[Counsel]

That's a refusal. And you're asking her to speculate.

Q. So you find it's very convenient to have 100 odd guinea pigs in your library. Is that correct?

[Counsel]

That was her answer.

[para17] Kenneth Shank ("Shank"), who was mentioned earlier, is a close friend of the applicants. His evidence contradicts that of Mrs. Walton: (Transcript, p. 34, Q. 247)

Q. Did you discuss with Mrs. Walton the building permit application?

A. Only the fact that she went down to get one.

Q. Did you discuss with her the type of building she intended to build and what she intended to use it for?

A. I guess she wanted to put the same kind of a building back that was there before [the fire]. And for the guinea pigs, the tools, the bikes, the pool equipment, lawn chairs.

Q. Okay. Now you said 'you guess.' Did you ever discuss with her the type of building she was going to build or what she was going to use it for?

A. Yes.

Q. Okay. And you said -- would it be fair to say that she -- your impression would be that she intended to rebuild the guinea pig facility that she had?

A. Oh, yes.

[para18] I observe, as well, that, in the last line of her letter to the respondent, dated March 19th, 1996, she wrote, "This building is only for previous existing use." The previous use, of course, included housing guinea pigs.

[para19] I easily reach the conclusion that Mrs. Walton's refusal to concede that she intends to house her guinea pigs in any new barn that might be constructed is, at best, disingenuous. Frankly, I do not find her to be credible when she suggests that she will seriously consider keeping 125 guinea pigs in her turreted library, with the bevelled glass windows and doors, even after the new facility is erected.

[para20] Moving on to another example, Mrs. Walton was asked about the value of her guinea pigs: (Transcript, p. 56, Q. 343)

Q. Any commercial value to the pigs you have?

A. No.

Q. So if I didn't know anyone and had to go and buy a guinea pig, breeding quality, what's the worth?

Q. I don't know ...

...

Q. Do you have any information as to what people seem to be willing to pay?

A. I don't sell guinea pigs.

Q. I didn't say you did. I asked you if you have any information as to sort of what they might commonly trade for if they trade?

A. I don't have any information ...

...

Q. This is a fairly large undertaking for you then ...

A. No.

Q. ... it's about $90.00 a week in feed and bedding?

[See Note 17 below]

Note 17: It was her evidence that she spent $75.00 - $80.00 each week on food for the guinea pigs and $16.00 each week for wood shavings (which are used as bedding).

A. It's a hobby.

Q. And then there'd be the money that you spend on travelling to shows and so on?

A. Yes.

Q. Any idea what -- how much money you have to set aside to cover those in a month or a year, sort of average it out?

A. No, I have no idea.

Q. Well, how many guinea pigs would you enter in a show, for instance? Let's say it's a local show?

A. Possibly 30.

Q. Entry fee?

A. Anywhere from a dollar twenty-five to two-fifty.

Q. Okay. Any other costs ... associated with the show? There's the entry fee and that'd be about it, you travel down. Or if there's more tell me, I don't know.

A. I guess that's, that's it.

Q. Okay. So if you entered 30 per show and if we figure two dollars roughly on average, that's $60.00 a show ...

A. Yes.

Q. ... for entry. Would that be a fair average?

A. Yes.

Q. And you do that 16 times a year?

A. Yes.

[para21] And at p. 59:

Q. How many guinea pigs do you have now? [See Note 18 below]

A. Approximately 125 ...

Q. You've gotten those all in the last year?

A. Yes.

Q. Where did you get them, buy them?

A. Most of them were given to me from people I've given pigs to.

Q. Did you buy any?

A. Yes, I did.

Q. How many did you buy?

A. I have no idea.

Q. No idea?

A. I have no idea.

Q. What did you pay for them?

A. Approximately five to seven dollars each.

Q. Before when I asked you if you had any idea what they traded for, you said you had no idea. [See Note 19 below] But you paid five to seven dollars.

A. Well there's people at conventions that could sell them for $20.00 or $30.00 and I certainly wouldn't pay that and I have no interest in paying that ...

Note 18: She was cross-examined on her affidavit January 24th, 1997.

Note 19: Each year Mrs. Walton gave many of her guinea pigs to Shank. Both she and Shank insisted that no money changed hands. Shank was asked, "Would Mrs. Walton, to your knowledge, have known what guinea pigs sort of commonly sold for if they were sold?" Counsel for Mrs. Walton instructed Shank not to answer the question.

[para22] It is transparently clear to me that Mrs. Walton was being evasive when counsel sought to have her place a value on her guinea pigs. It was only persistence on the part of counsel that finally produced an answer. A court should always be wary of a witness who feigns ignorance of the obvious. It would not have been believable for Mrs. Walton, immersed as she is in the milieu of guinea pigs, to be unable to place an approximate value on those animals.

[para23] All of the above evidence, in respect of Mrs. Walton's involvement with the breeding and showing of guinea pigs, was elicited after this question and answer: (Transcript, p. 35, Q. 187)

Q. Okay. So you've always been heavily involved in guinea pig raising and breeding. Would that be a fair [comment]?

A. Just a regular guinea pig breeder.

In the absence of evidence regarding the activities of other breeders, I am unable to conclude whether Mrs. Walton is, in fact, merely a "regular guinea pig breeder." However, if she is, then those who pursue this avocation must, indeed, be a dedicated lot.

[para24] There is yet another example to review on the issue of her credibility. In her appearance before Council on April 19th, 1993, Mrs. Walton stated that if she were required to purchase goat's milk for her son (rather than obtain it from goats she raised herself) she would have no choice but to apply for welfare. In determining the truth of that statement, the following information is helpful:

(a) On her evidence, the cost of the goat's milk would have been $70.00 each week. She was spending considerably more than that on her guinea pigs;

(b) The applicants purchased the Property in 1991 for $160,000.00 and took out a $76,000.00 mortgage. This placed their equity at a healthy $84,000.00;

(c) In 1993 an above-ground pool was installed on the Property with a construction value of $1,500.00;

(d) In 1994 a deck was built. It had a construction value of $3,000.00;

(e) In 1995 the turret (library) was added to the residence. It had a construction value of $10,000.00.

[para25] It is not sufficient to dismiss her statement to Council as an empty threat. She was intentionally misleading Council. At best, it shows that Mrs. Walton is capable of a casual allegiance to the truth.

[para26] The result of all of this is, I regret to say, that I am leery of Mrs. Walton's evidence. Her affidavit and the transcript of her cross-examination do not instill confidence in the reader. Thus, where there is a conflict between her evidence and that tendered on behalf of the respondent, and to the extent that documentary verification of either is unavailable, I accept the evidence of the respondent and reject the evidence of Mrs. Walton.

2. When did the respondent first learn that the applicants were breeding large numbers of guinea pigs on the Property?

[para27] It is the contention of Mrs. Walton that, even before the purchase of the Property, Allan knew that she would be breeding approximately 125 guinea pigs. The respondent, on the other hand, maintains that not until sometime after the purchase of the Property was it learned that the applicants were raising more than several guinea pigs.

[para28] Mrs. Walton says that her first contact with the respondent was in the fall of 1990 when she telephoned Allan. In her cross-examination, she testified: (Transcript, p. 7, Q. 40)

Q. Okay. Now tell me about this discussion with Mr. Allan as best you recall it.

A. I called [him] and I gave him the address of the house ... And I told him that my husband and I were interested in buying this house and that I raised and showed guinea pigs for 18 years at that point. And that we would like to buy the house and put the guinea pigs in the building. And could he check the by-laws and get back to me whether or not I could have the guinea pigs there, if there would be a problem. And, and he called me back and said that there was no by-laws against guinea pigs, they were not restricted and that I could have them there.

Q. Was there any discussion of the numbers of guinea pigs?

A. I told him I had approximately 100 to 125. I explained that I had been breeding for years and I had won numerous awards with them.

Q. Anyone present when you made that phone call?

A. Yes, Ken Shank, a friend of the family.

[para29] Shank gave the following evidence: (Transcript, p. 4, Q. 19)

Q. ...

A. No, she had called before I guess and was talking to somebody. I don't know for sure, but I imagine she was talking to somebody ...

Q. Do you know that she called ... or was that just your assumption?

A. She called in the year ...

Q. Is that something she told you or were you present when she called?

A. No, I wasn't present when she called.

Shank's evidence, therefore, contradicts that of Mrs. Walton in respect of the telephone call.

[para30] As I indicated previously, Mrs. Walton alleges that Allan was aware, from the outset, of the number of guinea pigs that would be bred on the property. Shank gave this evidence regarding an attendance at the respondent's offices in September 1990: (Transcript, p. 6, Q. 29)

A. I went in to see [Allan], the by-law officer.

Q. Why did you go?

A. Because she had her children in the car, in the van.

Q. What questions did you ask [Allan]?

A. I just asked [Allan] if there was any by-law against the guinea pigs being in the Town of Lincoln ...

Q. What did he say?

A. He went and looked it up in the book and said no, there's nothing in, in the by-law against guinea pigs.

Q. That was it?

A. More or less.

Mention was not made of the number of guinea pigs involved.

[para31] In the result, I do not accept the evidence of Mrs. Walton on this point. I find that, previous to the purchase of the Property by the applicants, the respondent was unaware of the number of guinea pigs to be housed in the barn. I accept the evidence of Allan that when he was contacted in 1990 and 1991 he was not told the number being bred and he assumed that Mrs. Walton was "talking about one, two or three, like as a household pet." [See Note 20 below]

Note 20: It was his evidence that there "was no mention made of any number."

---

3. Did the chief building official of the respondent refuse to issue a building permit or did he issue, and then revoke, the permit?

[para32] It is the position of the applicants that the building permit was issued and then revoked. The respondent argues that the permit was never issued.

[para33] Mrs. Walton completed a Town of Lincoln Building Department Permit Application ("Permit Application"). The bottom half of the Permit Application is designated "For Office Use Only". Radix stated, when cross-examined on his affidavit: (Transcript, p. 18, Q. 94)

Q. Alright. Now for office use only. So this would be -- this box where it says 'for office use only' would be filled in by one of your staff?

A. Yes.

Q. Alright. And would that be done at the time the application is made or subsequent to that?

A. Subsequent to it.

[para34] The "For Office Use Only" portion of the Permit Application contains several sections that require completion, including spaces or boxes for a fee and permit number to be inserted, in respect of which Radix testified as follows: (Transcript, p. 18, Q. 100)

Q. Okay. And the hundred and five dollars ($105.00) would be the cost of the building permit?

A. Correct.

Q. And would one know that at the time of the application or would that be a figure that would be put in later?

A. ... That's, that can be put in later and sometimes when you know it you can put it in right away ...

Q. Do you know when it happened in this case? Was that your writing?

A. No, I think -- no, that's not my writing either.

Q. Alright. And then underneath that there is a --

what is a permit number 39/96 I believe.

A. That could be the number assigned to it, yes.

...

Q. And when would the permit number 39/96, when would it be placed on the application? Would it be at the

time of the application or subsequent thereto?

A. It depends on the amount of time that we have. Sometimes right away and sometimes afterwards.

Q. Alright. So do you give a building a permit number?

I suppose a permit number, and this is my question, is given when the permit is approved. Is that a fair statement?

A. Well sometimes we do as, as they are received and sometimes as they ...

Q. If you give a permit number and it was subsequently refused, does the number just become ...

A. Well that's ...

Q. ... deleted?

A. ... that's when we -- that's what I mean, more or less we do it actually after, after the examination

because otherwise you have to shove all the numbers around.

...

Q. Alright. So you accept the application ... you would inspect the documents that were presented to you, alright. So that you looked at the drawings and you looked at the by-laws or whatever you looked at and then you would conclude whether or not this building permit should or should not be issued. Is that correct?

A. Yeah ...

Q. Alright.

A. ... as a rule.

...

A. When we talk about issuing a permit, that's when a person actually gets it.

Q. Alright.

A. And actually the permit was not in that context, it was not issued.

Q. In other words, it hadn't been handed to the individual?

A. Correct.

Q. Alright.

A. It was held back.

Q. It was held back. But my question is at one point you had decided that it was appropriate that the permit was valid, the request was valid ... and then subsequently determined that the use that you thought might be made of the building was inappropriate and held back the permit.

A. When, when we examined the zoning by-law.

Q. Yes.

A. The second stage.

Q. Alright. So in the chronological history, the application was made. Then you inspect the documents and whatever you were looking at and then ... [t]here's probably an intervening step of a request for a letter I think happened on or about the 19th, the 18th. You had requested of the Waltons that they provide you a letter indicating that there would be no gain or profit from this operation. Is that correct?

A. That's correct.

Q. Yes. And that letter was given to you?

A. Correct.

...

Q. ... Then the next step would be to ask for payment, would it be?

A. It, it can be done. Sometimes people leave money with the -- the payment should be with the, with the application and sometimes people pay when they pick up the permit.

Q. Right.

A. It's -- both are standard practices ...

...

Q. Alright. And I ask you to look at ... an official receipt from the Corporation of the Town of Lincoln dated March 19th, 1996. And it says 'Payment Account' and under it it says 'BPT', what does that ...

A. Building permits account ...

Q. ... and it has a specific number of 39/96?

A. Correct.

Q. So at that time, you had assigned a number or your staff had assigned a number to this building permit?

A. Correct.

Q. Would that not indicate that it was in fact approved and was issued?

A. No, it's -- not necessarily.

Q. Well tell me the circumstances when it wouldn't be ...

A. That is only when it's -- when we say issued when it's handed over to the person.

Q. Well ...

A. If we can find something that's -- during that time that there is something wrong with either the construction part of it or the zoning, even after it's issued, we can revoke it if we see ...

[para35] And at p. 28, Q. 164:

Q. ... you issued it, you hadn't handed it to them, but you subsequently found that there was something wrong and you revoked it?

A. No it -- I would -- state that I would not say that it was revoked, it was just not issued to them at all.

[para36] And further at p. 30, Q. 174:

Q. Alright. So you take the position that since it hadn't been handed over, it wasn't officially issued?

A. In my mind.

Q. May I ask you then, I mean why would you ask for the money if there was still some concern that you were

not going to issue it?

A. Sometimes people offer to pay right away. It's not always the case.

...

Q. Okay. So on the date of payment, there had been no indication on the file or to any of your staff that the permit was being either rejected or revoked or the application was being rejected or the permit was being revoked?

A. During the time I was scrutinizing the, the zoning by-law.

Q. Alright. And as a result of the scrutiny, what did you decide?

A. A reason for refusing the permit. And I spell that out in that letter.

[para37] It is clear that a building permit was issued:

[See Note 21 below] a permit number had been assigned; a permit fee (not an application fee) was paid by the applicants; and the fee was placed into the respondent's building permit account. I believe that the contradictions apparent on the face of the testimony of Radix are capable of reconciliation if one simply makes a distinction between "issued" and "effective." The permit was issued, however, the respondent did not regard it as effective since it had not been placed in the hands of the applicants.

Note 21: Although the permit never physically surfaced in this proceeding.

[para38] In the view I take, the chief building official issued, and then revoked, the building permit. Despite this finding, however, I am not at all convinced that the outcome of this application would be different had I reached the alternate conclusion. The permit was issued pursuant to s. 8(2) of the Building Code Act, 1992. Revocation is permitted under s. 8(10)(a) if the permit was issued "on mistaken, false or incorrect information" or under s. 8(10)(d) if "it was issued in error." I confess that the distinction between these two sets of grounds does not easily come to mind. If a permit is issued on the basis of "mistaken, false or incorrect information," could it not be said that the permit "was issued in error"? In any event, s. 8(10)(d) certainly would cover the situation where a permit was issued and then revoked, after further investigation showed the proposed building to be in violation of a by-law. That is what I find occurred here.

4. What was the basis for the decision of the chief building official?

[para39] Structurally, the proposed barn conforms to all existing legislation. On that there is agreement. So, why was the permit revoked?

[para40] On March 18th, 1996, Radix was concerned with whether the breeding of the guinea pigs was to be carried on for "gain or profit." That concern is obvious from the nature of the letter he requested from the applicants. At that point it was not the number of guinea pigs being bred that was the problem but, instead, the commercial nature of the operation. [See Note 22 below] He then asked for the applicants to provide an undertaking in writing that they would not use the barn for breeding on the scale previously practiced. In his memorandum to Council dated March 20th, 1996, Radix wrote that "the raising of a large number of guinea pigs in an accessory building" contravened the new by-law. In his letter to the applicants two days later, on March 22nd, there is no mention of the number of guinea pigs being the point of concern: he

simply states that "the raising of guinea pigs in an accessory building" is unlawful. Although the decision to revoke the building permit was expressed, in the letter of March 22nd, as the failure of the barn and breeding operation to meet the definitions of "accessory building or structure" and "accessory use", it seems to me that the true reason for the revocation of the permit was the number of guinea pigs which Mrs. Walton intended to raise in the barn. After all, it was conceded by the respondent, beginning in 1991, that the keeping of a small number of guinea pigs on the Property as pets was not prohibited. [See Note 23 below] It was not the breeding aspect of the applicants' operation with which the respondent took exception: it was the magnitude of the operation.

Note 22: Presumably Radix saw a possible violation of s. 6.2(c) of the new by-law which prohibited the use of accessory buildings "for gain or profit."

Note 23: And the memorandum of March 20th, 1996 speaks of raising "a large number of guinea pigs" as contravening the new by-law.

[para41] I move now to the principal issue raised by this application.

5. Was the decision of the chief building official correct?

[para42] It will be convenient to divide this issue into five sub-issues.

(a) Estoppel

[para43] It is apparent from the documentary evidence that, for a number of years and up to the revocation of the building permit, the respondent did not know what to do with the applicants and their menagerie. It was as if the respondent felt that something was wrong, and that something should be done, but was unable to articulate the "something." The quandary of the municipal officials is evident in the minutes of the Council meeting of April 19th, 1993. Until that meeting, the primary concern of the respondent seems to have been directed towards the ducks, goats, and rabbits being kept on the Property. After April, 1993, the focus appears to have narrowed to the guinea pigs. In the Council meeting held September 7th, 1993, one of the topics discussed was whether the guinea pigs presented a health problem. [See Note 24 below] In the memo of September 17th, 1993, Radix wrote, "Staff will ... investigate with the [Town's] Solicitor the cost and viability of preparing an Animal Control By-Law." Such a by-law was never passed. The uncertainty continued. As late as March 18th, 1996, the position ultimately adopted by the respondent still had not crystallized.

Note 24: As I mentioned earlier, this court did not hear evidence that public health was an issue in respect of the guinea pigs.

[para44] It was on March 20th, 1996 that the respondent finally arrived at the position eventually espoused in this court (that is, that raising a large number of guinea pigs in an accessory building, on land which is zoned residential, violated the new by-law because the definitions of "accessory use" and "accessory building or structure" were not met).

[para45] With the respondent having allowed the guinea pig operation to exist for so long, I was concerned, initially, as to whether a status quo had arisen against which the respondent ought not now be permitted to object. In other words, had an estoppel been created which would operate to preclude the respondent from denying the applicants the right to continue to breed and raise guinea pigs as they had before the fire. However, all forms of estoppel have, as a common element, the requirement of detrimental reliance. Without deciding whether estoppel may lie against a municipality in a

case of this nature, I am unable to find any evidence that the applicants relied, to their detriment, on the status quo ante.

(b) Which by-law applies, the old or the new?

[para46] It will be remembered that when the applicants began their breeding operation the old by-law governed. When the permit was revoked the new by-law was in force. The respondent is alleging that the guinea pig operation of the applicants fails to conform with the definitions of the terms "accessory use" and "accessory building or structure" as found in the new by-law. It is evident, from a comparison of the definitions found in the two by-laws, that there is no material distinction to be found:

OLD BY-LAW	NEW BY-LAW
S.2 Accessory Use means a use customarily incidental to, subordinate to or exclusively devoted to a principal use and located on the same lot therewith.	4.1 Accessory Use means a use customarily incidental, subordinate and exclusively devoted to a principal use, located on the same lot therewith.
Accessory Building or Structure means a detached building or structure that is not used for human habitation, but the use of which is naturally and normally incidental to, subordinate to or exclusively devoted to a principal use or building and located on the same lot therewith, and shall also mean and include a detached private garage or a detached carport ... [but] shall not include a building or structure used as a livestock operation.	4.2 Accessory Building or Structure means a detached building or structure not used for human habitation, but used to house an accessory use and includes a private garage.

[para47] This is not a case where the applicants are able to establish that the new by-law is more restrictive than the old by-law such that they are now prejudiced. In any event, even if the applicants were disadvantaged because of material differences between the by-laws, that is a matter that would be subsumed in the issue of legal non-conforming use, to be discussed next.

(c) Did the applicants' breeding operation constitute a legal non-conforming use?

[para48] I requested additional submissions from counsel, in writing, on whether the issue of a legal non-conforming use was present in this case. I was concerned that the applicants had been engaged in a legal non-conforming use and that it would survive the fire. The Planning Act deals with such a use. Section 34(9)(a), set out earlier, states:

(9) No by-law passed under this section applies,

(a) to prevent the use of any land, building or structure for any purpose prohibited by the by-law if such land, building or structure was lawfully used for such purpose on the day of the passing of the by-law, so long as it continues to be used for that purpose;

The key feature of s. 34(9)(a) is that the non-conforming use must be a continuing use if it is to survive a subsequent, prohibitory by-law. In Re Wilmot et al. and The City of Kingston [See Note 25 below] Laidlaw J.A. analyzed s. 406(2) of the Municipal Act. [See Note 26 below] That section was an early predecessor to s. 34(9)(a) of the Planning Act. [See Note 27 below] At p. 446, Laidlaw J.A. said:

Thus, if land is used on the day of the passing of a by-law for a purpose prohibited thereby, that use may continue, and such a by-law by express statutory provision is not applicable to that land so long as it continues to be used for that purpose. If the use for that purpose ceases, the by-law thereupon becomes applicable and the land cannot thereafter be used for a prohibited purpose. In the same manner, and to the same extent, the use of any building in existence at the time

> a by-law is passed for a purpose prohibited by the by-law may continue. But the right of a property owner or user at the date of the passing of such a by-law is fixed and limited in consequence thereof. It is thereafter subject to the provisions of any by-law enacted in the proper exercise of the legislative powers of the council of the municipality. The effect of such an enactment is to prohibit the erection of any building after the date of the passing of the by-law on premises which on that date were used for the purposes prohibited thereby ...

I see no reason why s. 34(9)(a) should not be interpreted literally. When that section speaks of a prohibited use being permitted "if it continues to be used for that purpose," I take it to be the case that a disruption in the prohibited or non-conforming use removes the use from the protection of s. 34(9)(a). Here, the fire of March 8th, 1996 ended the continuity of use. Therefore, the reconstruction of the barn required compliance with the new by-law. If there was a legal non-conforming use, it ended with the fire. [See Note 28 below]

Note 25: [1946] O.R. 437 (C.A.).

Note 26: R.S.O. 1937, c. 266, as re-enacted by the Municipal Amendment Act, 1941, c. 36, s. 13.

Note 27: Section 406(2) provided, in part, as follows:

> (2) No by-law passed under this section shall apply
>
> to any land or building which, on the day of the passing of the by-law, is used or erected for any purpose prohibited by the by-law, so long as it continues to be used for that purpose ...

Note 28: As a practical matter, this finding may be of no consequence since it is not apparent to me that there is a material distinction to be made between the two by-laws as they pertain to this case. In other words, if the breeding operation of the applicants is permitted under the new by-law it was probably permitted under the old by-law; conversely, if it is prohibited under the new by-law it was probably prohibited under the old by-law.

> (d) Is the new by-law "applicable law" which the chief building official is required to consider when deciding whether to issue (or revoke) a building permit?

[para49] The term "applicable law" is contained in s. 8(2)(a) of the Building Code Act, 1992. It provides:

> 8(1) No person shall construct ... a building ... in a municipality unless a permit has been issued therefor by the chief building official.
>
> (2) The chief building official shall issue a permit under subsection (1) unless,
>
> (a) the proposed building, construction ... will contravene this Act or the building code or any other applicable law;

[para50] It is submitted by the applicants that since the Permit Application describes the purpose for the permit as, "replace fire damaged building," and since the proposed building itself conforms structurally with the by-law, the permit must be issued. In other words, it is argued that s. 8(2)(a) relates to structural matters only and does not entitle the chief building official to consider the anticipated use of the building. The respondent contends that, when considering the "applicable law," the chief building official is entitled to have regard to by-laws restricting use.

[para51] In support of their position the applicants rely upon Re Bridgman and The City of Toronto et al. [See Note 29 below] I confess that had this issue been put before me as

one of first impression, I would have been quick to reject the position of the applicants. But the Bridgman case is a decision of McRuer C.J.H.C. It deserves a close look.

Note 29: [1951] O.R. 489.

[para52] In Re Bridgman the Chief Justice was faced with a chambers application in which the applicant sought an order requiring the respondents, the Building Commissioner and the City of Toronto, to issue a building permit. His Lordship described the facts as "quite unusual" [See Note 30 below] and I find that they do not lend themselves to an easy summary. I believe it will be sufficient to say that the applicant there desired a permit to construct an addition to a building in which a dry-cleaning business was to be conducted. The applicant also wished to install a boiler in the basement of the proposed addition. At the time, there was a municipal requirement for a boiler permit but there was no Ontario Municipal Board-approved by-law in place preventing the operation of a dry-cleaning plant. It was held that the respondents had denied the application for a boiler permit as a means of preventing the dry-cleaning plant from being established. At p. 501, McRuer C.J.H.C stated:

> ... then the Property Committee is put in a position that they can control the use to be made of property by refusing a permit for the machinery to be later installed.

Note 30: Ibid.

[para53] The passage in the decision upon which reliance is placed by the applicants at bar is found at pp. 502-503. I set it out in part:

> The words [in the unapproved building by-law] are, 'No person shall establish, set up, carry on or continue a dry cleaning plant or business'. The erection of a building for the purpose of housing a dry-cleaning unit ... which may never be there because there may never be a permit issued ... is one thing, and establishing, setting up, carrying on, and continuing a dry-cleaning plant or business is another. I do not think the erection of a building with the objective of housing a dry-cleaning plant is 'establishing, setting up, carrying on or continuing' a dry-cleaning plant. That is what follows after the building is put up, and that is a matter with which I do not have to concern myself on this motion, nor is it a matter that concerns [the respondents] when considering the application for a building permit.

On its face, the above passage does seem to make a distinction between erecting a building for a particular use and the use of a building already erected. However, I am attracted to the submission by counsel for the respondent that it would serve no social utility to grant a building permit for the construction of a building whose use is prohibited by law. I was not pointed to any decision in which the Bridgman case was followed. The explanation may lie in its "quite unusual" facts. [See Note 31 below]

Note 31: A further explanation could be that McRuer C.J.H.C. made it clear that the by-law he was considering, being restrictive of the use to which an owner may make of his or her property, must be strictly construed. That approach may be incorrect in light of the decision of the Supreme Court in Bayshore Shopping Centre Ltd. v. Nepean (Township) (1972), 25 D.L.R. (3d) 443 at p. 449.

[para54] The respondent submits that "applicable law" in s. 8(2)(a) includes zoning by-laws restricting the use of the building for which the permit is sought. Reliance is placed

in Loblaws Inc. v. Ancaster (Town) Chief Building Official [See Note 32 below] where it was held that "other applicable law" does include a zoning by-law. In that case, a respondent wished to construct a warehouse. Part of the intended use of the warehouse complied with a municipal by-law and part did not. At p. 87, Feldman J. stated:

> The zoning by-law prohibits the erection of a building for a purpose not permitted by the by-law, as well as prohibiting its use. In my view it is clear that a permit is not to be issued to erect a building for a purpose not permitted by the by-law ... It is inappropriate to ignore [an impermissible use] at the building permit stage.
>
> [Emphasis in the original]

Unfortunately, the matter does not end there. Prior to April 8th, 1993, [See Note 33 below] the Building Code Act did not contain a definition of "applicable law." On that date the following definitions were enacted:

> Applicable law means, for the purpose of section 8 of the Act, any general or special Act, and all regulations and by-laws enacted thereunder, which prohibit the proposed construction or demolition of the building unless the Act, regulation or by-law is complied with.
>
> Applicable law means, for the purposes of clause 10(2)(a) of the Act, any general or special Act, and all regulations and by-laws enacted thereunder, which prohibit the proposed use of the building unless the Act, regulation or by-law is complied with.

Note 32: (1992), 13 M.P.L.R. (2d) 73 (Ont. Gen. Div.).

Note 33: The Loblaws case was decided in 1992.

[para55] It is common ground that the within application involves s. 8 and not clause 10(2)(a). Consequently, we are dealing with the s. 8 definition rather than the clause 10(2)(a) definition. On behalf of the applicants it is submitted that the s. 8 definition is concerned only with "construction or demolition" of a building and not "use". Clause 10(2)(a), by its wording, is concerned with "use" and if "use" had been intended to be part of the s. 8 definition the legislators would have so indicated. Therefore, the submission goes, the chief building official, when considering the "applicable law" before issuing a building permit, is restricted to law pertaining to "construction" and not "use" and, since it is agreed by the parties that the proposed barn structurally conforms with the new by-law, there has been compliance with the "applicable law." The "use" to which the building will be put is irrelevant.

[para56] A decision that is more timely, and one which I favour, is Phi Delta Beta v. London (City) Chief Building Official. [See Note 34 below] In that case the applicant was a fraternity. The fraternity owned a residential building which it proposed to renovate. The chief building official refused to process the fraternity's application for a permit on the grounds that the intended use of the property (for a fraternity house) violated the zoning by-law (which permitted only single detached dwellings). In reviewing the actions of the chief building official, Leitch J. said, at p. 144:

> There is no issue on this application that the Zoning By-law is any other applicable law within the meaning of section 8(2) [of the Building Code Act, 1992]

Leitch J. referred to Axelrod v. Toronto (City) [See Note 35 below] where Saunders J. stated, at p. 149:

> It would be irrational to hold that [the chief building official is precluded from considering zoning by-law compliance on a building permit application.] Such a holding would mean that he could not refuse to issue a permit for a factory in a residential zone if the Building Code and all other applicable laws were complied

with.

Note 34: (1994), 25 M.P.L.R. (2d) 140 (Ont. Gen. Div.).

Note 35: (1981), 15 M.P.L.R. 143 (Ont. Div. Ct.).

[para57] Mention is not made in the Phi Delta Beta case to the 1993 amendments to the Act by which "applicable law" was statutorily defined. The case was heard in November 1994 and the judgment was released in January 1995 and so the amendments were certainly the law of the land at the time.

[para58] Counsel for the applicants points to the definition of "applicable law" (as it applies to s. 8) and submits that it speaks of "construction or demolition." The term "construction" is defined in the Building Code Act, as follows:

> 1. In this Act,
>
> ...
>
> 'construct' means to do anything in the erection, installation or extension or material alteration or repair of a building ... and 'construction' has a corresponding meaning;

Thus, counsel concludes, by applying the definition of "construction" to that term as it is found in the definition of "applicable law," considerations of "use" are precluded. I disagree. The matter is more than one of bricks and mortar. The definition of "applicable law" allows a chief building official, when assessing a Permit Application, to consider "by-laws ... which prohibit the proposed construction ... of the building." This definition does not exclude "use" as a consideration. By way of example, can it not be said that a residential zoning by-law would, effectively, prohibit the proposed construction of a factory?

[para59] The new by-law is intended to restrict the use to which buildings might be put. This is apparent in such provisions as ss. 1.3.1, 1.3.2, 2.1 and 11.1. It would not make sense to interpret the Building Code Act in such a way as to defeat the expressed intention of the new by-law (and the many by-laws throughout the province whose purpose it is to restrict use).

[para60] Accordingly, in the case at bar, I hold that the chief building official, in the course of issuing the building permit, was entitled (indeed, required) to consider whether the intended use of the barn would violate the provisions of the new by-law. It would have been wrong for him to have restricted his review of the Permit Application to a consideration of whether the building itself structurally complied with the by-law.

(e) Is the applicants' guinea pig breeding operation a legal "accessory use" as defined in the new by-law?

[para61] This issue is the nub of the entire application.

[para62] Section 11 of the new by-law prohibits any use not specifically permitted. [See Note 36 below] This applies to both principal buildings and outbuildings. An outbuilding must satisfy the definitions of "accessory building or structure" and "accessory use" as set out in sections 4.1 and 4.2. For convenience, I will repeat those provisions again:

> 4.1 Accessory Use means a use customarily incidental, subordinate and exclusively devoted to a principal use, located on the same lot therewith.
>
> 4.2 Accessory Building or Structure means a detached building or structure not used for human habitation, but used to house an accessory use and includes a private garage.

Note 36: It is beyond question that the respondent is

empowered to control the use of land within its boundaries through restrictive by-laws. The respondent submits, and I agree, that the Planning Act provides a municipality with two separate "zoning" powers with respect to "use": firstly, the power to pass by-laws restricting the use of land, as found in paragraph one of s. 34(1); and, secondly, the power to prohibit the erecting of buildings except for such purposes as are permitted in the by-laws, as found in paragraphs 2 and 4 of s. 34(1).

[para63] The respondent concedes that keeping a small number of guinea pigs on the Property would be a lawful accessory use: It would be a use that was "incidental" to the "principal use" (the principal use being residential). Therefore, if the applicants, by way of example, were to breed and maintain three guinea pigs in their barn the respondent would regard this as a lawful accessory use (and the barn a lawful "accessory building or structure"). Why are 125 guinea pigs an unlawful accessory use? Where does one draw the line? If a line is to be drawn, it is the function of the respondent to do so. It would be quite arbitrary for this court to conclude that breeding 125 guinea pigs is an unlawful accessory use. [See Note 37 below] Although arbitrariness is acceptable in matters of this nature, it is the purview of legislators not adjudicators.

Note 37: If this court were to find that housing 125 guinea pigs on the Property constituted an unlawful accessory use, what would happen if the applicants thereafter reduced the number to 100? or 75? or 30? or 10? Would the accessory use still be unlawful?

[para64] The respondent does have a municipal by-law prohibiting the keeping or raising of various kinds of animals on residential property. [See Note 38 below] Guinea pigs are not included. As desirous as it may be to restrict the number of guinea pigs permitted to be kept on residential property, the new by-law (and specifically ss. 4.1 and 4.2) is inadequate for the task.

Note 38: Such as bulls, sheep, goats and reptiles.

G. SUMMARY OF FINDINGS

[para65] For convenience I will summarize the material findings I have made:

1. Where there is a conflict between the evidence of Mrs. Walton and that tendered on behalf of the respondent, and to the extent that documentary verification of either is unavailable, I accept the evidence of the respondent and reject the evidence of Mrs. Walton.

2. It was not until after the applicants purchased the Property that the respondent learned of large

   numbers of guinea pigs being housed in the barn.

3. The chief building official ("CBO") of the respondent issued, and then revoked, the building permit.

4. The true reason for the revocation of the permit was the number of guinea pigs which the applicants intended to keep in the barn. It was not the breeding aspect of the applicants' operation with which the respondent took exception: it was the magnitude of the operation.

5. In deciding whether to issue a building permit, the "applicable law" which the CBO is asked to consider pursuant to s. 8(2)(a) of the Building Code Act, 1992 includes zoning by-laws. The definition of

"applicable law" allows a chief building official, when assessing a Permit Application, to consider "by-laws ... which prohibit the proposed construction ... of the building." This definition does not exclude "use" as a consideration. In this case, the CBO was not only entitled but required to consider whether the intended use of the barn would violate the provisions of the new by-law. It would have been wrong for him to have restricted his review of the Permit Application to a consideration of whether the building structurally complied with the by-law.

6. The definition of "accessory use" in the new by-law is inadequate to block the use intended by the applicants. If the respondent wishes to restrict its citizens from keeping a particular number of guinea pigs on residential property then it should pass an appropriate by-law. Remembering that the respondent does not object to a small number of those animals being housed on residential property, it is not the function of this court to arbitrarily determine when that "small" number becomes too large. As desirous as it may be to restrict the number of guinea pigs permitted to be kept on residential property, the new by-law (and specifically ss. 4.1 and 4.2) is ineffective for that task.

7. The applicants' breeding operation was lawful under both the old and the new by-law. It was a conforming use at all material times.

H. CONCLUSION

[para66] It is at least ironic, if not unfortunate, that, having ruled in favour of the respondent on all but one issue and having found the credibility of Mrs. Walton to be lacking, I must allow the application. The applicants have succeeded on the central issue and are entitled to the relief requested. The respondent, through its chief building official, shall issue a building permit to the applicants as sought in the Permit Application. If the parties are unable to agree as to costs, arrangements should be made with the trial coordinator for written submissions in that regard. However, my preliminary view is that to award costs to a successful but untruthful litigant might tend to bring the administration of justice into disrepute.

Judgment: June 29, 1990

Counsel for the Plaintiffs: Robert Wicks.
Counsel for the Defendants: F. Timothy Williamson and S. Lloyd.

HARVEY J.:--

Introduction

(a) The Parties

The plaintiffs in this action are Art Den Duyf, a businessman, and a number of British Columbia companies owned and operated by him (hereinafter referred to as "Sabre"). The defendants are a municipal corporation, the Resort Municipality of Whistler (hereinafter referred to as the "municipality"), and its employees, Dougles Wylie, Lindsay Wilson, Wayne Dickinson, and Geoffrey Pearce. Wylie was Director of Public Works from May 1981 to September 1987. Wilson was Chief Building Inspector from February 1970 to December 1981 to the end of 1988. Pearce was Clerk Treasurer then Administrator form March 1976 to September 14, 1985.

At the time the action was commenced in September 1987, the plaintiffs' claims against the defendants included:

(a) allegations of breach of contract,

(b) allegations of negligence by reason of unlawful acts on the part of the defendants, including breaches of their public duty,

(c) allegations that the defendants acted unfairly and thus in bad faith in their dealings with the plaintiffs,

and

(d) allegations that the personal defendants acted, inter alia, in a high-handed, oppressive, and vindictive manner, with intent to injure the plaintiffs.

At that time the plaintiffs also alleged the following:

"21. The Plaintiffs say and the fact is that by reason of the facts as set out herein and such other facts which the Plaintiffs cannot specify until after discovery, the Defendant WYLIE, the Defendant Wilson, and the Defendant DICKINSON and the Defendant PEARCE have conspired to injure the Plaintiffs and each of them and by their conspiracy have, in fact, injured the Plaintiffs and each of them and as a result, the Plaintiffs and each of them have suffered loss and damage."

At the commencement of the trial on January 2, 1990, the conspiracy allegation was withdrawn. On January 4, 1990, I allowed the plaintiffs' motion to amend further the Amended Statement of Claim to allow the amendments now contained in paragraphs No. 25 to No. 28 inclusive.

(b) Background

The plaintiff Den Duyf came to the Whistler area in 1978, at which time he established a base for his business operation at Mons, which is approximately one mile north of the present town centre. By 1982-1983, he was the largest local contractor in the sand and gravel business with extensive involvement in excavating and site development work. As time progressed, Den Duyf became involved in snow removal, both for the municipality and privately. In 1982, his company Sabre obtained its first snow removal contract with the municipality. Sabre obtained successive snow removal contracts with the municipality to the end of the 1989-1990 season.

In 1985, Den Duyf acquired by purchase the property the Sabre companies had occupied at Mons since 1978. Den Duyf then proceeded to plan and subsequently to build a building on this property. In the course of the ensuing four years, he experienced and continues to experience problems with regard to zoning, use and road access related to the property at Mons.

In spite of the fact that as of this year he remains one of the, if not the largest, local contractor, with contracts having a value of $3.5 million dollars in 1988, and contracts expected to exceed this amount in 1989, $1 million dollars of which is contract work with the municipality, Den Duyf says that since 1978 to the present day, from time to time, representatives of the municipality developed a state of mind towards him --"an attitude to treat him unfairly -- to bring him down to size". As examples of such an attitude, her refers to the manner in which the municipality has enforced its zoning and soil removal and deposit by-laws. In relation to such by-laws he says he is treated differently than his competitors. Furthermore, he maintains the applicable by-laws were not enforced upon complaints being made with regard to potential breaches thereof.

In this perspective, he repeatedly asked himself, "am I being treated fairly?" When Sabre either was not the successful bidder, or when Sabre was not asked to bid in relation to work done privately for the municipality, he asked himself, "whether this was work I did not obtain which I whould have obtained."

In the period following commencement of this action in September 1987, Den Duyf says the position of the defendants, meaning thereby the attitude of the defendants, became more evident to him when he attempted to obtain work from the municipality, whether by tender or otherwise, and with regard to zoning and the road access problems related to the Mons property.

The position of the plaintiffs that the defendants developed and manifested an attitude to treat them unfairly requires further clarification before dealing with the issues. In this regard, I quote the following passage from the cross-examination of Den Duyf at trial.

"Q. And you're saying it hasn't occurred to you as to whether the council, itself, is biased against you?

A. I haven't spent any time thinking on this item.

Q. All right. What about the previous council, which would be between '86 and '88? '86 and '88. Who was the Mayor between 86 and '88? Mr. Meredith correct?

A. Mr. Meredith, yes.

Q. He's the current Mayor as well?

A. Yes, he is.

Q. Were they discriminating -- that is, the previous council. Were they discriminating against you, biased and unprofessional or have you not thought about that?

A. I have not thought about it.

Q. All right. What about the council previous to it? Who was the Major then? I believe that was Mayor Rodgers.

A. Rodgers.

Q. And he and his council, during their tenure, were they

discriminating against you and biased and unprofessional?

A. It's an area all the way through I haven't dwelled on.

Q. So the politicians, you haven't considered whether they were discriminating against you, biased and unprofessional? Does it go back to your tenure at Whistler?

A. Right to day 1.

Q. So we can leave the politicians out of this, is that correct?

A. Yes."

The importance of this evidence is that the thrust of the plaintiffs" claims is against the personal defendants as employees of the municipality. The plaintiffs do not assert that the mayors and the members of the Municipal Councils from 1978 to date have any liability, apart from the vicarious liability of a municipal corporation for the torts committed by its employees.

The evidence at trial was adduced in relation to a List of Issues encompassing, inter alia, the following:

(a) breach of contract,

(b) zoning,

(c) tenders,

(d) permits, re Soil Removal and Deposit By-Law No. 131,

(e) Mons property re-zoning and road access,

(f) Expenditures Procedure By-Law No. 645,

(g) snow removal contracts and tender, and

(h) bad faith - negligence.

I will refer to those issues requiring consideration of the evidence and authorities referred to in argument.

Zoning and Permits

At trial, the plaintiffs made reference to twelve instances over the years wherein it is alleged that the defendants enforced by-laws in a discriminatory manner. In no instance do the plaintiffs attempt to quantify or calculate a loss supporting a claim for damages. As I understand the thrust of the plaintiffs' position it is that these instances should be taken into consideration in the entirety of the evidence confirming the discriminatory attitude of the defendants towards the plaintiffs.

In one instance, the complaint is that another contractor, a competitor of the plaintiffs, stored vehicles and equipment on property not zoned for such use. In other instances, Den Duyf, after making personal investigations, made complaints to the municipality that materials, usually sand or gravel, were being removed from or screened on sites, or both, where no soil removal permit had been obtained, or where such a permit had expired.

In cross-examination, it was put to Den Duyf that on two occasions he and his companies were themselves in breach of the Soil Removal and Deposit By-Law in relation to screening aggregate and removal of materials from sites where a soil removal permit was no longer valid or had not existed. Den Duyf made no further explanation other than to say that these were matters of great embarrassment to him. The plaintiffs were not the subject of prosecutions for these apparent violations of the by-law.

In a similar vein, when Den Duyf and Sabre commenced the construction of a new building at Mons, they started the foundation work and had this work substantially completed before a building permit was issued by the municipality. In this regard, the defendant Wylie stated that he turned a blind eye to this work to allow the plaintiffs to get on with construction, having regard to the seasonal aspect of when such

work could be done in this area.

The Municipality denies that it enforced its bylaws in a discriminatory manner. Its policy was to enforce bylaws on a "complaint driven" basis. Such a system was required given the needs and resources of this extremely fast developing resort community, particularly during the 1980's.

In any event, the Municipality submits that the plaintiffs have no cause of action regarding non-enforcement of municipal bylaws and, collaterally, that enforcing or not enforcing bylaws is entirely within the discretion of the municipal council.

I comment at the outset that there is no statutory obligation upon the Municipality to enforce its bylaws. Nothing in the municipality's bylaws directs that enforcement is mandatory. Moreover, the relevant sections of the Municipal Act contain no mandatory wording. Sections 750(1) and 751 of the Act provide examples of the discretion afforded municipalities in enforcing their bylaws:

" 750(1) A bylaw adopted under this Act may be enforced, and the breach of this Act or a bylaw resolution or regulation of the council restrained by a proceeding in the Supreme Court or the County Court whether or not a penalty has been imposed for the breach.

(2) .....

751 Where a building is erected or used, or land is used, in contravention of a bylaw adopted under this Act, in addition to any other remedy provided in this Act, and to any penalty imposed by the bylaw, the contravention may be restrained by a court proceeding at the instance of the municipality alone."

(my emphasis)

It is understandable that persons may feel aggrieved when bylaws are enforced against themselves, but not against others that they perceive to be similarly situated. Such governmental action no doubt appears to them to violate that most basic tenant of our law; that all persons are equal in the eyes of the law. Such notions of fundamental fairness underly recent courts' willingness to examine municipal decision-making and action taking.

However, in my view, the courts have also been mindful of the practical hazards of interfering with municipal discretion. As Duff, J. discussed in Orpen v. Roberts [1952] S.C.R. 364, we simply cannot allow every person who spots a bylaw infraction to commence an action against either or both the violator and the municipality which, perhaps for good reason, has condoned the bylaw infraction.

Keeping the tension between these two concepts in mind, I now propose to review the cases referred to in argument.

Tchaperoff v. City of Victoria and Memorial Airpark Association of Greater Vancouver, [1948] 2 W.W.R. 722 (B.C.S.C.) and Caldwell v. City of Saskatoon and Sisters of the Presentation (1969), 71 W.W.R. 152 (Sask. Q.B.) are good examples of the court's concern that private citizens not be given carte blanche to interfere with a municipality's enforcement practices.

In Tchaperoff, the City of Victoria signed an agreement with Memorial Airpark to construct an airport adjacent to the plaintiff's property. This clearly contravened the zoning bylaw for the area. In Caldwell, the plaintiff asked the court to quash a permit issued by the City of Saskatoon to the Sisters of the Presentation authorizing additions to their exising building which were also in violation of the bylaws. In both cases the court held that bylaws create no rights personal to citizens of the municipality and that they therefore have no cause of action. Both decisions rely heavily upon the court's reasoning in Orpen v. Roberts (supra).

The reasoning in Dusevic v. Columbia Shuswap Regional District, [1989] B.C.J. No. 668 (April 17, 1989) (B.C.S.C.), exemplifies, to my mind, the relatively recent willingness of the courts to examine municipal actions in the area of bylaw enforcement and to correct those actions when they have been

done in bad faith.

An earlier case, City of Toronto v. Polai (1969), 8 D.L.R. (3d) 689 (Ont. C.A.), is a transitional case. While the public interest in not interfering with municipal discretion was the basis upon which the City's request for an injunction against a bylaw violator was granted, all three judges saw fit to enquire into the basic fairness of the situation. Schroeder, J.A., in particular, examined at least three "bad faith" type factors: firstly, whether non-enforcement amounted to a grant of perpetual immunity to violators, secondly, whether the council carefully considered each situation of non-enforcement; and thirdly, was there any evidence of improper motive?

In Dusevic, the plaintiff sought an order of mandamus compelling the defendant district to enforce its zoning bylaw against Purcell Helicopters whose use of their land clearly contravened the bylaw.

The plaintiff sought to have the court apply a negligence standard to the municipality's actions as set out in Kamloops v. Nielson [1989] 5 W.W.R. 1 (S.C.C.). Mr. Justice Maczko, properly in my view, refused to do so on the basis that the municipal action under attack in the case before him was a policy decision, not an operational decision. He instead examined whether there was any evidence of bad faith on the part of the municipality and concluded that there was not.

One aspect of his reasons is problematic. It is clear that he agrees with the court in Toronto v. Polai ((supra), at page 699, quoted at p. 14 of Kamloops v. Nielson), that the court will interfere when a municipality adopts a general policy of non-enforcement. This is so because such a policy amounts to an unauthorized amendment of the legislative scheme. What is not clear is whether such a policy of non-enforcement is one aspect of bad faith or whether it stands on its own as a reason justifying a depatrue from the general rule that municipal discretion is not to be interfered with.

Whether or not "perpetual immunity" is an aspect of bad faith, in this case the municipality's decision to enforce bylaws on a complaint driven basis cannot possibly be characterized as a general policy of non-enforcement. Nor can it be considered an operational decision which would leave it open to review pursuant to the standard in Kamloops v. Nielson.

With respect to bad faith in relation to the issues presently under consideration, the plaintiffs have failed to demonstrate any improper motive for the municipality's enforcement actions. The conduct of the personal defendants relied upon by the plaintiffs to demonstrate bad faith on their part in this perspective not only falls far short of establishing such conduct but, in certain instances, supports a finding to the contrary.

In relation to the defendant Pearce, for example, it is submitted by Mr. Wicks that when Pearce recommended to his employer, the municipality, that a certain decision of the Board of Variance related to zoning at Mons be challenged, he was acting unreasonably -- in bad faith -- with regard to the plaintiffs. I consider such a recommendation to be consistent with the position of his department throughout and was in the course of discharge of his duty as he saw it at that time. In the end result it was the Municipal Council which made the decision to take the matter further.

Den Duyf experienced numerous problems in the course of development of his property at Mons, requiring him to engage in litigation, including litigation with the municipality. In the result, he has been largely successful to the extent that he was permitted to construct a new building on his property at Mons on the basis of the property and building hereon being a pre-existing, non-conforming use. However, the fact that the plaintiffs were successful in court regarding the Mons dispute in no way proves that the municipality acted in bad faith in litigating the matter.

The question of road access to the property also proved particularly difficult for Den Duyf. In the litigation which became necessary for him to obtain such access, the municipality is not a party -- the opposition to Den Duyf being that of a private owner of property in the area. In my view, the evidence confirms that the municipality has supported the position of Den Duyf with regard to this question. Den Duyf's

allegation that because he has had to bear the considerable expense of this litigation personally the municipality is discriminating against him is totally without merit.

In my view, the fact that on occasion bylaws were not enforced against the plaintiffs' competitors falls far short of establishing the factors necessary to find liability. I find the plaintiffs' claims concerning non-enforcement of bylaws related to zoning and permits must fail.

Tenders

At trial, the plaintiffs made reference to nine instances over the years wherein they allege, inter alia, that in relation to them, the tender process of the municipality was unfair.

The plaintiffs allege additionally that in two specific instances, described as the Whistler Road tender, and the Rainbow Beach Park tender, there were breaches of contract on the part of the municipality in the tendering procedure.

I will consider first the plaintiffs' allegations in relation to the nine instances in which they allege the tender processs of the municipality is unfair.

As I understand Den Duyf with regard to this issue, he says he wanted and should have been afforded the opportunity "to tender on any and all work" of the municipality performed by private contractors. In this regard, he appears to question the right of the municipality to tender work other than on a public tender basis. The practice of the municipality during the material times was to tender work on a public and a select tender basis, as well as by direct purchase in relation to smaller jobs usually pursuant to the Expenditures Procedure By-Law No. 645.

For example, in relation to three instances described as "hard pan for sludge pond", "21 Mile Creek Water Project" and "Parking Lots 1, 2 and 3", Den Duyf's complaint is that Sabre was not invited to submit bids on the work offered by the select tender process. In another instance he says specifications were altered, affording another contractor an opportunity to submit a bid late with corresponding advantage. In relation to certain direct purchases, he seemed to convey that either the work should not have been given in this manner to the contractors in question, or it should have been given to Sabre.

In no instance was a claim quantified or calculated and advanced as damages.

In cross-examination, Den Duyf agreed that when the select tender procedure was used by the municipality, there were numerous instances when Sabre was one of the contractors invited to bid, and other contractors in competiton were not so invited to bid. He also agreed that over the years Sabre had received work on numerous occasions by way of direct purchase.

In the course of argument, Mr. Williamson on behalf of the defendants submitted that it was apparent that, apart from the snow removal contracts, Sabre had probably received more than its fair share of the municipality's work, as reflected by the amount of contracts obtained by Sabre over the years, including its present volume of work in excess of $1 million. I consider there to be considerable merit in this submission. In any event, the evidence does not demonstrate in the instances referred to, the unfairness alleged or any unfairness in the tender procedure of the municipality such to support claims for damages either as alleged or at all. The plaintiffs' claims in relation to the tendering procedure generally, as reflected in the nine instances referred to above, are without any foundation insofar as providing a basis for claims for damages against the defendants and therefore must fail.

I return to the Whistler Road and Rainbow Beach Park tenders.

These are both situations in which Sabre was not awarded the contract. In both situations, Sabre was permitted to submit what was described as a late bid.

The defendants raise a preliminary objection regarding whether a claim for damages for breach of contract is proper in

the circumstances of these tenders. They submit on the facts of these tenders that an action for damages is not the proper remedy for parties aggrieved by and alleging an unfair tender process. I propose to deal with this objection and the authorities submitted in support thereof.

The usual remedy for breach of contract is damages. On that basis the plaintiffs claim the lost profit that they would have realized had they been awarded both the Whistler Road and Rainbow Beach contracts.

The defendants, however, assert that the plaintiffs are not entitled to any damages even if either or both tenders were improperly let. The defendants contend that the plaintiffs should have pursued a remedy under the Judicial Review Procedure Act which may have provided relief of an injunctive or mandative nature as opposed to now asking for damages after the work has been done. The defendants rely on three American cases: Sutter Brothers Construction Co., Inc. v. City of Leavensworth (1985) 65 A.L.R. 4th 81 (Kansas Supreme Court); M.A. Stephen Construction Co. Inc. v. Borough of Rumson (1973)
308 a. 2d 280 (New Jersey Supreme Court); and Owen of Georgia,
Inc. v. Shelby County (1981) 648 F. 2d 1084 (U.S. Court of Appeal).

All three cases concern actions by low bidders who were not awarded public works contracts that they bid for. In both M.A. Stephen and Sutter Brothers, the courts held that while low bidders had the right to challenge the improper awarding of public works contracts, that right is limited to injunctive or mandamus type relief. It does not include a right to damages suffered as a result of not being awarded the contract.

The court in M.A. Stephen relied on a number of what might be called policy reasons in denying damages; firstly, unsuccessful bidders' status to compel, by injunction or mandamus, a public authority to properly award a public works contract is not founded upon the private bidders' rights, but on the public's interest in the integrity of the bidding process.

Second, awarding damages for lost profit to an unsuccessful bidder, after the work has already been done by another bidder and paid for, forces the public to pay twice for the work. Third, allowing bidders on public works to collect damages when the work is improperly let to someone else places those bidders in an advantageous position compared to bidders on private projects, who have no such right.

I find these policy reasons very persuasive. However, I am not prepared to hold that the plaintiffs in this case are not entitled to bring an action for damages for the following reasons: firstly, the defendants could not provide the court with any Canadian case authority stating that unsuccessful bidders are limited to injunctive relief and prohibited from seeking damages. Although it is true that no damages for lost profit following the improper letting of a contract were awarded in any of the Canadian cases relied upon, it was not on the grounds that an action for damages is inappropriate. Moreover, in Chinook Aggregates Ltd. v. The District of Abbotsford (1989) 40 B.C.L.R. (2d) 345 (C.A.), the Court of Appeal specifically upheld the trial court's award of damages in the amount of an unsuccessful bidder's expenses for preparing the bid.

Secondly, it appears that the American cases differ from the Canadian cases in one major way; they do not determine tendering claims according to contractual principles and rules. In this regard, the American courts have not been faced with what appears to me to be a conflict; how can I hold that an unsuccessful bidder has no right to contractual relief (damages) when Canadian courts, including the Supreme Court of Canada, have defined a tenderer's rights in contractual terms?

It is obvious that "preventative" relief in the form of an injunction or order for mandamus is the preferred method for dealing with situations in which a tender contract has been improperly let. However, at least in Canada, the law as it stands does not prohibit the plaintiff in this case from bringing an action for damages instead.

In order to find a breach of contract in this case I must

first find that a contractual realtionship existed between the plaintiffs and the municipality. Secondly, I must find that the municipality breached its obligations under that contract.

Actions by parties who have not been awarded a contract after tendering are not based upon breach of the actual contract which they were competing for. Rather, they are based upon breach of the contract which is said to arise upon submission of tender in accordance with the terms set out in the tender documents. Authority for this approach to tendering related actions can be found in The Queen v. Ron Engineering and Construction Ltd. [1981] 1 S.C.R. 111. In his judgment for the court, Mr. Justice Estey distinguishes between contract "B", the actual service contract, and contract "A", which, he says, "... comes into being forthwith and without further formality upon the submission of the tender.' (p. 274). In strict contractual terms, therefore, the call for tenders is the "offer" and the tender submitted constitutes the "acceptance".

it is important to note that submission of a tender bid only creates a contract "A" if that bid complies with the terms and conditions of the call for tenders.

The defendants strenuously argue that irrevocability of the tender is a necessary prerequisite before tender submission can create a contract, contract "A". There is no irrevocability term in any of the tender documents involving the disputed tenders in this case.

Upon consideration of the Ron Engineering case as a whole, my conclusion is that irrevocability is not a prerequisite for the creation of a contract "A". Rather, contract "A" comes into being upon the submission of the tender and irrevocability, if present, is merely a term of the tender documents which must be examined, as do all the terms, to determine the nature of contract "A", not the existence of it.

In support of this view, I refer to Mr. Justice Estey's words at p. 275 of the judgment:

> " There is not disagreement between the parties here about the form and procedure in which the tender was submitted by the respondent and that it complied with the terms and conditions of the call for tenders. Conse quently, contract A came into being. The principal term of contract A. is the irrevocability of the bid, and the corollary term is the obligation in both parties to enter into a contract (contract B) upon the acceptance of the tender. Other terms include the qualified obligations of the owner to accept the lowest tender, and the degree of this obligation is controlled by the terms and conditions established in the call for tendes."

The defendants' position regarding the necessity of irrevocability is understandable given the emphasis placed upon this term in Ron Engineering. That emphasis, however, is explained by the fact that the key issue in the case was revocability of a bid and forfeiture of a deposit.

Subsequent cases which have applied the "Contract A- Contract B" notion of tender relationships enunciated in Ron Engineering include: Best Cleaners and Contractors Ltd. v. The Queen in Right of Canada [1985] 2 C.F. 293 (C.A.); Chinook Aggregates Ltd. v. The District of Abbotsford (1989) 40 B.C.L.R. (2d) 345 (C.A.); and Ben Bruinsma & Sons Ltd. v. The Corporation of the City of Chatham et al (1984), 11 C.L.R. 37 (Ont. S.C.). In none of these cases has it been specifically held that irrevocability is a prerequisite for contract "A".

If a court accepts that submission of a bid which complies with the terms and conditions of the call for tenders brings into existence a "contract A", then the court must then determine what obligations the defendant had under "contract A" and whether they were breached.

While the case law is somewhat unclear, in my view two kinds of obligations arise from the formation of contract "A". These are "express" obligations, as determined by the terms of the tender documents, and "implied" obligations, those terms and obligations that are understood by the parties to accompany the relationship that arises upon submission of the tender and formation of the contract.

Most of the cases deal with express obligations and as a result the focus is on the terms contained in the tender documents. For example, in the Ron Engineering case, the Supreme Court of Canada had to interpret terms in the tender documents relating to revocability of the bid and forfeiture of a $150,000 deposit in order to decide whether contract "A" had been breached.

In M.S.K. Financial Services Ltd. v. The Queen in Right of Alberta (1987) 23 C.L.R. 172 (Alta. Q.B.), the court also looked to the terms of the tender documents to decide whether a breach of contract "A" had occurred. In this case the contract was awarded to a firm that was not low bidder and did not have the qualifications required by the terms of the tender documents. Nevertheless, the defendant was not held liable given another term of the documents which stated that the lowest or any tende would not necessarily be accepted and that the defendant reserved the right to reject any and all tenders.

In Ben Bruinsma, the plaintiff was low bidder on a tender call involving sodding and seeding work. After submission but prior to acceptance, the defendant municipality's alteration of the terms was "... a breach of contract or a breach of duty on the part of Chatham within the contractual relationship with the plaintiff and all the tenderers." (p. 51).

Similarly, in Best Cleaners, the court specifically held that there is an implied obligation not to award contract "B" except in accordance with the terms of the tender documents:

> " The respondent's obligation under contract A was not to award the contract except in accordance with the terms of the tender call. The stipulation that the lowest or any tender need not be accepted does not alter that. The respondent might award no contract at all or it might award contract B to Tower, but it was under a contractual obligation to the appellant not to award Tower something other than contract B." (p. 306-7).

With respect to the Whistler Road tender, the following occurred. After the municipality sent out a call for tenders, Sabre submitted a bid which was accepted despite its lateness. Both tenders submitted exceeded the project budget. The project was then increased both in budget and amount of work to be done and after calculations were made based on the unit prices submitted by both tenderers, the contract was awarded to a bidder other than Sabre.

The plaintiff's position in a general sense is that the work should have been re-tendered and Sabre given an opportunity to re-bid.

The defendants rely upon two sets of arguments; those relating to the deficiencies in Sabre's tender bid and those concerning the terms set out in the tender documents. With respect to the first, the defendants assert that the bid did not contain the required detailed listing of experience. Nor did the tender bid include the required Consent of Surety form.

With respect to the terms set out in the tender documents, the defendants rely on the following passages:

> "(1) a description of the work as comprising 'reconstruction of approximately 500 metres of Whistler Road including replacement of drainage culverts' and that 'the limit of Corporation funding for this project will be confirmed prior to acceptance of the tender and the amount of road to be reconstructed to be decided at that time'; "

(emphasis added)

> (2) a further reference for the tenderer that 'The lowest or any tender will not necessarily be accepted' and 'The Corporation reserves the right to reject any or all tenders and the lowest bid will not necessarily be accepted.'"

In accordance with the method of analysis set out earlier, I first must enquire as to whether a "contract A" came into existence upon Sabre's submission of its bid. If it did then I must determine whether the municipality breached its express or implied obligations under that contract.

A contract "A" was not created when Sabre submitted its bid

on the Whistler Road project because that bid did not comply with two of the terms and conditions of the call for tenders. Such compliance is, as I have pointed out, a prerequisite for the creation of contract "A" upon submission fo a tender bid. (See p. 275 of Ron Engineering, as quoted previously). As the defendants stressed, the bid did not detail Sabre's experience, nor did it attach the required Consent of Surety form.

There being no contract "A" with respect to the Whistler Road tender, I need not consider the terms of the tender documents to determine whether Whistler breached its obligations under that contract "A".

With respect to the Rainbow Beach Park tender, Sabre was not the low bidder by a considerable amount. As I understand the plaintiffs' complaint in relation to this tender, it is that subsequent to the awarding of the work to the successful bidder, the municipality made a decision to change the specifications from washed sand to another form of sand. The plaintiffs argue, in essence, that had the tender been let without the requirement of washed sand in the first place, that he may have been the lower bidder. I am asked to draw the inference that the decision subsequently made to remove the requirement of supply of washed sand must have been known to the municipality or alternatively that the municipality did not put its mind to the matter at that time.

The defendants submit that all tenderers were treated fairly and equally in the bidding process and rely on a clause of the Preparation Agreement which allows them, after accepting a tender, to make changes in the work based on the site conditions and requirements.

Again, applying the analysis set out earlier, is there a contract "A"? The defendants raise no issue with the form and content of Sabre's bid so I must assume that is complied with the call for tenders. Therefore, a contract "A" came into existence when Sabre's bid was submitted.

Did the municipality's action in changing the sand requirement breach its obligations under contract "A"? This is not a case of the municipality changing a specification set out in the tender call documents with the result that a bidder other than Sabre received the job. This is a case of the municipality changing a term of contract "B" after it had properly accepted the low bid of the successful contractor.

There is no express term in the tender call document which obligates the municipality as part of its contract "A" with all tenderers, not to change the job specifications after selecting the low bidder. The municipality may have an implied obligation not to "rig" the bid by designing tender specifications and requirements so as to discriminatorily exclude all but its preferred contractor or just one disapproved of contractor. However, the plaintiffs did not put forward evidence of such manipulation.

Sabre submitted a bid on equal footing with the successful bidder and was outbid. Whatever alterations were subsequently made concerned only the parties to contract "B"; Whistler and the successful bidder. Those alterations in no way breached any obligation owed by Whistler to Sabre or any of the other bidders pursuant to contract "A".

The plaintiffs' claims based on breach of contract regarding the Whistler Road and Rainbow Beach Park tenders therefore fail.

Snow Removal Contracts and Tender

The plaintiffs claim damages for breach of its contract with the municipality for snow removal for the years 1986 to 1989, the first three-year contract issued in relation to this work.

As I understand the position of Sabre, it says the municipality is in breach of this contract because:

(a) the municipality leased two additional pieces of equipment during the 1988-1989 season, and

(b) the municipality allowed another contractor to remove snow from the Blackcomb Bench Lands, north of the Town Centre -- an area reserved to Sabre.

With regard to (a) above, Sabre says the effect of the leasing of this equipment and its potential use was to reduce the use of Sabre's equipment, evidence by the fact that, on occasion, Sabre's crews had to be sent home. With regard to (b) above, Sabre says Whistler encouraged Sabre's major competitor, one Demidoff, to become actively involved in this work. Sabre says this was done because the municipality considered Sabre was too big, and in need of competition.

In relation to the 1986-1989 Snow Removal Contract, the plaintiffs claim the sum of $50,000.00 for breach of contract.

Pursuant to the terms of this contract, the equipment to be provided by the parties is described as well as stand-by equipment. There is also provided a description of the work areas. Most importantly are the provisions of Section 2.03 which reads as follows:

"2.03 Roads Included

The roads to be plowed are the public roads within the Municipality and selected parking lots at the discretion of the Municipal Engineer, with the exception of Highway 99. Plowing will be directed by Municipal staff. It is the Municipality's intention to use its own snowplow, a 4 x 4 dump truck with plow, wing blade, and snowblower attachments to plow and sand some streets in conjunciton with the Contractor. The Municipality will be free to assign its own equipment or the Contractor's equipment as it seems fit. The Municipality will also have a second 4 x 4 dump with plow for standby. It is the Municipality's intent to use the first truck as its primary vehicle. The other 4 x 4 dump truck with plow for standby. It is the Municipality's intent to use the first truck as its primary vehicle. The other 4 x 4 dump truck will be used as a back up truck to be used if the Municipal or contractor equipment is broken down, or, in the event of a severe or extended storm as an additional vehicle on any road in the Municipality at the sole discretion of the Municipal Engineer."

The position of the municipality is that the provisions of Section 2.03 clearly confer upon the employees of the municipality a discretion in the assignment of work to be done and where it is to be done by the contractor. It says that at all material time during the term of the contract there was no abuse of this discretion, and that such was the case including those occasions when there was equipment breakdown on the part of Sabre, and when Sabre's operators were not available when called. Insofar as the use of any additional equipment, including that referred to by Sabre in its complaints, such equipment if and when used was within the terms of the contract, including those provisions related to the use of replacement vehicles. The municipality also denies that there was within the terms of the contract a geographical division of the area insofar as assignment of the work such as to require it to have assigned the work in the Blackcomb Bench Lands to Sabre as opposed to another private contractor.

I do not consider it necessary to determine whether the contract was breached by Sabre in the terms of equipment breakdown and operator availability. In any event, the municipality did not take such a position and move to terminate the contract on this basis.

I find the submissions of the defendants to be supported by the evidence. I find further that the scope of the discretion conferred by the provision of 2.03 should not be limited or restricted as claimed by the plaintiffs based upon previous experience in snow removal work. For these reasons I find that breach of the contract has not been proven.

It is not necessary to consider whether any damages related to breach of contract have been proven.

The plaintiffs advance a claim in relation to the tender for snow removal work put forward by the municipality for the post1989 seasons. As I understand the plaintiffs' position in this regard it is that the specification related to equipment of the municipality is not fair because some of Sabre's existing equipment is now over-sized, and in order for it to bid in relation to this work it would have had to replace such equipment. Furthermore, the plaintiffs say the specification was put forward to allow the municipality to do more of such

work itself. Finally, the plaintiffs say that such change in the specification had the result of leaving Sabre with equipment it could not effectively utilize in tis operations.

The plaintiffs' position in relation to the most recent snow removal tenders reflects, in part, its resistance to competition in this area of the municipality's work, and its apparent objection to the intrusion of the municipality into more of such work.

It is useful to consider the history of performance of this work. From the 1981-1982 season to the end of the 1988-1989 season, Sabre was awarded the snow removal contracts for the work to be performed by a private contractor. During the entirety of this time, it was never the low bidder in the public tendering process. On two occasions, the defendant Wylie, the Director of Public Works, recommended to the District Council that Sabre be awarded the contracts including the most recent three-year contract for the 1986-1989 season. In spite of such recommendations on the part of Wylie, Den Duyf stated in his evidence at trial that Wylie did everything he could to encourage competition and to enlarge the role of the municipality in the work to the disadvantage of Sabre.

I conclude from this evidence that with regard to snow removal contracts at the present time and in the future, Den Duyf is not prepared to accept two factors -- one, being competition among private contractors for the work; the other, being the legitimate desire of the municipality to become more involved in the work.

I conclude there can be no claim for the equipment which remains in the hands of the plaintiffs because of the present specification of the municipality for equipment it considers appropriate in relation to performance of the work by a private contractor. There is no evidence upon which the plaintiffs can rely to support a claim of this nature. The plaintiffs were not assured that Sabre would be awarded the snow removal contract upon expiration of the 1989 season.

Bad Faith - Negligence

The plaintiffs submit that when the acts of the personal defendants, in their entirety, are examined between 1981 and 1987, and thereafter, that what is revealed is a pattern of conduct designed to disadvantage the plaintiffs. The allegations of conspiracy made were abandoned at the commencement of the trial. The plaintiffs then began framing their cause in terms of an "attitude' on the part of the personal defendants.

One cannot maintain an action for "bad attitude". The plaintiffs have therefore, attempted to demonstrate that the action and attitudes of the personal defendants constitute bad faith, an abuse of power, unreasonableness, or at the very least, negligence. On the basis of vicarious liability, the plaintiffs also seek to recover from the municipality.

Before examining the basis upon which in law, municipal officers and municipal corporations can be held liable, it is important to note that certain sections of the Municipal Act severely limit liability in these cases. Section 755.1 provides:

" 755.1(1) No action for damages lies or shall be instituted against a municipal public officer or former municipal officer for anything said or done or omitted to be said or done by him in the performance or intended performance of his duty or the exercise of his power or for any alleged neglect or default in the performance or intended performance of his duty or exercise of his power.

(2) In this section 'municipal public officer' means

(i) an officer or employee of a municipality, regional district....

(3) Subsection (1) does not provide a defence where

(a) the municipal public officer has, in relation to the conduct that is the subject matter of the action, been guilty of dishonesty, gross negligence or malicious or wilful misconduct, or

(b) the cause of action is libel or slander."

The only conduct which any of the personal defendants may be held liable for is conduct amounting to dishonesty, gross negligence or malicious or wilful misconduct.

The municipality, on the other hand, pursuant to s. 755.1(4), may be held vicariously liable for any tort committed by a municipal officer that the municipality would have been liable for prior to the passing of s. 755.1(1). Section 755.1(4) reads:

" 755.1(4) Subsection (1) does not absolve any of the corporations ... from vicarious liability arising out of a tort committed by any of the individuals referred to in subsection (2) which the corporation or body would have been liable for had this section not been in force."

Inclusion of the words, "... which the corporation or body would have been liable for had this section not been in force", means that liability of the municipal corporation must be determined according to the common law as it stood before Section 755.1 was enacted. I will now review that law.

(a) Bad Faith

Upon consideration of the Authorities submitted by both parties, it is apparent that cases addressing the liability of municipalities for the bad faith or unreasonableness of, or the abuse of power of discrimination by, municipal officers, are exceedingly rare. The only case submitted which has any comparative value on its facts is Serendipity Ventures Ltd. et al v. Corporation of the City of White Rock (1988) 39 M.P.L.R. 1, a decision of Taylor, J., then of the Supreme Court of British Columbia. In that case the plaintiff land developers alleged that, over a five-year period, the municipal council unlawfully used its powers to frustrate the plaintiff's attempts to rezone and develop a parcel of land which the council wanted to designate as park land. The plaintiffs sought damages for negligence and bad faith. Taylor, J. found for the City but unfortunately did not discuss the nature of the action and whether, and in what circumstances, a municipality will be liable.

Although the cases submitted by both parties provide some indication as to what constitutes bad faith, unreasonableness, discrimination and abuse of power, I am reluctant to apply the approaches taken in these cases for two reasons.

First, almost all of the cases provided discuss such concepts as they relate to one of the oly two situations; the actions of municipal councils or administrative boards. For example, the plaintiffs rely upon Re: Nicholsen et al (1978), 18 D.L.R. (2d) 671 (S.C.C.) which stands for the proposition that administrative tribunals have a general duty to act fairly. In the absence of any authority dealing directly with the factual situation before me, in the context of bad faith allegations, am I merely to adopt, without question, the law as it relates to the standard of conduct required of municipal councils and administrative tribunals?

Secondly, invariably these cases regarding municipal and administrative tribunal action came before the court in a judicial review type manner, not by way of an a action for damages. My earlier comments regarding whether an action in damages is the appropriate way to compel a municipality to enforce its bylaws, are equally apt here. Counsel provided no authority regarding whether an action for damages can be sustained in the circumstances before me.

What is most evident about the law in this area is that it is unclear. Concepts of abuse of power, discrimination, bad faith and unreasonableness seem to be used somewhat interchangeably. Perhaps this is because some (for example "unreasonableness"), may merely be proof of another (bad faith), or because all may be merely different words for the same concept; the notion of unjustified, ill-motived, unfairness. Bad faith, in all its incarnations, is much like obscenity in the following respect; none know how to define it but all of us claim to know it when we see it.

When it is demonstrated, the courts will interfere with the discretion of a municipal council or administrative tribuanl.

Presumably then, the courts should also interfere when a municipal officer acts in bad faith. However, the burden on the plaintiffs is an onerous one, as exemplified by the plaintiff's failure in Serendipity (supra), a case which appeared to have been, on the evidence, a stronger one than the case at bar.

What most distinguishes bad faith concepts from negligence appears to be the intent element of the claim. This is revealed in the fact that the courts often look to whether a municipal or administrative action was improperly motivated to determine whether it was done in bad faith. This is also true of other "bad faith" type concepts. In Lees et al v. Corporation of the District of West Vancouver (1979) 15 B.C.L.R. 233, the British Columbia Court of Appeal stated that "wrongful discrimination" involves two elements; discrimination in fact, and improper motive. Improper motive, in the form of malice, may also be a crucial part of a finding of abuse of power; Bourgoin SA and others v. Ministry of Agriculture Fisheries and Food (1985) 3 ALL E.R. 585 (Court of Appeal, Civil Division) and Dunlop v. Woollahra Municipal Council [1981] 1 ALL E.R. 1202 (P.C.). Even unreasonableness, which would appear on its face to be something more likely than "discrimination" and "abuse of power", to occure without imporper motive, may also involve similar inquiries into motive; Beltz v. Law Society of British Columbia et al [1987] 1 W.W.R. 427 (B.C.S.C.).

(b) Negligence

Unlike the law concerning bad faith, it is clear from the results in Anns and others v. London Borough of Merton, [1977] 2 ALL E.R. 493 (H.L.) and city of Vernon v. Manolakos et al, sub nom. Rothfield v. Manolakos (1989), [1990] 1 W.W.R. 408 (S.C.C.), that municipalities can be held liable for the negligence of their municipal officers.

Both cases concerned the negligent actions or inactions of municipal building inspectors which ultimately caused property damage. In Anns, (at p. 498), the House of Lords set out the familiar test for negligence in these circumstances:

> " First one has to ask whether, as between the alleged wrongdoer and the person who has suffered damage there is a sufficient relationship of proximity or neighbourhood such former, carelessness on his part may be likely to cause damage to the latter, in which case a prima facie duty of care arises.
>
> Secondly, if the first question is answered affirmatively, it is necessary to consider whether there are any considerations which ought to negative, or the reduce or limit the scope of the duty or the class of person to whom it is owed or the damages to which a breach of it may give rise."

Entirely apart from the lack of evidence in this case of any negligent acts, there are two factors about this case that make it different from Anns and Vernon v. Manolakos. Firstly, in Anns and Manolakos the courts looked to the statutory duties and powers of the inspectors and municipalities to determine whether and what type of duty of care existed. The power and duty to inspect easily imputed a duty to do so, and do so with reasonable care. In this case, what specific statutory duty or power provides the foundation for a general duty of care existed. The power and duty to inspect easily imputed a duty to do so, and do so with reasonable care. in this case, what specific statutory duty or power provides the foundation for a general duty of care? If the plaintiffs' rather vague claims of "attitude" and discrimination are to constitute negligence, (and, in my opinion, they cannot since both terms imply "intent" not "neglect"), there must be neglect of some duty.

Secondly, in both Anns and Vernon v. Manolakos, the proximity element of the duty of care was easily satisfied; building inspectors owe a duty of care only to people who live in the building. In this case, even if there is a duty of care to not discriminate, to whom is it owed? If it is owed to everyone, then everyone affected adversely by a municipal officer's action or inaction, would conceivably have an action. The duty must be specifically owed to the plaintiffs and that is not the case here.

For these reasons, I have grave reservations, apart from the evidence, regarding the availability of a negligence action in this case.

In the course of these reasons, I have reviewed the evidence, including the conduct of the personal defendants in relation to a number of the issues requiring consideration. I have referred to the evidence adduced by the plaintiffs of an alleged attitude reflected by conduct related to their position that the personal defendants were engaged in conduct constituting bad faith or to be discriminatory. I do not find such allegations to be supportable upon consideration of the evidence as a whole. I have referred to instances over the years where, in my view, the actions of the personal defendants were supportive of the plaintiffs. These instances are inconsistent with the plaintiffs' position that an attitude of discrimination developed or ever existed. I find the personal defendants, acting within their powers, were not discriminatory, their conduct in no way constituted bad faith, or unreasonableness, or an abuse of power, and that, on the contrary, they were discharging their duties and obligations in good faith in the best interests of the public. I further find the personal defendants were not negligent, and furthermore that the plaintiffs have in no way met the test in Anns, (supra).

Conclusion

As is apparent from my reasons, the plaintiffs' claims are dismissed as against all defendants. In view of this conclusion, it is not necessary for me to consider the defendant's argument that the plaintiffs' claim is barred by effluxion of time pursuant to the Limitation Act.

Costs

With respect to costs, the defendants submitted that, should they prevail, costs should be awarded to them on a solicitorclient basis. As authority they cite: JWJ Developments Ltd. v. Village of Chase et al (1988) 32 B.C.L.R. (2d) 145 (C.A.) (affirming the unreported oral decision of Mr. Justice Lander). In that case Mr. Justice Lander was faced with a plaintiff alleging conspiracy, negligence, malicious and fraudulent conduct on the part of municipal councillors and a city clerk. Given the seriousness of such allegations and the total lack of any evidence supporting them, he awarded costs on a solicitor-client basis.

Upon consideration, I do not consider it appropriate to award costs on a solicitor-client basis. Firstly, although the evidence was lacking, this case was not patently and obviously without merit as Mr. Justice Lander appeared to conclude in JWJ Developments. The plaintiffs' pursuit of this litigation was not, in my view, malicious. Secondly, allegations of discrimination and bad faith on behalf of municipal officials, even when they are true, are difficult to prove. Thirdly, the defendants made no attempt to utilize the summary procedures available under the Rules of Court, possibly shortening this litigation. Costs will therefore be awarded to the defendants on a party-party basis.

HARVEY J.

Whitchurch-Stouffville (Town) Chief Building v. Official v St. Marys Cement Ltd.

Between
Robert Bennett, Chief Building Official of the Corporation of the Town of Whitchurch-Stouffville, appellant/applicant, and 893472 Ontario Limited and St. Mary's Cement Corporation, respondent/respondent

[1994] O.J. No. 4211

Ontario Court of Justice (General Division)
Divisional Court
O'Driscoll, O'Brien and Howden JJ.
Oral judgment: September 21, 1994.

Counsel:
Stanley M. Makuch, for the appellant.
Jonathan H. Wigley, for the respondents.

The judgment of the Court was delivered by

[para1] O'BRIEN J. (orally):-- This appeal is from the order of MacKinnon J., dismissing the Town's application for an order requiring the respondent to cease use of, and to remove, a concrete mixing plant and septic system located in the Town of Whitchurch-Stouffville.

[para2] The plant was assembled without a building permit, and contrary to stop-work orders issued by the respondent.

[para3] MacKinnon J. held no work permits were required, and the stop-work orders were invalid.

[para4] The issue was whether the plant and septic system were "buildings" within the meaning of the Building Code Act, R.S.O. 1990, c. B.13. The relevant sections of that Act are ss. 5(1), and the definition of "building" is contained in s. 1. Those sections are as follows:

> 1. "building" means a structure occupying an area greater than 10 square metres consisting of a wall, roof and floor, or any one or more of them, or a structural system serving the function thereof, including all the works, fixtures and service systems appurtenant thereto, and includes such other structures as are designated in the regulations, but does not include a structure used directly in the extraction of ore from a mine; ("batiment").
>
> 5(1) No person shall construct or demolish or cause to be constructed or demolished a building in a municipality unless a permit has been issued therefor by the chief official.

[para5] The material filed on the application includes pictures and a plan drawing of the plant. The plan drawing is shown at page 226 of the Appeal Book II.

[para6] There are three sections to the plant which may be described as follows:

> (i) a transcreter, which is an elevated storage tank supported by steel legs affixed to a reinforced concrete subgrade foundation;
>
> (ii) a concrete foundation pad with an area of 40.5 square metres which supports an aggregate bin, used to store the aggregate used in the process, two admix tanks, a power generator, and batchers' control room, which shelters the operator and computerized controls;
>
> (iii) concrete block retaining walls which separate and enclose aggregate stock piles.

[para7] It is conceded by the respondent that the plant exceeds 10 square metres stipulated in s. 1 of the Act. The respondent relies on the conclusions of MacKinnon J. that the plant did not constitute a building within the meaning of the Act, but were discrete portions of equipment designed to deliver a product and were a collection of machinery performing an individual process.

[para8] As it relates to the concrete foundation and pad, the decision of MacKinnon J. appears to conflict with that in Algoma Steel Corporation v. Sault Ste. Marie (City) (unreported, District Court, Algoma, Vannini, D.C.J. - October 27, 1978 - affirmed, without reasons and by endorsement, in Divisional Court, May 21, 1980).

[para9] In the Algoma decision, Vannini D.C.J. was dealing with an appeal from an order made under the Ontario Building Code, and dealt with section 5(1) of that Act in connection with an order to comply. The decision dealt with a concrete slab on which machinery was to be installed, and a concrete slab to be laid outside a building, on which dust control machinery was to be placed. Counsel advise the Algoma decision was not brought to the attention of MacKinnon J.

[para10] In my view, the factual situation in Algoma cannot be distinguished from this case as it applies to the concrete pads.

[para11] In his decision, Vannini D.C.J. made the following observations at page 5, dealing with the purpose of the Act:

> Clearly, the main object and intent of the statute and the regulations passed thereunder is the establishment of a building code for the province governing standards for the construction of all buildings within the meaning of s. 1(b) to ensure that they will be of sound construction and safe for the purpose for which the building is intended to be used.

[para12] Because s. 1(b) makes reference to "structure" more than any other of the other significant words therein, I proceed, firstly, to a consideration of the meaning of that word.

[para13] It is said that the word "structure" has a wide connotation. In its ordinary, common and popular meaning, it includes that which is built or constructed, a building or edifice of any kind; a fabric or framework of material parts put together. It is something which is constructed, and it involves the notion of something which is put together, consisting of a number of different things which are so put together or built together, constructed as to make one whole, which then is called a structure. However, not everything which is constructed is a structure. It is something of a substantial size which is built up from component parts and intended to remain in one place. See R. v. Bedard (1976), 31 C.C.C. (2d) 559.

[para14] It follows from these definitions that what is now proposed to be constructed by the applicant for the use to which they are intended to be put would, upon their construction, each constitute a structure.

[para15] Vannini D.C.J. then, at page 6, dealt with the meaning of the word "floor":

> What is a floor? Whatever meaning attaches to "floor" within the context of s. 1(b), it is, having regard to the requirement of s. 5(1) and to the definition of "construct" and "construction" in s. 1(e), clearly limited to something that is errected or installed or to anything that is done to it in the extension, material alteration or repair thereof.

[para16] It follows, then, that within the meaning of ss. 1(b) and 1(e), a "floor" is at least a structure.

[para17] The Shorter Oxford English Dictionary defines floor as "The layer of boards, brick, stone, etc. in an apartment, on which people tread, the under surface of the interior of a room. Hence, any analogous surface," and as "An artificial platform or levelled space, for the carrying on of some industry, especially threshing." In Webster's International Dictionary, it is defined as "the bottom or lower part of any room; the part of a room upon which one stands; the surface or the platform of a structure on which to walk, work or travel."

[para18] In considering the meaning to be given the word "floor," Vannini D.C.J., at page 7, made the following

statements:

> A floor can be construed in the open air, but it will depend upon the whole circumstances whether floor is an apt word to describe a constructed surface in the open air, e.g., in its ordinary meaning, the unmade earthen surface of an open yard cannot be a floor; per Lord Kissen in Sullivan v. Hall Russell, [1964] S.L.T. 192, at p. 193.
>
> Inasmuch as a building can be a structure within the meaning of s. 1(b) if it consists of a floor alone, a structure can be a floor within the meaning of s. 1(b) though it be constructed in the open air, and I do so hold.
>
> To the extent, then, that a structure is used to stand or to place machinery or equipment thereon, it could be described as a floor, and to the extent that a structure is used for the installation or affixing thereon of machinery or equipment, it may also be described as a base or foundation.

[para19] Vannini D.C.J. then considered the use and meaning of the word "structure," at page 8, as follows:

> While the proposed structures could, in the ordinary, common, or popular meaning thereof, be defined as a base or a foundation, this is not to say that they cannot be susceptible to being described as floors as well. If a structure upon which machinery or equipment is placed is a floor, e.g., in the display room of a manufacturer or a retailer, it should matter not that it is a structure in or on which machinery or equipment is installed or affixed. It, too, can be said to be a floor, having regard to the ordinary common and popular meaning of the word in the context of and the subject matter in regard to which they are used in s. 1(b), and I do so hold. As floors, the proposed structures are buildings, and for their construction a permit is required pursuant to s. 5(1) of the Act.

[para20] Vannini D.C.J. then, in the alternative, dealt with the issue of "a structural function," and the meaning of "works." I do not find it necessary to consider that portion of the judgment in this instance.

[para21] For the reasons given by Vannini D.C.J., I conclude the concrete pads under the two pieces of equipment referred to in paragraphs (i) and (ii) above are "floors" within the definition in s. 1 of the Act, and the plant was therefore a "building" within that section and section 5(1).

[para22] The mere fact that one of the pads is below grade does not prevent it being a "floor" within the meaning of the Act and as considered by Vannini D.C.J.

[para23] The transcreter and the piers affixing it to the concrete underpad fall within the words "fixtures and service systems appurtenant" to the "floor." As such, all are included in the definition of "building."

[para24] In addition, I conclude the cement block walls enclosing the piled aggregate are "walls" within the definition section, and are also included in the definition of the word "building." A building permit was therefore required, and the stop-work orders issued should have been complied with.

[para25] For these reasons, the appeal is allowed in connection with the order requiring the respondents to cease the use of, and remove, the concrete ready-mix plant described as part of Lots 9 and 10, Concession 8, in the Township of Whitchurch-Stouffville.

[para26] The appellant concedes that the septic system was not a work requiring a work permit under the Act, and no order is made in connection with that system on this appeal.

[para27] The respondent requests a stay until an O.M.B. hearing dealing with the appeal of interim control zoning By-law 92-111 is disposed of. The request for the stay is refused. A number of other parties involved in this appeal from the by-law to the O.M.B. did not proceed with the

construction, as this respondent did. A stay in effect would be to reward the respondent for ignoring the requirements leading to a building permit, and to ignore the interim by-law which was passed by the appellant. For these reasons, the stay will not be granted. The appeal is therefore allowed in part, as indicated above.

O'BRIEN J.
HOWDEN J.

White v. Vaughan

IN THE MATTER OF an appeal under s. 31(18) of The Planning
Act, R.S.O. 1960, c. P.13 from a decision of the Property Standards Committee of the City of Vaughan rendered January
20, 1997, which dismissed an appeal against the Property Standards Order, dated November 18, 1996, directed to Stanley
George White, junior, Beverly Rose Trottier and Stanley White,
senior

Between
Stanley George White, junior, Beverly Rose Trottier, and Stanley White, senior, appellants, and
The City of Vaughan, respondent

[1998] O.J. No. 2821
File No. 43418/97

Ontario Court of Justice (General Division)
Newmarket, Ontario
Howden J.

June 24, 1998.

Counsel:
E. Winemaker, for the appellants.
O. Fatigati, for the respondent.

[para1] HOWDEN J. (endorsement):-- In answer to my invitation to further submissions regarding s. 326 of the Municipal Act, counsel for the appellants submitted that as the City has expended no money for removal of the debris as yet, the right of the City to recover under s. 326 of the Municipal Act has not crystallized. The order before me on appeal is simply one compelling the parties to remove the described debris within a time limit or the municipality is to remove it thereafter. If the order were to be broadened to include an order for recovery of expense by the municipality from the appellants, counsel for the appellants submitted that s. 31(29) would allow me to modify the order and in so doing, provide that recovery of expense not be sought against the two appellants who are the title-holders but who do not occupy the land.

[para2] Counsel for the municipality submitted that the ability of the municipality to recover expenses under s. 326 of the Municipality Act is predicated on the order applying to the owner of the legal title to the land; otherwise a municipality could not recover its expenses by way of municipal taxes. There is no statutory authority to limit municipal powers of recovery under s. 31(31) of the Planning Act and s. 326 of the Municipal Act. He further submitted that s. 31 of the Planning Act is so structured that the order referred to must apply to the registered owner of the property.

[para3] I am not persuaded that s. 31(29) gives authority to a judge on appeal or to the Property Standards Committee to limit the municipality's power of recovery of its expenses save and except recovery of expense to terminate an immediate danger which was not incurred in this case. Section 31(31) of the Planning Act gives the authority to a municipality to recover expense by any or all of the methods in s. 326 of the Municipality Act. Section 31(29)(c) of the Planning Act, in authorizing a judge to modify, confirm or quash the Property Standards Order, does not extend beyond the clearance order referred to in s. 31(7) to limit municipal powers to recover expense granted, in quite broad terms, by s. 31(31).

[para4] In this case the problems among the appellants stem from family issues of long standing and affect only themselves. They are not properly used to limit the municipality's ability to recover expenses if it incurs them. The appellants have the legal means to solve their issues among themselves if they wish to avail themselves of them.

[para5] The order appealed from is in Exhibit 8. After considering the evidence and submissions, the appeal is denied and the order earlier confirmed by the Property Standards Committee of the City of Vaughan is confirmed by me.

HOWDEN J.

Wirth v. City of Vancouver

Between
Gordon Wirth, Plaintiff, (Appellant), and
City of Vancouver, Defendant, (Respondent)

[1990] B.C.J. No. 1616
DRS 91-00439
47 B.C.L.R. (2d) 340
71 D.L.R. (4th) 745
50 M.P.L.R. 105
[1990] 6 W.W.R. 225

British Columbia Court of Appeal
Toy, Taylor and Hollinrake JJ.A.
Heard: June 15, 1990
Judgment: July 9, 1990

Counsel for the Appellant: L.W. Goulet.
Counsel for the Respondent: B. Williamson.

Reasons for judgment delivered by Hollinrake J.A., dismissing the appeal; concurred in by Toy J.A. Separate and concurring reasons for judgment delivered by Taylor J.A.

TAYLOR J.A.:-- I agree with Mr. Justice Hollinrake, whose

reasons for judgment I have had the privilege of reading in draft.

In order to avoid any possibility of misunderstanding with respect to the scope of the issues before us I wish to add that no argument was addressed to us that on the present facts a claim might lie for damages for "pure economic loss" based on cases such as Hedley Byrne & Co. Ltd. v. Heller & Partners Ltd., [1964] A.C. 465 (H.L.) Tracy v. Atkins (1979), 16 B.C.L.R. 223 (C.A.) and Junior Books Ltd. v. Veitchi Co. Ltd., [1983] l A.C. 520 (H.L.). While appellant's counsel said in argument that the appellant was entitled to rely on the City in certain respects, there is no allegation in the appellant's pleadings that he in fact relied on the City to use reasonable care to protect him from the loss alleged, nor that the City was informed, or ought to have been aware, of such reliance, nor that reliance was reasonable in the circumstances. The affidavit material filed for the appellant makes no statement that the appellant relied on the City authorities in this or any other respect, or that he advised the City personnel of such reliance, nor is there any suggestion he received any representations or assurances from the City.

I wish also to emphasize that in characterizing the loss alleged in the present case as "pure economic loss" that imprecise expression refers only to loss suffered in circumstances in which there is no danger of injury to the person or of physical damage to property, and is not used in the sense in which it has sometimes been employed in cases where risk of injury to the person or physical damage to property exists but no such injury or damage has yet occurred, that is to say cases in which the claim is for the cost of remedying a negligently-created defect, so as to prevent such damage occurring, as were Anns v. Merton London Borough Council, [1978] A.C. 728 (H.L.) and City of Kamloops v. Nielsen, [1984] 2 S.C.R. 2.

I would not wish to be taken to suggest that a claim for damages for "pure economic loss" based on reliance or any other factor, had it been properly alleged and proved, could in the present circumstance have succeeded. I have grave doubt that such a claim would lie. But that is a question on which I would not wish to express a firm opinion without the benefit of full argument and consideration.

TAYLOR J.A.

HOLLINRAKE J.A.:-- This is an appeal by the plaintiff appellant from an order dismissing his action against the defendant respondent following an application made by the defendant under Rules 18A and 19(24) of the Rules of Court.

The decision in the court below is reported at [1988] 4 W.W.R. 72, 43 C.C.L.T. 209, 24 B.C.L.R. (2d) 117, 49 D.L.R. (4th) 153.

The plaintiff is the registered owner of real property in the City of Vancouver. In 1986 the City issued a permit for construction of buildings on a lot immediately adjacent to that owned by the plaintiff. A City employee miscalculated the square footage permitted by the Zoning and Development Bylaw which resulted in an accessory building being 802 square feet rather than the maximum 679 square feet permitted under the bylaw.

The defendant City concedes its negligence.

The plaintiff concedes that the only possible damage resulting from this negligence would be a diminution of value of his property and not the type of damage present in Anns v. London Borough of Merton, [1978] A.C. 728, 2 All E.R. 492, Kamloops v. Nielsen et al, [1984] 2 S.C.R. 2, 5 W.W.R. 1, 66 B.C.L.R. 273 and City of Vernon et al v. Manolakos (1989) 41 B.C.L.R. (2d) 374 (S.C.C.).

The learned chambers judge, after reference to Anns and Kamloops, concluded that the question for her was "one of policy and the drawing of lines" and she drew "this line in favour of the City for these reasons":

> (1) A landowner does have a remedy under s. 571(2) even though the section does not itself exclude a private law duty of care.
>
> (2) The owner of the neighbouring land at the time of construction was himself obliged to observe the by-law. It ought to be, although I do not decide the point, that the landowner can sue the offender for damages. I know of no authority for the proposition that the negligent issuance of a permit relieves an owner of his duty to obey s. 6.1 of the by-law. Whether an action will also lie against the present owner (who was not I understand the owner at the time of construction) raises another question.
>
> (3) In truth, the City is not some big bad stranger. it is all who live within its gates and it is they who must pay, either directly as ratepayers or indirectly as tenants, if such a duty of care exists. l do not see why the residents of a municipality should pay for the kind of economic loss asserted here.

I should note here that the case was decided on Rule 18A and Rule 19(24) was not addressed by the chambers judge.

The judgment below was handed down before the judgment of the Supreme Court of Canada in Manolakos.

The plaintiff before this Court rested his case on Anns, Kamloops and Manolakos, and on that basis only, saying that he was entitled to rely on the City to see to it that construction of this building on the lot next to his met the requirements of the bylaw and if it failed in this then the City must answer to him in damages. He says the City has a private law duty of care to him and others in a like position. I note here that reliance is not pleaded nor is it referred to in the affidavits of the plaintiff.

To go back to what I will call first principles I refer to the judgment of Taylor, J.A. in Kamahap Enterprises Ltd. v. Chu's Central Market Ltd., [1989] B.C.J. No. 2108, CAO10058 Vancouver Registry, November 22, 1989. The facts of that case are of no significance to the case at bar. Those portions of the judgment I refer to deal with "pure economic loss" generally. At p. 5 of the reasons, Taylor, J.A. said:

> Foreseeability of damage to the person or physical property of others is normally thought to be sufficient in itself to create the essential relationship of proximity between a person who causes damage and the person to whom it is caused.

And again at pp. 6 and 7:

> But where the only damage foreseeable is damage to another's pocket or estate -- where there is no foreseeable risk of personal injury or physical property damage -- foreseeability of such economic loss, while essential to the existence of a duty of care, cannot, it now seems clear, generally be regarded as sufficient to create proximity and thus impose such a duty.

In such cases reliance cannot, of course, be assumed, for it is not normally to be expected that a person will care gratuitously for the purely economic interests of others.

An impression that the requirements for creation of a duty of care might be the same in respect of all cases of loss, whether personal, physical or purely economic -- that mere foreseeability of damage will in all cases prima facie be sufficient for this purpose -- can, it seems, be gained from a broad interpretation of certain dicta found in the decisions of the House of Lords in Home Office v. Dorset Yacht Co. Ltd., [1970] A.C. 1004 (H.L.), and Anns v. Merton London Borough Council, [1978] A.C. 728 (H.L.). That those cases do not stand for such a proposition has, however, been made clear in more recent decisions of the House of Lords and Privy Council, such as Curran v. Northern Ireland Co-Ownership Housing Association Ltd., [1987] A.C. 718 (H.L.), Yuen Kun Yeu v. A.G. Hong Kong, [1988] A.C. 175 (P.C.) and Rowling v. Takaro Properties Ltd., [1988] A.C. 473 (P.C.).

Out of the period of uncertainty and re-thinking through which the law of negligence has passed in recent years, there has, I think, emerged a realization that the infliction of foreseeable pure economic loss must necessarily result from very many acts and omissions which take place routinely in the course of everyday business activities under our economic system, and that any law imposing a general duty of care to avoid the infliction of such loss would greatly hamper the conduct of commercial and private business, and would probably interfere fundamentally with the operation of that economic system.

It has also become apparent that to exempt business activity from a general rule imposing a duty of care in the economic field would not only be to exempt most cases falling within the rule, but to excuse deliberate infliction of economic loss for personal gain while imposing liability when such loss is caused by accident, and without selfish motive.

The issue before this Court is, do the principles enunciated by the Supreme Court of Canada in Kamloops and Manolakos extend to permit recovery on these facts.

I think not.

In Anns the legislation in question was the Public Health Act, 1936 which imposed a range of duties and powers on local authorities for the purpose of safeguarding and promoting the health of the public at large.

In Kamloops and Manolakos it was a building bylaw. Those bylaws are referred to as being "for the health, safety and protection of persons and property.".

In Manolakos, La Forest J. said at pp. 381-382:

> Moreover, in my view, the distinction sought to be made between owner builders and third parties overlooks the fact that both are ratepayers for whose safety the by-law was passed. The inspection of plans and the supervision of construction increases the costs of construction for everyone. But I think that most ratepayers, were they to give the matter any thought, would justify the increased expense as an investment in danger to life and limb and may
>
> result in future expense and liability. This applies equally to owner builders and third parties. Both are justified in saying: 'I pay for the provision of an inspection service, and so long as I act in good faith, l should be entitled to rely on the city to exercise reasonable care to ensure that all construction is built according to the standards set out in the by-laws.'

And at p. 385:

> Inasmuch as inadequately inspected foundations will public, building by-laws contain measures aimed at preventing the occurrence of such 'hidden defects'.

And, lastly, at p. 386:

> When the question is framed in this way, I think that the answer must be in the affirmative. The inspector could not and did not rely on the plan submitted to him; it was inadequate. He chose instead to rely solely on the onsite inspection. And when he attended at the site, he was confronted with a situation which, if left unremedied, manifestly stood to pose a threat to the health and safety of the public, including the neighbours and the owner builder.

Along the same lines, Wilson, J. said in the Kamloops case at pp. 43-44 of [1984] 5 W.W.R.:

> If economic loss was within the purview of the statute, then it should be recoverable for breach of the private law duty arising under the statute, whether or not it is recoverable for breach of a duty at common law. In my view, the private law duty in this case was designed to prevent the expense incurred by the plaintiff in putting proper foundations under his house. It was imposed to ensure that proper foundations would be under his house from the outset. I suppose it is arguable that the damage the duty was designed to prevent was injury to the occupants from the collapse of the house or damage caused by the house sliding down the hill. But it seems to me that this is too narrow an approach to the protection the statute was designed to provide. The purpose of the by-law in this case was to prevent the construction of which the by-law imposed on the Building Inspector required him at the very least to determine the scope of the measures which were necessary to achieve that end and, if required, to attempt to obtain the approval of the city for them. If he failed in that duty and a house on defective foundations resulted, it was obviously going the health and safety of the occupants.

It can be seen these three cases all dealt with bylaws passed for the safety of persons and property. The bylaw in the case at bar is a zoning bylaw and does not have this component of safety of persons and property. As I have said before in these reasons it is conceded by the plaintiff that the only possible damage here is diminution in value of his land. There is no suggestion here of danger or threat of danger of physical damage to persons or their property as was the case in Anns, Kamloops and Manolakos.

I am not aware of any theory of tort liability that would permit a property owner to sue an adjoining property owner because of something built on that adjoining land absent any safety component, nuisance or escape. That is, to sue an adjoining property owner because of how something looks in the eye of the beholder, that beholder being the adjoining property owner. I have some difficulty with the concept of foreseeability of harm in a case such as this. Is there such a thing as the reasonable man when it comes to the aesthetics of building construction? There is no duty of care that I am aware of to maintain the aesthetic appeal of one's property so as to support the property value of one's neighbour's property.

I have no hesitation in concluding that the principles enunciated in Anns, Kamloops and Manolakos do not extend and apply to the facts of this case.

I do not think there is any private law duty of care on the City in this case to protect the plaintiff from the economic loss resulting from the breach of this zoning bylaw by the neighbouring 'property owner and the negligence of the City. I say this assuming such loss can be said to be foreseeable, a proposition which I find is at best tenuous. In my opinion, this case is governed by the well established principle that where the only damage foreseeable is damage to another's pocket or estate and there is no foreseeable risk of personal injury or property damage there is no duty of care owed and no redress for that damage.

I would dismiss the appeal.

HOLLINRAKE J.A.

TOY J.A.:-- I agree.

Wolfond v North York Building Official

74 O.R. (2d) 466
[1990] O.J. No. 1370
Action No. 362/90

ONTARIO
District Court of Ontario
Haley D.C.J.
July 20, 1990.

Alan B. Dryer, for applicants.

Catherine Conrad, for respondent.

HALEY D.C.J.:-- This is an appeal brought under s. 15 of the Building Code Act, R.S.O. 1980, c. 51, from the refusal of the Building Commissioner of the City of North York to issue a building permit for the demolition of a one and a half storey dwelling-house and replacement by a two storey building of greater floor area. The detailed facts are not in dispute between the parties. It is useful, therefore, to outline the pertinent chronology:

Early in 1989: Plans were submitted to the North York Building Department and an application for a building permit made. The applicants were advised a minor variance was needed.

April 20, 1989: The applicants obtained minor variance from the Committee of Adjustment.

The city appealed the decision of the Committee of Adjustment.

March 20, 1990: Ontario Municipal Board ruling dismissing the appeal.

The applicants requested the issuance of a building permit and were advised by the Department it had not received a copy of the OMB ruling.

April 2, 1990: The applicants delivered a copy of the ruling to the Building Department and were advised the building permit would be issued "in a couple of days".

April 4, 1990: The city passed By-law 31182 which has the effect of prohibiting the building proposed by the applicants. This was a by-law of general application and not an interim control by-law.

May 16, 1990: The applicants appealed By-law 31182 to the Ontario Municipal Board. No decision has yet been made by the Board.

May 17, 1990: Letter from the Building Commissioner to the applicants refusing the building permit.

By a request to admit two additional facts were agreed between the parties.

1. That the proposed building of the applicants referred to in

the notice of application complies with all applicable laws save and except for City of North York By-law 31182.

2. That as of March 21, 1990, the said proposed building complied with all applicable laws.

Section 15 of the Building Code Act provides for an appeal from the refusal of the Chief Official, in this case the Building Commissioner for the City of North York, to issue a building permit.

Section 6(1) of that Act as applicable to this case provides:

6.(1) The chief official shall issue a permit except where,

(a) the proposed building or the proposed construction or demolition will not comply with this Act or the building code or will contravene any other applicable law ...

In this application the issue is whether there is "any other

applicable law" which prevents the Building Commissioner from issuing the permit.

The powers given to the judge on appeal under s. 15(3) permit the judge to rescind or affirm the decision of the Chief Official or to take such action as the judge considers the Chief Official ought to take and for that purpose to substitute his opinion for that of the Chief Official.

In Woodglen & Co. v. North York (City) (1984), 47 O.R. (2d) 614, 12 D.L.R. (4th) 146, 26 M.P.L.R. 40, 5 O.A.C. 313, the Divisional Court, at p. 46 M.P.L.R., Southey J. speaking for the court, stated the duty of the judge under s. 15 to be:

> ... to do what the Judge considers the inspector or chief official ought to have done. The judge has no powers other than those which were possessed by the inspector or chief official, and has no discretion to act or defer action, if that discretion was not enjoyed by the inspector or chief official.

On March 20, 1990, the date of the decision of the Ontario Municipal Board, the applicants had fulfilled the requirements for the issuing of the building permit. The applicants requested the permit at that time and were advised by the officials of the Building Department that the permit would be forthcoming. It is the practice of the Ontario Municipal Board to advise all parties, of which the city was one, of its decisions, but even if that practice was not followed in this case, the Building Department had a copy of the decision by April 2, 1990, two days before the passing of the by-law 31182. Counsel for the city argues that administratively it was not then possible for the city to issue the permit and that the city is entitled to a reasonable time for the issuance of the permit. In those circumstances she acknowledges it was unfortunate for the applicants but the passing of the by-law intervened and the Chief Official could not thereafter act contrary to the law by which he was bound.

She refers to R. v. Toronto; Ex parte Lawson, [1971] 1 O.R. 451, 15 D.L.R. (3d) 553 (H.C.J.), a decision of Wright J. who said at p. 454 O.R.:

> It seems to me that it is reasonable to say that, once a City Council has passed a by-law, its employees are bound to do the business of the city, when they have a discretion to exercise, in accordance with the by-law, even if the by-law has not passed the Municipal Board.

At that time it was necessary for the Ontario Municipal Board to approve all municipal by-laws, not just those from which an appeal was taken.

In considering the force of this decision, one has to take into account the peculiar facts of the case and, in particular, that the applicants sought a mandamus for the renewal of an expired building permit which had itself been issued contrary to the zoning by-law passed by the city. There the by-law was passed three days before the application for the original building permit had been submitted. The permit was issued before the Ontario Municipal Board approval of the by-law. This is much different from the position in this case where the city admits that prior to the passing of By-law 31182 the proposed building complied with all applicable laws. Here the intervention of the by-law, which the respondent says was binding on the city officials, came in a period before the issuing of a building permit could be accomplished because of the time required for the paper work to be done.

Leaving that aspect for a moment, it is also necessary to consider the changes in the Planning Act between the Ex parte Lawson case and this case.

In 1971 the applicable part of the Planning Act saved the right to a building permit where plans for the project had been approved by the municipality prior to the passing of a contrary by-law. [The Planning Act referred to in Ex parte Lawson was R.S.O. 1960, c. 296, s. 30(7)(b). It was superseded in turn by the Planning Act, R.S.O. 1970, c. 349, s. 35(7)(b), the Planning Act, R.S.O. 1980, c. 379, s. 39(8)(b) and the Planning Act, 1983, S.O. 1983, c. 1, s. 34(9)(b).] Section 30(7)(b) of the then Planning Act reads:

> 30(7) No by-law under this section applies,

. . . . .

(b) to prevent the erection or use for a purpose prohibited by the by-law of any building or structure the plans for which have, prior to the day of the passing of the by-law, been approved by the municipal architect or building inspector, so long as the building or structure when erected is used and continues to be used for the purpose for which it was erected and provided the erection of such building or structure is commenced within two years after the day of the passing of the by-law and such building or structure is completed within a reasonable time after the erection thereof is commenced.

(Emphasis added)

That section of the Planning Act was amended in 1983. The old s. 30(7) now appears as s. 34(9) in the following form:

34(9) No by-law passed under this section applies,

. . . . .

(b) to prevent the erection or use for a purpose prohibited by the by-law of any building or structure for which a permit has been issued under section 5 of the Building Code Act, prior to the day of the passing of the by-law, so long as the building or structure when erected is used and continues to be used for the purpose for which it was erected and provided the permit has not been revoked under section 6 of the Building Code Act.

(Emphasis added)

The respondent argues that the prerequisite for protection under the Planning Act now requires the building permit to have been issued prior to the day the by-law was passed. Here, no permit having been issued at the latest on April 3, 1990, the applicants, she argues, are not saved by the Planning Act, and the Chief Official acted properly, being bound by By-law 31182 on May 17, 1990 when he refused to issue the permit (and on any day prior to May 17, 1990 and after April 3, 1990).

In Quay West v. Toronto (City) (1989), 47 M.P.L.R. 109 [leave to appeal to Ont. C.A. refused (1989), 47 M.P.L.R. 109n], the Divisional Court considered the now s. 34(9)(b) of the Planning Act. Southey J. said at p. 111 M.P.L.R.:

The subsection does not exempt the erection of buildings for which a permit ought to have been issued before the effective date of the zoning by-law, but only buildings for which a permit has in fact been issued. I do not consider the addition of the words "or ought to have been issued" to be a modification necessary in applying s. 34(9) to an interim control by-law.

The developer sought to relate the relevant date back to the date the building permit was applied for, which antedated the passing of the interim control by-law.

In the Quay West case the municipality was relying on an interim control by-law. As well no site plan approval had yet been given. In those circumstances Southey J., with whom Gray J. concurred, held at pp. 111-12 M.P.L.R.:

As a general rule, a building permit should not be issued for a development in a site plan control area to which s. 40 of the Planning Act applies until site plan approval for the development has been obtained from council or the Municipal Board. Without such approval, the proposed building would contravene s. 40(4) of the Planning Act, and the permit should not be issued because of s. 6(1)(a) of the Building Code Act.

Saunders J., while agreeing with the outcome, preferred to refuse the mandamus on the basis only of the existence of the interim control by-law and s. 34(9) of the Planning Act.

Southey J. also acknowledged there may be extraordinary circumstances in which a building permit should issue where the municipality did not act "in good faith or was refusing developmental approval for an obviously unlawful reason", as was the case in Re Revenue Properties Ltd. and Toronto (City)

(1984), 26 M.P.L.R. 165 (Ont. Co. Ct., Matlow Co. Ct. J.). In that case the municipality refused to examine the developer's application for a building permit or to consider its application for site plan approval, even after the by-law amending the zoning by-law to prohibit the proposed development was quashed, the city having appealed that judgment. Judge Matlow reviewed the changes to the Planning Act and noted in discussing the repeal of provisions in the Planning Act requiring a site plan prior to issuance of a building permit at p. 170 M.P.L.R.:

> As well, because of s. 34(9)(b) of the Planning Act referred to above, certain rights now crystallize only when a building permit is actually issued. This increased significance of the actual issuance of a building permit lends weight to my interpretation of the legislation. In other words, the words of the legislation should not be strained to lead to an interpretation resulting in unauthorized delays in the issuance of building permits.

While it might be possible to draw an inference of lack of bona fides in the municipality in view of the change in the position of the building department from at least April 2, 1990 when it advised the applicants the permit would be forthcoming in a couple of days and May 17, 1990, the date of the letter refusing the permit, which was one day after the applicants appealed By-law 31182, I am not prepared to draw that inference. Rather, I find this is an extraordinary case of another kind which falls outside the purview of s. 34(9)(b) of the Planning Act. I consider the comments in the Quay West case on the interpretation to be given s. 34(9)(b) are not binding on me as the circumstances of that case were quite different. Here the applicants, as admitted by the city, up to the date of the passing of the by-law complied with all applicable laws. Had the Chief Official chosen to act on April 3, 1990 or any day after the decision of the Ontario Municipal Board on March 20, 1990 upholding the Committee of Adjustment, up to and including April 3, 1990 there was no reason to refuse the building permit and in fact the Chief Official was under an obligation to issue it under s. 6 of the Building Code Act.

Had he done so the applicants would then have been entitled to the protection of s. 34(9)(b) of the Planning Act against the effect of By-law 38112. In my view it is incorrect to apply s. 34(9) to deprive the applicants of their rights which had clearly accrued under s. 6 of the Building Code Act before the by-law was passed.

On looking at the position of the Chief Official under s. 15 of the Building Code Act I consider I am to look at the time when the rights of the applicants had crystallized. The administrative delay in acting on those rights should not be permitted to deprive the applicants of their rights. To decide otherwise or to accede to the argument of the respondent that a reasonable time should be allowed to do administrative acts would in my view open the system to unprofitable attempts to determine when and if administrative delay was reasonable and to potential abuse if administrative delay could be deliberately engineered for nefarious purposes.

In H & D International Group v. Toronto (City) (1988), 44 M.P.L.R. 187 (Ont. Dist. Ct.), Corbett D.C.J. considered the time when the right of the applicants is to be determined for purposes of s. 6 of the Building Code Act. She followed the direction of Southey J. in the Woodglen case and held the rights of the applicants should be determined on the date of the decision of the Chief Building Inspector and not as of the date of the court hearing. I agree with Judge Corbett and do not consider myself bound by any contrary holding in Re Greengable Holdings and Toronto (City) a decision of the County Court, April 26, 1984.

In the case before me there was no formal refusal of the Chief Official until May 17, 1990. I find, however, there was an informal decision to grant the permit at least by April 3, 1990 by the officials of the Building Department on behalf of the Building Commissioner, and that is the time I hold the applicants' rights should be determined in this case. The date of the letter of the later refusal is not relevant as it is only the date of reducing to writing a decision that had to have been made after the passing of the by-law on April 4, 1990.

If the holding that the determinative date was between March

20, 1990 and April 3, 1990 puts the applicants out of time for bringing an application under s. 15(1) of the Building Code Act then I make the order necessary to extend the time pursuant to s. 15(5).

The applicants were entitled to the issuance of a building permit before April 4, 1990. The Chief Official who finds himself in those circumstances ought to issue a building permit forthwith. I phrase this conclusion in the present tense since the respondent takes issue with the comment of Southey J. in the Woodglen case to do what the judge considers the inspector or chief official ought to have done". I think there is no significance in the use of the present tense by the Legislature in s. 15(3) of the Building Code Act. If one considers the judge places himself or herself in the shoes of the Chief Official when the applicant's rights are crystallized then the present tense is the correct one. If one considers the judge is determining by way of later review what was the correct act of the Chief Official at the time the applicants' rights crystallized then the past tense is correct.

Either way the applicants are entitled to a building permit and I direct the Chief Building Commission to issue the necessary building permit to the applicants forthwith.

As agreed by the parties there will be costs of this application to the applicants on a party-and-party basis.

Order accordingly.

Re Woodglen & Co. Ltd. v. North York et al.

47 O.R. (2d) 614

ONTARIO
HIGH COURT OF JUSTICE
DIVISIONAL COURT
SOUTHEY, SAUNDERS AND SMITH JJ.
25TH SEPTEMBER 1984.

APPEAL from a judgment of Haley Co. Ct. J., 43 O.R. (2d) 289, 23 M.P.L.R. 18, allowing an appeal from a decision of the chief building inspector of the appellant municipality refusing a building permit.

Nadia Koltun, for appellants.
Michael J. McQuaid, Q.C., for respondent

The judgment of the court was delivered by

SOUTHEY J.:-- The municipality and its building inspector appeal from an order of The Honourable Judge Haley of the County Court of the Judicial District of York, dated September 23, 1983 (43 O.R. (2d) 289, 23 M.P.L.R. 18), allowing the appeal of Woodglen & Co. Ltd. under s. 15(5) of the Building Code Act, R.S.O. 1980, c. 51, from a decision of the chief building official of the municipality refusing a building permit to Woodglen for the erection of a single-family dwelling on part of a seven and a half-acre parcel of land fronting on Toba Dr. in the City of North York. The learned county court judge ordered that the permit be issued. The appeal to her was brought following the refusal by the Divisional Court on July 6, 1983 (42 O.R. (2d) 385), to hear an application by Woodglen for mandamus. The Divisional Court refused to hear the application on the ground that the right of appeal to the county court judge under the Building Code Act provided a specific alternative remedy to mandamus, which is equally, if not more, convenient, expeditious, beneficial and effective.

It is common ground that the use for which the permit was requested was permitted under the applicable zoning by-laws, and that Woodglen had, by September 8, 1982, satisfied all the requirements for the issuance of the building permit for which it had applied. The permit was refused on the ground that the proposed construction was contrary to the official plan.

The issues before the court are:

(1) whether the learned county court judge was right in holding that non-compliance with the official plan was not a contravention of applicable law which would disentitle Woodglen to the permit, and

(2) whether the learned county court judge was right in refusing to adjourn the appeal to give the municipality the opportunity of implementing its intent to rezone the lands to prohibit the proposed construction, it having been shown that such intent existed before Woodglen made its application for a permit.

Effect of official plan

The duty of the chief building officer was to deal with the application for a building permit in accordance with s. 6(1) of the Building Code Act, the relevant portion of which reads as follows:

6(1) The chief official shall issue a permit except where,

(a) the proposed building or the proposed construction or demolition will not comply with this Act or the building code or will contravene any other applicable law;

Since 1974, the lands in question had been subject to an official plan which designated them for uses which did not permit single-family dwellings. The only applicable zoning, however, was that contained in the general zoning by-law of the Township of North York, approved by the Ontario Municipal Board in 1953, and it permitted single-family dwellings on the lands. The municipality had never amended its zoning by-laws to conform with the official plan by prohibiting the construction of single-family dwellings on the lands.

Counsel for the appellants argued that the official plan was part of the "applicable law" within the meaning of s. 6(1)(a) of the Building Code Act, and that the chief building officer was not obliged to issue a permit to cover construction that would not be in conformance with the official plan. In my judgment, the learned county court judge was right in rejecting that submission, on the ground that an official plan and amendments thereto are not effective in themselves to regulate land use and are not part of the applicable law which the chief official is to obey. As appears from the authorities to which the learned judge referred, an official plan is a recommendation, or statement of intention only, which may or may not be implemented by the municipality by the enactment of appropriate zoning by-laws: see Re Steven Polon Ltd. and Metropolitan Licensing Com'n, [1961] O.R. 810, 29 D.L.R. (2d) 620; Re Township of Southwold and Caplice et al. (1978), 22 O.R. (2d) 804, 94 D.L.R. (3d) 134, 8 M.P.L.R. 1; Re Cadillac Development Corp. Ltd. et al. and City of Toronto (1973), 1 O.R. (2d) 20, 39 D.L.R. (3d) 188.

Was the municipality entitled to an adjournment?

The appeal to the learned county court judge was brought under s. 15 of the Building Code Act, which reads, in part, as follows:

> 15(1) Any person who considers himself aggrieved by an order given or decision made by an inspector or chief official under this Act or the regulations may, within twenty days after the order or decision is made, apply to the judge of the county or district court for a hearing and appeal.
>
> . . . . .
>
> (3) Where an application is made to a judge for a hearing under subsection (1), the judge shall appoint a time for and hold the hearing and may rescind or affirm the order or decision of the inspector or chief official or take such action as the judge considers the inspector or chief official ought to take in accordance with this Act and the regulations, and for such purposes the judge may substitute his opinion for that of the inspector or chief official.

Before the enactment of the provision for an appeal, the only remedy available to a person who considered that he had been wrongfully refused a building permit was an application for an order in the nature of mandamus, or, latterly, an application for judicial review. The power of the court to grant mandamus or judicial review is discretionary. Because of the delays involved in bringing into force zoning by-laws and amendments thereto, the practice developed of adjourning applications for mandamus to permit a municipality opposing the issuance of a permit to complete the enactment or amendment of zoning by-laws which would render unlawful a use for which a permit had been applied and was a permitted use at the date of the application.

The circumstances in which such an adjournment would be permitted were set out by Spence J. in delivering the judgment of the Supreme Court of Canada in City of Ottawa et al. v. Boyd Builders Ltd., [1965] S.C.R. 408 at p. 410, 50 D.L.R. (2d) 704 at p. 705:

> An owner has a prima facie right to utilize his own property in whatever manner he deems fit subject only to the rights of surrounding owners, e.g., nuisance, etc. This prima facie right may be defeated or superseded by rezoning if three prerequisites are established by the municipality, (a) a clear intent to restrict or zone existing before the application by the owner for a building permit, (b) that counsel has proceeded in good faith, and (c) that council has proceeded with dispatch.

The learned county court judge concluded, and correctly so in my view, that the chief official acting under s. 5 of the Building Code Act has no jurisdiction to give effect to the Boyd principles. She held that a permit ought to have been issued to Woodglen, because the application complied with the zoning by-law at the date of the application, and there were no contraventions of any kind under s. 6(1) of the Building Code Act. She then went on to consider her own powers on the appeal under s. 15 of the Building Code Act, and concluded they were broader than those of the chief official under s. 6(1). She decided that she had the power to grant a mandamus application

on the appeal, and that this carried with it jurisdiction to apply the established principles respecting mandamus applications, which she characterized as equitable principles, including those relating to adjournments as enunciated in the Boyd Builders case. Applying those principles to the case at bar, she held that the municipality had had the intent to rezone since 1974, long before Woodglen's application for a permit, and that it had acted in good faith, but that it had failed to comply with the third requirement contained in Boyd Builders in that it had not proceeded with dispatch.

If the Boyd Builders principles applied to the hearing before the learned county court judge, then I agree entirely with her view that the municipality did not proceed with dispatch, and that no adjournment should be granted under Boyd Builders, for the reasons expressed so clearly by her. With much deference to the learned county court judge, however, I am unable to agree with her conclusion that the Boyd Builders principles apply to an appeal under s. 15 of the Building Code Act. The powers of the county court judge hearing an application under s. 15 are limited by s-s. (3). The judge "may rescind or affirm the order or decision of the inspector or chief official or take such action as the judge considers the inspector or chief official ought to take in accordance with this Act and the regulations". The duty of the judge under this subsection is to do what the judge considers the inspector or chief official ought to have done. The judge has no powers other than those which were possessed by the inspector or chief official, and has no discretion to act or defer action, if that discretion was not enjoyed by the inspector or chief official. As stated earlier, I agree with the decision of the learned county court judge in this case that the chief official of the municipality was under a duty to issue the permit to Woodglen because the proposed construction would not contravene any law. That being so, the learned county court judge, in my view, was required by law to allow the appeal and order the issuance of the building permit.

Because of the mandatory duty imposed by s. 6(1) of the Building Code Act, there is no room now for application by the inspector or chief official of the Boyd Builders principles, and the county court judge is in the same position on an appeal under s. 15 of the Building Code Act. Mr. McQuaid referred to a decision of Blair Co. Ct. J., in McDonald's Restaurants of Canada Ltd. v. Humm et al. (unreported, December 19, 1983 [since reported 24 M.P.L.R. 103]) who reached the same conclusion as I have done as to the applicability of Boyd Builders to an appeal under s. 15. I agree with the reasons expressed by Blair Co. Ct. J., regarding the discretion to adjourn, and note particularly his statements that an appeal under s. 15 of the Building Code Act is not an application for or in the nature of mandamus, and that equitable principles are not applicable on such appeals.

In my judgment, the Legislature did away with the Boyd Builders principles by enacting s. 6(1) of the Building Code Act, which directs that a permit be issued except where the proposed building will not comply with the Act or the building code or will contravene any other applicable law. In respect of zoning, if the proposed construction complies with the zoning by-laws in force at the date of the application for the permit, then the intention of the municipality to rezone to prohibit such construction is not a valid reason for refusing or postponing the issuance of a permit.

Municipalities no longer have the need to delay an application for a permit in order that new zoning by-laws may be made effective, because they have the power under s. 37 of the Planning Act, 1983 (Ont.), c. 1, to pass interim control by-laws, to be in effect for one year, when land-use policies are being reviewed or studied in the municipality or in a defined area. Such by-laws may be passed without prior notice or hearing.

For the foregoing reasons, the appeal is dismissed with costs, and the order of the learned county court judge is affirmed.

Appeal dismissed.

Re Woodglen & Co. Ltd. v. North York (City) et al.

42 O.R. (2d) 385
149 D.L.R. (3d) 186

ONTARIO
HIGH COURT OF JUSTICE
DIVISIONAL COURT
HENRY, EBERLE AND
CALLAGHAN JJ.
6TH JULY 1983.

APPLICATION for an order directing the issuance of a building permit.

M. J. McQuaid, Q.C., for appellant.

N. Koltun, for respondent.

The judgment of the court was delivered orally by

EBERLE J.:-- This is an application for judicial review seeking an order in the nature of mandamus directed to the Corporation of the City of North York and to Mr. Uzumeri, its building commissioner, to issue a building permit, which would enable the applicant to build a single-family two-storey residence on lands owned by it in the City of North York.

The building permit was refused on the ground of Official Plan Amendment No. 259 enacted by a by-law of the city, several months before the applicant filed its application for a building permit. That official plan amendment was duly forwarded to the Minister of Municipal Affairs and Housing, and requests have been filed with the Minister asking that the matter be referred to the Ontario Municipal Board for a public hearing.

While this court has jurisdiction to hear an application for a mandamus with respect to a building permit under the Judicial Review Procedure Act, R.S.O. 1980, c. 224, whether that jurisdiction should or should not be exercised in a particular case involves a consideration of any alternative remedies open to the applicant. In this case, we must consider whether s. 15 of the Building Code Act, R.S.O. 1980, c. 51, enacted in 1974 [as s. 14, c. 74], is such a remedy. That section reads as follows:

> 15(1) Any person who considers himself aggrieved by an order given or decision made by an inspector or chief official under this Act or the regulations may, within twenty days after the order or decision is made, apply to the judge of the county or district court for a hearing and appeal.

The section goes on in further subsections to give to the judge on the hearing broad powers of decision. It enables him to extend the time for hearing and there are other provisions dealing with the hearing.

In the present case, the authority to issue a building permit depends upon s. 6 and, particularly, s. 6(1)(a) which reads as follows:

> 6(1) The chief official shall issue a permit except where,
>
> (a) the proposed building or the proposed construction or demolition will not comply with this Act or the building code or will contravene any other applicable law;

In my view, it is clear that s. 6 requires the chief official to consider zoning matters. This was decided by the Divisional Court in Axelrod et al. v. City of Toronto et al. (1981), 15 M.P.L.R. 143, and particularly at pp. 148-9; as well, the applicant quite properly conceded that in dealing with an application for a building permit, the chief official must consider zoning matters as well as matters which might be considered as more directly related to construction details, fire safety, etc. Further the applicant conceded that s. 6 contains the statutory duty on which he relies in his application for mandamus.

The argument is, however, that no appeal lies under s. 15 to the county or district court where the refusal of a building permit is based on zoning matters. Zoning matters are, in my view, clearly included within the concluding words of s. 6(1)

(a), namely, "any other applicable law". In other words, the argument is that an appeal under s. 15 is limited to matters of bricks and mortar including matters of fire safety as spelled out in great detail in the Building Code itself. I can find in s. 15 nothing which supports this distinction. I can find nothing to narrow its scope depending on the particular ground for refusing a building permit and I come to this conclusion even although the balance of the Building Code Act deals with matters of construction and fire safety, rather than with zoning matters. Any other conclusion would mean that a rejected applicant for a building permit would have to decide on the basis of the particular grounds for refusal, whether his remedy lay under s. 15 by way of appeal to the county or district court, or whether it was a matter that must be taken to the Divisional Court by way of judicial review. Such a situation would lead to uncertainty as to where the proper remedy ought to be sought, especially where a building permit was refused on both types of grounds; in such a situation, two different avenues of relief might have to be sought.

I think it is important to consider also that by s. 16 of the Building Code Act an appeal to the Divisional Court is provided for from a decision made under s. 15. It is, therefore, my conclusion that the applicant had a right of appeal under s. 15; a right of appeal which was probably more expeditious than proceeding by way of judicial review and a right of appeal which was broader in scope and on the whole, more effective, than proceeding by way of judicial review.

As to the exercise of the court's discretion, the only ground suggested is that the applicant would, in a sense, have to start all over again at the beginning in making application to the county court judge and, the time-limit having expired, that he would have to make application for an extension under s-s. (5) of s. 15.

In my view these are not grounds for exercising the court's discretion in this case. In the absence of exceptional circumstances, the court's discretion ought not to be exercised in favour of the extraordinary remedy of mandamus where there is a specific alternative remedy under s. 15 which is equally, if not more convenient, expeditious, beneficial and effective and accordingly, in my view, this application must be dismissed.

Since this seems to be rather a new point, I do not think it is a case for costs.

Application dismissed.

Woolridge v. Stack

Between
Elaine Woolridge and James Woolridge, Plaintiffs, and
Frederick Stack, Dawn Stack, Steven L. Butler, Mel Mahon Realty (1988) Ltd., Gary Peddle and Town of Logy Bay, Middle Cove and Outer Cove, Defendants
[1993] N.J. No. 28
DRS 12272
1989 St. J. No. 3087

Newfoundland Supreme Court - Trial Division
O'Regan J.
Heard: January 12 - 14 and 25, 1993.
Judgment: filed February 3, 1993.

Brian Casey, for the Plaintiffs.
Gregory M. Smith, for Frederick and Dawn Stack.
Donald H. Burrage, for the Town of Logy Bay.
Wayne Spracklin, for Gary Peddle.

O'REGAN J.:-- Some four years ago, the Woolridges bought a house from the Stacks. They now claim the house is substandard and seek damages from all defendants. The plaintiff's history of the events is best put forward by Elaine Woolridge. It was Elaine, rather than her husband James who was involved in the purchase of the house.

In early March of 1989 she and her husband were contemplating buying a larger home for their family. They saw the subject house advertised and then contacted the defendant Steve Butler, a real estate agent with Mel Mahon Realty. They went with Mr. Butler to the home and there met Fred and Dawn Stack the owners. They viewed the house on several occasions and subsequently made an offer which was accepted by Mr. Fred Stack. According to Elaine Woolridge it was her understanding that this was a "business" transaction by Mr. Stack and that it was not necessary for his wife to sign the offer of purchase and sale. During one of the early visits to the house Elaine Woolridge noted numerous things which she felt remained to be completed or repaired. Among these items which are listed in the Statement of Claim were such things as:

1. Several shingles to be replaced;

2. Linoleum in some areas to be repaired;
3. Some heaters were not working;
4. Mouldings were incomplete in some areas;
5. A closet bar in one of the closets was missing;
6. Damaged carpet;
7. In some areas nails were protruding from the plaster and cracks were showing in the gyproc;
8. Throughout the house there needed to be some plastering and painting.

Mrs. Woolridge was left with the impression that all her concerns regarding deficiencies would be alleviated before they took possession. She discussed with Mr. Stack the possibility of changing some of the colours in the house and he agreed. She supplied him with a list of colours for the various rooms and agreed to pay up to $600 towards the purchase of paint. Elaine Woolridge stated that as the painting was to be done as part of the purchase price she felt satisfied that all other work such as plastering and minor repairs would be carried out by Mr. Stack before the date of possession. Among other conditions the agreement of purchase and sale stated that:

1. The vendors complete all cosmetic work upon completion of sale;
2. Purchasers are willing to share cost of paint only with vendor on a 50/50 basis up to $600 maximum; and,
3. Vendor to install air exchanger.

The Woolridges agreed to use the vendors lawyer and in this regard they engaged Mr. Gary Peddle as their solicitor.

The sale was meant to close on the 17th of May, 1989 but by mutual agreement the Stacks and the Woolridges agreed to extend the closing date to June 2nd, 1989. In order to ensure that the conditions of purchase and sale were complied with and that all the work was carried out, the Woolridges requested their lawyer keep a holdback of $4,000.

When the purchasers took possession of the house they were not satisfied that the work as contemplated in the agreement of purchase and sale had been carried out. According to Elaine Woolridge they found themselves "boxed-in" as they had sold their own house and now found it necessary to move into their new home without the repairs and completion of work done by the Stacks. They discovered that Gary Peddle, their lawyer had advanced all but $1500 of the purchase price to the Stacks. Subsequent negotiations between the parties and their lawyer led to the Woolridges accepting the $1500 as final settlement for the work outstanding. Although Elaine Woolridge felt that the $1500 was inadequate compensation for the outstanding work she did agree, that she accepted this amount as a final settlement.

A short while after possession date the Woolridges discovered, to their dismay, that the foundation and structure of the property was inadequate and did not meet the standards of the National Building Code. As a result of the work which they feel was not completed, the representations made by the Real Estate Agent and his company, the services provided by their solicitor and the failure of the building to meet the standards of the National Building Code they took this action against the defendants.

The evidence of the Stacks is basically as follows:

The Stacks lived in a bungalow adjoining the property in question. Not unlike the Woolridges they decided that they needed a larger home for an ever increasing family. Fred Stack acted as his own contractor and employed various sub-trades. As well he obtained the necessary permits from the Town of Logy Bay. In late October the Stacks and their five children began to live in the house.

During this period of time (October - March) relationships between the Stacks became strained and a decision to separate was made. Mr. Stack wished to sell the house but his wife didn't share the same enthusiasm. Therefore when the Woolridges visited the home most of the viewing was done with Mr. Stack rather than Mrs. Stack. Mr. Stack gave the Woolridges a full tour of the house and undertook to carry out the work requested by them prior to the date of closing. However, in his opinion the house was

complete and fit for habitation apart from minor deficiencies which had to be rectified. He also stated that he showed them the crawl space beneath the house and gave them an opportunity to view the foundation.

Mr. Stack agreed that although he had undertaken to carry out the repairs and complete all work which was not finished he never really obtained the services of someone to carry out this work. He did, however, manage to have some minor painting done by his wife prior to the date of possession but this only constituted a small portion of the undertaking.

As for the house not complying with the National Building Code, Mr. Stack says that he relied on his contractor, a Mr. Codner to comply with all the regulations regarding building and that he was only present on the site for a short period of time.

Barbara Power is the Town Clerk and Manager of the defendant municipality. She confirmed that the Town under the Municipalities Act adopted the National Building Code and The Administrative Regulations in November of 1988. The Council, however, decided that having adopted the Code and Regulations their policy would be that they would play a passive role and inspections would not be carried out on building projects. The Town's position was that it did not have the resources or manpower to perform this function. The town merely stipulates on all building permits that the building must conform to the Code. The burden to conform to the Code being on the builder the Town only becomes involved if they are made aware of problems. The Town's policy was that it only required the following from builders:

1. Location plan showing the house and boundary;
2. Plan of the home;
3. Location of septic tank and approval from the Department of Health;
4. Building must meet the standards of The National Building Code.

The Town's position then is quite clear. The responsibility for building according to the Code is clearly on the applicant and the Town will not become involved unless alerted or requested to do so.

ESTIMATES FOR REPAIRS:

To support their claim for structural damage the plaintiffs called an expert in structural engineering. His evidence was not seriously challenged. In his opinion the structural foundation was not well constructed nor in accordance with the National Building Code. He stated that a qualified contractor could easily rectify the problem and the corrective measures would have no adverse effect on the existing structure.

Roy Penney, Vice-President of construction for Trident Construction Ltd., gave estimates for repairs to both the structural and interior repairs. His estimates are as follows:

1. To repair structural beams, supply new structural columns, pour new column footings, install new perimeter sill, nail brace and anchor floor joists, including temporary access to crawl space all as recommended by Structural Consultants Ltd. and as per our discussions.

Our quote for this portion of the work ...

$5,636.00 plus GST

2. To complete remaining trim, patch & paint all walls, repair living room ceiling and paint remaining ceilings, replace window lock, finish and patch sheet flooring, caulk living room window and patio door, trim bath tub enclosure second floor, replace damaged shingles on roof, repair bath overflow on second floor and flush box on main floor toilet all as per discussions.

Our quote for this portion of the work ...

$8,411.00 plus GST

LIABILITY OF THE DEFENDANTS STEVE BUTLER, MEL MAHON REALTY,
DAWN STACK AND GARY PEDDLE:

At trial, the plaintiffs did not pursue their claim against Steve Butler and Mel Mahon Realty (1988) Ltd. They also abandoned their claim against Dawn Stack as she was not party to the sale agreement. The abandonment of the claim against Dawn Stack did not occur, however, until the final argument and in that regard costs will have to be dealt with. The action against Gary Peddle was discontinued prior to trial and like the defendants Steve Butler and Mel Mahon Realty no costs were incurred.

LIABILITY OF THE DEFENDANT FRED STACK:

(a) Cost of completing cosmetic work

The plaintiffs allege that Fred Stack agreed to complete

certain "cosmetic work" in the agreement. I am satisfied on the evidence and more particularly on the admissions by Elaine Woolridge that this has been settled between the parties. The settlement for $1,500 was made and accepted by the Woolridges for outstanding work and this was done with legal advice. The Woolridges also settled with their lawyer for any outstanding claims that they may have had against him for what they felt was poor representation.

(b) The claim for structural deficiencies:

The plaintiff's claim is based on an implied warranty whereas the defendant says "caveat emptor" applies. A statement in Chitty's Law Journal, Vol. 22 No. 8, 1974 best sets out the law in Canada as supported by the authorities. The article states at p. 273:

> In Canada the protection now afforded by contract law for defects of quality can be briefly summarized. The buyer of a newly constructed house which is fully completed is in the same position as the purchaser of an old house, or the lessee of unfurnished premises. He must take the premises as they stand, although they might have some quality defects of which he is unaware, unless he is able to extract an express warranty as part of the agreement of purchase. The purchaser of a newly constructed house which was not fully completed at the date of the agreement is protected against physical defects to the extent that he can hold the builder-vendor to an implied warranty that the house has been built in a good and workmanlike manner with good materials and that it is fit for human habitation. That warranty extends to all parts of the house, whether constructed or not at the date when the agreement is entered into.

The courts finding on the distinction between complete - incomplete is of the utmost importance. In making that determination a "common sense" approach must be taken so one is not caught straining to find incompleteness in order to assist a purchaser who has failed to protect himself or herself.

The distinction between complete - non-complete and its rationality was dealt with by Dickson J. (as he then was) in

Fraser - Reid and v. Droumtsekos [1980] 1 S.C.R. 720. There Dickson J. saw the irrational distinction but refused to move to an extended implied warranty for a complete house. He stated at p. 731:

> The only real question for debate in the present case is whether removal of the irrational distinction between completed and incomplete houses is better left to legislative intervention. One can argue that caveat emptor was a judicial creation and what the courts created, the courts can delimit. But the complexities of the problem,

> the difficulties of spelling out the ambit of a court-imposed warranty, the major cost impact upon the construction industry and, in due course, upon consumers through increased house prices, all counsel judicial restraint.
>
> I would be inclined to reject the proposition advanced on behalf of the appellants for an extended implied warranty. It appears to me at this time that if the sale of a completed house by a vendor-builder is to carry a non-contractual
>
> warranty, it should be of statutory origin, and spelled out in detail.

I find, considering all the circumstances and evidence, that this house was complete when the sale agreement was signed. Historically, courts have sometimes strained to find incompleteness to favour an aggrieved purchaser. Harsh as it may be, however, common sense in this case dictates otherwise. The house had been lived in for over four months by the Stacks. Outstanding items such as painting, plastering, closet rods and other minor items were referred to as "cosmetic" in the agreement. Placement of the air exchanger, in the agreement, was a separate item not involved with the construction.

I find that the house was complete in the legal sense. It was habitable and the items agreed upon between the parties in the sale agreement were really separate requests and undertakings between the parties. These agreed items are not evidence of incompleteness but better classified as "extras" or "cosmetic" work requested by the plaintiff and consented to by the defendant, Fred Stack.

There can be no doubt that the Woolridges had ample opportunity to inspect and did inspect the house before purchase and the matters to be completed were resolved between the parties and looked after by the holdback.

Finding the house to be complete the common law doctrine of "caveat emptor" applies.

(c) Liability of the Town:

The Town was required to adopt by-laws by the Municipalities Act and in this regard adopted the National Building Code and Administrative Requirements. However, other than requiring the builder to conform to the Code and request the items outlined on p.6 of this judgment, the Town took a passive role. Agreed the Code and Administrative Regulations gave the Town power to regulate, inspect and control but the Town, for "economic reasons", adopted a policy of minimum action.

In City of Kamloops v. Nielson et al. 26 M.P.L.R. 81, Wilson J. stated on p. 94:

> It seems to me that, applying the principle in Anns [Anns v. Morton London Borough Counsel [1978] A.C. 728 (H.L.)], it is fair to say that the City of Kamloops had a statutory power to regulate construction by by-law. It did not have to do so. It was in its discretion whether to do so or not. It was, in other words, a "policy" decision. However, not only did it make the policy decision in favour of regulating construction by by-law, it also imposed on the city's building inspector a duty to enforce the provisions of the by-law. This would be Lord Wilberforce's "operational" duty. Is the city not then in the position where in discharging its operational duty it must take care not to injure persons such as the plaintiff whose relationship to the city was sufficiently close that the city ought reasonably to have had him in contemplation?

Having found a duty of care and rejecting the argument on misfeasance and malfeasance as a factor for finding a duty Wilson J. then went on to comment on Mr. Justice Lambert's decision at the appellate level. She stated at p. 103:

> As I read his reasons, his view was that the city at the very least had to give serious consideration

> to taking the steps toward enforcement that were open to it. If it decided against taking them, say on economic grounds,then that would be a legitimate policy decision within the operational context and the Courts should not interfere with it. It would be a decision made, as Lord Wilberforce put it, within the limits of a discretion bona fide exercised.

This clearly recognizes a policy aspect at the operational level provided that the policy decision is taken bona fide.

The evidence in this case shows that the Council debated and indeed struggled with the role it should take on enforcement. As a small municipality with only a few employees it didn't have the resources or manpower to enforce and administer the by-laws. They, therefore, made a conscious and reasonable policy decision to play a passive role. This was not as Wilson J. in Kamloops, supra, envisaged when she stated at p. 104:

> In my view, inaction for no reason or inaction for an improper reason cannot be a policy decision taken in the bona fide exercise of discretion. Where the question whether the requisite action should be taken has not even been considered by the public authority, or at least has not been considered in good faith, it seems clear that for that very reason the authority has not acted with reasonable care.

I conclude the policy decision here was bona fide and the Town acting with reasonable care cannot be held liable.

The plaintiff's claim is unsuccessful against all defendants and I now turn to the matter of costs.

Counsel have asked to leave the matter of costs for further argument. Based on my decision the matter of costs appears obvious, however, either party may make application for a determination.

O'REGAN J.

Re 382671 Ontario Ltd. v. London (City) Chief Building Official for the City of London et al.

382671 Ontario Ltd. v. London (City) Chief Building Official]

28 O.R. (3d) 718
[1996] O.J. No. 1352
Court File No. 20060/96

Ontario Court (General Division),
Killeen J.
April 4, 1996

Barry R. Card, for applicant.
James P. Barber, for respondent, City of London.

KILLEEN J.: -- This is yet another in the seemingly endless and inexhaustible series of cases dealing with the zoning principle of legal non-conforming use. Here, the applicant 382671 Ontario Limited ("382671") brings an application under s. 25(1) of the Building Code Act, 1992, S.O. 1992, c. 23, seeking orders, (1) rescinding the decision of Rocco Cerminara, the London Director of Building Controls, to reject the applicant's application for a building permit, and (2) directing that Mr. Cerminara issue a building permit for the conversion of certain unused space in an apartment building into an apartment dwelling unit as requested in building permit application No. 9501104.

The Background Facts

There is not a shred of dispute about the facts of this case.

382671 is the owner of a 16-unit apartment building located at 100 Barton Street in London. The apartment building has three floors with the lower floor being partially below ground level.

The building was constructed in 1952 and, at that time, complied with the applicable zoning by-law.

In 1949, By-law C.P. 65-233 provided for multi-family residence zones permitting a "multiple dwelling" which, under the by-law, was defined as "a building containing three or more dwelling units" and an "apartment house". The building at 100 Barton Street has contained 16 apartment units from the date of its construction to the date of the application for the building permit on April 10, 1995.

The definition of multiple dwelling was changed in 1958 and the use described as an "apartment house" was deleted and the term "apartment building" was substituted in its place.

There were several consolidations of By-law C.P. 65-233 throughout the 1960s and 1970s, but it would seem that each maintained a multi-family residence zone in which apartment buildings were permitted and regulated based upon the number of dwelling units in the given building.

By-law C.P. 1000.-21 was passed on December 7, 1981, and received Ontario Municipal Board approval on November 29, 1982, such approval to be effective from January 1, 1982.

This by-law rezoned the lands at 100 Barton Street as an R4/R7 composite zone. Neither the R4 nor the R7 zones permitted an apartment building. The by-law defined apartment buildings based on the number of dwelling units in the building, as had its predecessor by-laws in the 1960-1980 period.

The number of dwelling units in 100 Barton Street exceeded the permitted number under the permitted uses in the R4 or R7 zones of By-law C.P. 1000.-21 so that it may be said that, when this by-law was passed, 100 Barton Street acquired the status of a legal non-conforming use.

By-law Z.-1 was enacted by the city on May 21, 1991, and came into force with respect to the subject property on July 1, 1993, under an order of the Ontario Municipal Board. This comprehensive general zoning by-law rezoned the area where 100 Barton Street was located as an R3-1/0C2 zone. Neither the R3-1 nor the 0C2 zone permits apartment buildings.

The permitted uses in the Barton Street area are set out at

s. 7 of the by-law. They are all essentially residential uses:

7.2 PERMITTED USES

No person shall erect or use any building or structure, or use any land or cause or permit any building or structure to be erected or used, or cause or permit any land to be used in any Residential R3 Zone for any use other than the

following uses:

a) Single detached dwellings;

b) Semi-detached dwellings;

c) Duplex dwellings;

d) Triplex dwellings;

e) Converted dwellings;

f) Fourplex dwellings.

Each of these permitted uses is carefully defined in s. 2, the definitions section of the by-law. In s. 2(122) we find the drafter undertaking the Herculean task of providing multiple subdefinitions of the many kinds of "dwellings" which are referred to throughout the by-law. For example, in s. 2(122)(a) we find this definition for apartment building:

a) "APARTMENT BUILDING" means a residential building containing four or more dwelling units to each of which

access is obtained through a common entrance or entrances from the outside and through a corridor or hallway from the inside.

A somewhat unique feature of By-law Z.-1 is that it contains a special proviso which attempts to "deem" certain legal non-conforming uses to be lawful on and after July 1, 1993, the effective date of the by-law. Section 1.3 says this:

1.3 DEEMED CONFORMITY OF USES AND COMPLIANCE WITH REGULATIONS

(1) Where any land, building or structure was lawfully used on the 30th day of June, 1993 for a purpose that, were it not for this provision, is prohibited by this By-law, that use is hereby deemed to be permitted by and in conformity with this By-law, despite anything in this By-law to the contrary, so long as the land, building or structure is used and continues to be used for that purpose.

(2)(a) Where any land, building or structure has been continuously used from the 1st day of July, 1973 until the 30th day of June, 1993 for a purpose that is prohibited by this By-law, that use is hereby deemed to be a lawful use on the 30th day of June, 1993.

As I have already noted, 382671 filed its application for a building permit on April 10, 1995. It was seeking to convert an unused and empty storage room area on the lower floor of the building into a one-bedroom apartment. The application and its attachments clearly show that the conversion would be done without any changes to the exterior of the building. Not even the windows in the proposed area were to be changed; all that was going to happen was that an unused or under-utilized area was going to be converted into one more apartment unit for the building.

The response to the building permit application was negative and came some months later in the form of Mr. Cerminara's letter of January 2, 1996, reading as follows:

Dear Sir:

Re: 100 Barton Street, London ON Application No. 9501104

Further to your discussions with Brace Henry this letter will

confirm that the Chief Building Official can not issue the permit for an additional dwelling unit because the issuance would be contrary to applicable law namely the Zoning By-law.

The existing apartment building with 17 apartments has been in existence for a number of years. Our understanding is that the use of the building for 17 apartments has been continuous between July 1, 1973 and July 1, 1993 and by virtue of Section 1.3.(2)(a) of the Zoning By-law (see copy attached), the use of the building is deemed to be a lawful use. It is our opinion that if the owner is to extend this use by adding an additional dwelling unit, then a minor variance to the Zoning By-law is required.

As can be seen, Mr. Cerminara relies on the new deeming provision of the by-law -- s. 1.3.(2)(a) -- to defeat the applicant's attempt to rely on its legal non-conforming use rights.

The Issues and their Resolution

The nerve centre of the argument presented by Mr. Card for the applicant may be found in s. 34(9) of the Planning Act,

R.S.O. 1990, c. P.13:

34(9) No by-law passed under this section applies,

(a) to prevent the use of any land, building or structure for any purpose prohibited by the by-law if such land, building or structure was lawfully used for such purpose on the day of the passing of the by-law, so long as it continues to be used for that purpose . . .

The history of s. 34(9) and its statutory predecessors have been well and thoroughly reviewed in Rogers' Canadian Law of Planning and Zoning, (1973) at pp. 210.20-.56 and needs no repetition here in detail. Suffice it to say that the legal non-conforming use principle was given statutory form in Ontario and elsewhere to provide a limited form of protection to vested property rights in the teeth of the necessary zoning powers of local governments to control the orderly development of municipal lands in the light of ongoing and constantly changing circumstances.

Without this protective principle, the local landowner would be at the mercy of the passing whims and fancies, as well as the reasoned planning and zoning judgments, of local officials and could face indirect expropriation or forfeiture without compensation. Thus, the non-conforming use principle has been statutorily embedded in the zoning process to prevent retroactive injustice from being wreaked upon the landowner.

In Ontario, then, lands and buildings are excepted from the operation of a zoning by-law if they were lawfully used for a purpose prohibited by the by-law on the date of its passing. Section 34(9)(a) says simply that no by-law is to apply to prevent the use of any such land or building.

Reduced to its basic points, Mr. Card's argument on behalf of the applicant may be summarized as follows. First, he submits that his client's original use of its land for an apartment building from 1952 onward to 1980 or so was a lawful use. Second, that use became a legal non-conforming use within the predecessor proviso to s. 34(9) and fell within the protective features of that statutory principle. Finally, he argues that the deeming proviso of s. 1.3 of By-law Z.-1, under which the city has attempted to convert certain legal non-conforming uses into lawful uses, is ultra vires the city because it derogates from the statutory rights of the applicant and other similarly situated landowners under s. 34(9) of the Planning Act. Clearly, he argues here, a municipality cannot, by by-law, amend and eviscerate the important non-conforming use principle which is, after all, embedded in the parent legislation under which the municipality's zoning power is created.

Mr. Barber, for the city, developed two basic arguments in response to the applicant's position.

First, he argued that new s. 1.3 of By-law Z.-1 was essentially a benevolent extension or adjustment of the legal non-conforming use principle and was not inconsistent with it. Thus, it could be held to be intra vires the municipality as a legitimate attempt to smooth out the local zoning field and provide a more level and consistent playing field for city planners and landowners alike. Second, he argued that, in any event, the relevant decisional law under s. 34(9) of the Act

does not, on close analysis, permit the applicant to add an apartment unit to the apartment building without recourse to the "minor variance" process provided for in s. 45(2) of the Act.

A. The vires of s. 1.3 of By-law Z.-1

In my view, s. 1.3 of By-law Z.-1 is nothing more nor less than a clever attempt by the municipality to trench upon and even disembowel s. 34(9) of the Act.

It must be remembered that s. 34 of the Act provides the basic life support system for the enactment of all zoning by-laws across Ontario. Section 34(1) starts out by saying that "[z]oning by-laws may be passed by the councils of local municipalities . . .". Following upon that opening language, s. 34(1) then includes six broad paragraphs which outline the general parameters of the zoning powers granted to municipalities. As I have already noted, s. 34(9) is a central element in the zoning-power structure and has been included to protect property owners against inevitable retroactive zoning changes down through the years which could otherwise put a given property or building at risk of disastrous economic dislocation.

To me, there is a substantial measure of operational disunity and inconsistency between the by-law proviso of the subordinate instrument and the protective proviso of the parent statute such that the by-law proviso must fall. If the municipality wishes to obtain the power set out in the by-law, it must seek out an amendment to s. 34(9) itself and not take it upon itself to amend the statute through the subtle but illegal sleight-of-hand device set out in s. 1.3.

The leading Ontario case on the question of repugnancy or inconsistency between a statutory proviso and a municipal by-law is Ontario (Attorney General) v. Mississauga (City) (1981), 33 O.R. (2d) 395, 124 D.L.R. (3d) 385 (C.A.). There, the court had to deal with an alleged repugnancy between a municipal by-law prohibiting the storage or burning of chlorinated carbons and certain provisions of the Environmental Protection Act, R.S.O. 1980, c. 141. The judgment of the court was written by Morden J.A. He said this about the issue at hand at pp. 409-10:

> Is there a conflict between By-law 731-79 and the Environmental Protection Act, 1971 of the kind which would render the By-law 431-79 inoperative? I do not intend to review the extensive jurisprudence in which various tests have been formulated and applied in resolving the issues of conflict, or of inconsistency, repugnancy or incompatibility. In my view, if the competing pieces of legislation are intended to advance the same policy and the provision in the statute covers the same ground as the by-law in a way to give rise to the interpretation that the statutory provision is intended ". . . completely, exhaustively, or exclusively [to express] what [shall be] the law governing the particular conduct . . . to which its attention is directed . . .", then there is a case of conflict. I quote from Ex parte McLean (1930), 43 C.L.R. 472 at p. 483, which was adopted in O'Sullivan v. Noarlunga Meat Ltd., [1957] A.C. 1 at p. 24, and quoted in R. v. Morin (1965), 52 D.L.R. (2d) 644 at pp. 646-7, [1966] 1 C.C.C. 265, 53 W.W.R. 234. If, in covering the same ground the subordinate legislation works at cross purposes to the provincial statute, then the case for conflict is reinforced. This is not intended to be an exhaustive definition of a conflict which will result in the rendering inoperative of the subordinate legislation but merely as one instance thereof and one which, in my view, is applicable to the case.

Morden J.A. was, of course, dealing with a conflict problem between a separate statute -- the Environmental Protection Act -- and a by-law enacted under the Municipal Act. In the case at bar, on the other hand, I am faced with an alleged clash between a provision in the parent statute -- the Planning Act -- and a zoning by-law enacted under the very section -- s. 34 -- which enables the municipality to pass zoning regulations. Nevertheless, the principle which he propounds of "operative conflict" (see passage at p. 407) strikes me as being peculiarly applicable to the case at bar.

As I read the two provisos, they cannot live side by side because, incontestably, the by-law proviso strikes at the heart

of the statutory right. This, the municipality cannot do with subordinate legislation.

B. The scope of the non-conforming use

Mr. Barber has argued that, even if By-law Z.-1 is inoperative, the applicant cannot convert the unused space into a 17th apartment under the non-conforming use principle, as the principle has been explicated in the case-law. Essentially, he was saying here that the non-conforming use which was created under the 1981 by-law was a "16-unit apartment building" and that the applicant cannot, as of right, construct or add a 17th unit in virtue of s. 34(9).

The well-spring of the case-law explicating the doctrine of legal non-conforming use is found in the well-known case of Central Jewish Institute v. Toronto (City), [1948] S.C.R. 101, [1948] 2 D.L.R. 1.

In this case, the institute entered an agreement on June 27, 1946, to buy a large residence on Avenue Rd. in the City of Toronto for use as a progressive school for young children. The closing and possession date for the transaction was originally fixed for September 1. The vendor had been using the property as a rooming-house with several lodgers.

The city council, in response to lobbying efforts from local residents who were opposed to a school, quickly passed a zoning by-law restricting the use of area lands to single-family residences and related uses.

However, before the actual passing of the by-law, the vendor and institute had, on July 12, amended their agreement to allow the institute into possession on July 15, but reserving the right to the vendor and his lodgers to stay in occupation on a phase-out basis over the summer.

On July 15 three teachers and a number of young students went on the property and, for the balance of the summer, a modest part of the premises was operated as a summer nursery school of sorts. There is no doubt that the institute occupied the premises on this partial basis in an attempt to establish a legal non-conforming use.

In 1946, the non-conforming use proviso was set out in s. 406(2) of the Municipal Act, R.S.O. 1937, c. 266, as amended, and read as follows:

> 406(2) No by-law passed under this section shall apply to any land or building which, on the day of the passing of the by-law, is used or erected for any purpose prohibited by the by-law, so long as it continues to be used for that purpose . . .

While this language is a little different from the language of current s. 34(9) of the Planning Act, there is no difference in substance or effect. This fact is conceded by Mr. Barber.

The judgment of the court was written by Kerwin J. Rand and Kellock JJ. wrote concurrences but, if anything, their concurrences are stronger, in effect, than the judgment of Kerwin J.

The Supreme Court reversed the concurrent holdings of the trial court and Ontario Court of Appeal and concluded that the institute had established a legal non-conforming use through its partial and limited use of the residence in the short period between July 12, the changed date of possession, and the passing of the zoning by-law on July 24, a matter of 12 days later.

As Kerwin J. said at pp. 105-06 of the judgment:

> It is not necessary that the entire premises, that is every room in the building, be used. While a bona fide intention to use is not sufficient, as has been decided by the Judicial Committee in Toronto Corporation v. Roman Catholic Separate Schools Trustees [[1926] A.C. 81], it is an important element in considering the evidence as to actual user. There is no doubt, in the present case, as to the purpose of the appellant in purchasing the premises nor, I think, is there any real doubt on the evidence as to what it did. This is not a case of disturbing concurrent findings but of accepting the

facts as found and of drawing the proper legal conclusions therefrom. The appellant took steps during the summer vacation, in an endeavour to bring itself within subsection 2 of section 406 of the Act and, in my opinion, has succeeded in so doing. It actually used the premises as a school and the mere fact that it was a nursery summer school does not prevent the appellant increasing the number of pupils or enlarging the scope of its activities so as to conduct classes not in operation at the relevant time. We are not concerned, in the present appeal, with any question of erecting new buildings.

(Emphasis added)

Mr. Justice Rand, in his concurrence, goes into more detail than Kerwin J. in describing the effect of old s. 406(2). At p. 109 he describes the effect of the subsection as creating an "exemption" from the new by-law:

It will be seen that the exemption is not to the existing use but to the building; and there is no implication that it is the whole of the building that must be so used or that the use must be the sole use. The language would be satisfied by

a partial use as if, for instance, an owner was carrying on a grocery store on the ground floor and using the second storey for his home: could it seriously be questioned that the use of the lower floor in such a case would be protected by the exemption? If that same business were extended to the upper storey, could it be said that the exemption did not continue or was lost? The building would still be used on the ground floor for the prohibited purpose; the building as a whole would be exempt; and I think it would necessarily follow that no such extension could bring about a forfeiture of the exemption. In any case the question is whether a real use, in good faith, is being made of the building, a use not merely incidental to some other use, but possessing an individuality of its own.

Mr. Justice Kellock reinforces what was said by his colleagues in the following passage at p. 113:

I agree with the view of the statute taken by my brother Rand that the use being made of the building here in question on the day of the passing of the by-law was sufficient to bring it within the very words of section 406(2) and as the building and the lands appurtenant were being used by the appellant for a purpose not permitted by the by-law, the by-law does not apply to them.

As I read the three strong judgments in Central Jewish Institute, nothing could be clearer than what they have said about the effect of a new zoning by-law on the use or uses of a legal non-conforming building: It is not necessary that the entire premises be used. This is because the statutory exemption from the new by-law was not to the existing use per se, but to the building itself. In effect, the whole of the existing building was thereby exempt from the zoning by-law.

There are at least four judgments in Ontario (and many elsewhere across Canada) which usefully address the full ramifications of the holding in Central Jewish Institute. They are O'Sullivan Funeral Home Ltd. v. Sault Ste. Marie (City), [1961] O.R. 413, 28 D.L.R. (2d) 1 (H.C.J.); Thorman v. Cambridge (City) (1977), 18 O.R. (2d) 142, 4 M.P.L.R. 220 (H.C.J.); Haldimand-Norfolk (Regional Municipality) v. Copland (1992), 12 M.P.L.R. (2d) 85, 96 D.L.R. (4th) 443 (Ont. Gen. Div.) and Magdalena's Rest Home Ltd. v. Etobicoke (City) (1992), 12 M.P.L.R. (2d) 316 (Ont. Gen. Div.).

It is unnecessary to review the factual circumstances of all of these cases. They all dealt with situations where, essentially, an owner attempted to enlarge or expand a legal non-conforming use. After careful analysis of Central Jewish Institute, each court held that the owner could expand the non-conforming use within the confines of the entire building without the necessity of conforming with the dictates of the new zoning by-law.

Magdalena's Rest Home gives the flavour of all these cases. There, the owner operated a rest home in a residential zone. Before the passage of the first zoning by-law for the area, the lands were used as a 15-bed rest home. The municipality later passed a zoning by-law which allowed specified residential uses

only, and a rest home was not within the list of permitted uses. The applicant sought to expand the number of beds to the maximum permitted under certain health and licensing regulations. The proposed expansion could be accomplished internally without any extension of the building.

The municipality argued that the legal non-conforming use protected only the exact status quo ante of 15 beds and submitted that any expansion called for relief from the zoning by-law either through an application to the Committee of Adjustment for a minor variance or to council for an amendment to the zoning by-law itself.

The argument presented by the municipality in this case is paradigmatic of the arguments of many municipalities across Ontario since Central Jewish Institute was decided in 1948. The argument was made that a narrow view should be taken of the term "use", ignoring the fact that the phrase employed in s. 34(9) and its predecessors is "use . . . for any purpose prohibited by the by-law . . .".

In this case, the municipality attempted to seize upon the phrase "15-bed rest home" as a mantra and thereby freeze the building in a strait-jacket.

On the other hand, the owner argued -- and successfully -- that the number of beds was merely a reflection of the intensity of the use and did not represent a different use.

Mr. Barber, during his argument for the city, relied heavily on a decision of the Ontario Court of Appeal in R. v. Grant (1983), 23 M.P.L.R. 89.

Grant was a case where the building had been used for two self-contained dwelling units before a zoning by-law was passed which only permitted a private detached dwelling-house or a converted dwelling-house. Later, the owner quietly increased the number of dwelling units from two to four without making any changes to the exterior aspect of the building. As a result, the city prosecuted the owner for breach of the zoning by-law. The trial judge acquitted, purporting to follow Thorman v. Cambridge, supra, but, in the Court of Appeal, this decision was overturned and a conviction entered.

Mr. Justice Cory, for the Court of Appeal, said this about the scope of the legal non-conforming issue at hand at p. 92:

> What was the nature of the non-conforming use in January, 1960? It was the existence of the two self-contained dwelling units in 12 Playter Blvd. It was no more than that. The existence of the non-conformity did not give rise to a right to increase significantly the extent of that non-conformity. The R. 1 zoning delineated by the by-law was designed to control the density of population in the area. To permit the doubling of the number of self-contained units within the dwelling house flies in the face of the intent and purpose of the by-law. If this increase were permitted, there would be no basis for restricting or controlling by means of the by-law an increase to 10 or 12 units within the exterior walls of the dwelling. The unauthorized use permitted by the Planning Act was to maintain two self-contained dwelling units within the premises. It should not be extended beyond that limit. To do so would make a mockery of zoning by-laws and unduly extend non-conforming uses.

It is interesting to note that Cory J.A. did not, in so ruling, purport to reject the Thorman decision but only distinguished it on its facts. In referring to a passage in the Thorman decision he said this at pp. 92-93:

> That statement cannot be taken as a blanket authority for multiplying the number of self-contained dwelling units without restraint so long as the external walls are not altered. Rather, the decision was based upon planning concepts for it was pointed out that a separate apartment was a higher and more desirable use than a butcher shop in an area zoned for detached single family residential use. The decision permitted a reasonable use of space in a portion of a building that had become vacant as a result of the abandonment of the butcher shop.

There are two difficulties with Mr. Barber's heavy reliance on the judgment of Cory J.A. in Grant.

First, it may be fairly said, I think, that Cory J.A. is not saying that a building use can never be expanded or enhanced beyond its precise non-conforming status at the date of the passing of the zoning by-law which creates the non-conformity. Rather, he appears to be saying that any such enhancement must be done reasonably, with restraint, and consistently with fair generic range of the established non-conformity.

I must conclude, on the facts before me, that that is precisely what the applicant was attempting to do in utilizing unused space for an additional apartment unit.

Second, it must also be said that nowhere in his reasons does Cory J.A. mention the all-important judgment of the Supreme Court in Central Jewish Institute. I am bound to say there is language in Grant which seems to be at odds with the Central Jewish Institute decision. While the conflict may be more a

matter of appearance than reality, I must, of course, follow Central Jewish Institute and conclude that the applicant's building is exempt from the constraints of the city's zoning by-laws and may proceed with the construction of an additional apartment as requested.

Accordingly, orders will go declaring that, (a) the decision of the chief building official should be rescinded, and (b) a building permit should forthwith issue.

It would seem to me that the applicant should have its party-and-party costs but, if counsel wish to argue this question, I may be spoken to.

Before concluding this judgment, I would be remiss if I did not express my gratitude to counsel for their most helpful and candid arguments. Also, I would like to pay homage to a brilliant, scholarly article on the broad subject of legal non-conforming uses written by Ira Kagan under the title of "But I Do Not Want To Be Legal", published at (1993), 13 M.P.L.R. (2d) 252. This article should quickly become an essential research source for any practitioner, judge or legal scholar interested in the subject at hand.

Appeal allowed.

861168 Ontario Inc. v. Foreshew, Chief Building Official
of the Town of Lindsay and the Town of Lindsay*
3 O.R. (3d) 721

ONTARIO
Ontario Court (General Division)
Taliano J.
May 17, 1991

APPEAL from a decision of the Chief Building Official of the Town of Lindsay, which refused to grant a building permit pursuant to the Building Code Act.

Stanley B. Stein and Bonnie Freedman, for applicant.

A. Ronald Cork and D. La Mantia, for respondents.

TALIANO J.:-- In this proceeding, the applicant is appealing the decision of the Chief Building Official of the Corporation of the Town of Lindsay who refused a building permit for renovations to 40 Lindsay St. in Lindsay. The appeal is governed by the provisions of s. 15 of the Building Code Act, R.S.O. 1980, c. 51, and particularly subs. (3) which permits the judge hearing the appeal to substitute his opinion for that of the official.

The facts are that the applicant, an experienced developer, purchased the "Moose Hall" in Lindsay on October 31, 1990 with the intention of converting the building, which contains approximately 9400 square feet, into office space. Both before and after the purchase, the building was lawfully used as a meeting place, banquet hall, and licensed eating and drinking establishment. Fire and other regulations permitted as many as 500 people on the premises at any one time.

After the building was acquired, the applicant prepared and submitted detailed plans for the conversion of the building to office use, and even though the plan ultimately satisfied all building code requirements, the Chief Building Official refused to issue the building permit because the applicant had not entered into a site plan agreement with the municipality as required by By-Law 9-88 passed pursuant to s. 40 of the Planning Act, 1983, S.O. 1983, c. 1.

Section 40 of the Planning Act, 1983 permits municipalities to control the development of land through the vehicle of a site plan agreement where:

-- a new building is being erected (which is not the case here);

-- a commercial parking lot is being established (which once again does not apply); or

-- where an addition or alteration to a building is being proposed, that has the effect of "substantially increasing the size or usability" of the building.

Counsel agree that if a site plan agreement is required prior to the applicant proceeding with its development, it is because it is substantially increasing the usability of the building in question since it is conceded that the applicant's proposal does not seek to increase the size of the building.

The applicant argues that the prior use of the building as a place of assembly attracted much higher or stringent requirements for public safety and convenience than are required for an office building and from that point of view, the usability of the building had diminished rather than increased. It was also argued that the meeting hall use permitted as many as 500 people on the premises at the same time where, as an office building, there will only be between 35 and 50 people coming to the building on a daily basis; from that point of view, there is a downgrading to the building's usability.

On the other hand, counsel for the municipality submitted that the original purchase price for the building was $450,000; the proposed renovations will cost an additional $180,000, or

approximately 40 per cent of the original purchase price. That sum, it is argued, has not been spent to make the building less usable. In addition, when the building was used as an assembly hall, there was only one office in the building; now the applicant proposes to increase the number of offices by 28, which is a substantial increase in the usability of the building for offices. Finally, it was urged upon me that the applicant is spending large sums of money on this property, and it must therefore be assumed that the property will be generating, if not more income, at least more benefit to the applicant and consequently its use of the building has been upgraded thus triggering the requirement for site plan control.

Although the municipality's arguments are persuasive, I have concluded that they are not valid for these brief reasons.

Firstly, although knowing the extent of the costs involved in making the renovations is of some assistance in resolving the issue, costs are not determinative. The costs of upgrading an existing building are normally substantial; the cost to convert a building from one use to another can also be substantial, but if that was the intended criterion for deciding whether a site plan agreement was necessary, surely the legislation would have used words that would easily have imported that meaning. Since the legislature did not use such words, in my view the cost and fact of renovating has little bearing on the meaning of the word "usability". The applicant admits that the renovating costs are extensive but he says that they relate solely to upgrading the electrical, mechanical and cosmetic aspects of the building, including interior partitions. Notwithstanding, I have concluded that the conversion in use is not likely to increase the usability of the building and by that I mean that there will be fewer people coming to the building after the changes are made than before. That is, fewer people will be using the building and therefore the usability of the building by the public will be diminished, not increased, as a result of the changes.

Secondly, the enlargement of the number of offices in the building in and of itself does not necessarily suggest an increase in "usability", unless the principal use prior to the enlargement was also for offices. That, however, is not the case. The principal use before was as a banquet hall and the one office in the building at the time was ancillary to or incidental to that principal use. Now, that principal use is to be changed to office use, a trade-off which will net a much reduced traffic flow through the building. Accordingly, it is not accurate to suggest that the office use has expanded substantially. It is accurate to say that the prior banquet hall use will be transformed to a use which will generate less traffic and, therefore, substantially reduced demands and, consequently, reduced usability.

Finally I must deal with the argument that the renovations and change in the building's revenue suggest that the applicant is deriving some benefit from the change in use, and that it is therefore incumbent on the applicant and not the municipality to demonstrate that a possible change in revenue negates an increase in usability. As I understand the respondent's submission, the building was generating income as a banquet hall and since the use is changing, it must be assumed that the new use will increase the existing revenues, thus increasing the building's usability. In my view such a conclusion does not necessarily follow.

The change in use does not necessarily suggest an increase in revenue, but assuming for the purposes of argument that it does, I do not think that is decisive either. Premises can often be used for highly profitable purposes, some legal, some not, but I cannot agree that increased revenues necessarily mean increased usability. The two must be related, but it has not been demonstrated in this case by the municipality that changed or even potentially larger revenues necessarily mean increased usability, particularly when all of the building was being used before and there is no increase in the size of the space to be used in the future.

In my view the term "usability" must be interpreted in a fashion consistent with the objects of the legislation which are demonstrated by s. 40(7)(a) of the Planning Act, 1983. That

section provides that a municipality may impose conditions upon a development by way of a site agreement. The conditions that a municipality may address are specifically enumerated and they relate to such matters as highways, traffic access, pedestrian access, easements, lighting, landscaping and garbage facilities. All of these concerns have already been satisfied by the existing building and are of such marginal relevance now that their applicability to this development would have to be seriously questioned.

In my view, usability as that term is used in this legislation can relate either to the public's use of the land in question or the owner's use of the land.

The owner is not using any more of the land than was previously used. The use is changing, but the extent of the use is not, in the sense that the same square footage that was being used before is still being used. That does not trigger the need for site plan control.

Nor is the public's use of the land increasing; the facts are that less people will be using the building than before and, bearing in mind the types of concerns that the municipality may regulate by s. 40(7), usability must surely relate to those conditions. Since those matters have already been addressed, I am satisfied that the objects of the legislation have been satisfied and that the expanded definition of the term "usability" as suggested by counsel for the municipality is not warranted by an analysis of the legislation itself.

For these brief reasons, I have concluded that the proposed renovations do not constitute a "development" within the meaning of s. 40 of the Planning Act, 1983, and that the applicant is not required to enter into a site plan agreement with the Corporation of the Town of Lindsay for the site in question.

The issue of costs was not addressed and I am prepared to entertain submissions (to be arranged through the regional trial co-ordinator) if for some reason it is inappropriate to follow the usual rule of costs following the event.

Order accordingly.

Re 1121472 Ontario Inc. v. Toronto (City)

39 O.R. (3d) 535
[1998] O.J. No. 1851
Docket No. C22872

Court of Appeal for Ontario
Morden A.C.J.O., Robins and Charron JJ.A.
May 1, 1998

APPEAL from an order of Kiteley J. (1995), 26 O.R. (3d) 25, 29 M.P.L.R. (2d) 221 (Gen. Div.), declaring a proposed use of premises a "restaurant" as defined under City of Toronto By-law 438-86.

Thomas H. Wall, for appellant.
Lawrence H. Zucker and Ira T. Kagan, for respondent.

The judgment of the court was delivered by

ROBINS J.A.: -- This is an appeal by the City of Toronto from an order [reported (1995), 26 O.R. (3d) 25, 29 M.P.L.R. (2d) 221] declaring that "the restaurant as described in Exhibit B to the Affidavit of Paul Stagl sworn August 31, 1995, (II by IV Design Associates Inc.'s furnishing plan dated May, 1995) is a use permitted by By-law 438-86 as amended". Exhibit B is a construction floor plan for the second floor of 794 Bathurst Street, Toronto, showing an 8,000-square-foot dining facility with an oval-shaped bar, a dance floor and a stage.

A building permit was issued for the construction of the premises on June 30, 1995, but not on the basis of ex. B. The city was unaware of the use proposed by this floor plan until after the permit was issued. In fact, the permit was issued on the basis of a set of architectural construction drawings of the same space which included the floor plan shown in ex. C to the affidavit of Paul Stagl. This plan showed the dining facility with an oval-shaped bar as having a seating capacity of 370 people with tables and chairs located throughout the premises. Neither the floor plan nor the architectural drawings indicated that any part of the premises were to be used for the purposes of a dance floor or stage. Had this intention been disclosed, the evidence is that the permit would not have been issued.

It is undisputed that the use reflected in ex. C is a permissible use under Zoning By-law 438-86 as amended. The dining facility provided for therein is clearly a "restaurant", as defined in the by-law, and has been operated as such since the construction was completed. The respondent, however, seeks to extend the use by presenting Spanish-style entertainment in conjunction with the restaurant, and by providing a dance floor in front of the stage for the enjoyment of its patrons. The entertainment is to range from flamenco dancers to Spanish singers and bands "from around the world"; the dance floor area is to have a capacity of 195 people. The judge of first instance held that the use of the premises for these purposes would not affect their status as a restaurant.

The city contends that the judge erred in so ruling. In its submission, the addition of a stage and dance floor would effectively alter the character of the restaurant use contemplated when the building permit was issued and render the establishment an "entertainment facility" as that term is defined in the by-law. An "entertainment facility" is not a permissible use in this area of the city.

Thus, the question to be decided in this appeal is whether the respondent's proposed premises can correctly be described as a "restaurant" or an "entertainment facility".

Before addressing this question, there are two preliminary matters to be considered. The first matter relates to the city's contention that the respondent's application for declaratory relief ought not to be heard while an appeal to the Ontario Municipal Board involving the same property remains pending. The appeal in question apparently arose out of a decision of the Committee of Adjustment granting the respondent a minor variance in the parking standards set by the zoning by-law with respect to an application the respondent had made to operate the premises as a restaurant and "place of amusement" or billiard hall. Counsel for the respondent has

made it clear that it no longer seeks to use any part of the premises as a place of amusement. No variance in the by-law was required to operate a restaurant. For all practical purposes, the application giving rise to the OMB appeal has now been abandoned. While the appeal may remain technically outstanding, it is effectively moot and cannot affect these proceedings.

The second matter relates to an interim control by-law which was passed by the city on September 18, 1995, a few days before this application was to be heard in Weekly Court. This by-law prohibited a variety of uses, including a dance floor, stage, live entertainment and recorded music, in connection with the preparation and sale of food to the public for a period of one year in the area of the city in which the respondent's premises are located. In the view of the judge, the only inference that could be drawn from the timing of this by-law was that "the City is not prepared to risk an unfavourable result in the courts and passed an interim control by-law to prevent that occurrence". This action by the city, she said, constituted "an affront to the judicial system" requiring that the by-law be ignored and warranting the imposition of costs on a solicitor and client basis against the city.

In my respectful opinion, there is no proper evidentiary foundation for impugning the city's conduct or motives in this matter. The interim control by-law is not referred to in the record before this court and there is no evidence of any circumstances surrounding its enactment. Moreover, there is no material relating to the report of the Commissioner of Planning and Development, which is cited in the by-law, and which presumably provides the basis for the recommendation that a study be undertaken in respect to land use policies related to restaurants and similar establishments in the area of the city in question. Nor is there any evidence as to when the matter first became the subject of municipal consideration or of the problems giving rise to the consideration. While the timing of a by-law may be a relevant factor going to a municipality's good faith, it must be seen in context, and no context is provided here. In short, there is no justification for finding that the city had been guilty of the kind of bad faith that can warrant setting aside a by-law of this nature: see Equity Waste Management of Canada Corp. v. Halton Hills (Town) (1997), 35 O.R. (3d) 321, 40 M.P.L.R. (2d) 107 (C.A.); H.G. Winton Ltd. v. North York (Borough) (1978), 20 O.R. (2d) 737, 88 D.L.R. (3d) 733 (Div. Ct.).

In any event, the validity of the interim control by-law is of no moment in this case. It was passed after the city had already issued the respondent a building permit, the validity of which is not in issue. Whatever rights the respondent may have acquired by virtue of the permit cannot be adversely affected by the subsequent by-law. Under s. 34(9)(b) of the Planning Act, R.S.O. 1990, c. P.13, no by-law shall prevent a building from being used for a purpose prohibited by the by-law if a building permit was issued prior to the passing of the prohibiting by-law.

That being the case, I turn to the question of whether the use intended by the addition of a dance floor and stage constitutes the respondent's establishment an "entertainment facility" or whether it nonetheless remains a "restaurant".

The expression "restaurant" is defined in By-law 438-86 to mean:

> . . . a building or portion of a building used primarily for the cooking, preparation and sale of meals and food to the public, for service and consumption on the premises and may include an incidental take-out service.

The by-law permits uses "accessory" to a restaurant. That term, where used to describe a use, building or structure, means, in part, that the use, building or structure is:

> (i) naturally and normally incidental, subordinate in purpose or floor area, or both, and exclusively devoted to a principal use, building or structure . . .

"Entertainment facility" is defined in By-law 438-86, as amended in 1993 by By-law 425-93, to mean:

> . . . an establishment engaged in providing entertainment to the public in conjunction with the serving and sale of food and beverages and includes a dance hall or a dance floor, a

discotheque, a dinner theatre, a supper club, a night club, a cabaret or an entertainment lounge . . .

The judge described the respondent's proposed business operation as being that of "a restaurant with an accessory entertainment use". In reaching this conclusion she laid stress on the word "primarily" in the definition of restaurant and on the permitted uses "accessory" to a restaurant. In her view [p. 38]:

> The difference between an entertainment facility and a restaurant appears to be one of emphasis. In an entertainment facility, the primary function is entertainment and the secondary function is dining. In a restaurant, the primary function is dining and the secondary function is entertainment. I have no hesitation in this case that the proposed use falls into the latter category of a restaurant with an accessory entertainment use.

I am respectfully unable to accept that the determination of whether an establishment is a "restaurant" or an "entertainment facility" depends simply on which use constitutes the primary function of the business. Where a by-law creates a separate category of use specifically covering a proposed use, the proposed use must be subject to the restrictions imposed on that category. Put another way, if the by-law contains a provision governing establishments providing a particular kind or class of entertainment in conjunction with the sale of food, the use of the premises for the specified entertainment puts what may otherwise be a restaurant in the defined entertainment category. In the absence of any provision in the definition of the entertainment category permitting a use accessory to the entertainment use, this is so regardless of whether the entertainment use is primary to the dining use or vice versa.

In the present case, we have a by-law that defines "entertainment facility". This relatively new category was not in existence when any of the cases referred to in the court below were decided. It was enacted to deal with the problems created by large combined dining and entertainment facilities. As this category is defined, an establishment that provides entertainment including any of the types of entertainment specified therein, as for instance, a dance floor, a discotheque or a supper club, in conjunction with the sale of food, is an "entertainment facility". It is the combination of these uses that brings an establishment into this category. Unlike the definition of restaurant, no provision is made in the definition of "entertainment facility" for accessory or secondary uses.

The entertainment area here has a standing capacity of 195 people and includes a stage and dance floor. The presentation of entertainment featuring international singers, dancers and bands with a dance floor for patrons, can hardly be treated as something "naturally and normally" incidental or subordinate to the preparation and sale of food. The main attraction may well be the entertainment rather than the food. However, even if the entertainment can be said to be an accessory use, the establishment would nonetheless be an "entertainment facility".

The provision of a "dance floor" and the proposed entertainment in combination with the sale of food, by definition, renders the premises such a facility, as would a discotheque, a night club, a supper club or any other of the forms of entertainment enumerated in the definition. The respondent's proposed use of the premises is the kind of use intended to be covered by the definition and to which the zoning restrictions are directed.

In reaching this conclusion, I would not wish to be taken as agreeing with the view apparently expressed by certain municipal officials to the effect that any live entertainment of any kind in any restaurant of whatever size necessarily converts the restaurant into an entertainment facility. The by-law must be applied in a common sense way on a case-by-case basis and regard must be had to the reasons underlying the introduction of the "entertainment facility" category and the zoning restrictions pertinent thereto.

For these reasons, I would allow the appeal, set aside the order under appeal, and in place thereof order that the respondent's application be dismissed. I would make no order as to costs of the application or of this appeal.

Appeal allowed.

Chapeskie v. Lake (Township)

Between
Karen Chapeskie and Jeffrey Chapeskie, plaintiffs, and
The Corporation of the Township of Lake of Bays, Robert Gregory Larosee and Correne Jacqueline Larosee, defendants

[1999] O.J. No. 2773
File No. G13082/94

Ontario Superior Court of Justice
Newmarket, Ontario
Howden J.
Heard: April 14-16, 19-23 and 26-28, 1999.
Judgment: July 9, 1999.

Counsel:
D. Morin, for the plaintiffs.
P. O'Hagan, for the Township of Lake of Bays.
N. Roche, for Robert and Correne Larosee.
